MEMBERS OF THE INDUSTRIAL COMMISSION.

Mr. ALBERT CLARKE, *Chairman.*

Senator BOIES PENROSE.
Senator STEPHEN R. MALLORY.
Senator JOHN W. DANIEL.
Senator THOMAS R. BARD.
Representative JOHN J. GARDNER.
Representative L. F. LIVINGSTON.
Representative JOHN C. BELL.
Representative THEOBALD OTJEN.
Mr. WILLIAM LORIMER.

Mr. ANDREW L. HARRIS.
Mr. JOHN M. FARQUHAR.
Mr. EUGENE D. CONGER.
Mr. THOMAS W. PHILLIPS.
Mr. CHARLES J. HARRIS.
Mr. JOHN L. KENNEDY.
Mr. CHARLES H. LITCHMAN.
Mr. D. A. TOMPKINS.

E. DANA DURAND, *Secretary.*

[Extract from act of Congress of June 18, 1898, defining the duties of the Industrial Commission and showing the scope of its inquiries.]

SEC. 2. That it shall be the duty of this commission to investigate questions pertaining to immigration, to labor, to agriculture, to manufacturing, and to business, and to report to Congress and to suggest such legislation as it may deem best upon these subjects.

SEC. 3. That it shall furnish such information and suggest such laws as may be made a basis for uniform legislation by the various States of the Union, in order to harmonize conflicting interests and to be equitable to the laborer, the employer, the producer, and the consumer.

IMMIGRATION.

INDUSTRIAL COMMISSION,
December 5, 1901.

To the Fifty-seventh Congress:

I have the honor to transmit herewith, on behalf of the Industrial Commission, a report to Congress on the subject of Immigration, prepared in conformity with an act of Congress of June 18, 1898.

The conclusions and recommendations of the Commission on this subject will be presented in its final report.

Respectfully,

ALBERT CLARKE, *Chairman.*

REVIEW OF EVIDENCE AND SPECIAL REPORTS.

I. REVIEW OF EVIDENCE.

A.—STATISTICS OF IMMIGRATION.

It was not until after the enactment of the law of 1893 providing for a set of questions to be answered upon the ships' manifests, that statistics relating to social and economic characteristics of immigration were obtained. Even since that date doubt has been expressed by witnesses as to the reliability of statistics—especially those which concern the occupations and destination of immigrants are of little or no value.¹ Immigrants who state themselves to be farmers are usually mere farm laborers, and a large proportion of those who give their destination as New York City do not actually remain there. One witness maintains that even the United States census statistics are inaccurate. He claims that the number of Italians in the country in 1890 was placed at 182,000, whereas it was estimated by Italian authorities at 500,000.²

The most important improvement since 1893 in the method of compiling statistics of immigration was introduced in 1899, when, instead of the preceding classification of immigrants according to the countries or political divisions from which they came, they were classified according to the races to which they belonged. This makes an important difference in comparing statistics for all years preceding 1899 with those for 1899 and succeeding years. For example, it appeared that, in 1898, 40,000 Russians came to the United States, whereas the great majority of these were Poles or Jews, probably not over 200 being actually Russians. Likewise there are very few Austrians and comparatively few Huns or Magyars, the immigrants from Austro-Hungary since 1899 appearing as mostly Slovaks, Slavonians, Croatians, and Poles.³

Lack of caution in observing this change in classification has led to many misleading statements,⁴ yet comparisons can be made with the statistics prior to 1899, since the original method of classification by political divisions is still followed, the new method being simply added to the old.⁵ Protests against this classification by races were made by leading Jews on the ground that they were not a nationality but a religious body, and ought no more to be separately classified than Presbyterians or Catholics. On the other hand it is maintained that the classification does not discriminate against Jews, but it gives what it pretends to do—information not regarding nationality, but regarding races of immigrants.

B.—SOCIAL CHARACTER AND EFFECTS OF IMMIGRATION.

Illiteracy.—It has been pointed out by witnesses and by special report that there is a marked distinction in the illiteracy of immigrants from western Europe and those from eastern and southern Europe. Those from western Europe, including Scandinavians, Finns, Irish, Germans, Scotch, British, and northern Italians showed an illiteracy of 2.8 per cent in 1899, and 4 per cent in 1900, of those over 14 years of age, whereas illiteracy of immigrants from eastern Europe, including Hebrews, Slovaks,

¹ McSweeney, 82-83.
² Schultels, 27, 28, 30.

³ Senner, 187.
⁴ Safford, 131-132.

On the other hand, it is maintained that the reason why Italians return to Italy in the winter is because they can not find employment here and that Italian immigration is becoming more and more permanent;¹ that the number of women and children who accompany Italian immigrants is increasing proportionately to the total immigration.² Formerly one-half of the Italians who came to this country returned, but now the proportion does not exceed one-fourth.³

The padrone system has been particularly reported upon by various witnesses, and it is shown, both by their testimony and by the special report upon this subject, that the system, as it existed in the early days of Italian immigration, has ceased, and that the Italians are now coming in such large numbers that it is no longer necessary for contractors to go abroad and import them into this country. The padrone system, as it exists at the present time, is simply the mode of oppression which Italians who are acquainted with the language are able to exercise upon newcomers through their ignorance and poverty. As a remedy for this new form of padrone system, which is not a violation of the contract-labor law, it is proposed that any immigrant who comes on the invitation of any person whatever except a relative should be deported.⁴

The Armenian and Greek immigration also presents resemblances to the Italian padrone system. These immigrants are believed to be under the control of a central organization which sends them out as notion peddlers.⁵

D.—DISTRIBUTION AND EMPLOYMENT OF IMMIGRANTS.

The Governments of Italy and Austria-Hungary furnish subventions to bureaus of those respective nationalities designed to assist immigrants upon landing at New York. The Italian bureau formerly was granted a location at Ellis Island, but this privilege has been revoked. This bureau was created in order to counteract the evils of the padrone system, and the chief, Dr. Rossi, considers that it has been of considerable success.⁶ The revocation of the permit was owing to the allegation that the bureau assisted immigrants to evade the law and was practically an agent of the padrones,⁷ but this is denied by the chief, who asserts that the officers of the bureau did not come in contact with immigrants until after they had passed the inspection officers.⁸ No other country has as great need of a bureau of this sort as Italy for the protection of its immigrants. The Germans, English, and Irish, when they arrive here, are practically arriving at home.

The Austro-Hungarian Home, supported by the Austrian Government and by Austrian and Hungarian societies in New York, furnishes intelligence for immigrants as to the labor market, and attempts to place them throughout the country. The demand for women as servants is so great that no trouble is found in this direction. Most of the single men are provided with employment in the neighborhood of New York.⁹

Various witnesses have emphasized the need of a better distribution of immigrants throughout the country by means of a comprehensive system of employment agencies, and with this in view the Industrial Commission has listened to testimony from the superintendent of the free employment bureau of the State of New York, located in New York City, and from the deputy chief of the bureau of licenses of New York, whose official duty is the supervision of private agencies, and from a representative of private agencies. Mr. Bealin, of the State free employment bureau, complains that the law governing employment agencies in New York gives no effective power of supervision; that there is evidence to show that servants have

repeatedly found places in families on the recommendation of employment agents and have carried on a regular system of robbing their employers.¹ Furthermore, the employment agencies are sometimes connected with saloons and boarding houses which make a practice of exploiting the laborer. Women are sometimes treated coarsely and brutally, contrary to law. It is in the protection of this class of women that the Austro-Hungarian Home considers its most useful work to have been done.²

Mr. Bealin states that, contrary to law, fees paid to employment agencies are not returned when work is not found. On the other hand, those who represent the private employment agencies and the bureau of licenses maintain that very few complaints are made; that the supervision is thorough; that licenses are revoked or suspended on the proof of charges; that a fee for the use of the office, whether or not employment is found, is a proper mode of payment, provided a larger fee be charged when employment is found. Very few frauds are known to exist, and the public knowledge of the same is largely based on hearsay.³

The proposed law in New York advocated by the State free employment agency and charitable bodies is designed to bring about a better class of private employment agencies. It places the fees in New York City at \$50 the first year and \$25 the second year; prohibits saloon keepers from keeping an employment agency; requires a registry of the name and address of every applicant and his last employer, which registers must be open to inspection; provides for punishing those who publish false advertisements or give false information; prohibits sending female help to any place of bad repute, and requires the fee to be returned on demand if employment is not found,⁴ as is required by the law of Massachusetts.⁵

E.—CAUSES INDUCING IMMIGRATION.

In general people coming to this country do so from a desire for better opportunities. A few come on account of the republican principles of our Government, but this is not usually an important motive. One witness attributes the increase of immigration from southern Italy and eastern Europe largely to the desire to anticipate the enactment of educational restrictions.⁶

The most important influence affecting immigration is the prosperity of the country. The highest number coming to this country in one year was in the exceptionally prosperous year of 1882, when it reached 778,000, after which it declined, and again in 1892 reached 580,000. The immigrants in 1874, immediately following the panic, were only 261,000, a decline from 438,000 of the preceding year. The fluctuations of immigration according to the prosperity of the country are largely accounted for by the fact that immigrants come in many, if not most cases, by inducements of friends and relatives who have come before.⁷ It is stated by representatives of steamship companies that 40 to 55 per cent of those who come have their passage prepaid by friends in this country.⁸ If to this be added those to whom money is sent from this side for purchase of tickets abroad, the proportion coming on prepaid transportation would amount to 65 per cent.⁹ This class of immigration is claimed to be desirable, but there are many tickets sold by peddlers on the installment plan, and the chances are that those coming on such tickets would be of a more undesirable class. For the sake of checking this practice a provision has been suggested prohibiting the sale of tickets except by authorized agents of steamship companies.¹⁰

Mr. Ritter, manager of the Austro-Hungarian Home of New York, an institution receiving subvention from the Austro-Hungarian Government, says that nearly all

XIV THE INDUSTRIAL COMMISSION:—IMMIGRATION.

the Hungarian and Slavonic immigrants get their tickets from agents who induce them to come here. He believes, however, these agents work merely for the commission they get on the transportation tickets, and are not employed by persons or corporations in this country.¹

Another witness alleges that the steamship lines have their agents in the little European villages to induce men to come to America as miners. He has been told by men who would be glad to go back if they could that they have been enticed by circulars scattered in their villages by the steamship agents. Steamship agents also work among the people in this country and entice them to buy tickets on the installment plan for their relatives and friends. The agents drum up custom like life-insurance agents.² Another witness speaks of extensive advertising in Europe of free public lands and high wages.³

Representatives of steamship companies deny the attempt to induce immigrants to come to the United States. This is prohibited by stringent laws in most of the European countries, for the reason that those countries desire for military service all the young men who are likely to emigrate. Only agents licensed by the Governments are permitted to sell tickets, and in the case of one company numbers of agents have had their licenses revoked because they have sent circulars to persons whom they thought likely to emigrate. Similarly the agents who sell prepaid tickets in this country do not attempt to stimulate immigration or to induce the sale of tickets. It would hardly be possible for them to do so if they tried, and the small commission on tickets, \$2, takes away the motive.⁴

The influence of changes in steerage rates is commented on by one or two witnesses. The existing rate of \$28 from Naples to New York, and \$36.50 from Bremen to New York, \$29.50 from Antwerp to New York, are about double the rates which were charged in 1880, and are based upon combinations or "conferences" between the steamship lines.⁵ Difference of opinion is expressed regarding the influence of steerage rates on immigration. While it is agreed that the rates now are about one-half the rates of 20 years ago, when the enormous immigration came from western Europe, yet it is claimed by several witnesses representing the steamship companies that this has but little influence, and that the prosperity of the country is the main cause of changes in migration. At the same time the rates could not profitably be advanced beyond the present figures, since to do so would tend to reduce traffic.⁶

F.—ASSISTED IMMIGRATION.

In times past several governments, local and national, as well as private charitable societies, in Europe engaged more or less in the assistance of paupers and criminals to emigrate to colonial countries and to the United States. Owing to the representations of our Government these countries have officially restricted or prohibited such assistance, and in so far as it exists at the present time it is without the official knowledge of the governments concerned.⁷ It is asserted, however, that a large proportion of immigration is at present of the assisted character, and that the chief source of such migration is Great Britain, the immigrants coming largely by the way of Canada. This assistance is granted by various local authorities seeking to pass on paupers from their own jurisdiction.⁸ It is both asserted and denied that the policy of the Italian Government is to encourage emigration, especially temporary migration, of those who return and bring money to Italy.⁹ The Italian Government continues to treat as Italian citizens, whom it designates as "colonists," such persons as come to this country and, not having taken out naturalization papers, are subject to

⁹ McSweeney, 89; Rossi, 154, 160.

military service in Italy. (See also text of recent Italian Law on Emigration, p. 000.) The Government requires that every Italian who is deported from New York shall be given by the Italian bureau at that port a card stating why he has been deported, and under the Italian laws he is then entitled to prosecute the agent who sold him his ticket. The Italian Government has, on the complaint of the bureau at New York, withdrawn the licenses from various steamship agencies in Italy and has punished others. The Government also adopted the practice of giving to convicts who emigrate to the United States a certificate stating the cause of imprisonment, etc. In only one case does the agent of the Italian bureau know of a convict who came to the United States from Italy with a passport but without such a certificate.¹

The Austro-Hungarian Government does not desire emigration to this country, but would prefer to keep its people at home, and Mr. Ritter, the agent of the Austro-Hungarian Home, which receives a subvention from that Government, does not think that any undesirable person has received public aid in emigrating to this country.²

The immigration of Jews from Austro-Hungary, Russia, and Roumania has been directly owing to persecution and the growth of anti-Semitism in those countries. The earliest persecution which drove Jews abroad began in Russia in 1880, and the exodus which, after continuing a year or two, diminished for 7 or 8 years, was renewed in 1891, when the persecutions were again revived.³ The Jews from Roumania began to migrate within the last 2 or 3 years as a result of the Dreyfus agitation which spread to that country. During 3 months of 1900, more than 20,000 Jews left Roumania, but owing to a resulting industrial disturbance and commercial crisis, this persecution was discontinued. The thousands of Jews thus expatriated were without means for emigration, and at this juncture the Baron de Hirsch fund was provided, by which they have been assisted to migrate in large numbers. But it is claimed that this fund was never used to any considerable extent except in the way of helping families to go together.⁴ Other countries besides the United States received large contingencies of Jews through the assistance of this fund. American Jews have always discouraged immigration of European Jews, and are in full accord with the laws to prevent the immigration of paupers and diseased persons and all who are unfitted to enjoy the franchise.⁵ Those who come from Roumania are largely capable of self-support, but the American Jews, with the help of the Baron de Hirsch fund, endeavor to furnish employment and to distribute their beneficiaries throughout the country, and thus remove them from the congestion in New York City.

G.—EXISTING LEGISLATION RESTRICTING IMMIGRATION.

The early immigration laws sought to regulate immigration rather than to restrict it, and provided a head tax to defray the expense. It declared that no convict, lunatic, idiot, or person likely to become a public charge should be permitted to land, but there was no provision for returning such persons to their homes. The contract-labor laws were enacted between 1882 and 1891. The law of 1891 defined more strictly the persons to be excluded, and the act of 1893 added a large number of ineligible, so that it is estimated as a result of this law that fully 50,000 persons were refused the sale of tickets within a year after it was passed.⁶ The immigration laws, thus added one to another, are not clear at many points, and they have afforded many opportunities for evasion.⁷

Regarding the efficiency of the existing laws there is a difference of opinion. One witness testifying in 1899 held that the recent decrease in immigration is largely due

¹ Bond, 154, 160.

² Ritter, 221.

³ Wolf, 245, 247.

⁴ Benner, 171.

⁵ Wolf, 245.

⁶ McSweeney, 77, 78.

⁷ Ullo, 141.

to the restrictive effect of the law of 1893, but his conclusion seems to be unwarranted in view of the increase which followed in the 2 years since his testimony was given.¹ This witness lays emphasis on the annoyance and vexation to which immigrants are exposed. On the other hand, the larger number of witnesses considers the laws and the inspection of immigrants as unsatisfactory, and that only a very small proportion of the undesirable immigrants are excluded. The actual number deported is from one-half of one to one per cent of the total number of immigrants. The question as to whether a person is likely to become a public charge is indefinite. The inspectors are hurried and can not ask questions in sufficient detail to elicit the facts. The procedure before the board of special inquiry is cumbrous and not frequently resorted to.²

The methods of inspection are described at length by various witnesses connected with the inspection service at New York. When a vessel approaches the harbor it is boarded by 1 or 2 inspectors, who examine the cabin passengers. These men are confronted with 100 or 150 passengers at a time, and they have an hour and a half for an examination covering the period of time from touching at quarantine and landing at the dock. Cabin passengers are asked questions calculated to ascertain whether they are likely to become a public charge or whether they are under contract to perform labor. If one is suspected he is brought to Ellis Island for further investigation. No one is allowed to mingle with the steerage passengers until they have passed through the inspection office at the island.³

After landing at Ellis Island immigrants pass before the medical officers of the Marine-Hospital Service. The rigidity of the medical inspection depends on the general appearance and character of the immigrants. In many shiploads only a casual inspection is necessary. The greatest difficulty is found in the fact that Italians and Syrians are especially subject to trachoma and favus.⁴ The medical examination of emigrants before embarkation is insufficient. The most effective examination of this kind is at Liverpool, but even there a physician views them at the rate of 2,000 an hour, even without uncovering their heads.⁵ The surgeons in Europe do not recognize two of the diseases which are grounds for exclusion, viz, trachoma and favus.

After medical inspection the immigrants file in lines of 30 each, according to the manifests furnished by the steamship company, before the immigration inspectors. These inspectors are registry clerks, who speak the several languages of the immigrants. Each registry clerk has a steamship manifest before him and examines each applicant to ascertain if there is any discrepancy. Sometimes as many as 4,000 persons pass through the office in a day, but the verification is correct, at least so far as the count of the immigrants goes.⁶ Two or three witnesses complain that the immigration officers at present are scarcely qualified for the satisfactory performance of their duties. An inspector ought to be able to judge each individual according to his merits upon the basis of many considerations. The inspectors are poorly paid, and the interpreters are often incompetent to secure correct information.⁷ It is contended by the commissioner of immigration at the port of New York that the application of the civil-service examination to the position of immigration inspector is disadvantageous to the service. The system may be satisfactory for clerical positions, but no academic examination based on book learning or linguistic knowledge can be a guaranty that the person will have the necessary common sense and honesty to decide whether an immigrant is desirable or not. The bureau at New York has had difficulty with men who have been chosen under the civil-service rules. The law, moreover, protects men who have never taken an examination.⁸

⁶ McSweeney, 81, 84, 85.

⁷ Senner, 169, 170.

⁸ Fitchie, 72, 75.

The immigration inspectors are required to detain for special inquiry all who are not plainly and unquestionably entitled to admission. Under this rule they detain about 13 to 15 per cent of the immigrants. These amounted in 1898-99 to about 25,000 persons examined before boards of special inquiry. The proportion of those who require such examination varies greatly in the case of different vessels. Since the steamship companies are required to provide for immigrants during their detention, the amounts paid by the different companies is a fair index to the character of the immigrants. These amounts vary from 2 cents per capita for the passengers on board to 50 cents per capita. On some vessels only 3 or 4 may be detained, while a ship bringing immigrants from Italy may have three-fourths to three-fifths of the passengers detained.¹ The board of special inquiry consists of 4 inspectors especially designated. An affirmative vote of 3 of the members is required for admission. Any member dissenting has a right to appeal to the Secretary of the Treasury, and the immigrant has the same right. The decisions of the board, however, are seldom overruled.² If the immigrant is excluded, the steamship company bears the expense of deportation.

Contract laborers often come as cabin passengers, and it is here that the greatest difficulty in their detection occurs. If the alleged contract laborer is detained by the inspector, he is then brought before the board of special inquiry for examination, the same as other immigrants who are detained. The authority of the immigration inspectors, on approval by the Secretary of the Treasury, in ordering the deportation of an immigrant whom they deem ineligible is final. It is so recognized by the courts, who will refuse to review their action.

Besides the deportation of the contract laborer, the law provides for the punishment of an importer who contracts for his employment in this country. There have been but few cases of conviction, although there have been in 6 years some 4,000 contract laborers deported.³ This is because the law requires that the contract be proven and does not provide punishment for the mere inducement, request, or solicitation, or for the offer of employment.⁴ The contract must also be made in a foreign country in order to convict the importer.⁵ At the present time very few such contracts are made. The more common practice is for the foreman to inquire of his foreign workmen whether they have any friends or relatives whom they would like to bring to the United States. In this way large numbers of immigrants reach this country with the object of replacing Americans at lower wages.⁶ It is asserted that the wholesale importation of contract labor has practically been stopped, although the person making the contract is not convicted.⁷

Criminals.—The immigration law provides only for the exclusion of persons convicted of crime, but not for those charged with crime or those deemed to be immoral.⁸ Although it provides for the exclusion of polygamists, it is impossible to prove such a charge, and consequently a constant stream of Mormon converts, of whom 90 to 95 per cent are women, are continually coming to this country.⁹

Immigration through Canada.—The law does not provide for restriction of immigration from Canada, and the inspection of those who come from Europe through Canada is wholly inadequate. The United States Commissioner made an agreement with the Canadian steamship companies allowing them to board the ships at Canadian ports and to pay the United States head tax for those destined to this country. The railroads through Canada agree to transport none who are not granted a certificate of inspection by these inspectors entitling them to enter at the frontier.¹⁰

Notwithstanding these agreements, a large number of immigrants from Europe evade the law by giving some place in Canada as their destination, which relieves them of

XVIII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

inspection by the United States officers, and then after remaining there only a short time they cross over to the American side. This is affirmed to be the greatest loophole in the restriction of legislation, and as a remedy it is proposed that inspectors should be placed along the Canadian border.¹

Steamship companies.—Prior to 1893 steamship agents in Europe were very little restricted as to persons to whom they sold tickets. The result was an indiscriminate emigration to the United States. The act of 1893, compelling the steamship companies to deport those of their passengers who might be rejected by the inspectors, has had the effect of making the European agents of the companies the most effective inspectors under the law.² Indeed, the steamship representatives maintain that this class of inspection is much superior to that of consular officers or direct representatives of the United States Government.³ The reasons given are that the companies hold their agents responsible for immigrants to whom tickets have been sold in case these immigrants are deported. These agents are fully informed of all the details of American legislation, and are furnished with minute instructions regarding the classes of immigrants who are ineligible.⁴

II. REVIEW OF SPECIAL REPORTS.

STATISTICS AND SOCIAL EFFECTS OF IMMIGRATION.

Part II of this volume, prepared under the direction of the Commission by E. Dana Durand, secretary, presents statistical exhibits based upon the several censuses and upon the reports of the Bureau of Immigration, showing the general effect of immigration upon population and social conditions. It appears that from the year 1850 to 1890 the proportion of foreign born increased from about one-tenth to one-seventh of the total population. This increase has gone chiefly to the States already having the largest proportion, the New England States and Illinois, however, showing the principal increase. From 1880 to 1890 the great manufacturing urban States of New England, New York, New Jersey, Pennsylvania, and Illinois received the largest accession of foreigners.¹

Interesting and significant changes have occurred in the past 50 years in the distribution of immigrants according to the country of birth. These statistics are shown in two ways—first, by the foreign-born population at the date of each census, and, secondly, by the annual immigration. Considering the latter feature, the immigration by decades indicates that the largest absolute number of immigrants, exceeding 5,000,000, came to this country from 1881 to 1890. The preceding three decades show a remarkable uniformity, the total immigration for each ranging from 2,300,000 to 2,800,000. From 1891 to 1900 the aggregate was 3,687,564.²

While the aggregate numbers of immigrants changed in the order indicated, the composition by country of birth gives an entirely different aspect to the statistics. The Irish were the first to appear in large proportions, and from 1840 to 1850 constituted 46 per cent of the total immigration. Their proportion has greatly diminished until the present time. The Germans followed close upon the Irish in the early days of immigration and reached their largest proportion in the period 1880 to 1884, when they constituted 30 per cent of the entire number of immigrants. In that period of 5 years, nearly 1,000,000 Germans came to our shores, but in the 5 years from 1895 to 1899 only 125,000, constituting but 9 per cent of the total immigration. The proportion of Scandinavians reached its highest point in 1885 to 1889, constituting 11 per cent, but their decline has been less rapid than the Germans, their proportion amounting to 7.8 per cent in the past 5 years.³

Thus the decade from 1880 to 1890 marks a turning point in the character of immigration. Up to that time it was mainly the inhabitants of western Europe, including England, Scotland, Wales, Ireland, Germany, Sweden and Norway, who furnished nearly two-thirds of the immigrants. Since that time immigration from eastern and southern Europe has rapidly increased, and in the 5-year period from 1895 to 1899 constituted 54 per cent of the immigration. Italy shows the most striking increase of all; numbering only 20,000 immigrants from 1875 to 1879, they rose to 307,000 from 1890 to 1894 and 300,000 from 1895 to 1899—15 times greater than from 1875 to 1879. It will be seen that the immigration from the northern and western countries of Europe reached its maximum during the decade 1880 to 1889, when it

¹ P. 260.

² P. 267.

³ P. 271.

represented a little more than two-thirds of the total influx. For the past 5 years, on the other hand, the absolute number of immigrants from these countries has been barely one-third the number for the 5 years from 1885 to 1889, while the proportion to the total immigration has fallen to 39.9 per cent. The immigration from the southern and eastern countries of Europe began to increase in 1880-1884, but reached its maximum in absolute numbers from 1890 to 1894, when it was more than 10 times greater than from 1875 to 1879, and had risen from 9.4 to 38.6 of the total. The proportion borne by the immigration from these countries to the total for the period 1895 to 1899 is still greater, amounting to no less than 54.1 per cent.¹

The enormous influx of immigrants may lead to the hasty conclusion that immigration has been the leading factor in the rapid increase of the aggregate population of the United States, but this conclusion was objected to by the late Francis A. Walker, superintendent of the censuses of 1870 to 1880, who maintained that foreign immigration into this country, from the time when it first assumed large proportions, amounted, not to a reinforcement of our population, but to a replacement of native by foreign stock. The ingenious estimates made by President Walker, based upon the predictions of Elkanah Watson in 1815, give plausibility to this estimate, since it appears that the growth of population from 1790 to 1840, when there was very little immigration, was as great in proportion to numbers as from 1840 to 1860, when there was a large foreign immigration, and that since 1860 the growth of population has been at a lower rate of increase than during the 50 years prior to the large influx. President Walker's explanation is based on the economic ground that the American shrank from the industrial competition imposed upon him by the low standards of the incoming foreigners, and was unwilling either to handicap himself by family ties in his efforts to rise above them or to bring sons and daughters into the world to enter into that competition.²

The tendency of the foreign born to congregate in the larger cities of the country has been frequently noticed and commented upon. While the foreign born constitute only 14.4 per cent of the total population of our country, they constitute more than twice as large proportion, namely, 29.18 per cent, of the population of cities over 25,000. In rural districts only a little over one-tenth of the total number of inhabitants are of foreign birth. The three cities possessing the largest proportion of foreign-born population are New York, San Francisco, and Chicago, each exceeding 40 per cent. Eighteen of the 28 great cities have more than one-fourth of their population of foreign birth.³

Great differences exist as to the relative tendency of different nationalities toward city life. There is marked aptitude for urban life among the Hebrews, Poles, and Irish, each of which nationalities has more than one-half of its numbers in this country dwelling in large cities. The Irish and Germans, owing to their great absolute numbers, constitute together more than one-half of the total foreign-born population in the cities of the country as a whole, the Irish furnishing 20 per cent and the Germans 30 per cent. The Germans are the predominant foreign nationality in most of the cities individually as well as in the urban population as a whole. They constitute more than two-thirds of the total foreign-born population in Milwaukee and Cincinnati. The Irish constitute 47 per cent of the foreign-born population in Providence, 45 per cent in Boston, 41 per cent in Jersey City, and 41 per cent in Philadelphia.⁴

Bearing upon the question of American citizenship and the proposed educational test for immigrants, the question of literacy and illiteracy among the foreign born is important. For the United States as a whole 6.2 per cent of the native whites are illiterate, while more than twice that proportion, 13 per cent, of the foreign-born whites are unable to read and write. The disparity is greatest in those States with

¹P. 272 ff.²P. 277.³P. 279.

the most advanced systems of education. In the North Atlantic States only 2.3 per cent of the native whites are illiterate, against 15.6 per cent of the foreign-born whites. In the great cities, on the whole, the efficiency of the common school system is especially indicated by the fact that the illiteracy is scarcely greater among native whites of foreign parentage than among those having native parents. The illiteracy among the foreign-born city dwellers, on the other hand, is very much greater than among the natives. Thus, in New York the per cent of illiteracy among the native whites of native parentage is 0.52; among the native whites of foreign parentage, 0.66; while among the foreign whites it is 14.6.¹

From the reports of the Bureau of Immigration it appears that the proportion of illiteracy among those landing in this country, of 14 years of age and over, varies by years from 20 to 24 per cent. Comparing the countries of their origin, the illiteracy of immigrants 14 years of age and over from the countries of western Europe, including Scandinavians, the Finnish, the Irish, the Germans, and the northern Italians, was only 2.8 per cent in 1899 and 4 per cent in 1900; whereas the illiteracy of those who came from eastern Europe, including Hebrews, Slovaks, Poles, Croatians, and southern Italians, was 38.4 in 1899 and 36.6 in 1900. The nationality showing the highest illiteracy is the Turkish, being 78.7 per cent; but the absolute number arriving is so small—namely, 184—that this high percentage loses social significance. Of those nationalities having heavy immigration the southern Italians, out of 84,346 immigrants in 1900, had an illiteracy of 54.5 per cent; the Poles, with 46,938 immigrants, had an illiteracy of 31.6 per cent; the Slovaks, with 29,243 immigrants, had an illiteracy of 28 per cent; and the Hebrews, with 60,764 immigrants, had an illiteracy of 22.8 per cent. The lowest illiteracy in the entire list of nationalities is that of the Scandinavians, who, numbering 32,952 immigrants in 1900, had an illiteracy of only 0.8 per cent; the English, with 10,897 immigrants, had an illiteracy of 2 per cent; the Finns, with more than 12,000 immigrants, had an illiteracy of 2.7 per cent; the Irish, with 35,607 immigrants, had 3.2 per cent illiteracy; and the Germans, with 29,682 immigrants, had 5.8 per cent illiteracy.²

The financial condition of immigrants by nationalities varies, on the whole, inversely with their illiteracy. Thus the Portuguese, with 60 per cent illiteracy, brought in 1900 \$10.47 per capita, and the southern Italians, with 54.5 per cent of illiterates, brought with them to this country \$8.84; on the other hand, the Germans, with 5.8 per cent of illiterates, brought \$28.53 per capita; and the English and Scotch, with 2 per cent illiterates, brought \$38.90 and \$41.51 per capita, respectively.³

The effect of immigration upon the amount of pauperism and criminality in the United States is of leading importance, and the immigration laws of this country have from their earliest inception been directed mainly to the diminishing of these effects. The census statistics comparing the tendency to pauperism and criminality of the foreign born with the native born should be accepted with caution.⁴ These statistics present the serious defect of failing to take account of the different distribution of ages as between the foreign born and the native born. Immigrants come to this country mainly after they have reached the criminal age, and consequently when the census writer for 1890 states that 16.39 per cent of the whole population furnishes 30.24 per cent of the institution population, the conclusion, in so far as it includes prisoners, is misleading. Persons under the age of 20 seldom commit crimes; the immense number of persons of native birth below that age contribute very little to the number of prisoners in the country. If, on the other hand, the number of males of the ages of 20 to 45 of native birth and of foreign birth be compared with the number of criminals of native birth and foreign birth, the showing is quite different. On this basis it appears that the whites of foreign birth show a trifle less criminality than the total number of whites of native birth.⁵

¹ Pp. 280, 281.² Pp. 282, 283.³ P. 284.⁴ P. 285.⁵ Pp. 287, 288.

At the same time the full effect of immigration on the prison population of the country can not be measured by simply the number of foreigners. Account must also be taken of the children of foreigners. The excessively large proportion of prisoners among the latter class—namely, 7,435 per million voters, compared with 2,517 of native parentage and 3,289 of foreign born—constitute nearly as strong an argument as to the injurious effects of immigration as would the high proportion among the foreign born themselves. The second generation of the foreign element break readily away from the control of their parents, whom they learn to look down upon as ignorant and out of date. They become more familiar with the criminal ways of this country, and so they present an excessively high proportion of criminality. This appears from the census tables showing the birthplaces of the parents of white prisoners by specific crimes, wherein it appears that 38 per cent of the total male population of militia age—namely, 18 to 44 years—being the children of foreigners, whether themselves born in this country or born abroad, furnish more than half the prisoners, and that this proportion, in the case of intoxication and disorderly conduct, amounts to two-fifths of the population producing nearly four-fifths of the punished offenses.¹

ECONOMIC EFFECTS OF IMMIGRATION.

Part III, prepared by John R. Commons, special agent of the Industrial Commission, deals with the economic effects of immigration, with legislation affecting immigration in this and other countries and with the agricultural distribution of immigrants.

The effect of immigration on industry, looked at from the standpoint of the productive energy of the country, can not be measured by the aggregate numbers, but by the predominance of males among immigrants and by the predominant age periods at which they migrate. The proportion of males among the native born in the census of 1890 was 51.21 per cent, while among the foreign born it was 54.9 per cent. The immigration statistics show an even greater disproportion. In 1881 to 1890 males numbered 61 per cent of the total influx. When we consider that the most productive ages for labor are those from the ages of 20 to 45, it is significant that while the proportion of native-born population falling within these years is only 34 per cent, the proportion of foreign-born population is 51 per cent; and when we examine the statistics of immigrants as presented by the Bureau of Immigration, we find that the immigrants belonging to the productive years, 15 to 40, constitute not less than 68 per cent of the total number. From these facts it follows, seeing that it is the male population above 15 years of age that predominate in competitive industry, that the effect of immigrants upon industry and wages is proportionately greater than the effect of the corresponding number of native born.²

Equally important with the gross proportion of immigrants is the unequal distribution of immigration throughout the several occupations. Whereas the foreign-born whites constituted in 1890 14.40 per cent of the total population, those engaged in gainful occupations constituted no less than 22.45 per cent of the total number in such occupations. In the manufacturing and mechanical industries, and in domestic and personal service the number was 31 per cent, whereas, on the other hand, in agriculture the number was only 14.49 per cent.³

The unskilled occupations, those of domestic and personal service, receive the largest access of immigrants. Only 16 per cent of the male immigrants declare themselves as belonging to the skilled occupations, while 57 per cent are rated unskilled,

¹ P. 296.

² P. 295, 296.

³ P. 297.

and 23 per cent, including women and children, as without occupation. The industries in which one-fourth of the total number of employees are foreign born present the following occupations conspicuously: Tailors, bakers, boot and shoe makers, brick and tile makers, butchers, cabinetmakers and upholsterers, textile and mill operatives, leather dressers and tanners, marble and stone cutters.¹

Of peculiar interest in enforcing the statements already made concerning the tendency of foreigners to city life are the figures showing the proportion of foreign born and their descendants in agriculture. While nearly one-half of the native whites of native parents are engaged in agriculture, less than one-fourth of the foreign whites are so engaged. The second generation of foreign classes shows a slightly greater inclination to agricultural life than the first generation.² Nationalities differ widely in this regard. Those which show the greatest inclination toward agriculture are the Scandinavians, Germans, and Bohemians, numbering 27, 21, and 28 per cent of the total population of these respective nationalities in this country. The Irish have but 14 per cent of those engaged in gainful occupations on the farm. The lowest proportions are found among the Italians and Hungarians, numbering 4 per cent each.³

The races having the largest proportion of unskilled and miscellaneous laborers are the Chinese, Japanese, Croatians, Russians, Greeks, Italians, Lithuanians, Magyar, Poles, Portuguese, Ruthenians, Scandinavians, and Slovaks. The immigrants with the largest proportion of skilled laborers are the Hebrews, Scotch, English, French, and Cubans.⁴

Owing to a conflict of various causes it is impossible to determine precisely the effect of immigration on wages. The cycles of business prosperity and depression are the principal conflicting factor.⁵ The low standard of living of immigrants, especially from eastern and southern Europe, is shown in a table on page 310, and it appears that the wages in American cities are 4 to 5 times the wages of farm laborers in those sections of Europe, but the immigrant who attempts to enter American industry is not able to keep up the pace, owing to his low standard. In the course of time he is compelled to organize for the mere purpose of finding the adequate food, shelter, and clothing to continue at work. This point was reached by the bituminous coal miners in 1897 and the anthracite coal miners in 1900, and the remarkable labor organization in that occupation at the present time is the result of the direct poverty to which a large class of labor in this country has probably ever been reduced. Immigrants from southern and eastern Europe displace those from the British Isles, and, having competed among themselves, are at last compelled to organize for protection. In the clothing trade a similar condition has been reached, but in that trade the continuous influx of immigrants has not yet afforded a breathing spell for organization.⁶

Labor organizations are handicapped by the mixed nationalities, languages, and religions which make it impossible even to bring them together on a mutual understanding.⁷

One of the factors which conceals the effect of immigration and at the same time cooperates with it is machinery and division of labor. This, by displacing the skilled mechanic, makes room for the unskilled immigrant. The fact that machinery has been introduced so largely in this country is a part of the results of immigration, since, by breaking down the traditions and organization of the trade unions, their resistance to machinery and new methods has been overcome; but at the same time the lower and lower standards of living which have come into machine industries illustrate the cooperation between machinery and immigration in depressing the condition of labor. If, however, they are able to organize, they may recover their position. This, as already stated, is difficult until the immigrants have experienced a period of extreme poverty.

¹ Pp. 298, 299.

² P. 300.

³ P. 301.

⁴ P. 304.

⁵ P. 305.

⁶ P. 311.

⁷ P. 312.

The competition of women and children is a contributing factor in depressing wages, but it is noticeable that the women and children who work in factories are usually the wives and daughters of immigrants. Furthermore, the fact that the complaints against immigrants proceed from cities, where the cost of living is high, makes it important to note that the country competition of native Americans where the cost of living is low often acts as a depressing effect on wages in the same occupation in cities.

In contrasting these various causes it appears that the effect of immigration tends to cumulate upon the same industry where the other causes are in operation, and that the relative effect of immigration depends upon the rapidity of the influx, while a moderate amount of immigration would be assimilated. A rapid influx into particular trades by breaking down organization subjects workmen to an unfair competition.

THE CLOTHING TRADE.

According to the census of 1890, that branch of the clothing trade known as custom work shows the largest proportion of foreigners of all occupations in the United States—namely, 71 per cent. This was 11½ per cent higher than the occupation next in order—namely, the bakers. The other branch of the clothing trade, the so-called factory product, is not presented in the census tables upon the basis of the nationality of the operatives; but it is probably true that the proportion of foreign born is as large, if not larger, in this branch than in that of the custom tailors.

The immigration of tailors into the United States at the present time is mainly Hebrews, numbering 7,031, and Italians, numbering 1,312. This is a marked change in the character of immigration, since in 1882 it was the German element, numbering 1,935, that contributed the largest proportion of the total number of immigrants stating that to be their trade. The German immigration in 1900 was only 270. The indirect effect of immigration on the tailoring trade is even greater than the direct effect. The division of labor has advanced to such a stage of minuteness that in the ready-made or factory work less than 1 man in 4 is a tailor. The majority, instead of requiring 4 or 5 years to learn the trade of a custom tailor, require only 2 or 3 months to learn such simple work as operating, pressing, sewing buttons, felling, and so on, although a longer time is required to develop speed and endurance. It is this minute subdivision of labor which opens the way for the serious effects of immigration.

The manufacture of clothing is largely centered in New York City, and it is in this place that immigration plays its weightiest part. In lieu of the census of 1900, which at the time of writing has not yet presented the statistics for that year, it may be stated that, in the opinion of those best versed in the trade, fully one-half of the ready-made clothing in the United States is manufactured in New York City. In this way immigration in this trade holds a peculiarly strategic position. Organizations of employees in other cities throughout the country are met continually with the threat that their demands for improved conditions will result simply in transferring the work to New York. On this account a careful examination of the conditions in that city is important.¹

The characteristic feature of the clothing trade is the so-called sweating system.² The definition of the sweating system by different parties varies widely, and a committee of the House of Lords, which in 1888 investigated the subject in Great Britain, was unable to decide upon a precise definition. Their conclusions are summed up in a description of what they consider to be the conditions attending the sweating system—namely, first, a rate of wages inadequate to the necessities of the workman, or disproportionate to the work done; second, excessive hours of labor; third, the insanitary state of the houses in which work is carried on.

It will be seen that this description does not in any way state a method of work, but rather the condition of the operatives employed. In general the sweating sys-

¹ Pp. 316-319.

² P. 319 ff.

tem is one in which the work is done by a middleman or contractor, who takes the cloth from the manufacturer at a competitive price, and then, employing his own labor at such wages as he can force them to accept, makes such a profit as his attention to details and his oppression of employees can secure. We have, therefore, in this trade three classes of people concerned—namely, the manufacturer, the contractor, and the workman. The term “manufacturer” does not exactly describe the position of this member of the joint production. The manufacturer (so-called) is more properly a wholesale merchant or warehouseman who may employ his own help directly in the manufacture of garments, or may let it out to contractors. In case the manufacturer employs his help direct, the shop which he conducts is technically known as an “inside shop;” whereas the shops operated by contractors are called “outside shops.” The opposition to the contractor on the part of the workmen consists in the demand that the manufacturers substitute inside shops for outside shops. But here a peculiar distinction is necessary. An inside shop, it would be assumed, is one in which the workmen are employed under the direction of a foreman, the latter being a representative of the manufacturer, the wages being paid directly to the workman by the manufacturer and not by the foreman; but the labor organizations which attempt to secure inside shops do not go as far as this. They consider that the evil of the contracting system consists in the fact of a number of competing contractors bidding against each other for the work of the manufacturer, this competition continually reducing the price which they receive for making the garment and the wages of the workers. If, however, the manufacturer would agree to dispense with this system of competing contractors, and would substitute, not a foreman, but a noncompetitive contractor, who has a regular employment with the manufacturer and is not subject to underbidding from other contractors, they would be willing still to content themselves with this modification of the contracting system.

The contractor at the present time in New York and Chicago occupies the peculiar position of an organizer and employer of immigrants. The man best fitted to be a contractor is the man who is well acquainted with his neighbors, who is able to speak the languages of several classes of immigrants, and who can easily persuade them or their wives and children to work for him, and in this way can secure the cheapest help. So irregular is the business and unsteady the employment that in the busy season when the work doubles it is to the advantage of the manufacturer to rely upon contractors who have this ability to increase the number of employees quickly and in proportion to the amount of work. The ability to become a contracting employer depends also upon the small amount of capital invested. Probably \$50, under the system of renting the sewing machines, is enough to enable an employee to become a contractor on his own account. He has no investment in goods and runs no risk. Little managing ability is required, because the number of employees is small. He locates in the midst of the districts occupied by immigrants, and contributes to their clannishness by making it possible for them to earn a living without mingling with other nationalities. There is always competition among contractors. The contractor feels more dependent than any of his employees. His profits are often less than the wages of his better-paid workmen.

It must not be inferred, however, that the contractor is the cause of the sweating system. Both the contractor and the sweating system are the product of a disorganized and crowded labor market.

That the contracting system is not essential to the sweating system is shown by the fact that in one branch of the clothing trade, namely, that of the manufacture of ladies' ready-made suits, these small contractors have become manufacturers; that is to say, they have opened up their shops and have begun to sell their ready-made garments direct to the wholesale trade—the clothing houses, cloak jobbers, country merchants, or “mail-order houses.” They do not send out traveling salesmen, but wait for buyers to call and see the samples and leave their orders. They manufacture only on order, and frequently, with the help of a banking house, by depositing

the order as a guaranty, they are able to secure the cloth necessary to make up the garments. It is in this way that the development of this branch of clothing manufacture in New York City presents exactly the opposite development to that which has occurred in other large industries. Instead of the large manufacturer successfully underbidding and driving out the small manufacturer, leading ultimately to the greater consolidation in the so-called trusts, in this business the small manufacturer has driven out the large manufacturer. The small man does not need to pay a high-priced designer, since he designs his own patterns; he does not have to pay a superintendent, since he manages his own business; he does not pay high rent, since he locates in the poor quarter of the city; he can get labor as cheap as any contractor; the shop is open day and night; the people can work as long hours as they wish. The wages which these small manufacturers pay to their employees vary widely in the different seasons of the trade. In the busy season they are sometimes double the wages paid in the dull season. It has been the effort of the unions to compel the manufacturers to agree upon a scale of prices which shall be unchanged through the year; but as soon as the dull season comes and the large numbers of unskilled and poverty-stricken workmen, pushed on by the influx of immigrants, are crowding for employment, the uniform scale is abandoned, and every manufacturer or contractor is able to command labor at wages barely covering cost of living.

New York and Chicago are the largest centers of the ready-made clothing trade.¹ The industry in New York is practically in the hands of the Russian Jews, who have displaced the earlier Germans and Irish. One branch of the work, that of the finishing or hand sewing on coats and trousers, has within the past 10 years fallen into the hands of the Italian women who work in tenement houses. It is a mistake, however, to infer that tenement-house work is increasing. Contractors no longer have their machines in tenement houses to any material extent. Legislation on this subject and the agitation of the unions has caused them to move into buildings especially erected for their purposes; but in this branch of the work, the so-called home finishing, the Italian women, owing to the fact that they work at prices 25 to 50 per cent less than those formerly received by other nationalities, have absorbed 95 per cent of the work. In Chicago the clothing workers are distributed more equally throughout the different nationalities; the Swedes, Bohemians, and Jews represent probably 25 per cent each of the total number, the Poles 15 per cent, the Germans 5 per cent.

The Jew occupies a unique position in the clothing trade. His physical strength does not fit him for manual labor; his instincts lead him to speculation and trade; his individualism unsuits him for the life of a wage earner, and especially for the discipline of labor organization. For these reasons when a Jew first lands in this country he enters such light occupations as sewing, cigar making, and shoemaking. Jewish women are employed to a much less extent than women of other nationalities, and their children are kept in school until 15 or 16 years of age. The Jew's conception of a labor organization is that of a tradesman rather than that of a workman. Whenever a real abuse arises among the Jewish workmen they all come together to form a giant union and at once engage in a strike. They bring in 95 per cent of the trade. They hold out a long time, even under the greatest suffering. They usually win their case, but when once a strike is settled they are contented, and that usually ends the union, since they do not see any practical use for organization where there is no cause to fight for; consequently the membership of the Jewish union is wholly uncertain. The Jew is also exceedingly abstract and metaphysical and greatly interested in general principles; for this reason the socialistic element acquires control and the practical problems and serious conditions of the trade are neglected.

¹ P. 824 ff.

The Italian tailor in his own country receives only about one-half the wages received by the Jews in the country of their European origin and about one-fourth of the wages paid for the same grades of work in western Europe, consequently, in the United States the Italian is able successfully to compete with the newly arrived Russian Jew, and far more able to compete with the German or Englishman. The Italian has usually been a farmer or a farm hand, and his standard of living is even lower than that of the Italian tailor. While as yet the Italians have not gone into the trade in very large numbers, since they have sought mainly outdoor employment, yet, considering the large numbers and their readiness in taking up this branch of work, it seems probable that the future clothing workers of New York are not likely to be Jews, but Italians. One point in which the Italians have the advantage is in the employment of their wives and sisters. The Italian and his wife work in a shop together. In the case of the Jews, a Jewish woman after she is married will not go to work in a shop. The Italian, like the Jew, has a very elastic character; he is energetic and thrifty and will work hard, with little regard for the number of hours.

The Polish clothing workers are mainly women, since the former Polish farmer when coming to this country clings to common work requiring hard labor. He can compete successfully in factory work where hard automatic labor is needed, and consequently in Chicago, where large numbers of Poles are employed in this class of work, the Polish women and girls are employed in the clothing shops. Owing to the opposition of their priests they have never made any attempt to join the labor organizations. During the strike in Chicago in 1896 it was the Polish shops that continued at work and defeated the strike. They are a submissive people while working, and it is in their shops that the hardest driving is done. Their children begin to work early.

The best people in the clothing trade in Chicago are the Scandinavians, including Swedes, Norwegians, and Danes. They are engaged in the manufacture of pants and vests under contractors of their own nationalities. They do not work more than 10 hours a day, as a rule, usually in large shops with steam power. The standard of living is high, and many of them are fairly well educated. The proportion of women who work is large; there are about 5 women to 1 man in the Swedish shops, about 2 women to 1 man in the Polish and Bohemian coat shops, about equal numbers of men and women in the Jewish shops, although the women are mainly of other nationalities.

Unquestionably the standard of living of all nationalities has been raised greatly after their immigration to this country. The Poles and Italians adhere to a lower standard for a longer time than the others; at the same time the low standard of living on the part of those immigrants who are continuously coming into the trade is always a successful check on the efforts others are making to better their condition. The Jews have been especially successful in escaping from the trade, since they change their standard of living soonest and are most energetic in finding employment in other trades or in advancing to the position of contractor or merchant.

Estimating the effect of immigration on the wages in the clothing trade,¹ it will be seen a variety of factors enter to confuse the judgment. In the first place, a change in the character of the trade has occurred in the past 50 years, consisting in the introduction of ready-made clothing, first for men, then for children, and finally for women. These new branches of work, whereby a product, which when formerly made by the custom tailor, the dressmaker, or the housewife cost higher prices than the most of the people could afford, is now made in the latest styles, enables all classes of people to be better dressed and to spend much more money every year for clothing. Herein the immigrant has created his own employment and cultivated a

¹ Pp. 368, 369.

XXVIII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

market for his product. The journeyman tailor who in former times made the entire coat continues to do so only for the wealthier classes of the public, and for that reason he can earn higher wages than formerly. But, owing to the increasing subdivision of labor in the manufacture of ready-made garments, such important changes have occurred in the several occupations involved that it is a difficult problem to identify any one occupation over a period of years. The first important advance in the subdivision of journeyman tailor's work was introduced by the Jews some 20 years ago in New York City and has been known as the "task" system. This remarkable system, by which perhaps nine-tenths of the ready-made coats in New York are manufactured, exists in no other city of this or other country. Its peculiarity is found in the fact that the 3 men who make the greater part of the coat work in a team or "set," and in their agreement with the contractor they undertake to turn out a certain number of coats per day. This results in what is practically a piece-price system with unrestricted work. Whereas the journeyman tailor formerly filled in his dull season by making coats at half price, which were later sold as ready-made garments, the task system made it possible to manufacture the same coat at one-half the journeyman's price in the dull season. Since this task system has continued unchanged for 20 years, it is possible to measure precisely the changes in wages during that period. The wages per week of male operators and basters have fallen one-sixth; their hours increased one-fifth; their weekly output has increased two-thirds; the piece price for their product has decreased one-half, without any change in machinery or subdivision of labor. Formerly 1 woman was a member of the team, but so intense has become their exertion that women have been replaced by male immigrants at wages per week about 50 per cent higher than those which the women formerly received, but per piece the same, owing to the greater speed and endurance of the men. It can not, however, be said that the low wages, long hours, and overexertion in the task shops of New York are owing solely to immigration, since in recent years a new form of production, which may be called the factory or large-shop method, has entered, and those Jews who adhere to the task system are operating under an antiquated system of production in competition with a modern system.

This factory system carries the subdivision of labor far beyond that of the task system, so that a coat passes through the hands of 40 or 50, or more, work people, whereas in the task system it passed through the hands of only 8 or 10. This increasing subdivision of labor has substituted simple operations for complex operations and has increased the speed and exertion of the workmen. While wages by the hour, day, or week on factory products have decreased in most cases, and remained constant in the cases of the more highly skilled and indispensable workers, yet the increased overexertion and overtime are much more exhausting to the employee than they were 20 years ago. The cost of manufacture, owing to this subdivision of labor, is 40 per cent below that of the task system, so that, altogether, the cost of making a coat in 20 years has been reduced 70 per cent below the price received by the journeyman tailor in the dull season.

The amount of wages in the clothing trade is directly affected by the fate of labor organizations. With the continual influx of immigrants, with the subdivision of labor, with the employment of women and children, and with the prevalence of home work, the problem of organization is indeed serious.

After male immigrants have been here 2 or 3 years they are willing to organize, but are prevented from bettering their condition by the new arrivals, whose necessities compel them to accept low pay. The most successful organization is that of the Swedish Pants and Vest Makers of Chicago, who, owing to peculiar advantages in the nature of their trade, have greatly increased their wages in recent years; in nearly all other occupations of the trade the influx of immigrants is a constant

menace to organization, and the conclusion is inevitable that such restriction of immigration as would lessen the number of those nationalities now coming into this trade would enable the clothing workers to organize and secure generally shorter hours and higher pay.

TENEMENT-HOUSE MANUFACTURE.¹

The so-called sweat-shop legislation of American States is legislation directed against tenement-house work. In this legislation the American States are dealing practically with the subject of immigration in its most urgent and threatening aspect. Practically all the work in tenements governed by these laws is carried on by foreign-born men and women, and by the latest arrivals and lowest conditioned of the foreign born. Two races are the ones mainly affected—the Hebrew and the Italian. The Italian woman working in her tenement has absorbed 95 per cent of the so-called “home finishing” in New York City. Home finishing is that remnant of work in the former home shop where the entire garment was made at home; since through legislation and economic development the regular shop has largely taken the place of the home, this “finishing” is that portion which has not been carried over to the shop. In New York coats and trousers are finished at home; in other cities, only trousers. Finishing amounts to about one-fourth of the work on a garment, but owing to the low wages paid in this class of work, the price is about one-seventh of the price for the entire garment. The Italian home finisher works for about two-thirds of the price which other nationalities formerly received for the same work, and, where formerly 10 to 14 cents was paid for finishing, the Italian does the same work for 5 to 7 cents. By means of this kind of work done at home by his wife and children the Italian laborer is able to bid at much cheaper rates for employment in other occupations; so that home work not only has a damaging effect on the shop work in the trade, but it also affects the people engaged in the same calling as the Italian laborers.

Other classes of clothing workers who are employed at home to more or less extent are the custom tailor, who is a skilled mechanic, making the entire coat; also married women or widows of American birth who, in this way, earn small amounts of “pin money.” These women take up this work in emergency, or when they are partly dependent upon charity or upon the help of friends, and on this account they accept wages considerably below the cost of living for a girl working in a shop who has this as her only means of livelihood.

Subcontracting is the rule in this business. Manufacturers dislike the administration of the small lots of work distributed in secluded places where they are unable to keep oversight, and consequently the clothing contractor who takes work from the manufacturer, and who is in closer connection with the home workers, sublets the finishing to them. The objections made to home work are not only the low wages, but the low standard of living which is consequent upon the crowded condition of the home, with pieces of cloth and rags lying about, and pressing irons and sewing machines crowding upon the space. The man who works at home has irregular hours, and usually works all the time he can spare, day and night. He employs his wife and children as helpers, and thus in open competition is able to underbid the man or woman who works in the factory. Home work is depressing upon the intelligence and personal initiative of the tailors. Since it affords but little opportunity for improved machinery or subdivision of labor, the workman makes up in long hours what he loses in economy of manufacture. Labor organization is especially difficult with this class of workers. The journeyman tailors' organizations in this country direct their agitation more vigorously against the home work of their numbers than they do against accepting low prices for work. Scattered over the city, the

¹ P. 369 ff.

home workers have no opportunity of meeting together and organizing. They do not learn the English language and are slow to become Americanized. With the abolition or restriction of home work organization becomes more effective, the wages are increased, and hours diminished.

But the legislation of American States directed against tenement-house work has been undertaken not on behalf of the workers, but on behalf of the consumers. It is the protection of the public against contagious and infectious diseases which has induced the States of Massachusetts, New York, Pennsylvania, Illinois, and others, to deal in a rigid manner with this class of employment. In no State does the legislature take the legal step of prohibiting outright tenement-house work; the statute simply restricts the number of persons who shall be employed in a room or tenement, usually to the immediate members of the family living therein. Legislation covers wearing apparel and includes, in some cases, also, cigars and cigarettes.

As regards the administrative details of this legislation, it is noticeable that in those States most directly affected by immigration, namely, New York, Massachusetts, and Pennsylvania, the legislation has been most radical and even despotic. In the first place, a register is required to be kept by the contractor or manufacturer of all home workers in his employment. This register, unfortunately, is not treated as a public record, and hence does not afford opportunity for trade unions, consumers' leagues, and charity societies to carry on effective agitation which will reach the manufacturers.

But the despotic feature of the legislation appears in the provisions requiring a license or permit in order to work at home. In the enforcement of ordinary factory and workshop laws the factory inspector is required to come into court and prove the alleged violation of the law. The defendant enjoys the benefit of the doubt, and the inspector and prosecuting attorney are held to a strict interpretation of the statute. By the license feature, however, the inspector is not dependent upon the courts; his action is summary and decisive; he grants or revokes the license upon his own discretion and judgment, and the penalty thus imposed, since it deprives the workman of his entire living, is far heavier than the imposition of a fine by the court. The inspector, under this provision of the law, calls upon the courts not to punish the material violation of the law, but to punish the workman who works without a license. Both the prosecution and the punishment of the offender are therefore practically in the hands of the administrative officer without recourse to the court. There remains, indeed, the judicial remedy by mandamus or injunction, but in the case of the poverty-stricken workers of the tenement house this is not a substantial remedy.

Massachusetts was the first State to introduce the license feature as a part of its factory legislation. New York, Pennsylvania, New Jersey, Indiana, and Michigan within the last 2 or 3 years have followed the example of Massachusetts. In Pennsylvania the law goes much farther than in other States, and requires a license not only for tenement-house work, but for any "building or parts of building" where wearing apparel is manufactured, and in New York it applies to any building in the rear of a tenement building.

While the law lays down conditions under which the inspector shall grant or revoke a license the decision is in the judgment of the inspector. The law in no case attempts to deal with wages or hours of labor, but, in harmony with its purpose of protecting the consumer, provides only that work shall be conducted under clean and proper sanitary conditions. In New York it provides for absolute cleanliness, and it is conceivable that with inspectors whose standards of cleanliness are high very few licenses would be long outstanding and tenement-house work would be practically abolished.

An interesting feature of the legislation of Massachusetts and New York is the so-called "tenement-made" tag. The inspector is empowered when he discovers garments manufactured under unsanitary conditions or in violation of the law to

affix this label to the garment, and any person removing the label is subject to a fine or imprisonment. It is often assumed that the tenement-made label is designed to reach the manufacturer or wholesale merchant and to be kept upon the garments until they have been placed upon the market. This may have been the intention of the legislator, but in no case do the inspectors go so far as to enforce such a penalty upon the manufacturer. They consider the purpose of the tag accomplished when the home worker or the contractor is punished or when the goods have been disinfected. They then remove the tag and the goods are placed upon the market.

Whether garments which have been subject to contagion can be fully disinfected is a matter of dispute, but it is certain that did such goods carry a label at the time when the consumer makes his purchases they could not be sold. In Pennsylvania the law does not provide for a tag, but requires that goods subject to contagion shall be destroyed.

The penalties imposed by the law apply only to home workers and contractors and do not affect the wholesale manufacturer. On this account they are defective. The home worker is an obscure person, and a slight penalty is a heavy burden. The contractor also is unknown, but the manufacturer's position before the community is a responsible one; the sale of his goods depends upon the reputation of his house. Now, the existing laws do not make the manufacturer responsible for tenement-house work unless he gives this work out directly to the home workers; he is not responsible for work given out by his contractors. In this way the contract system shows its advantage, not merely as a cheap method of manufacture, but also as a method of shifting legal responsibility from the manufacturer to the middleman. Were the law to make the manufacturer responsible for all tenement work, whether given out directly by himself or through a contractor, both tenement work and the contractor would quickly disappear.

The results of legislation on tenement-house work in the States of Massachusetts, New York, and Pennsylvania, in so far as they have been satisfactory, have depended not so much on the terms of the law as on the efficiency and integrity of the inspectors. With their enormous powers and wide discretion legislation has created opportunities for bribery and political favoritism unusually tempting. The law of Massachusetts, although inferior to that of other States, has yet accomplished far better results, owing to the civil-service regulations and the permanent tenure of the inspectors. Although not directed to the improvement of wages, nevertheless, by restricting the amount of tenement work, the wages for this class of employment in Boston are 40 to 50 per cent higher than the wages in New York for the same work. The depressing effects of immigration on wages, therefore, are partly counteracted by the restriction of tenement-house work.

This class of legislation is, on the whole, superior to the proposed total abolition of tenement-house manufacture, since it makes it possible to abolish the work in the majority of cases, but also makes it possible to grant exceptions in those emergency cases where hardship would be caused by its prohibition.¹

While neither the Federal Government nor any State government has undertaken to abolish tenement-house work where the work is sold to private purchasers, yet, where the Federal Government is itself a purchaser of clothing, it has undertaken to establish this condition. Since the Spanish-American war, when it seemed to be clearly demonstrated that the contagion of measles and other diseases in the army camps was owing directly to tenement-house manufacture, the War Department has inserted in its contracts with the manufacturers of military garments that all work must be done in a regularly organized factory, and no part of the work shall be sublet to contractors. In the several States clothing for the National Guard is usually purchased from the War Department, and is therefore protected by the specifications

¹ P. 380.

of that Department; but in those States where clothing is manufactured by the State authorities there exist at present but few restrictions. These are in Massachusetts, which provides that military clothing shall be made in the city of Boston, and not in sweat shops; in California, that it shall not be made by convict or Chinese labor; and in New York, that it shall be made under the conditions prescribed by the factory and sweat-shop legislation of the State. In one State, Pennsylvania, clothing for the National Guard is made in the manufacturing department of the State arsenal, and in the case of the United States Navy, clothing is manufactured by the naval clothing factory, navy-yard, Brooklyn.¹

The legislation of Great Britain and Canada and the ordinances of the London county council go further than the legislation of American States, in that their object is not merely the protection of the public, but also the protection of the workers in securing a "fair rate of wages." In Canada this object is thought to be secured by prohibiting subcontracting.

The wish of the purchaser to know the conditions under which his garments are manufactured is, the basis of the Consumers' League, organized in May, 1899. This league adopts an official label to be attached to the garments of those manufacturers who abide by the conditions imposed upon them—that they obey the State factory laws, that they manufacture the goods on their premises, that they employ no children under 16 years of age, and that they use no overtime work. More than two-thirds of the labels granted to manufacturers by this league are in the State of Massachusetts, owing to the excellent factory legislation in that State and especially the thorough manner in which it is enforced.

Besides the label of the Consumers' League, the organization of the garment workers has adopted a label based on slightly different principles. This label is granted only to those manufacturers or contractors who employ solely union help. Hitherto the garment workers' label has been somewhat misleading, since it has been granted to contractors and has not stood for the absence of sweatshop conditions; but by a resolution adopted in May, 1901, the label henceforth is to be furnished only to those manufacturers who maintain exclusively their own shops.²

An appendix to this chapter, dealing with the Philadelphia trade, prepared by Helen Marot and Caroline L. Pratt, is added at pages 723-743.

CIGAR MAKERS.³

The problem of the effect of immigration on the wages and employment of cigar makers can not be separated from the effects of machinery, division of labor, country competition, and the competition of women and girls. The machinery which has been introduced in recent years, known as the "suction table," is exceedingly limited in character, but it is such that less skilled workmen and girls can take the place of the skilled mechanic. With this new condition, girls working at \$4.50 per 1,000 cigars, where the union scale is \$7.50 to \$8.50 per 1,000, can earn wages amounting to \$7.50 per week. The large establishments in New York and Philadelphia which have in recent years extended the sale of advertised cigars employ almost exclusively girls and women. But it must be noted that these are the American-born daughters of immigrant parents.

Of similar effect upon the wages of city cigar makers is the remarkable development of country shops. This is especially true in Pennsylvania where, in the counties of Berks, Bucks, Montgomery, York, and Lancaster, Philadelphia manufacturers have located their annexes, and, in place of the very low union scale of \$7.50 in Philadelphia, they can have the same cigar made for \$5.50. This rate is so low that the suction table is not profitable. The advantages of country employment to the

¹ P. 382, 383.

² P. 384.

³ P. 385 ff.

manufacturer consist often in the favorable inducements—in the exemption from taxes, even in donations of ground and subscriptions for buildings—offered by the citizens, but mainly in the low cost of living. Much of the work, however, is crude, and the 10-cent cigars are not made in these localities on a large scale.

Contrasted with country competition and the employment of women and girls are the efforts of the labor organization, which includes about 40 per cent of the workmen in the trade. The union, through its strong organization, has effected a continuous increase in wages paid to its members, so that it is estimated that on the class of work where sweat-shop and nonunion labor earn \$6 to \$9 a week union labor earns \$12 to \$18. But the union scale is based largely upon the union label, which, being in effect a substitute for the expensive advertising of the large manufacturers, enables the members of the union to distribute among themselves the \$4 or \$5 per 1,000 which the manufacturer usually invests in advertising. In this way the union maintains a high scale of wages, keeps immigrants out of its ranks, and prohibits the use of machinery, but at the same time loses control of the large establishments employing 200 to 2,000 working people. The immigrants crowding into the cheaper lines of work and the unorganized branches of employment have forced down the prices to a very low point, so that in the Jewish sweat shops of New York and Chicago cigars are manufactured at \$4.50 per 1,000 equal in quality to those which are made at the union scale of \$8.50 and \$9.50.

On account of these several peculiar conditions in the trade it may be asserted that at the present time the effect of immigration is less than the effect of country competition or of the employment of women and girls; and that, were it not for the label, these three factors cooperating would depress wages, except in the highest grades of work, below the point at which the members of the union could afford to work longer at the trade.

COAL MINERS.¹

The coal mining industry of the United States has from its earliest days been a field peculiarly affected by the influx of fresh immigrants. In the earlier days they were mainly from the British Isles—Englishmen, Scotchmen, Welshmen, and Irishmen. Within the past 20 years these earlier nationalities have been displaced by immigrants from Austria-Hungary, Italy, and Russia. According to the census of 1890 the foreign-born miners constituted 58.1 per cent of the total in Pennsylvania, 57.4 per cent in Illinois, and 59 per cent in Ohio. In the mines of the Philadelphia and Reading Coal and Iron Company in 1896 one-fourth were Polish, one-fifth were Irish, one-fifth Americans, and one-tenth were, respectively, Germans and Hungarians. In the mines of Illinois in 1899 the foreign-born miners in the order of precedence were Germans, English, Italians, Polish, Irish, Scotch, Austrians, Bohemians, and Hungarians.

The principal complaint arising from the presence of foreigners is the alleged oversupply of labor. This is shown in the diminished number of days for which employment is obtainable in the course of the year. The fact that there is a seasonal character in the mining of coal is exaggerated by the presence of an oversupply of labor. Relying upon such oversupply, the operator is content to mine his coal only on the receipt of orders, or with the orders in view, and does not endeavor to distribute employment throughout the year. Bituminous coal can not economically be stored, as it disintegrates with exposure; but, on the other hand, since bituminous coal is used mainly for manufactures and railroads, while anthracite coal is used for domestic purposes, the demand for bituminous is more continuous throughout the year, and the number of days of employment is greater. Coupled with this consideration is the fact that the anthracite coal mines lie nearer the Atlantic coast and are

¹ P. 399 ff

XXXIV THE INDUSTRIAL COMMISSION:—IMMIGRATION.

more accessible to the inroads of immigrants, and consequently the oversupply of labor is greater than in the bituminous mines which lie at farther distance from the ports. These influences appear in the aggregate number of days employed in the different fields. In 1892 anthracite coal miners worked 206.6 days out of a possible 310, but in 1898 they worked only 148 days. On the other hand, bituminous coal miners in Pennsylvania, in 1892, worked 208.6 days, and in 1898, 208.5 days. Comparing these industries with 47 manufacturing industries in the State of Pennsylvania, it appears that for bituminous coal mining there is employment for 68 per cent of the possible working days; in anthracite coal mining for 48.5 per cent of the working days, and in 47 leading industries for 97.3 per cent of the working days. On an average the workers in iron, steel, cotton, woolen, and general manufactures have an opportunity to work from 35 to 50 per cent more of the total time per year than the coal miners in the anthracite field, and from 30 to 40 per cent more than the bituminous miners. The increase in the number of employees in the anthracite region has meant not so much an increase in the amount of the resulting product as a decrease in the number of days worked per man.

Closely connected with the influx of immigrants is the introduction of machinery. This applies only to bituminous coal mining, since anthracite coal is more refractory and has not yet been submitted to machine cutting. At the same time it is doubtful, in the opinion of many operators, whether machinery could have been introduced in the bituminous coal mines had it not been for the introduction of foreign labor. The English, Scotch, Welsh, and Irish miners in earlier days successfully resisted the machine, and it was their displacement by Slavs and Italians that permitted the introduction of machinery.

Machinery has had a twofold effect—it has greatly reduced the cost of mining coal and has displaced skilled labor by unskilled labor. The reduction in the cost appears in the investigations of the United States Department of Labor, which shows that one mine, where formerly the cost per ton by hand mining was 71.2 cents, was able to mine the same coal by machinery for 42.3 cents, and that another was able to reduce the cost from 77.6 to 42.4 cents.

The effect of machinery on skilled labor is shown in two establishments reported by the bureau of statistics of Illinois, in one of which, mined by hand, the miners numbered 71.2 per cent of the men employed, and in the other, operated by machinery, the cutters, blasters, and timbermen who took the places of the miners were only 9.37 per cent of employees. The machine has greatly subdivided the work, so that 7 or 8 men are required on various operations which formerly were performed by the individual miner. The smaller proportion of skilled laborers following the introduction of the machine has required even greater skill and endurance on their part, and the larger proportion of laborers who follow the machine and load the cars must have greater endurance and physical strength than formerly; consequently, the wages have not, in all cases, been reduced on the substitution of machine production, but the exhaustion and overexertion of the workmen have increased.

The most important circumstance which determines whether the mine worker shall gain an increase in wages with the introduction of machinery is the state of his labor organization. This is shown by the fact that with the introduction of machinery wages were continually declining until the year 1897, but in that year, after the organization of the union, wages increased 30 to 40 per cent, and in Illinois, where the union is strongest, the average gain in wages in machine mines was 36.3 per cent, whereas the average for all mines, including machine mines, was 26.4 per cent. Through this organization in Illinois the union fixes the price of machine mining at only 7 cents less per ton than the price for pick mining, whereas in Pennsylvania and Ohio, where the union has less strength, the differential is 19.2 cents. It is needless to say that this narrow differential in Illinois, while giving the miner a share in the advantages of machinery, is at the same time a discouragement to the mine operator in the introduction of machinery.

Labor organization among the coal miners has passed through extraordinary vicissitudes. The Welsh, Scotch, English, and Irish miners were well organized and maintained high wages, but in 1875, not owing to the presence of immigrants, but as a result of a strike against a falling market, their organization was entirely broken and their wages greatly reduced. Not until 1897, in the bituminous field, and 1900, in the anthracite field, was a reorganization effected, this time not of the original British stock alone, but also of the mixed nationalities from eastern and southeastern Europe. These new immigrants began displacing the earlier ones following the strike of 1875, and their numbers increased so rapidly that the general strike in 1887 for a restoration of the conditions of 12 years before was utterly defeated. The same was true of the strike in 1894. Owing to these disasters of the union the rates of wages were continually declining for more than 20 years. In Illinois, from 1881 to 1886, they fell 33 per cent; from 1890 to 1896 there was an additional decline of 17 per cent, but following 1897, when the union secured influence, wages rose the first year 26.42 per cent, and in the 2 years following they had increased 49 per cent for hand mining and 42 per cent for machine mining.

The problem of organizing the diverse races and languages of the mine workers has been more serious than that which has confronted any other labor organization in this or other countries. Not only have these races been divided by language, but equally or more by the antagonisms of religion, which usually have accompanied race divisions and have been played upon by the operators. In the earlier form of local organization it was the custom to organize each nationality separately in its own branch in order that it might conduct its business in its own language and then meet the other branches through its chosen representatives. This method was soon abandoned, first, because the non-English miners themselves wished to be in a better position to learn the English language, and, second, because the organization by nationalities brought together workmen in different mines whose legislative problems were different. At the present time the local unions are organized as English-speaking unions for each mine or district. The non-English members are represented in the executive board by one of their own race and in their business meetings the motions and speeches are translated by interpreters.

Naturally and necessarily the leaders of the Miners' Union are English-speaking persons, but it is a notable fact that the predominant race of leaders and officers is Irish. The Irishman possesses peculiar gifts in bringing together and organizing conflicting nationalities, races, and religions.

While there have been serious problems in the organization of mixed nationalities, an equally serious problem which has confronted the organization of these immigrants has been the competition of the unorganized Americans of native stock. This was fully shown in the experience of the miners prior to 1897, when their organizations in northern Illinois were defeated by the native Americans in southern Illinois. In the first mining district of Illinois the per cent of Americans is only 11, and in the seventh, in the southern part of the State, it is 80. Yet it was these American miners in the thick and more easily mined veins of the southern section whose competition reduced wages so low that they were actually earning less than in the northern districts. The success of the strike in 1897 consisted mainly in the fact that the southern American-born miners were brought into the union and placed on a basis of equal competition with the northern foreign-born miners.

A similar condition at the present time confronts the mining organization of the 4 great States of the bituminous field in the competition of West Virginia, where the native whites of native parents number 57½ per cent and the colored miners number 21 per cent of the total number of miners, compared with 20 to 48 per cent native whites of both native and foreign parentage in the other States. Prices and wages in West Virginia are 30 to 70 per cent below those under similar conditions in the other States. Colored miners of themselves present no greater difficulties than do

XXXVI THE INDUSTRIAL COMMISSION:—IMMIGRATION.

the native whites, since, in other Southern States, like Alabama, where they number one-half the miners, they are well organized and receive equal pay with the whites. Alabama coal, however, does not enter into competition with Northern coal, and the low pay of both whites and blacks is not threatening as it is in West Virginia. As far as the great northern central field is concerned the result (conditions in West Virginia has been that while the output of the other States has increased somewhat the output of West Virginia has leaped forward by bounds) and the organization of 150,000 bituminous mine workers, over one-half of whom are foreign born of diverse races, is menaced more by the unorganized Americans (native stock) than by their own internal divisions.

TEXTILE TRADES.¹

The textile trades exhibit in a remarkable way the combination of machinery, immigration, employment of women and children, and country competition. Weavers have more than doubled their capacity in the last 30 years, and, with the introduction of the Northrop loom, they are able to produce 5 times as much as they produced 40 years ago. The ring-spindle machine does twice the work of the mule spindle. With the increase of machinery the intensity of exertion of the weaver has greatly increased. Formerly, when both machine and thread were in an imperfect state the machines ran slower and there were more frequent breaks, but now, with better machines and better cotton, there is greater speeding and no cessation. In the spindle room, where formerly a hard-working spinner earned \$12 to \$14, the woman attending the ring-spinning machine earns only \$6 to \$8, and the work is not as hard.

With these improvements unskilled labor takes the place of skilled labor, since only a week or two is needed to learn to operate the ring-spinning machine and 3 or 4 weeks to run 4 looms and earn some money. This has been the opportunity for the immigrant. The succession of nationalities in the cotton-textile trade is well known by the public. The Americans 50 years ago were the only employees; then came the English, Irish, and Scotch. Owing to the high prices at the time of the war, wages rose, but the French Canadians, beginning to come in 1866, coupled with the decline in markets, brought a rapid decline in wages. This continued with variations until 1897, when earnings which 30 years ago were \$12 to \$13 a week had been reduced to \$8 and \$10 a week. Since that time there has been a slight increase but this increase is again checked and a reduction is again in prospect owing to a new factor—the competition of Southern mills working 66 hours a week with low fixed charges, improved machinery, and exceedingly cheap labor.

The French Canadians brought a remarkably low standard of living. They were willing to work for almost any wages, but gradually their standard has improved and they copy the living of their English, Irish, and American fellow laborers. At the same time they look upon American employment as more or less temporary. The French farmers in Canada send their families to Fall River and other New England towns to earn a little money and then return. When the price for labor rises they come in large numbers, and when the price falls large numbers return, but more so than remain than was formerly the case. On account of their temporary residence they do not seriously strive to raise their standard of living, but consider themselves able to endure privation in view of the savings which they may take with them to their Canadian homes. Formerly they placed their children at work at very low ages, but now legislation has stopped this practice. Again, in the earlier days they worked unlimited hours, but since the law of Massachusetts fixes the hours at 58 per week their competition in this direction has been restricted. In these two ways, through legislation, by prohibiting child labor and by reducing the hours of employment of women, the State of Massachusetts has dealt directly with the evil factors of

¹ Pp. 420 ff.

French-Canadian immigration, and has to a certain extent protected the American standard of living.

Labor organization is exceedingly difficult, owing to the variety of nationalities. In the card-picking and ring-spinning branches at Fall River, whereas 55 per cent of the employees are Irish, English, and Scotch, these races constitute 75 per cent of the union; the French, with 30 per cent employees, are 20 per cent of the union; Portuguese, Poles, and others, with 15 per cent employees, are 5 per cent of the union. Proportionate to their numbers the French, Poles, and Portuguese are poorly organized. In the more highly skilled occupations, as that of mule spinners, where they have been in the country for a longer time and have become Americanized, they are more eager to maintain union principles. But the mule spinners are being displaced by the cheaper ring spinners. While it is doubtless true that the French Canadians, with their low standard and their incapacity for organization, have greatly reduced the earnings of textile workers, it is also true that now, when they show a readiness to improve their condition, they are handicapped by a new factor not connected with immigration—the competition of native labor in the cheaper districts of the South.

BOOT AND SHOE WORKERS.¹

In recent years immigration has played a minor part in this trade, except where in certain isolated cases Armenians and Italians have been introduced in order to break a strike. Probably 85 per cent of the workers throughout the country are native born. The difference in wages which has occurred has been owing to the introduction of machinery and the employment of women and girls in country districts. These are generally the children of immigrants, so that taking into account the 15 per cent of foreign born and the 85 per cent of native born, it is probably true that immigration, both of the first and second generation, plays a leading part in the industry.

WOODWORKERS.²

The enormous development in recent years of the factory product in this industry has been accompanied by a corresponding influx of immigrants. Work which the carpenter formerly executed at the place of building is now prepared beforehand in factories, and these factories are manned to the extent of 50 to 75 per cent by foreigners. The wood-working factory is essentially a machine industry with unskilled labor. The majority are located in Chicago, Michigan, and Wisconsin. In the furniture factory out of 75 men perhaps only 5 are skilled mechanics, the rest being only feeders. In this way a large number of immigrants are employed, and often children and women find places. In cabinetmaking 50 per cent are Germans, who are considered the best men in the trade, and 25 per cent are foreigners of all other nationalities, and 25 per cent are native born. In furniture factories in country districts in Wisconsin the Germans have worked recently at as low as 50 cents a day and their women were doing carpenter work at the bench.

The organization of woodworkers relies to a large extent on outside help. For example, in Chicago they control 60 per cent of the sash and door employees, the union being supported prior to 1900 by the building trades of Chicago. After the defeat of the building trades council in the strike of 1900, the hours of labor in the building material factories were increased from 8 to 9, owing to the loss of this support. The unions control 95 per cent of the office and saloon factories, but none of the regular furniture factories, and only 1 desk factory. In the box-making trade the union shops are those which have probably 90 per cent skilled labor, while the nonunion shops have 90 per cent unskilled labor, thus showing the success of organizing skilled mechanics, but the difficulty in organizing machine shops with their large proportion of immigrants, women, and boys. In these shops the union scale runs from \$2 to \$2.50 dozen and the nonunion scale runs from \$1 to \$1.75.

¹ P. 422 ff.

² P. 428 ff.

IRON, STEEL, AND MACHINERY.¹

The iron, steel, and machinery trades illustrate the fact that skilled occupations, affected only by immigration from western Europe, have far less complaint to make at the present time than those unskilled trades affected by immigration from southern and eastern Europe. The machinists who come from Great Britain or Sweden have been accustomed to organization, and, bringing their "cards" with them, do not enter into strong competition with those already here. The iron, steel, and tin workers, whose immigrant competitors come from Belgium and Alsace-Lorraine, have been affected somewhat by alleged evasions of the alien contract-labor laws, and their disastrous defeat at Homestead is ascribed partly to the importation of aliens. In the branch of the trade thus affected wages have been reduced and have not recovered their former standard.

The steel industry offers examples of the effect of immigration on the speed and exertion of the workmen. Formerly there were rigid restrictions imposed by the union on the amount of work which the team of men should be permitted to accomplish in the 8 hours' employment. This output has been doubled in the past 7 years, mainly because immigrants, with only a temporary interest in their residence here, would not submit to the restrictions.

More serious than immigration for the skilled workman of the iron and steel trades is the introduction of machinery. This is a means for introducing low-grade labor from southern and eastern Europe, but so rapid has been the growth of the industry that, although the skilled workmen are a continually smaller proportion of the number employed, they are continually increasing in absolute numbers, thus being able to maintain the standard of earnings, but yielding a larger and larger proportion of their work to machinery and immigrant labor.

GLASS WORKERS.²

The glass workers illustrate in certain branches the way in which immigration has compelled the removal of restrictions on output. In some departments of the flint-glass trade there is the limited system, and in others the unlimited. In the unlimited branches of the work there are scarcely any foreigners, since the skill is of a very high degree and the speed is so great that immigrants can not endure it. The men work in teams, earning \$6 and \$8 a day, paid by the piece, and the trade longevity of the men, owing to the severe exertion, is seriously reduced. In other branches of the work, where formerly there were agreements with other groups of employers, the quantity of output was limited; immigrants found ingress to nonunion establishments and, working on an unlimited system, in the course of time compelled the union, in order to protect itself, to remove the restrictions on its own members. In one branch the increased production, with the removal of the union limitations, amounted to 100 per cent, and the increase in earnings about 15 per cent.

The flint-glass workers protect themselves against immigration by a discriminating initiation fee, charging \$3 for Americans and \$100 to foreigners, recently reduced to \$50. This discriminating fee depends for its success on union monopoly of the business, since immigrants unable to pay the fee are forced to enter nonunion establishments. Glass-bottle blowers prohibit the admission of foreign blowers, but the president of the union is given authority to make exceptions if the executive board thinks necessary. The union does not think foreigners should come here, because whenever the trade needs more workmen the union, through its annual agreement with the manufacturers, increases the apprentices accordingly, and when trade is dull and there are plenty of idle members the manufacturers agree to take no apprentices, or to take a smaller proportion. The initiation fee is normally \$100 for foreigners, compared with \$5 for Americans, but this high fee has been levied but once in 5 years. Foreigners usually pay \$50, but when they are taken in from a non-union factory, which is usually the case, they are charged nothing.

¹ Pp. 424, 425.² P. 425, 426.

BUILDING TRADES.¹

The strong organization of the building trades in American cities, and the rapid growth of the cities themselves have contributed to maintaining high standards of wages. The branch most seriously affected is that of the carpenters, and in this case the competition of country and suburban carpenters in the interior cities is more important than the competition of immigrants. On the other hand, along the Canadian border the competition of Canadians who come from country districts and small villages of Canada contributes to a lower scale of wages than those maintained at interior points. The granite workers in the cities complain of work done at the quarries, where mainly immigrant labor is employed and the wages are very low, but they are able to maintain the high standard in the cities themselves. Stonecutters have complained in times past of so-called "harvesters" who come from abroad during the busy season, but by the discriminatory initiation fee of \$50, compared with the American fee of \$10, this form of competition has been checked.

The bricklayers, one of the strongest organizations in the building trade, has successfully protected itself in New York against immigrants by requiring its members to be citizens of the United States, and by requiring a second initiation fee of those who absent themselves for more than 1 month from the locality. Plumbers receive competition only from England and Scotland, where the immigrants have strong unions of their own, and they readily abide by the union rules when they migrate. Hod carriers and building laborers are naturally the branches of the building trade most affected by immigration, but owing to their association with the other stronger trades, based sometimes on sympathetic strikes, they have been able to maintain standards of wages higher than those received by common laborers.

LONGSHOREMEN.²

The organization of longshoremen on the Great Lakes is one of the most striking instances of the way in which organization overcomes the disadvantages of race competition. Formerly, under a system which was substantially that of subcontracting or sweating, a man received very low pay for very irregular work, but since the organization of their international union in 1897, in which they have become their own contractors, their year's earnings have doubled. Their local branches are often organized by races, each with its own representation in the central council, which conducts business in English and has jurisdiction over the several branches. The same arrangement exists at Newport News between the white and colored races.

PADRONE SYSTEM.³

The so-called padrone system of the Italian immigrants differs at the present time essentially from the original system as first introduced in this country. The term itself in Italy, as well as in the early stages of Italian immigration, applied in general to the employment of children in the roving professions, such as strolling musicians, performers on the harp and hand organ, and street acrobats. These children were collected by the padrone, the "little father," from the hillsides of Italy, and, practically in the condition of slaves, were carried from Europe to America. This practice was prohibited by law, and does not now exist except in irregular and surreptitious ways.

But it was respecting adult Italian labor that the padrone system acquired its earliest and its present ill reputation. In the early days of Italian immigration the apprehension of change, the fear of going to a strange and unknown land had to be counteracted by a guaranty of some kind. The padrone therefore was an importer of contract labor. He engaged with the American manufacturer or contractor to furnish cheap labor, and then in order to secure this labor himself went to Italy,

¹ Pp. 426-428.² P. 428.³ Pp. 430-442.

entered into contracts at 40, 50, or 60 cents a day, and furnished labor to the manufacturer at \$1 to \$1.50 a day. Sometimes he would act upon his own initiative, and enter into a contract with an Italian at, say, \$40 a year for 2 years, and then would take his chances after importing the Italian laborer of finding employment at wages three or four times as high. This form of the padrone system has, however, at the present time entirely disappeared. The immigration of Italians has reached such enormous bulk, and the communications of those already in the country attract their fellow-countrymen so successfully, that it is necessary no longer to employ the system of contracting in order to induce immigration. The padrone system at present is strictly a system of "bossism," and the so-called padrone is known by the Italians themselves not as padrone but as "the boss." This padrone thrives simply on the ignorance, illiteracy, and distrust of the green immigrant. His revenues are, in the words of Dr. Rossi, "the forced tribute which the newly arrived pays to those of his own race who are acquainted with the ways and language of the country." The padrone's methods are analogous to those of an employment agency, though he does not have an employment-agency license. He often goes to a regular employment agency in search of work for his fellows. His business is to accompany his gang, and to continue with them at their place of work, but he is not their foreman and not their contractor. He acts, perhaps, as interpreter, but mainly as the proprietor of the shanty or boarding house in which they crowd together for the time being. His profit is partly in the commission which he receives from the employer, but mainly in the prices which he charges for food and lodging. The food which he furnishes has a monopoly value, because his subjects are prohibited from purchasing elsewhere on pain of discharge. For this reason he is able to charge 10 cents for macaroni which in the market costs 3 cents, or 15 cents for beer which can be purchased for 4 cents, and so on. He has this strong hold largely because the Italians suffer more than any other race from irregular employment. In the winter there is no employment at all. The laborers must therefore board with the contractor, a dozen or more in one room, under the most unsanitary conditions.

The padrone is usually in combination with an Italian banker, who, out of the deposits of the laborers themselves who distrust the post-office and the American bankers, furnishes capital for the padrone to establish his shanty and pay the transportation of his help. The profits are shared by the padrone with the banker.

Laborers working under this system cost the contractor in Eastern States as low as \$1 per day during the period of depression, and at the present time as high as \$1.35 to \$1.75 per day. On the Erie Canal in 1898, of 15,000 common laborers employed, only 1,000 were American citizens, 13,500 were Italian aliens, 350 were Poles, and 150 were Hungarians. The local laborers of the State were deprived of the wages they might have earned on this great public improvement, the merchants lost the benefit of their purchases, and at the close of the employment many of the Italians were left on the local authorities for support.

In the small country towns the padrone stands ready to furnish skilled help, such as masons, carpenters, stonecutters, and machinists, but in the larger cities he is confined to work upon sewers, railroads, waterworks, construction, and similar common employment. In public employment of the leading cities of the country at the present time the padrone system is not known to exist to any great extent. In Eastern cities rules are quite generally adopted either by the city council or by the State legislature intended to exclude this class of employment. In Philadelphia only those who are citizens of the United States can be employed upon work paid from the general tax levy, but aliens may be employed on work paid from assessments of benefits.

Italian labor has very largely displaced all other kinds of labor in railway construction in the Eastern States. The same is true of the Chinese and Japanese on the Pacific coast. The Italians in the Eastern States work from \$1 to \$1.25 per day,

rich is 25 cents less than the wages paid to other nationalities. In Maine the construction of large works was done by Americans and then by the Irish, then by the French Canadians, and now by the Italians brought over from New York and Boston. North Dakota the railroads have imported Italians from Chicago at \$1.40 per day, considerably less than that which American laborers receive.

SYRIANS.¹

The changing character of immigration and the rapid extension of its recruiting area toward the Orient is strikingly indicated in the case of Syrians. Beginning in small numbers some 10 years ago, their immigration amounted in 1900 to nearly 3,000 persons. This immigration is similar to the beginnings of all immigration from a newly contributing country, being, in the first place, stimulated by outside influences, in this case mainly by the American missionaries, and secondly, having a patriarchal or padrone character. Unlike the padrone system, the Syrian immigrants bring with them the initiative clan organization of the family, so that it is not strange that a score, or even hundred, may claim relationship. The authority of their superiors, owing to this relationship, plays an important part in their migration, but more significant is the fact that they come mainly from the cities and towns of Syria, and that they number only a small proportion of peasants or workingmen. Their characteristics are those of the business man or trader. In New York a score or more of Syrians are reputed to be worth from \$10,000 to \$40,000. These are the most enterprising of the Syrian population. In their business activities in this country—mainly peddling—they rely to a considerable extent upon the help of their wives and daughters, and these women extend their enterprise to many parts of the United States.

As far as the Syrian is a wage-earner his field of occupation is mainly in the old first Ward of New York City, where probably 6,000 of the estimated 25,000 Syrians of the country at present reside. In this locality the products manufactured are mainly those which their fellow-countrymen afterwards peddle upon the streets; they are combs, brushes, hat pins, razor strops, bibs, tuckers, aprons, wrappers, suspenders, toothpicks, and lace. As a factory operative, the Syrian is as fit as an experiment. Probably 15 to 20 per cent are employed in the textile mills, especially in the silk mills of New Jersey. They are found in Lawrence and Worcester, Mass., and in Scranton, Pa. Silk mill owners have used Syrian help as a means in attempting to break a strike, but only rarely. As a worker, although tireless and docile, he is limited by his fatalism, which leads him to abandon a job when once he is driven. At the same time he has an instinct for weaving, and learns it quickly, and is preferred by certain proprietors to the Armenian or Italian. It may be stated in general that the competition of the Syrian does not bear directly upon native or earlier immigrant labor, but that he is displacing the Italian who had in turn already displaced the natives. In the silk mills, partly through the introduction of Syrians and Armenians, the price for weaving in the last 4 years has declined one-third.

The problem of labor organization is especially difficult with the Syrian. Other nationalities distrust him. He has not yet been brought into any organization, but his recently unrestricted competition has so lowered the price of his labor that he himself is dissatisfied, and is making the first overtures to get into line with the other nationalities.

In the Syrian quarter in New York the tenements occupied are old and in bad condition. The poor Syrian contracts to pay \$5 to \$7 for two rooms; sometimes he is able to get one room for \$4 a month, and proceeds to crowd his family of 7 persons into it. It is not extraordinary to find 6 or 8 women making their headquarters in such a garret; their husbands away peddling and their children in institutions.

¹ Pp. 442-448.

The institution is, curiously enough, one of the great anticipated advantages of immigration to America. He recognizes it as "the college," a term which he has applied in his own land to the charity institutions of the missionaries; and as soon as the law and the administration permit the Syrian brings his children to "the college," to be supported by the public until old enough to assist him in earning a living.

At the same time the standard of living is improving. A cooking stove is the first new necessity added to the room; next comes a bed as a substitute for the rug or blanket. As to citizenship, probably there are 300 fully naturalized Syrian-Americans in New York City.

THE FOREIGN IMMIGRANT IN NEW YORK CITY.¹

Of all the great cities, New York is perhaps the most intimately concerned with the problem of immigration, since of the nineteen millions and odd foreign immigrants who have landed in this country between 1820 and 1900, approximately 13,500,000, or about 71 per cent, have entered at this port. On account of this pre-eminent importance of New York in the problems of immigration, considerable space has been given in the report on the economic effects of immigration to a chapter prepared by Kate Holladay Claghorn, Ph. D.

Down to 1870 immigration was mainly British, Irish, and German. Since that period there has been a rapid decrease in the proportion furnished by these races in successive years, and a rapid increase in the proportion of immigrants from Italy, Austria-Hungary, and Russia, until in the year 1899-1900 British made up only 2.8 per cent, Irish 8 per cent, Germans 4.1 per cent, and Scandinavians 7 per cent of the total immigration, while immigrants from Italy made up 22.3 per cent, those from Austria-Hungary 25.6 per cent, and those from Russia and Poland 20.2 per cent.

The immigration problem was felt as a serious one in New York City as early as 1819. In that year the managers of the Society for the Prevention of Pauperism, in their second annual report, outlined the problem much as we know it to-day, complaining of the pauperism and the general social and moral evils that were likely to follow the influx of immigration.

The complaint was made as early as 1817, while the country was as yet sparsely settled, that immigrants were lingering in crowded cities instead of proceeding to the interior, where there was need of their services.

An evil especially felt, and ascribed to the foreign immigrant, was an increase in sickness and of the death rate in the city. Hospital accommodation had to be provided for "diseased emigrants" as early as 1769. Newly arrived immigrants were the principal victims of the yellow-fever epidemic of 1795. The city inspector for the year 1816 ascribed the great mortality of that year to the "constant influx of immigrants." From this time on city inspectors called attention again and again to immigration as a cause of disease, their reports showing in especial a great increase in consumption of the lungs, typhoid and typhus fever, and smallpox, coincident with increase in immigration.

Much of the disease brought in by immigrants was due to bad conditions on ship-board, to neglect by shipmasters of the simplest sanitary precautions, to their failure to provide for proper food, ventilation, or cleanliness.

Various Government regulations made for the purpose of doing away with these evils worked to reduce them; until in 1864 it could be said that the diseases engendered by "confined air, filthy habits, bad fare, and long voyages," were no longer a source of serious apprehension.

Another more important cause of ill health among foreign immigrants in New York was bad housing.

In the course of the city's growth business pressed into residence districts, driving out the well-to-do residents who objected to the noise and bustle of a business quarter. The old private residences left behind were, in part, pulled down to give place

¹ Pp. 449-492.

to business houses; in part were turned over to occupancy by the poor, who crowded into them—4, 5, and 6 families to a house originally built for the uses of 1 family only. In such quarters foreign immigrants found their first homes.

By 1834 overcrowding was recognized as a serious evil, the city inspector of that year stating that the great increase in the death rate was caused, largely, by bad housing.

Former good residence districts gradually being changed into tenement quarters were, at this time, the lower west side of the city from the Battery up toward Greenwich village and the Fourth Ward. The Sixth Ward, never so good a residence district as the others named, was now known as a long-settled Irish neighborhood and a center of crime and disorder. Housing was especially bad here and disease flourished..

As the poor population of the city increased, largely from foreign immigration, in addition to the old private residences turned over to their use, large barrack buildings, especially built for their accommodation, were provided for them. From the use of the older type of tenement house, the abandoned family residence, had come the great crowding of the poor into cellars and attics, which was an especial evil of the time. The newer barrack type, by housing more people in its greater number of stories, to some extent did away with the necessity for cellar dwellings, but as they were built to a greater height than the old dwellings and covered every available foot of ground space along narrow "courts" and "alleys," the light and ventilation they could receive was reduced far below the limits of health. It was said in 1842 that occupancy of these courts and the cellars of the old type of dwellings was the cause of the high death rate from consumption shown by the foreign born. By 1864 it was noted that the poor population of New York had become more and more concentrated in given areas, and the rate of crowding, by houses, far exceeded that of other cities. The total number of tenant houses was 15,309; the average number of families to each was $7\frac{1}{4}$. The number of persons residing in tenant houses and cellars was 495,592. Tenements were built to a greater height in stories than before, and courts, alleys, and yard spaces were smaller and narrower, consequently affording less light and air.

It was noticed at this time that poor people were not only concentrated in certain districts, but segregated according to nationalities, with their own theaters, military and national organizations, schools, churches, trades unions, and newspapers.

The lower west side had become a crowded tenement district, mainly inhabited by Irish.

Farther up on the west side the foreign tenement-house population pressed upon the native-born population up to Fourteenth street. From Fourteenth to Fortieth streets the two elements occupied the district side by side, the foreigners in the western part of the district, the well-to-do natives in the eastern part, the center of the city.

As the foreigners were coming into a district not thickly built up, there were comparatively few old residences used as tenements; nearly all were of the barrack type. Sanitary conditions were extremely bad.

Above Fortieth street the foreigners had outstripped the natives in the race uptown, occupying large tracts of otherwise vacant land as a squatter population in little shanties, which were kept in as uncleanly a condition as the tenements, but were, on the whole, more healthy, as each was occupied by one family only and admitted more light and air. The squatter population of the upper west side was largely German.

In the center of the city the Fourth, Sixth, and Fourteenth wards had increased in crowding and offensiveness and were largely occupied by Irish.

The east side below Fourteenth street was rapidly filling up with a tenant-house population, largely Irish. The Tenth Ward was at this time the one distinctively

German district in the city. Many new tenement houses of a pretty good character were found here. On the upper east side, as on the upper west side, foreigners in tenements were to be found along the half of the district nearest the river, the native born in private residences in the center of the city, while above the thickly settled part of the city was a squatter population of foreigners. Irish were scattered pretty well over the city; Germans were seen to be gathered more closely into colonies.

In all quarters tenement conditions were bad. Besides the general lack of light and ventilation were other especially bad sanitary conditions. Closets and privies were badly constructed and always foul. Yards and courts overflowed with sewage and other drainage. Owing to the bad condition of closets much offense was committed in the houses themselves, which reeked with foul odors. All of these bad conditions led to physical decay and this to moral degeneracy, which was, furthermore, directly brought about by a degree of overcrowding which made ordinary decency practically impossible. The connection between bad housing conditions and "filthiness, indecency, and lawlessness" was remarked by students of social matters again and again.

For these bad housing conditions the immigrants themselves were partly responsible. It is plainly evident that the tenement houses came into being in response to the demand caused by rapid immigration. The numbers and poverty of the immigrants naturally led to overcrowding, and their habits of life were such as not to improve bad conditions where such already existed. But the landlords were not responsible, as they had it in their power to determine special conditions of housing, and they chose, for the sake of exorbitant profit, to violate every law of health and decency in providing shelter for the poor.

In considering the problem of immigration as it affects the city, special race characteristics, as well as general housing conditions, etc., have to be taken into account. The Irish came here in especially bad physical condition, and their sickness and death rate in the city was higher than that of other peoples. They were notably drunkards, and of violent, quarrelsome dispositions. The worst tenement conditions were found in Irish neighborhoods, as contrasted with German neighborhoods. The Germans came here in good physical condition from healthy country districts, and were industrious, hard working, and orderly.

With respect to pauperism and crime, it was stated in 1860 that while the native born made up 48 per cent of the population, 14.2 per cent of the paupers, and 23 per cent of the criminals, the Irish, making up only 28 per cent of the population, were 41 per cent of the paupers and 55 per cent of the criminals; and the Germans, 15 per cent of the population, were 10.8 per cent of the paupers and 10 per cent of the criminals.

An interesting type among the Germans was the ragpickers or "chiffonniers," as they were then called. They lived in crowded and filthy quarters, but were industrious, orderly, and ambitious enough, many of them, to invest their savings, often considerable, in Western lands, to which they migrated. They afford a curious and interesting parallel as to habits and general character with the Italian ragpicking class which followed them many years later.

Migration to country districts was early thought of as a remedy for bad city conditions, and many schemes for the ruralization of immigrants and other poor people were tried one after the other.

These schemes, however, were none of them successful. The main reasons seemed to be that those who could make use of the opportunities for labor afforded in the interior could either get there themselves or find work in the city, while those who made up the bulk of the pauper class either would not go or would not be able to care for themselves if they did go. It is to be noted that the Germans largely fell within the former class, while the latter was mainly made up of Irish. The Germans in large proportion went of their own accord to the country, either directly

upon arrival or after having saved enough to purchase land, while the Irish persistently lingered in the cities.

On the whole; however, there was a fairly rapid dispersion of immigrants from the city up to 1860, the rate of dispersion, somewhat contrary to expectation, increasing with the increase of immigration.

PERIOD II, 1871-1900.

By 1890 foreigners from Italy, Austria-Hungary, and Russia, who were noted as coming in increasing numbers from 1870 on, had become a considerable element in the city's population. Although Germans and Irish still predominated, the total foreign born were at that time 42.23 per cent of the total population. Of the foreign born, regarded as 100 per cent, Germans made up 32.93 per cent; Irish, 29.76 per cent; Russians (Hebrews), 7.62 per cent; Italians, 6.24 per cent, and Austro-Hungarians, 6.16 per cent.

At this time, while the foreign born were 42 per cent of the population, native whites of foreign parentage were 38 per cent and colored 2 per cent of the population, leaving only 18 per cent of the strictly native element—native whites of native parentage. Females predominated in all of the above classes (except the colored, which is not taken into account); but dividing the city at Fourteenth street it is found that males predominate in all three classes below that line; females above it.

Comparing the foreign born to the native born of foreign parents, the first to the second generation of the "foreign element," the Hungarians, Scandinavians, Italians, and Russians show the highest proportion of the first to the second generation in the order named, the foreign born making up over 70 per cent of the total group of the first and second generations for each race for all four.

Of the second generation by far the greater proportion for all races had both parents foreign of the same race. The highest proportion is shown by the Bohemians.

Of the second generation born of one native and one foreign parent many more of all races have native mothers and foreign fathers than have native fathers and foreign mothers.

Examining the distribution of population over the city by wards, it is found that native whites of native parentage are distributed over the city with great evenness at a low degree of density. It is something of a surprise to find that in the down-town districts from which they were supposed to be entirely driven out they are as numerous to the acre as anywhere uptown. These are, however, in many cases third-generation Irish and Germans.

The Irish are also distributed quite evenly through the city, but more densely than the native population; while the Germans are gathered in some parts of the city into highly congested districts, from others they are almost entirely absent.

The Irish and Germans have pressed farther up the east and west sides than they were found in 1864—the former largely on the west, the latter on the east. On the other hand, the Irish are less thickly settled in their old districts—the Sixth, Fourteenth, and Fourth wards—than are some other peoples, and the Germans have pressed out of their old district—the Tenth Ward—into the territory to the north.

Italians by 1890 had come into the old Irish neighborhoods, and Russians and Poles (practically all Hebrews) into old German neighborhoods, driving out the older occupants. Italians were found in 1890 massed to the west of the Bowery, in the Sixth and Fourteenth wards; they were also found in the Fourth, the Eighth, the Ninth wards, and in Harlem. Russian and Polish Hebrews were massed to the east of the Bowery, with the Tenth Ward as their center, and were scattered along up the east side of the city to Harlem. Hungarians (a considerable proportion of whom were Hebrews) were gathered in a considerable colony east of avenue B, about

Houston street, and Bohemians on the upper east side, near the river, from about Fiftieth to Seventy-sixth streets.

Of the newer peoples coming in the Italians and Hebrews are the most important as affecting city conditions, both on account of their absolute numbers and their tendency to remain in the cities.

The few Italians noted in the city's population at an earlier period were mainly a vagabond but harmless class—ragpickers or organ grinders. These were noted in the Sixth Ward as early as 1864. A colony of Italian ragpickers was found in the upper part of the Fourteenth Ward, a few years later, where they were described as to filth and overcrowding in terms that would have applied equally well to the German ragpickers of 30 years before, but were said to be "peaceable, thrifty, and orderly," never begging or stealing, and keeping generally out of trouble.

Later came the class of unskilled day-laborers—steady, industrious peasantry in the home country—who now make up the bulk of our immigration. The men at first come alone, and return to Italy after a season or two of work, with their earnings, but later bring wives and children to this country and settle down here. Besides the day-laborers are now to be found in the city many Italian tradesmen—barbers, bootblacks, fruiterers, shoemakers, etc. These, in the main, come from cities in Italy, as the day-laborers come from the country. They are ambitious and generally successful in business, the more successful of them moving to the suburbs and becoming property owners. There are also many skilled workmen from the north of Italy employed in the city. All classes, except the most prosperous, live in crowded quarters, in bad air, and more or less dirty surroundings, but they are highly industrious, thrifty, and saving. Some are ambitious, but as a whole they are slower than some other peoples to take up American habits and customs. Italian children, however, are rapidly Americanized. Coming under the influence of the public schools they are generally satisfactory pupils, mainly in the line of manual work and the arts, however, rather than in bookwork, and on leaving the schools try to take up occupations of a higher grade than those their parents are engaged in.

Even the adults feel more or less of the Americanizing influence of the schools. Evening classes are held for them, which, while giving instruction primarily in the English language, incidentally teach something of American citizenship in an informal way.

Hebrew immigrants in the city have passed far beyond the narrow boundaries within which they were found in 1890. They have pretty well filled the east side below Fourteenth street, the former German inhabitants being almost entirely dispersed, and a large Hebrew colony in Harlem has been formed.

These immigrant Hebrews are found in conditions of extreme filth and overcrowding, but, unlike the adult Italians, they have definite aspirations toward social, economic, and educational advancement. Economic prosperity comes to them with surprising rapidity. Much tenement property is owned by Russian Hebrews, who, a few years before, were themselves living in crowded tenement quarters. The poorer among them will make great sacrifices to keep his children in school, and the children themselves are considered as perhaps the most satisfactory and successful class of scholars the schools have to deal with. They fill the high schools and college and are especially anxious to get into the professions or into the higher class of commercial pursuits.

Like the Italians, the Hebrews are, in general, a quiet, orderly, industrious people but for both peoples tenement-house life tends to their physical and moral deterioration.

The Jews have shown a low death rate even in tenement districts, but tuberculosis a disease fostered by tenement conditions, is gaining a great hold on them. The Italians, too, are subject to tuberculosis, and there is considerable general sickness among them, especially among the children.

The moral surroundings also are bad for them. In tenement districts the unsophisticated Italian peasant or the quiet, inoffensive Hebrew is thrown in contact with the degenerate remnants of former immigrant populations, who bring every influence to bear to rob, persecute, and corrupt the newcomers.

Both Italians and Hebrews are accredited with a tendency to pauperism from their practice of turning their children over to institutions as far as possible. In doing this, however, they are mainly trying to secure what they consider a legitimate educational advantage, as well as support, reasoning imperfectly from the analogy of the free day schools. The parents themselves are not paupers. They work unremittingly and are rarely found as charges upon public or private charity. The census of 1890 shows that the Irish still lead the list of paupers, as they did 50 years ago, the proportion of paupers to the thousand of population of the same race element for the whole country being $7\frac{1}{2}$ for the Irish, $2\frac{1}{2}$ for the Germans, a little over 2 for the English, $1\frac{1}{2}$ for the Bohemians, eight-tenths for the Italians, and six-tenths for the Russians (Hebrews).

As to criminality, the census of 1890 showed that while Italians were 1.98 per cent of the general population, Italian prisoners were 3.7 per cent of the foreign prison population, Irish were 20.23 per cent of the total population and 35 per cent of the prison population, English in like manner, 9.82 per cent and 12 per cent; Russians, 1.97 per cent and 1 per cent; and Germans, 30 per cent and 19 per cent.

The crime rate for the Italians as compared with the Irish should be modified by the consideration that their general population is so much more largely made up of adult males than is that of the Irish, for whom the large proportion of women and children reduces the crime rate. The crime rate of Italians here will naturally be reduced by the incoming of women and children in increasing proportions, and by changes going on in the home country itself, such as the growth of education, intercommunication, etc.; that seem to be reducing the crime rate there.

Many attempts have been made to reduce tenement-house evils by legislation affecting tenement houses. The most important pieces of legislation enacted in New York State dealing with this matter were, up to the present year, the laws of 1867, 1879, 1887, and 1895. These laws effected some improvement of the most glaring sanitary evils, such as arose from lack of sewerage, plumbing, etc., but under all of them overcrowding was not simply unchecked, but increased, and conditions of light and ventilation were not bettered. The "double-decker" tenement house, invented and introduced in 1879 as a "model tenement," kept quite within the provisions of all of these laws, but proved to be the worst type of tenement yet used. It was built to a still greater height than the "barrack" had been and covered, for all practical purposes, a greater per cent of the ground space. Thus light and ventilation were still further reduced, and crowding of population under one roof—with all its consequent evils—still further increased.

A tenement-house law passed in the present year, 1901, promises definite improvement as to light and ventilation in tenement houses hereafter to be built, by more stringent provisions as to yard and court spaces, height of buildings, etc., and for tenements of the old barrack type by provisions regarding windows in interior rooms. But nothing has been done to help the "double-decker," of which type are about 60 per cent of the tenements now in existence on Manhattan Island, in this regard. Sanitary evils still remaining will be materially improved by the new law; and in it social evils are for the first time touched upon directly in a tenement-house law, by provisions dealing with prostitution in tenement houses, providing in a practical way for the punishment of the prostitute, the landlord, and the lessee, in cases where the law is violated.

A serious hindrance to the effectiveness of former laws has been the difficulty of enforcing them, either through the disinclination or inability of the administrative officers to act. Provision has been made for the better enforcement of the new law,

XLVIII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

by the establishment of a special tenement-house department, which shall stand in public view as wholly responsible for the enforcement of the law, and shall have an adequate staff for that purpose.

But no radical reduction of overcrowding, the great evil of the tenement, may be looked for under the new law. Owing to high ground rents in the city a law that should effect this would involve so great a reduction of income from a given ground area to owners, at the rates of rental possible to the poor, as to put a stop to the erection of new tenements, and to drive those already occupied as such out of use. Such a law, indeed, could never be passed; but if it were it would practically deprive the poor of housing accommodations in the city altogether. On the whole, the newer immigration does not seem to offer any more serious problems than the old, except as they add to the total numbers, and increase overcrowding.

In the newer period sickness and death rates have fallen, the immigrants themselves are of fully as good a type as those who preceded them and in some cases they have brought positive improvement to the neighborhoods they have entered.

Migration is urged, as in the earlier period, to relieve the overcrowding which remains as a serious evil, but still there are difficulties in the way. Agriculture, the special industry of country districts, is probably the least remunerative of any of the great classes of industry. At least it is thought to be so. The large city is the great center for manufacturing and mechanical industries, and the great market for labor in these lines. In the cities, too, are found the hospitals, dispensaries, charities, libraries, and schools. These are great and substantial advantages to the immigrant, and he is not quickly ready to give them up.

AGRICULTURAL DISTRIBUTION OF IMMIGRANTS.¹

The foreign peoples now coming among us are, on the whole, especially skillful in intensive methods in farming; consequently room may be found for them not only in the sparsely settled districts (such as those of the Northwest and portions of the South) adapted to extensive agriculture, but in parts of the country now regarded as about full, where, however, intensive farming is needed to provide for the wants of the growing community, and will support a population of a density of indefinite limit.

Among the immigrant peoples noted for their success in intensive agriculture are the Scandinavians, Germans, Dutch, Bohemians, and Italians.

ITALIANS.²

The Italians who come to this country would naturally be expected to go directly into agricultural pursuits, as at least 80 per cent of the Italian immigrants now coming here were agricultural laborers at home. They do not do this to any extent, however, partly because in following this occupation they were at so great a social and economic disadvantage at home and can not imagine anything better here, partly because most of the Italians now coming here—those from the South—are unfamiliar with country life as we know it. In the home country they worked in the fields by day, it is true, but returned at night to crowded towns, in which they huddled themselves for protection against the dangers of the open country, such as brigands and malaria.

Italian immigrants have already formed centers of Italian population in the cities, which attract other immigrants. If some could be established in country districts, these settlements also would become centers of attraction and draw the Italian peasant away from the cities and out of reach of the camp followers of their own race, who gather in cities simply to prey upon them.

In other respects, too, city conditions are bad for the Italian immigrant. The bad housing causes disease in them and their children; the food they have to buy is poor. During the long idle winter that the common day laborer has to spend in the

¹ Pp. 492-646.

² Pp. 496-507.

city, because there is no work for him to do, he falls into habits of drinking and gambling that are bad for his health and waste his money.

The Italian Government has interested itself in the welfare of the Italian emigrant, and various laws have been passed to improve his condition, but the proper remedy has never been strongly enough urged, viz, to induce migration of the Italians from the city to the country.

Something, however, has been done in this way. Signor Secchi de Casale founded an Italian agricultural colony at Vineland, N. J., in 1878, which has been successful and has grown greatly, comprising now about 5,000 Italians, engaged in truck farming mainly. An agricultural colony was founded about the year 1880 at Bryan, Brazos County, Tex., by some Sicilians who were working on the Houston and Texas Railway. They are mainly engaged in cotton farming, have been successful, and now number about 500 persons.

In 1881 some well-to-do Italians in San Francisco made plans for a colony to engage in the raising of grapes and the making of wine. The enterprise was started as a strictly cooperative association. Funds were raised by monthly payments from shareholders, and land was bought at Asti, Sonoma County. It was planned that all permanent laborers employed on the estate should be members of the association, but as they declined to enter into this scheme, city business men remained the sole owners and managers of the concern. Many difficulties were met with in the early years of the colony, but it is now in a highly prosperous condition. For the past 20 years the industries carried on—grape raising and wine making—have given employment to over 200 laborers daily. The Italians in this colony were mainly from the Italian-Swiss cantons and from Piedmont.

Besides these colonists at Asti there are many other Swiss-Italians in California, successful as truck farmers, ranchmen, and dairymen.

Italians are found in large numbers in Louisiana and Mississippi on the sugar plantations, from which, it is said, they are driving out the negroes. They are mostly Sicilians.

Agricultural colonies of Italians were established by Sig. A. Mastro-Valerio, who contributes the chapter on Italian colonists in this report—one at Daphne, Baldwin County, Ala., in 1890; the other at Lamberth, Mobile County, Ala., in 1893. The first colony is quite successful. The colonists carry on general and truck farming under intensive methods. The second colony now consists of about 12 families of very prosperous people, engaged in viticulture and truck farming.

At Sunnyside, Ark., an island in the Mississippi River, a colony of about 500 families, brought directly from Italy—from Romagna and the Marche—was established by Mr. Austin Corbin in 1895. Mr. Corbin provided everything needed for the use of an agricultural colony—teams, tools and seed, means of transportation, houses and allotments of land for each family, etc. Malaria, however, killed off large numbers of the colony. This circumstance and the death of Mr. Corbin in 1896, which put an end to improvements that might have reduced the disease, caused the abandonment of the colony. Many of the families went back to Italy, others went to South America, to Alabama, New Orleans, and to Northern States.

The remaining families went to form the colonies of Tontitown, Ark.; Montebello and Verdella, Mo., which are small, but fairly successful.

BOHEMIANS.¹

The Bohemians are fond of the soil, and have always been considered a rural people, but in this country the majority are found in cities. This is due partly to lack of capital to start on a farm, partly to the loneliness of life on American farms as contrasted with farm life in Bohemia.

¹ Pp. 507-510.

THE INDUSTRIAL COMMISSION;—IMMIGRATION.

Several attempts have been made to start agricultural colonies of Bohemians, but all have failed. Individually, however, Bohemian farmers have done well. The most prosperous are found in Iowa, Nebraska, Texas, and Wisconsin. Some in Minnesota and Nebraska have started cooperative mills and cheese factories. Few of the Bohemian farmers came in as farm laborers; most of them brought money enough to buy land at once. The Bohemian farmers settled mostly in groups, mingling little with other nationalities, and retaining their Bohemian habits. Where they are near other nationalities, however, they Americanize very rapidly.

Bohemian farmers are hard workers; their farms prosper, and they grow rich.

FINNS.¹

A large proportion of the Finns driven here in recent years by political troubles and economic hardships at home go directly to the country. Many are found in the Northwest, where they are regarded as excellent farmers.

They are going also to the South. A colony of these people was established about 2 years ago in Hickman County, Tenn., which promises to be quite successful, and another is planned for South Carolina.

Jews.²

The Jews are not generally regarded as an agricultural people, and, as a matter of fact, a larger proportion of this class of immigrants than of any other settle down in cities.

Not a little has been done, however, in the way of agricultural settlement by Jews.

In 1880 a group of these people from Odessa formed a communistic agricultural colony near Glendale Station, Oregon. They received some outside financial aid, and made encouraging progress, but finding themselves too isolated, they disbanded.

In 1881 a colony of 25 families located in South Carolina, removing after a year to North Dakota. After 4 years this colony was disbanded. Other colonies established at various points in the Western States about this time met the same fate.

In 1882 the first of the now well-known Jewish colonies in southern New Jersey was founded. This was Alliance, and was followed by settlements at Rosenhayn and at Carmel. All of these colonies received more or less aid from the start, but in a few years came to a crisis in which they had to be helped by the Baron de Hirsch fund. With this assistance they are still continued, and are in a fairly prosperous condition.

The Baron de Hirsch fund established in 1891 the best known and largest of the Jewish colonies, Woodbine, also in southern New Jersey. All possible assistance was given to make this, as well as the other three, purely agricultural colonies; but the attempt failed. Industrial pursuits had to be introduced into all four. It is said that practically none of the Jewish farmers in this region are gaining their entire living from farming.

The Baron de Hirsch fund has also assisted individuals by giving information about farm property and financial aid for its purchase. Many of the "abandoned farms" of New England have been purchased by Jews in this way, and the farmers have been quite successful. Purchasers were seldom new immigrants, but persons who had made some money in business—usually tailoring—in the city. This work has somewhat slackened up for the present, owing to the fact that business has been so good in the city as to keep persons there who might otherwise wish to buy farms.

So many difficulties have been found in the way of agricultural removal that plans of industrial removal are now being tried. A branch of the Baron de Hirsch fund, known as the Industrial Removal Society, is finding employment out of the city, in such occupations as they can follow, for Russian and Roumanian Jews. From

REVIEW OF SPECIAL REPORTS.

August, 1900, to the spring of 1901, about 2,500 persons have been assisted in this way, and are scattered to almost every State in the Union.

At present plans are being made to induce the removal of factories that employ Hebrew immigrants out of New York City. This plan, if successful, will do much to relieve the congestion there.

In Chicago the Jewish Agriculturists' Aid Society has been, for the past 13 years, engaged in establishing poor Jews on farms. They have so far placed 70 families—71 in the Middle West. The society believes in individualism rather than the colony principle.

That so few Jews, after all such efforts, are found in farming is not to be taken as an indication that they are generally unfit to carry on that pursuit. In most of the many cases reported of Jews giving up their farms, they have not been unsuccessful as farmers; they have simply seen an opportunity of doing even better in some other pursuit.

IMMIGRATION AND AGRICULTURE IN THE SEPARATE STATES.

NORTH ATLANTIC STATES.¹

Maine.—There are said to be greater opportunities at present in this State for immigrants than at any time in the past, in farming, lumbering, and general manufacture. Swedes, Canadian French, and Finns have proved the most effective as farmers and farm laborers. The farmers of this State, however, do not generally welcome a further influx of immigrants. In the State is a colony of Swedes at New Sweden, and one of Finns at South Thomaston.

New Hampshire.—Representative farmers heard from do not generally encourage the incoming of foreign immigrants. Where Swedes and Poles are employed, however, they seem to be liked. Good opportunities in the many "abandoned farms" offered for sale in this State are afforded to foreign immigrants with a little money to purchase land.

Vermont.—Farmers as a class would not favor the further influx of foreigners into the State. There are, however, opportunities for immigrants as farm laborers, as labor is very scarce. Many farm laborers now employed are Canadian French, Swedes, Norwegians, and Poles, the last three in increasing proportions of late years. Scandinavians do not settle down in colonies, nor do they seem to care to migrate to the northwest. Scandinavians seem to be regarded as the best farm help, but Poles are quite satisfactory. The State secretary of agriculture says that the French, Irish, and Norwegians, of the foreigners, make the best farmers, but Americans are more successful than any.

Massachusetts.—There are greater opportunities for immigrants than in past years. Poles are numerous as farm laborers and considered satisfactory. Many French Canadians are also employed. Many Portuguese are abandoning fishing and going on to farms. Farmers favor the coming in of the better class of foreigners.

Rhode Island.—Farmers would probably favor the influx of foreigners, as they might not be able to cultivate their farms without them. Of the foreigners, Swedes are found most effective as farmers and farm laborers. Considerable opportunity to purchase is given the immigrant in the many "abandoned farms" offered for sale at low prices.

Connecticut.—Most of the Irish of the second generation are farming for themselves or have gone into other employment, so that Italians, Swedes, and Poles are coming in to perform field labor. The Swedes and Poles and better class of Italians are satisfactory. Farmers do not object to the incoming of foreigners of the right sort. Besides the nationalities above mentioned as farm laborers, are Danes, Swiss, and Portuguese. Russian Jews are found in Salem and in other towns.

New York.—Irish and Germans prevail, of the foreigners, as farm laborers. German and Dutch settlers have made good farmers and good citizens, although somewhat clannish. They are said to be more thorough farmers than the Americans. Poles, Swedes, Russians, and Hungarians are found in some counties. Italians are also found as farm laborers and as farmers. Italians have been employed in sugar-beet culture. This industry in general affords especially good opportunities to foreign farmers and farm laborers, as they are willing to do the work required and Americans generally are not.

New Jersey.—Germans and Danes are said to be the best farm laborers. Hungarians and Italians are also employed. Foreign farmers are no more successful than Americans. Farmers would not object to the incoming of a good class of immigrants. Foreign laborers are becoming proprietors, especially near the cities, where they go into market gardening. There is considerable opportunity for immigrants who do not speak English.

Pennsylvania.—The State secretary of agriculture says that very few immigrants come to take up land for agricultural purposes—land is too dear, but farmers would not oppose the incoming of any person who wished to become a citizen and buy land. As to immigrants going into farming, however, representative farmers speak of foreign farmers in many parts of the State, largely Irish and German, and a few French, Belgians, and Poles. They also say that there is considerable opportunity for immigrants who do not speak English. Among farm laborers are already many Germans, some Irish and Swedes, and a few Welsh and Poles.

NORTH CENTRAL STATES.¹

Ohio.—Germans are found most effective as farmers and farm laborers, and their success is greater than that of the native born, owing to greater industry and frugality. Farmers as a class would probably favor further immigration, especially of Germans, who are already numerous in central and northern counties. Few foreigners are found in the southern part of the State.

Indiana.—There are many foreign farm laborers, mostly Swedes and Germans. They have a tendency to colonize, and where they settle the price of land advances. They make desirable citizens. There is little call for further immigration, however.

Illinois.—Foreign farm laborers through the central part of the State are mainly Germans, Danes, and Swedes, and an intelligent class of people. They show a tendency to colonize. Germans, French, Danes, Swedes, Scotch, and Irish are found as farmers in southwestern and central counties, and as laborers, except the French, in the same localities. Germans and Swedes are liked as farm laborers, and the call for immigrants is general.

Michigan.—Opportunities for foreign immigrants are good, as agricultural labor is very scarce. Farmers would favor further immigration.

There are many colonies of foreigners in the State. One in Ottawa and Allegan counties, of Hollanders, now numbers about 40,000. They were established in 1847, and have been very successful as farmers. An offshoot of this colony is located in and about Rudyard, Chippewa County, and consists of about 5,000 persons. Finns, Danes, and Norwegians are also located at Rudyard, and thought well of. Germans are scattered over the State.

There are also many French Canadians, especially in Menominee and Delta counties. They came in originally as lumbermen. They are not clannish.

The sugar-beet industry gives good opportunity for foreign laborers. Germans, Poles and Russians are found most effective as laborers in the sugar-beet fields.

Wisconsin.—Good opportunities are offered for immigrants, and farmers would favor further immigration to the State. Germans and Scandinavians are found

most effective as farmers and farm laborers. Foreign farmers, if German or Scandinavian, succeed better than the native born, owing to greater industry and thrift.

Especial opportunities for immigrants to settle on farms of their own are afforded in the "cut-over" lands, of which there are some 8,000,000 acres in the State, and which are to be had on favorable terms. One land company has been settling Poles on such lands for the past 14 years, selling land in that time to about 1,000 of them. Another land company is forming a colony of Russians, from Odessa, and bringing Germans and Norwegians from Europe and from other States to their land. Many private and railroad land companies are engaged in the work of getting settlers, including foreign immigrants. Two companies heard from maintain agents in European countries for the purpose of securing settlers.

"Wisconsin probably contains a greater variety of foreign groups than any American State." (Professor Thwaites.) The principal nationalities colonized here rank in numbers as follows: Germans, Scandinavians, Irish, British, Canadians, Bohemians, and Dutch. There are, besides, Belgians, Poles (many), Italians, Russians (Slavs and Hebrews, mostly in Milwaukee), Swiss (very prosperous), Finns, and Austrians. Many of these foreign groups occupy entire townships and control within them all political, educational, and religious affairs. In considerable districts, especially among Germans and Welsh, English is seldom spoken, and public schools are conducted in the foreign tongue. But as a rule the foreign-born people of the States desire to become Americanized. The second generation invariably drops foreign customs and habits.

Minnesota.—There are generally good opportunities for immigrants in this State. Scandinavians, Germans, Poles, Bohemians, English, Irish, and Canadians are found as farmers and farm laborers. Germans, Scandinavians, and Canadians are preferred. Foreigners are found in colonies and also scattered. A railway company with land to dispose of states that their customers have been mostly Scandinavians, Finns, and Poles.

Iowa.—There are good opportunities for immigrants, but farmers as a class would oppose a further influx of foreigners. Germans are found most effective as farmers and farm laborers, but the success of foreign farmers is no greater than that of the native born. English, Scotch, Irish, Welsh, Germans, Dutch, Bohemians, Poles, Slovaks, and Belgians are found as farmers and farm laborers.

Missouri.—Returns received from representative farmers in 13 counties of the State show diversity of opinion as to opportunity for immigrants. Foreign farmers—Germans, Irish, Scandinavians, and French—are found in every county. They seem to be more frequent than foreign laborers.

North Dakota.—Population in this State is still very sparse, affording good opportunity for new settlers. Farmers would decidedly favor the incoming of foreign immigrants. Germans, Scandinavians, German-Russians, Austrians, Dutch, Belgians, Bohemians, Poles, Irish, Canadians, English, Scotch, French, and Icelanders are found here as farmers and farm laborers.

South Dakota.—There is abundant room here for immigrants, and farmers favor their coming to the eastern farming counties. There are also opportunities for them in the western stock-raising counties. Germans, Scandinavians, Russians, Bohemians, Belgians, Dutch, Finns, Irish, and Scotch are found as farmers and farm laborers.

Kansas.—Foreign farmers and farm laborers are found throughout the State. Germans are most prevalent, closely followed by Swedes. There are also some Danes. Russians are found in various parts of the State and are prosperous. They are not Hebrews. The Union Pacific Railroad has land for sale in the State, and the land commissioner of the road says that a large proportion of their sales have been to foreigners, particularly to English, Swedes, Germans, and Russians.

Nebraska.—There are good opportunities for immigrants, and farmers would make them welcome. The nationalities found most effective in farming are Germans, Bohemians, Swedes, Norwegians, and Danes. The success of foreign farmers, as a rule, is greater than that of the native born, owing to their lower standard of life and greater thrift. The State encourages immigration through publication of information regarding the resources of the State. Besides the nationalities above mentioned, English, Irish, Scotch, Russian, and French farmers and laborers are found. Foreign farmers have been, as a rule, very prosperous. The land commissioner of the Burlington road, which has land to sell in the State, says that the class of immigrants arriving of late years are not profitable customers. The road now prefers to get renters or other people who want cheaper land from other States.

The sugar-beet industry is opening up opportunities for immigrants. One large corporation is making special efforts to get farm laborers either from rural districts or from cities. Russians, although backward, ignorant, and under the control of leaders, are much sought after, as the best of them are quite satisfactory, and all know something already of beet culture. Men with large families are so greatly desired that the company above mentioned refuses employment to those with small families. About 50 per cent of the laborers on the farm of the company are native born; the rest are Bohemians, Germans, Russians, Scandinavians, Irish, English, and Canadians. Probably Germans are preferred.

SOUTHERN STATES.¹

In these States the enforced change from a system of agriculture based on slave labor is resulting in: (1) A decline of old kinds of farming; (2) a growth of manufacturing interests; (3) a beginning of new forms of agriculture and a demand for farmers and farm laborers able to carry these on. Extensive farming of staple crops by the aid of cheap labor is growing less profitable. Negro labor has deteriorated since the war. "Cropping" and renting, the usual methods of arranging for the working of the land, are bad for the land, wasting its fertility and not securing the best yield from a given area. These methods are in vogue, partly on account of the necessities of planters, partly from the peculiar characteristics of the negro, who does not care to be bound down to continuous daily work as he would be under a wage system.

A remedy for this state of things is proposed in diversified or intensive farming. For this sort of farming the negro is generally considered unsuitable. The prevalence of negro labor is at once an inducement to go into diversified farming as a relief from cotton farming, which depends upon the negro, and a drawback to making the change as "the laborer must be worked some way, and cotton is all that they know how to make."

Diversified and intensive farming will, however, gain ground in the South, as the advantages offered by these forms of culture are better known. Such farming will restore fertility, reduce the labor cost of crops by the use of machinery, and help out cotton farming itself by supplying the general needs of the plantation. Such farming, too, is more and more in demand with the growth of manufacturing industries in the South, which afford a better market at home, and with the improvement of transportation facilities which bring the markets of the North nearer. These circumstances are peculiarly favorable to the introduction of European farmers and farm laborers with their special skill at intensive and diversified farming.

Delaware.—Farm laborers here are mostly negroes, but Irish, Germans, Swedes, and Poles are also found. Germans, Swedes, and Poles are liked. Germans, English, and Canadians are found as independent farmers. Many of the Germans began as farm laborers. There are said to be good opportunities for newly arrived immigrants who do not speak English.

¹ Pp. 550-575. 615-634.

Maryland.—A State bureau of immigration, established in 1896, is at work to bring settlers to the State. Dutch and Germans are especially desired. As a result of their work many families of Germans, Dutch, and Swedes have been settled in the State. Up to November, 1899, from 400 to 500 families had settled in the State and bought over 25,000 acres of land. Most of the foreign settlers have come from the Western States. For the year ending April 30, 1901, 249 immigrants came to the State through the State board of immigration, and bought 4,577 acres of land. Ninety-six were from the United States or Canada, 74 from Germany, 12 from the Netherlands, 23 from Switzerland, 41 from Austria-Hungary, 1 from Denmark, and 2 from South Africa.

Virginia.—There are good opportunities for immigrants in this State; farmers gladly welcome them. Germans are found to be the best farmers. They are especially successful in the use of intensive methods. Farmers from the Blue Ridge region only were heard from in response to a circular letter addressed to farmers in all parts of the State. In this region practically no foreigners are found, but some dissatisfaction with negro labor is expressed, and one farmer heard from thought that Germans would probably suit better.

West Virginia.—In all of the counties heard from (too few and scattering to represent the State as a whole) there are almost no foreign farmers or farm laborers, no desire is expressed for their coming, and there are said to be no opportunities for English-speaking immigrants.

North Carolina.—There has been but little foreign immigration to this State, but there are growing opportunities for foreign immigrants on farms deprived of native labor by the cotton mills and other manufactories. Farmers as a class would welcome foreign farmers who came to buy homes.

The State encourages immigration through the agency of a special subdepartment of the State department of agriculture. This department wishes only such immigrants as have money to invest in land. They are especially desirous of attracting the small German farmers who usually go to the Northwest, and to this end distribute descriptions of the country, etc., in the German language in Germany.

There is now a German colony of about 25 persons at Ridgeway, established 17 years ago and very successful, and also a Waldensian colony at Valdese of about 40 families (250 persons) from the Italian Alps, established 7 years ago.

South Carolina.—From reports of representative farmers there appear to be practically no foreign farmers or farm laborers in the State. Laborers are exclusively negroes and poor whites. Some dissatisfaction with negro labor is expressed, and truck and dairy farming is coming into greater prominence, so that foreign labor may before long find some opportunity in the State.

Georgia.—There are good opportunities to buy so-called worn-out lands, which can be restored by careful cultivation at the hands of thrifty foreign purchasers who are familiar with intensive methods. There are a few foreign farmers and farm laborers already in the State—English, Scotch, Irish, Dutch, and Germans. The Central of Georgia Railway is encouraging the better element of foreign immigrants to locate in their territory. They especially desire Germans and Swedes.

Florida.—Some foreign farmers and farm laborers have found their way to this State. Italians have come in to engage in orange culture. English, Scotch Irish, Germans, Swedes, Russians, French, and Spanish are found as independent farmers, and English, Germans, and Swedes as farm laborers. Germans and Swedes are liked.

Kentucky.—Farmers favor the influx of the right kind of foreigners into the State. Foreign farmers on the whole are more successful than the natives, owing to skill in intensive methods. Germans are found most effective as farmers and farm laborers, especially in market gardening. The Germans come as individuals, not in colonies. There is a Swiss colony at Bernstadt doing well after 12 years of settlement. There are, on the whole, few foreign farmers and farm laborers in the State.

Tennessee.—The Nashville and Chattanooga Railway is interested in getting settlers into the State, and would be glad to have Germans to engage in fruit and vegetable culture for the Northern markets. There is a Swiss colony at Hohenwald and another at Belvidere, accounted very good farmers. Most of them came from the Northwest. A colony of Finns in Hickman County and colonies of Italians have already been noted.

Alabama.—Within the last few years Scandinavians and other northern Europeans have shown a disposition to locate south of the Tennessee River. These are mostly such as have been in the United States for some years. A Scandinavian settlement has been started at Thorsby, and a large and prosperous colony of Germans is found at Cullman. Italian settlers have already been noted.

Mississippi.—Quite a number of foreign farmers are found in the State. These are mainly Germans and Swedes, with a few Irish. Farm labor is exclusively negro labor, and this seems fairly acceptable, but some desire is expressed for Germans and Swedes. Six out of 15 farmers heard from consider that there are good opportunities for non-English speaking immigrants in their neighborhoods. A few Italians were engaged in cotton farming in Delta County as renters. They soon left off, however, having made enough money to engage in some other more profitable line of business.

Louisiana.—There are better opportunities for immigrants at present than a few years ago, and farmers as a class do not oppose the influx of honest and industrious foreigners. Of the foreign farmers, Swedes, Germans, and Dutch are found to be the best. The foreign farmers, after they become familiar with the soil, crops, etc., are as successful as the native born. The State encourages immigration to the State by means of a State immigration department in connection with the bureau of agriculture. There are as yet only a few foreign farmers in the State—Germans, Irish, Swedes, and Italians. Italians are found as laborers on large sugar plantations.

Texas.—Representative farmers from the Brazos River region say that chances for foreign immigrants are good. No foreign farm laborers are reported from these counties, but foreign farmers are found. These are Germans, Scandinavians, Bohemians, Poles, and Italians. The Southern Pacific and Houston and Texas Railways maintain joint agencies in Hamburg, Antwerp, Rotterdam, London, and Liverpool, to secure foreign settlers on their lands. Their commissioner speaks of a German colony in the State, near New Braunfels, and a Scandinavian colony in Travis and Williamson counties which have been remarkably successful. Other railways maintain immigration and land agencies, but reach only those foreigners who have already settled in the United States. Bohemian and Italian settlers in the State have been referred to above in the separate accounts of these peoples.

Arkansas.—There are capital opportunities for immigrants, and farmers favor their incoming. Germans are the most effective farmers, surpassing the native born, owing to their use of intensive methods. Many colonies of German farmers have been established here. A Hungarian colony, which afterwards removed, was established near Searcy. In Arkansas County a colony of Slovaks is said to be located. Another colony of Slovaks was established near Little Rock, but failed; only about 60 families remaining.

The State encourages immigration through its department of mines, manufactures, and agriculture.

WESTERN STATES.¹

General.—There is not much European immigration direct to the Pacific coast, on account of the distance and expense. Railway land agencies have not tried to secure foreign settlers, especially, but some foreign colonies have settled along their lines. The Northern Pacific colonized some Hollanders in the Gallatin Valley in Montana,

¹ Pp 575-582, 635-646.

and the Yakima Valley in Washington. These were principally persons who were already located in other States, principally Michigan, Iowa, and South Dakota.

Montana.—There are some openings for non-English speaking immigrants, and many foreign farmers and farm laborers are already found in the State. These are Germans, Scandinavians, British, Irish, Canadians, French, Austrians, and Italians.

Colorado.—There are better opportunities for immigrants than ever before. Farmers do not oppose the influx of foreigners. As general farmers or farm laborers Germans are more effective. For truck gardening Italians seem to take the lead. Foreign farmers, by their thrift, economy, and use of intensive methods, succeed in many cases where the native born fail.

The beet-sugar industry affords good openings for immigrants, the large companies being especially desirous of securing foreigners to raise the beets.

Arizona.—Representative farmers from 3 counties are divided as to opportunities for immigrants in the State. In none of the 3 counties were foreign laborers spoken of. There were said to be many Scandinavian farmers, some quite wealthy, in Maricopa County, and in Yuma a few German farmers.

Utah.—Farming is mostly on small farms, worked by owners and their families. Many of these small farmers are foreigners—English, German, Scandinavian, Swiss, and Dutch. There are also some farm laborers of these nationalities. Italian truck farmers are found near Salt Lake City. There are said to be no chances for non-English speaking immigrants.

Washington.—There are many foreign farmers and farm laborers in this State. These are English, Irish, Scotch, Germans, Scandinavians, Finns, German-Russians, Italians, and French. There are excellent chances for newly arrived immigrants.

Oregon.—Representative farmers report good chances for immigrants. Many foreign farmers have settled here. Most of them are Germans. There are also Scandinavians, Swiss, Dutch, English, Scotch, and Irish. Many of them started as poor men.

California.—Representative farmers from 9 counties speak of Germans, Swedes, Danes, English, Scotch, and Swiss as farmers. There are also Mexicans and many Portuguese. Italians are found in many parts of the State, as before noted. Further immigration of foreigners is not generally encouraged.

IMMIGRATION LEGISLATION.¹

The Federal legislation restricting immigration is a series of acts added one to another during the past 25 years, and, since portions of the earlier laws without being repealed were given a new construction by later laws, the result is a system ambiguous and conflicting at many points. Not only are the laws conflicting in their terms, but also they have grown out of conflicting views as to the principles and objects to be attained. The earlier laws, those of 1875 and 1882, were designed to exclude the vicious, the criminals, and the paupers, those who could not or would not support themselves. The later laws, the anti-contract labor laws of 1885, 1887, and 1888, sought to exclude those who had the ability and forethought to provide means of supporting themselves, namely, a definite contract for work in this country. The earlier laws excluded the worst; the later laws often exclude the best, though they have also another important bearing. The consequence is that both the immigrant and the inspector must summon all their ingenuity to steer between the two extremes. If an immigrant is sound in body and mind, and therefore able to compete with American workmen, he is admitted, but if he has the certain prospect of competing with American workmen as shown in the possession of a contract, they exclude him. On the face of the law, the contradiction seems inexplicable. But an examination of the principles underlying the two phases of the law explains the contradiction. On the one side it is sought to protect the American public generally by

excluding those classes who threaten the property or lives or morals of the people, and whose presence increases the expenses of Government. On the other hand, it is sought to protect a single class of the community—the working class. In this respect the alien contract labor law is analogous to the protective tariff, whereby it is intended, by protecting one class of the community against the cheap manufactures of foreign countries, to promote industry and indirectly to benefit the entire community. The object of the contract labor law is, through protecting a single class, the largest class in the community, to raise the standards of living and benefit the whole community. But the analogy is not precise, since the immigration laws impose no general restrictive head tax but are limited only to one class of immigrants, namely, those who come under that kind of special inducement and solicitation involved in a contract to work in this country. Moreover, employers have sometimes made it a practice to import large bodies of men, often mere unskilled laborers, for the purpose of combating labor organizations or of breaking a strike. These forms of inducement are especially characteristic of the earlier immigration from a given country, preceding such time as the workmen of that country have learned to look upon immigration as a means of improving their industrial condition. After immigration reaches the magnitude of a flood, and foreigners are thenceforth attracted by letters and prepaid tickets of their friends already here, the earlier protection of the alien contract labor law loses much of its efficacy, and additional restrictions more analogous to a protective tariff find favor. In the case of the Chinese, the protective theory has been carried to its extreme limit, and workmen of this race are absolutely prohibited from stopping in this country. But in the case of the Europeans, foreign competition has not been considered so menacing. The great majority up until quite a recent period came from countries related to the people already here in race, language, literature, religion, and representative government. Any restriction against immigrants from these countries must be a specific protection against a definite recognized evil. This evil appeared at first chiefly in the artificial immigration induced by employers for the purpose of breaking labor organizations. Immigrants who came on their own initiative or on the representation of friends and relatives are especially exempt. This difference in the treatment of the Chinese and the European immigrant, however, loses its force in proportion as European immigration extends its recruiting area more and more toward the Orient, as it has done in recent years. The question now uppermost is that of the direct restriction of immigrants who are considered undesirable on general economic and social grounds and not merely on the ground of contract labor.

In addition to these new characteristics of immigration itself, which render the principle of the alien contract labor law relatively less important, the law does not accomplish the results originally expected by its advocates, and the successive interpretations of the courts, coupled with an administration at some points less strict and a growing acquaintance with its loopholes on the part of the immigrants themselves, have rendered the law practically a nullity.

This appears plainly in a review of the legislation itself as affected by the decisions of the courts and by an examination of the practices of the inspectors and the administrative authorities.

The alien contract labor law, as originally enacted in 1885, applied only to the importer of contract laborers and not to the immigrant. This defect was partially corrected in 1887 by a clause which commanded the officers to send back to the nation to which they belong all contract laborers. In so far as the law has been effective it has been due mainly to the latter clause. There have been very few cases in which the importer was fined, but there have been over 8,000 contract laborers, or those deemed to be such, sent back by the contract labor inspectors. The reasons for the difference are plain. The conviction of the importer depends upon a prosecution in court, but the deportation of an immigrant turns upon the views of administrative authorities who are not strictly bound by the letter of the law. This feature

was definitely provided for by the law of 1894 which makes the decision of the immigration officers, if adverse to the admission of an alien of the excluded classes, final, with an appeal only to the Secretary of the Treasury and not to the courts.

There are therefore two broad divisions in the application of the alien contract labor law: First, the interpretation placed upon the law by the courts, affecting mainly the importer; second, the administration of the law by the Treasury Department, affecting mainly the exclusion of contract laborers.

In the prosecution of importers very few judgments have been secured. The courts hold the law to be highly penal, since it provides a fine to be imposed upon the importer, and on this account he is given the benefit of every doubt. With this in view the courts hold strictly to the letter of the law in defining a contract, but hold to the so-called spirit of the law in exempting from its penalties all those laborers who could not be shown to be specifically and unquestionably excluded by its terms from the country. In other words, if the contract reveals any flaw whatever the importer is released, and if an imported laborer can possibly be admitted the importer is also released.

The strict interpretation in the case of the contract is shown in the holding of the courts that in order to convict the importer the contract must have the following elements:

1. It must designate the time during which employment is to continue and the rate of wages to be paid. This practically exempts in nearly every case the importer, since a labor contract seldom specifies the duration of employment, and even often the amount of wages is left indefinite.

2. The importer can not be convicted unless the contract is completed. This completion requires the actual migration of the laborer to the United States and his landing upon American soil. Now the law in another place requires the immigration officials to deport before landing all aliens coming under a labor contract. Therefore they are required not only to send back their only witness to the contract, but also to prevent the completion of the illegal contract itself.

3. The importer can not be convicted for encouraging or soliciting immigration, or prepaying the passage of the immigrant unless when he did so he knew the existence of the illegal contract.

Taking these three strict interpretations into consideration, the immigration officials and the district attorneys have been able in only an insignificant number of cases to secure conviction of the importer. Conviction, however, is sometimes secured under another clause which prohibits advertisements published in a foreign country promising employment to aliens when they come to the United States. In this case actual immigration need not take place, and the proof of a contract is not required in order to convict the importer. The advertisement is looked upon simply as a form of solicitation and is punished as such. This, however, is the only form of solicitation for whose punishment the law provides.

The foregoing statement shows the strict interpretation of the courts as applied to a contract. The following shows the liberal interpretation as applied to the exempted classes of laborers—that is, those classes with whom the importer may contract for employment without laying himself liable to the violation of the law.

The general law applies in terms only to "alien immigrants," and the courts have distinguished, on the one hand, aliens who are immigrants and, on the other hand, aliens who are only temporary visitors and aliens who are residents. It has been held that all persons who come across the border from Canada to perform daily labor and return at night, even though they be under contract, do not furnish ground for the conviction of the importer, since they are not immigrants, because they do not come here intending to acquire permanent or temporary home.

Also it has been held that aliens who have once been in the country have thereby become residents, even though unnaturalized, and when, having returned to their own land, they enter the United States a second time, they are no longer "alien

immigrants," but they are alien residents. Thus the importer who brings in the alien residents under contract is not liable to penalty. Congress amended the law in 1894 so as to give the Secretary of the Treasury final authority in deporting aliens whether they were immigrants or residents, but this does not apply to a prosecution of an importer, who may continue to import aliens under contract, provided they formerly resided in this country.

There are certain classes of aliens who are immigrants who may be admitted, even though they come under contract. These are personal or domestic servants, including coachmen, but not including farm hands or dairymen. There are also relatives of friends of persons in this country who have been assisted by the latter to come. When it is considered that 65 per cent of the immigrants come on tickets that have been bought or paid for in this country it will be seen that this exemption is a large one, and, moreover, it is the principal means by which, at the present time, employers desiring to import laborers secure their immigration. They simply speak to their friends, advising them of the opportunities for employment, and the latter attend to the correspondence and solicitation necessary to bring the foreigner to these shores. This exemption, however, does not permit an immigrant to come if he belongs to one of the excluded classes, or if he can be shown to be under contract. In other words, when an immigrant comes with his own money the burden is on the Government to show that he belongs to the excluded classes, but when he comes assisted by a relative or friend the burden is on the immigrant to prove that he is not of the excluded classes.

The act of 1885, through an oversight, had not specifically exempted from its prohibition ministers and college professors. When, therefore, the corporation of Trinity Church in 1888 engaged a minister in England to come here and take charge of its church as a pastor, a suit was brought in a Federal court charging violation of the alien contract-labor law. Judge Wallace, of the lower court, maintained that Congress had prohibited the importation of all aliens under contract to perform, not only labor, but any service of any kind; but that Congress had made certain specific exceptions, such as actors, lecturers, artists, and so on. Therefore the law applied to all kinds of service not specifically exempted. Now, there was no specific exemption of ministers. Consequently the law applied to ministers, and their importation under contract is a violation of the law. He surmised that this was an oversight in the enactment of the law, but he held that the courts are not at liberty to go outside of the language of a statute to search for a meaning which it does not reasonably bear. When this case came before the Supreme Court of the United States, the ruling of Judge Wallace was overthrown, and the Supreme Court maintained the right of the courts to inquire into the debates of Congress, the reports of Senate and House committees, in order to ascertain the intention of the lawmakers. In doing this the court inferred that Congress intended to exclude only those whose labor or service is manual in character, and that all other classes could be admitted even under contract without imposing a penalty upon the importer.

The decision in the Trinity case furnished a precedent for exemptions on the part of the lower courts, which grew wider and wider year by year, until by a decision in the circuit court of appeals in the seventh circuit in 1899 not only were professional classes exempted from the prohibition of the law, but even all skilled labor. It was held in this decision that the "law does not exclude such professional classes as surgeons and physicians or such skilled occupations as those of engineer, bookkeeper, stenographer, typewriter, clerk, saleswoman, draper, or window dresser;" indeed, that "Congress never intended to include in the act skilled labor of any kind;" that it was the intention of Congress merely to "stay the influx of cheap, unskilled manual labor," and to shut out "only the cheaper, grosser sort of unskilled and unhousehold manual labor." This decision of the appellate court, accepted as it has been by other courts and by the administrative authorities, has reduced the law to such a

point that it is no longer a practical means of restricting immigration. The cheap labor from eastern and southern Europe does not come under contract, and so evades the law, while skilled laborers, who naturally would be more likely to enter into contracts, are by this decision exempted from the law.

Turning to the second aspect of the alien contract labor law, the deportation of immigrants, we find the conditions entirely different from those which pertain to the prosecution of the importer. By an amendment to the law adopted in 1894, the decisions of the inspectors, upon appeal to the Secretary of the Treasury, are final in the case of all aliens, whether immigrants or former residents. There is no appeal to the courts. The courts will refuse to interfere on habeas corpus, even when they see that what they consider serious injustice is being done; they affirm that the statute does not require inspectors even to take testimony, and that they can exclude an immigrant on whatever inspection and examination they choose to undertake. Of course the decision of the inspectors and the Secretary is not binding upon the court in the prosecution of the importer.

Such being the large discretion in the hands of the Treasury Department, the efficiency of the law in respect to the exclusion of obnoxious immigrants depends partly upon the opinions and convictions of the official, and partly upon the administrative machinery. The latter may be briefly stated. Excluded classes whom the Bureau of Immigration is authorized to debar, without appeal to the courts, are those who are likely to become a public charge on account of idiocy, insanity, and pauperism; those who suffer from loathsome or contagious diseases; those who have been convicted of a felony, or even a misdemeanor involving moral turpitude; polygamists and contract laborers. In order that the inspectors may properly execute their duties, they require in the first place as complete information as possible regarding the thousands of immigrants who pass under their examination. The methods devised for this purpose do not include consular or medical examination at the foreign port of debarkation. The principal reliance to prevent debarkation of the ineligible classes is placed upon the agents of the steamship companies. It is reasoned that if the steamship companies are compelled to bear the burden of deporting the passengers who have been excluded from landing, they will take careful precautions in prohibiting their agents from selling tickets to those liable to be debarred. The better class of steamship companies, indeed, carry out this theory, since they make their agents responsible even for the expense of the passage back to the country of debarkation. The steamship companies are required to fill out, for the use of inspectors at the United States ports, a manifest or list of names of all alien immigrants before they embark on the steamer, giving certain information specified by law. These manifests are verified by the master and surgeon of the vessel before the United States consul at the port of embarkation.

Upon arrival at the American port the immigrants are passed in file, first before the medical inspectors detailed from the Marine-Hospital Service for this work, then before the immigration inspectors who, with the ship's manifest in their presence, make inquiries relative to their eligibility to land. Should the immigration inspector entertain any doubt whatever as to eligibility, he is required by law to hold the immigrant for further inquiry before a board of inspectors. This board is known as the board of special inquiry, and in framing it the legislators contemplated an administrative court which should be free as much as possible from the personal motives of the individual inspector, and able to establish standards for admission and rejection. It is found that on an average the immigration inspectors admit 80 or 90 per cent of all immigrants, and retain 10 to 20 per cent for special inquiry. The board of special inquiry in turn admits some 85 per cent of those examined by it, and rejects 10 or 15 per cent. As a result the total number debarred each year is about 1 per cent of the total number of the immigrants.

LXII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

The leading cause for exclusion in point of numbers is that of pauperism or liability to become a public charge. The next in order is that of contract labor; following is that of loathsome and contagious diseases.

CONTRACT-LABOR INSPECTION.

The inspection of contract laborers is distinguished from that of the general inspection in the contemplation of the law. The contract-labor inspectors receive higher salaries than others and are selected with a special view to the peculiar nature of their employment. Owing to a change made in the spring of 1899 at the port of New York in the assignment of duties to the contract-labor inspectors, there has been a marked falling off in the number of deportations. Prior to that date these inspectors did not take charge of a line of immigrants when engaged in a regular inspection, but limited themselves to observation of immigrants as they passed before the immigrant inspector. Since that time the various classes of inspectors have been placed on the same line of duty, with the falling off already noted in the deportation. The justification advanced by the commissioner at New York for this change in method is the need of uniformity in inspection and securing the advantages of these highly paid inspectors in cooperation with the other less skilled immigrant inspectors. This justification, however, is denied by other officers of the Bureau of Immigration, who contend that the change in method has practically defeated the purpose of the law. (p. 662-665.)

It is, of course, impossible that of the thousands of immigrants landing each year none should be admitted who should not have been excluded. In view of this condition, the law since 1888 provides that the Secretary of the Treasury may, within 1 year after landing, arrest and deport any immigrant who has landed contrary to the prohibition of the law. The expense of such deportation is borne by the importing vessel if the causes originated prior to migration, or by the immigrant fund if the causes originated after migration. The importance of this provision is shown in the fact that in the year 1900 the number of immigrants deported within 1 year after landing was 356 out of a total of 4,603. The 1-year period is peculiarly valuable in the case of contract laborers who, coming as they do to this country admirably coached in the answers to be given to inspectors, are able to effect a landing and to fulfill their contracts for employment. The discretion of the Secretary in arresting and deporting such cases without the delay and formality of legal procedure, after investigation by agents of the Bureau at the locality of employment, is an effective feature in the law. Whether the period of 1 year is long enough may be questioned. The extension of the period to 2 years, especially in the case of those who become public charges or those who become insane, would increase the efficiency of the law.

IMMIGRATION THROUGH CANADA.

Apart from the defects of the alien contract-labor law, unquestionably the most serious defect in immigration legislation is found in the failure to protect the border lines between Canada and Mexico. In proportion to the efficiency of the inspection and deportation of immigrants at the seaports of the United States, those classes liable to be debarred naturally seek these back entrances. In 1893 and in 1896 the Commissioner of Immigration entered into agreements with the steamship companies entering Canadian ports, and with the railroad companies carrying passengers from those ports to the American border, by which the United States inspectors were permitted to examine immigrants on landing. This agreement was not officially recognized by the Canadian government, and its standing is maintained only as a voluntary arrangement, without power of enforcement by the American Government in case of violation. The agreement applies only to those immigrants from Europe or Asia manifested to the United States, and of course does not apply to

those manifested to interior points of Canada, who might intend thereafter to cross over to the American side. The railroad companies agree not to sell tickets to those who are rejected by the American inspectors, and the steamship companies agree to carry them back to the port whence they came. The agreement has proved unsatisfactory, mainly because the American Government lacks the power of legal enforcement.

More serious, however, is the evasion of the law which is practiced by manifesting immigrants to Canadian interior points. These, of course, being ostensibly immigrants to Canada, can not be subjected to inspection by officials of the United States, and it is an easy matter for them, having once reached their Canadian destination, to cross to the American side. The commissioners at the American border have power only to send them back to the Canadian side and not to conduct them to the ships which brought them. Consequently they find it an easy matter to return at unguarded points along the 3,000 miles of the frontier. The only method which has been adopted to meet this evasion has been the attempt to inspect immigrants at Liverpool, but as this also depends on the consent of the steamship companies and has no binding force, it is found that many undesirable immigrants are carried by the companies even after having been rejected by the representatives of the American Government. (pp. 684-692.)

LEGISLATION OF GERMANY AND ITALY.

The legislation of European countries in general has during the past fifty years permitted free and voluntary emigration, except in case of attempt to escape military duties. The German Government, however, in 1897, adopted a law which marks an important innovation. In addition to the design of the law to protect the emigrant in the purchase of his ticket and in his transportation, the law provides for additional protection on the part of the fatherland in the country of his settlement, and endeavors also to maintain German institutions among the emigrants by diverting their migration away from North America, where they are rapidly assimilated, to South America, where they continue commercial and even political relations with the home country. This is brought about by granting to the chancellor of the Empire the power to license contractors or companies, who are permitted to solicit emigrants and to settle them in colonies. These licenses are not granted to companies operating in the United States, but solely to those who conduct emigration to South America and the German colonies. (p. 695.)

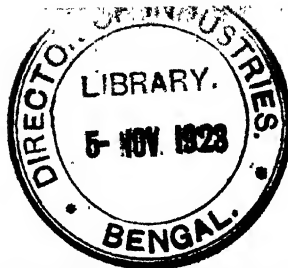

The Italian legislation of 1901 is modeled somewhat after the German legislation of 1897, but does not carry to the same extent the attempt to discriminate between countries to which emigrants shall be encouraged to migrate. The law provides for the establishment of employment agencies in the countries of settlement, for protection to emigrants in the purchase of tickets and their transportation, and creates the office of commissioner of immigration, with assistants nominated by cooperative societies and trade organizations, for supervision of emigration. (p. 699.)

Other countries, outside of the United States, receiving immigrants, which have legislated especially upon the subject, are the British colonies of Canada, Australia, and South Africa. Canada has, with one exception, adopted legislation of various kinds for the promotion of immigration, especially that of desirable immigrants for the agricultural sections of the country. The several British colonies have agencies in Great Britain, and certain colonies of Australia provide free and assisted passages for laborers and domestic servants and for small farmers. They also provide "nominated passages"—that is, assistance to immigrants who are named by the residents of the colony, for whom they have contracted to furnish employment after immigration. These colonies make special effort to secure only the best immigrants from the British Isles, and have severe restrictions against pauper, criminal, and diseased

LXIV THE INDUSTRIAL COMMISSION:—IMMIGRATION.

immigrants of all classes. Natal, New Zealand, and South Wales have in the last three or four years adopted educational tests. The legislation of the Australasian colonies restricting Chinese immigration is prohibitive in the form of a high head tax, ranging from \$50 to \$150, and limiting the number who can be brought to a certain ratio of the tonnage of the vessel, usually 1 immigrant for every 100 or 500 tons, and imposing heavy penalties upon the shipowner for all Chinese carried in excess of this proportion. This legislation also extends to the Japanese and the inhabitants of the Malay Islands (pp. 709-719).

The exception to the liberal policy of Canada, noted above, is found in the contract labor law of 1897, modeled after similar legislation in the United States, with the important addition that a private citizen, as well as the attorney-general, is authorized to institute prosecution of the importer of the laborer. This exception to the general character of Canadian legislation can not, however, be considered as really an exception, since it applies only to immigrants from the United States, and may be considered as in the nature of a retaliatory enactment (p. 719).

TOPICAL DIGEST OF EVIDENCE.

I. STATISTICS OF IMMIGRATION.

A. Defective statistics.—Dr. SENNER, former commissioner of immigration at New York, declares that the statistics of immigration were exceedingly defective before the new law of 1893 went into effect, especially under the administration of the State of New York. Many old records showed whole pages blank so far as the answers to the questions concerning nationality, destination, and age were concerned. About half of the immigrants stated their destination as New York, though comparatively few actually remained there. The officials freely admitted that the statistics on these subjects had been largely guesswork. This was necessarily the case on account of the very small number of inspectors. Even the count of immigrants could not always be accurate and complete. A comparison of the statistics of immigration with the census figures shows great inaccuracy in the former, especially arising from the failure to ascertain whether the immigrant had been in the United States before.

The statistics as to nationality have up to the latest period been unsatisfactory, partly on account of the ignorance of the inspectors as to the many and complex nationalities of Europe, and partly on account of the changes in the methods of preparing the tables. Nevertheless the statistics generally are greatly improved since 1893.

Dr. Senner suggests that the immigration authorities would be greatly assisted in preparing statistics if the ticket agent in Europe who sells the ticket should require answers to interrogatories as to the points covered by the statistics and should enter these replies with the signature of the immigrant, the schedule thus prepared to be submitted to the inspectors. (178, 179.)

Mr. SCHULTEIS, a special commissioner who visited Europe in 1891 to investigate immigration, declares that the methods of counting immigrants and ascertaining their nationality have been and are still very unsatisfactory. Only at New York are immigrants counted by immigration officers; at the other ports they are reported by steamship companies merely. Statistics of immigration from Canada have been entirely dropped. Formerly it was the practice to count two children as equal to one person. Steamship companies often land immigrants under guise of employees, thus evading the head tax. Statistics of nationality are based entirely on port from which immigrant sailed, an undue number thus being assigned to Germany and England (an erroneous statement). Italian and German statistics show larger numbers of emigrants than our statistics of immigration. Even the census statistics are inaccurate. The number of Italians in the country in 1890 was placed at 183,000. It was estimated by Italian authorities at 500,000. (27, 28, 80.)

Mr. EICHLER, chief of the statistical and record division of the bureau of immigration at New York, testifies that nearly all of the early records of the New York State inspection bureau, as well as those of the first years of the United States service at New York City, were destroyed by fire at Ellis Island. He thinks that the loss was a very serious one, since the only duplicates of these records are to be found at the United States custom-house.

Mr. Eichler states further, that the United States authorities followed the statistical methods of the State bureau up to the time of the recent adoption of the race classification of immigrants in place of that by political divisions. He considers that the statistical methods at present are very satisfactory, being much superior to those existing before, but adds that more careful statistics concerning cabin passengers are desirable. (188.)

Occupations of immigrants.—Mr. MCSWEENEY, assistant commissioner of immigration at New York, believes that the statistics concerning the occupations

of individuals are of no value whatever. Especially those who state themselves to be farmers are usually mere farm laborers, who are ready to drift into any unskilled labor which presents itself.

The statements of the immigrants concerning their destination in this country also give very little information as to the actual distribution of immigrants. (82, 83.)

Destination of immigrants.—Mr. MCSWEENEY says that the statements concerning destination of immigrants in their manifests are usually exceedingly misleading. A much larger proportion give their destination as New York City than actually remain there. This is partly owing to the fact that the immigrants know no other place to put down, but sometimes there is willful falsification. The effect of such falsification is not merely to make the statistics unsatisfactory, but persons are sometimes admitted on the strength of having a certain amount of money, practically all of which is immediately taken from them in paying railway fare, so that they are likely to become paupers when reaching their actual destination. For this reason the witness thinks that a fine for willful falsification as to destination would be desirable.

B. Nationality and race.—Mr. MCSWEENEY believes that the statistics concerning the nationality of immigrants have been of little value prior to 1899. Regard has been given hitherto only to the political divisions from which the immigrants came and not to their nationality. Thus it appeared that 40,000 Russians came to the United States during 1898, whereas the great majority of these were Poles or Jews, probably not over 200 being actual Russians. Austria-Hungary furnishes a large proportion of our immigrants, yet there are very few who can be called Austrians and comparatively few "Huns" or Magyars. The immigrants from Austria-Hungary are mostly Slovaks, Slavonians, and Croats, etc. Although Poland has been divided among different countries the Poles are as distinguished a race as ever. The witness greatly approves the change in methods adopted in 1899 by which the attempt is made to ascertain the race of the immigrants. (82, 83.)

Dr. SENNER points out the danger of misunderstanding on the part of the general public as the result of the change in the method of classifying immigrants from the basis of nationality to that of race. He quotes from a recent editorial in the New York Times, which makes entirely misleading statements as to the number of Swiss and Hungarians coming into the United States, as compared with the previous year, these errors arising from the change in classification. To avoid these difficulties the old statistics by nationality should be continued with the others. Moreover, there are a number of ethnological errors in the new classification, and the system is exceedingly difficult to carry out with accuracy. (187.)

Mr. McSweeney says that the purposes of the new classification of immigrants according to race rather than nationality is to afford a fairer basis for judging the industrial character and effects of immigration. The system is not intended to discriminate against the Jews or against those of any other faith, although in order to secure accurate information as to nationality inquiries concerning religious faith are often necessary.

Under the former practice the immigration bureau trusted primarily to the statements made by the immigrants upon their manifests for ascertaining the place from which the immigrants had come. It is easy for these statements to be made incorrectly or dishonestly. The present method of investigation on the basis of language and other tests reduces the statistical errors. (81, 82.)

Dr. SAFFORD, who was a member on the committee, with Mr. McSweeney, Mr. Campbell, and Mr. Rogers, which recommended the adoption of the new method of statistics, first adopted in 1898-99, which substitutes classification according to language or race for that according to territory, believes that the new system is a great improvement on the old. At the same time he considers that the former statistics were essentially accurate as regards the number of persons coming from each political division, and that the conclusions which have been based upon these statistics were by no means misleading. Statistics based on political divisions are still compiled, the new method being in addition to the old. (181, 182.)

Mr. WOLF, vice-president of the B'nai B'rith, states that he and others have protested against the separate classification of Jews in the statistics of immigration, on the ground that they are not a nationality but a religious body, and ought no more to be separately classified than Presbyterians or Catholics. (250.)

Mr. HALL, secretary of the Immigration Restriction League, submitted statements and diagrams showing the changes in the nationality of immigrants in recent years. In 1869 the immigrants from southeastern Europe, including Aus-

tria-Hungary, Italy, Russia, and Poland, furnished only nine-tenths of 1 per cent of the total number of immigrants; while those from northwestern Europe, including Great Britain, France, Germany, and the Scandinavian countries, furnished 74 per cent. In 1880 southeastern Europe furnished 8 per cent and northwestern Europe 64 per cent. In 1896 the proportion from southeastern Europe had risen to 52 per cent and that from northwestern Europe had fallen to but 39 per cent; while the respective proportions in 1898 were 57 per cent and 83 per cent. (30.)

Mr. WOLF presents an estimate showing that for the year ending November 1, 1899, the number of Jewish immigrants to the United States was about 37,000, and for the year ending November 1, 1900, about 63,000. Jews are estimated to have furnished about 12 per cent of the total immigration in the fiscal years 1898, 1899, 1900. (352.)

II. SOCIAL CHARACTER AND EFFECTS OF IMMIGRATION.

A. Illiteracy of immigrants.—Mr. STUMP, ex-commissioner-general of immigration, says that at present the asking by the immigration bureau of the question as to ability to read and write is not specially authorized by law. Even among steerage passengers the proportion of illiterate Swiss, Germans, Swedes, Norwegians, English, and Irish is less than the proportion for the entire population of the United States. But the southern countries of Europe, and Russia, have inferior educational facilities, and the proportion of illiteracy is high. In Portugal 77 per cent of the population are illiterate; Italy, 54 per cent; Hungary, 46 per cent; Russia, 41 per cent. The average for the entire United States is 13.43 per cent. The illiteracy of immigrants was less in 1897 than in 1896. (6, 7.)

Mr. HALL points out that the immigrants from the southeastern countries of Europe, who have been increasing greatly in proportion, are much more illiterate than those from northwestern Europe. In 1896 only 4.5 per cent of the immigrants from Great Britain, France, Germany, and the Scandinavian countries were illiterate, while 47 per cent of those from Italy, Austria-Hungary, Russia, and Poland were illiterate. The females, as a rule, are more illiterate than the males. The fact that a large proportion of the immigrants are above the school age and not likely to attend schools in this country has an important bearing not only upon their future standard of intelligence, but also upon their assimilation. (50, 54.)

Mr. Hall calls attention to the fact that the immigration from Italy has increased from less than 1 per cent of the total in 1869 to nearly one-fourth of the total in 1899. Of the 76,489 Italians who landed in New York in the latter year 88 per cent were from southern Italy, Sicily, and Sardinia. The southern Italians are a very undesirable class. The average illiteracy of southern Italians is 57.4 per cent, as compared with 11.2 per cent for northern Italians. The average amount of money brought by southern Italians was \$8; by northern, \$21. Of southern Italians 2.1 per cent were debarred from entrance; of northern Italians, only 0.7 per cent. (67.)

Out of 50 anthracite miners whom Mr. ROSENDALE, special agent of the department of agriculture of the State of Pennsylvania, interviewed in 1897, 8 could read and write English, 20 their own language, and 22 were illiterate. Very few of the children—not 1 out of 50—attended the public schools. The boys were mostly at work as helpers, pickers, etc., in the mines, and the girls did the housework. (190, 191.)

B. Tendency of foreign born toward cities.—Mr. HALL refers to the well-known tendency of the foreign born to settle largely in cities rather than in small towns or in the rural districts. In 1890, 44 per cent of all foreign born in the United States were found in the 124 principal cities. The proportion of Norwegians in these cities was 20 per cent; English, 41 per cent; Germans, 48 per cent; Russians, 65 per cent; Poles, 57 per cent; Italians, 59 per cent. In other words, the more illiterate races tend to the cities in a greater degree than the others. This fact is attributed by the witness to the lack of enterprise and energy on the part of these races. There are plenty of unsettled regions in the country to which Italians could go if they would, but they have not the disposition. They do not even go South where they might seem to be invited by the climate.

The immigrants are found in especially large numbers in those districts or cities which are recognized as being slums. The less advanced races furnish a much larger proportion of the inhabitants of these slums than the more advanced. Thus immigrants from southern Europe furnish 19 times as many of the slum population of New York as immigrants from northwestern Europe, 30 times as

many in the slums of Chicago, and 71 times as many in the slums of Philadelphia. The average of illiteracy of the immigrants from northwestern Europe in the slums of these 4 cities is 25 per cent, of those from southeastern Europe 54 per cent, while the average illiteracy of the native Americans in the slums is only 7 per cent.

Efforts to induce immigrants to leave the cities and settle in the country have usually proved to be unsuccessful. Thus the Hebrew Aid Society of New York spent about \$600 per family in carrying a number of families into the country, but within 2 years most of them were back again. (54-56.)

Distribution of immigrants—Mr. HALL points out that most immigrants to this country settle in the Northeastern States. This is attributed largely to the fact that New York is the chief landing place, and that the immigrants do not know of opportunities elsewhere. In the South the colored race furnishes all the unskilled labor that is required. The reports of the Commissioner of Immigration say that in 1896 72 per cent of all the immigrants stated that their destination was either Illinois, Massachusetts, New York, or Pennsylvania, while only 11 per cent were destined for States south of the Potomac and west of the Mississippi. The Scandinavians have to a considerable extent settled in colonies in Minnesota and other Northwestern States, but the immigrants from the southeastern countries of Europe are especially prone to locate in the Northeastern States. (55, 56.)

Mr. STUMP speaks of the marked tendency of people of same nationality to settle together, especially in cities. The Scandinavians to some extent form farm colonies in the West, and the Huns and Poles in the mining regions of Pennsylvania. In these latter cases the native language is retained in places of worship and schools. (22.)

Mr. SCHULTEIS says that there is a natural tendency of persons of same nationality to group together, but that this has an injurious effect in the case of our immigrants, preventing assimilation. The second generation, however, usually learn to read and write English. (31.)

Dr. SENNER declares that the settlement of immigrants in colonies of their own nationality is to a certain extent necessary and unavoidable at the outset. Such colonies, however, do not stick together very long in most cases. The desire of the foreign born to become Americanized is usually intense. The second generation, in any case, can no longer be held to the old customs or language. There is indeed considerable complaint on this latter score among Germans in this country. Even the Jews in New York are rapidly becoming assimilated and Americanized. The colonies of Poles and Hungarians in Pennsylvania are to be sure still far from being assimilated, but this is accounted for in part by opposition to them on the part of Americans which makes them social outcasts. Many of them, especially of the second generation, would be glad to mingle more with Americans. The witness does not think that the public school facilities offered to these people in Pennsylvania are sufficient or that proper compulsion is exercised to bring children into the schools.

Dr. Senner says further that these classes in Pennsylvania are not "Huns," as they are frequently called, but are Poles, Polacks, and Croats chiefly from Austria. Most of them came to this country under contract between 1881 and 1885. They are a tractable and peaceful people if left alone and not maltreated. At any rate, the cause of their nonassimilation is an exceptional one and it will not long continue. (183, 185, 186.)

Mr. ROSENDALE gives as reasons for the tendency of the Jews to settle in colonies in the cities, first, that by this means they are able to live among their own people. They have their synagogues and their theaters. They can understand their neighbors and their neighbors can understand them. In the country they would be isolated. In the second place, the other races about them despise them, ridicule them, call names after them in the streets, and moreover, object to living among them, and remove from their neighborhood. The solidity of the race colonies is due partly to the voluntary withdrawal of other races, as well as to the exclusiveness of the race itself. (195, 196.)

Mr. BROWN, deputy chief of the bureau of licenses of New York, considers that the great number of unemployed and of paupers in New York City is due to the fact that many people had rather live in the city in the most abject poverty than earn a fairly comfortable living in other places. Mr. Brown would not favor an attempt to make it certain by law that every person could get a job in New York. If it were certain that a job would be provided for everyone who should come, the whole population of the United States would gather there. (238.)

Jewish colonies in New Jersey.—Mr. WOLF gives statistics of population, wealth, and pursuits of a part of the Jewish colonies in New Jersey. Those at Alliance, Norma, and Carmel contain altogether 185 Jewish families, of which 52 are said

to be devoted exclusively to farming, 26 to farming and tailoring, 59 to farming and other workshop occupations, and 48 to tailoring exclusively. These families own 2,529 acres of land, of which 643 are under fruit, 1,081 under truck, and the remainder uncultivated. Their holdings are valued at \$196,000, and there is an indebtedness on them of \$70,000. Some statistics for the colony at Rosenhayn are also given. (246.)

Mr. POWDERLY says there is an increasing immigration of Russian Jews. They are very undesirable, being in poor physical condition and largely paupers. Their settlements in Tennessee and New Jersey are not successful. An educational test would exclude such Jews only temporarily, for they would soon learn to read some passage. (86, 42.)

C. Citizenship and naturalization of immigrants.—Mr. HALL says that the immigrants from the southeastern countries of Europe, the Slav and Latin races, are much less inclined to become citizens than those from the northwestern countries. The average proportion of the southeastern immigrants in this country who are still aliens is about 32 per cent, as against 9.9 per cent for those from the northwestern countries. The fact that the immigrants from the southeastern countries have, in many cases, not been in this country as long as the others does not explain all of this difference. There are comparatively few applications for naturalization even among those who have been here for some time, although in many cases Italians take out the first papers in order to facilitate the passage of inspection in case they return to this country for a second time. Mr. Hall points out further that there are 16 States in the Union which permit aliens to vote without naturalization. (57, 62.)

Mr. POWDERLY, Commissioner-General of Immigration, says that the naturalization laws are frequently violated, both for the purpose of securing the franchise and of evading immigration laws. International questions have been precipitated by the arrest of persons abroad who claimed, fraudulently, to be United States citizens. The educational test for naturalization should be established. It is also desirable to give a landing certificate for each immigrant, to be presented on applying for naturalization. (45.)

Mr. ROSENDALE found that out of 50 anthracite miners whom he interviewed in 1897, 2 had applied for citizenship and 4 were naturalized. (188.)

Mr. STUMP says that opposition to immigration comes largely from those who fear its political effects. The question of immigration should be clearly distinguished from that of naturalization and the franchise. Stricter laws on the latter subject are perhaps desirable without restricting immigration. (22.)

Mr. SCHWAB, of the North-German Lloyd Company, favors a requirement of ability to read and understand the Constitution of the United States as a condition of naturalization. (108.)

D. Criminality of immigrants.—Mr. HALL asserts that the foreign born and the children of the foreign born are much more criminal in their tendencies than the native-born population. The census of 1890 showed that while persons of foreign birth or foreign parentage represented two-fifths of the total white population they furnished three-fifths of the white criminals in the country. In Massachusetts, in 1894, 85 per cent of the commitments to prisons were of persons of foreign parentage, 80 per cent being of foreign birth, while the proportion of the foreign born to the total population was 29 per cent. From this Mr. Hall draws the conclusion that 100 persons of foreign birth in Massachusetts furnish ten times as many criminals as 100 persons of native birth and parentage (a conclusion incorrectly drawn). The witness has compared the criminality of the different nationalities in Massachusetts, leaving out of account commitments for drunkenness as perhaps not fairly to be compared. He finds that immigrants from Germany furnished 3.6 criminals per thousand of their number in the State. Scandinavia, Scotland, France, and Ireland follow in the order named. Next came English immigrants, showing 7.2 criminals per thousand population; Russia, 7.9; Austria, 10.4; Hungary, 15.4; Poland, 16; Italy, 18.2. The average number of commitments of the native born was only 2.7 per thousand. The progression among the foreign born is exactly parallel to the proportion of illiteracy. (51.)

Dr. SENNER denies that there is any close connection between illiteracy and crime. He presents statistics concerning the nationality of immigrants in the State prisons of Massachusetts, New York, Illinois, Pennsylvania, New Jersey, Connecticut, Ohio, Indiana, Missouri, Wisconsin, Minnesota, and Michigan (house of correction). The figures also include the number of inmates of local jails and the number of commitments for drunkenness in Massachusetts, and statistics for reformatories and other institutions in Illinois, Connecticut, and Ohio. He compares these figures with the total immigration of the respective nationalities during the years from 1886 to 1897. The prisoners of Polish birth have been evenly

LXX THE INDUSTRIAL COMMISSION:—IMMIGRATION.

distributed between Russia and Austria. By bringing together the figures for these different States the witness has prepared the following table, which he declares shows that Italy, Austria, and Russia furnish a much smaller proportion of commitments than the more literate States of North Europe. (This method of comparison is, of course, an exceedingly rough one.) (171-175.)

	Total commitments.	Immigration 1896-1897.	Percentage.
England.....	3,199	530,872	0.60
Ireland.....	15,819	605,968	2.61
Scotland.....	1,027	124,494	.82
Germany.....	1,214	945,008	.13
Italy.....	733	613,581	.12
Austria.....	253	642,642	.04
Russia.....	445	537,201	.08
Sweden and Norway.....	745	518,602	.12

Italians.—Dr. SENNER declares that the Italians are an orderly and law-fearing class, the cases of the too free use of the knife being too rare exceptions to prove the contrary. Although their standard of life upon arriving in this country is relatively low, it rises rapidly. Italian labor is certainly welcome to do the rough work on railroads, sewers, etc., which American laborers are unwilling to undertake. (170, 171.)

Jews.—Mr. ROSENDALE says that the Jews are a temperate people. Even among the lowest Polish Jews there is not so much drunkenness as among others. There is not much crime among them, though there is much more than there used to be. Their crimes are largely in the way of fraud; swindling, buying goods under false pretenses, setting their stores on fire. But in sanitary conditions the Russian and Polish Jews are far below other immigrants. They seem to prefer to live in dirt. (194, 195.)

Mrs. STUCKLEN, matron of the Immigration Bureau at New York, believes that the law should be amended so that immoral women coming to this country may be excluded. She thinks that it would often be possible to get proof of their character by questioning in the board of special inquiry. The witness refers to one instance in particular where a woman of this character came nominally as the wife of an immigrant. (146, 147.)

Mr. RITTER, manager of the Austro-Hungarian Home, says that one reason for the establishment of this home was the fact that immigrant women were getting into bad habits and even sometimes into disorderly houses. The percentage going astray is practically nothing in comparison with what it formerly was. (232.)

Dr. SENNER thinks that the existing laws sufficiently prevent immigration of criminals to the United States, although, of course, there are exceptional cases in which they are admitted. (185.)

E. Pauperism and insanity.—Mr. HALL refers to the census of 1890 as showing that the foreign-born population, constituting about one-seventh of the total population, furnished one-third of the total number of insane persons in the country. The foreign-born whites, one-sixth of the total number of whites, furnished one-half of the paupers supported in public institutions. It was found in Boston in 1897 that 66 per cent of those who were aided by the Industrial Aid Society, the chief form of public charity, were foreign born, although the foreign born were only 30 per cent of the population.

In conclusion the witness states that there were supported at the public expense in 1899 about 80,000 criminals, insane, and paupers of foreign birth. The average cost of supporting them may be estimated at \$150 yearly, making the total expense \$12,000,000. (51, 52.)

Mr. SCHULTZ affirms that 40 per cent of inmates of our eleemosynary institutions are foreigners or of foreign descent. (28, 27.)

Mr. DOBLER, inspector Immigration Bureau, New York, says that in his opinion a considerable number of immigrants who come in the second cabin of vessels, bringing with them very little money, are likely to become public charges soon after landing. Thus clerks, bookkeepers, and others who have been used to the less profitable professions in Europe are likely to be unable to support themselves here. (147.)

Nationality of insane.—Mr. GOODWIN BROWN, counsel for the New York State Commission in Lunacy, says that a fraction over 50 per cent of the insane in the

hospitals in the State of New York are foreign born, although the foreign population of the State of New York constitutes only 25 per cent of the total population. The conclusion is inevitable that the defective classes of immigrants have not been successfully excluded from this country. The proportion of foreign-born insane during the last 10 years has varied from 40 to 50 per cent of the total number of insane.

As the net increase in the number of insane in the State of New York is now about 700 per year, the net increase in the number of foreign-born insane may be taken to be 350 a year. The estimates show that the entire average cost to the State for each insane person is \$3,000. On this basis, the yearly increase in the cost to the State from the foreign-born insane is more than \$1,000,000. What is true in regard to the insane, in respect to the large proportion of foreign born, is true in respect to the inmates of the prisons, reformatories, houses of refuge, and all other public institutions. A larger percentage of the foreign-born insane come from Ireland than from any other country. It is probably true that it is the least thrifty of the Irish who come over here. They come because of the hard conditions at home, and are, therefore, largely people who have lived on a low diet. This is, perhaps, in part an explanation of the large percentage of foreign born among the insane in the New York institutions. (204, 205, 207, 213.)

Proportion of insane.—MR. GOODWIN BROWN says that in the Eastern States the ratio of insane persons to the whole population is pretty nearly constant, and that there is about 1 insane person in every 300 of the population. As one goes farther west the proportion runs less, and in the far Western States there is only 1 insane person to every 1,500 of the population. It seems to be the hardy persons who go to the Western States. The feeble and defective ones are left behind. It is impossible to estimate what the proportion of insane is in foreign countries. There is no centralized administration, and things are in a confused state. Furthermore, those countries permit a far greater number of defective persons to roam at large than is the case in this country. (213, 214.)

Increase in number of insane.—MR. GOODWIN BROWN says it is very questionable whether the insane are actually increasing. Apparently the insane increase much faster proportionately than the population. That, however, may be largely attributed to the fact that more of the insane are now being given public care and treatment than was formerly the case. The management of the institutions in the State of New York to-day is so satisfactory that relatives and friends are no longer unwilling, as they were formerly, to commit insane persons to public institutions. Up to 1890 the insane were increasing in New York State at the rate of about 1,000 a year, net increase. In the last few years the annual net increase has averaged between 600 and 700. (203.)

State care of insane.—MR. GOODWIN BROWN says that the abuses in the care of the insane by local authorities were so great that, in 1890, an act was passed by the New York legislature providing for the care of all the insane by the State. Certain counties were exempted, but the act provided that those counties might turn over their insane to the State on certain terms, and, as a matter of fact, by 1896 all of those counties had turned over their insane to the care of the State. Since 1896 therefore all the insane in the State of New York have been under the care of the State, and the care of the insane had ceased to be a local affair in any sense, with the exception that the local authorities are obliged to provide the clothing and pay the expenses of commitment for the insane from their localities. The cost of caring for the insane has increased the expenses of the State, but, on the other hand, the expenses of the municipalities have been relieved from that tax. It is better to care for the insane in public institutions than to have them cared for at home, or to allow them to wander about the country. If allowed to go at large they constantly commit acts of violence or depredation. The policy of the State of New York has been to take under its charge every person properly committed.

Since the care of the insane has been put under a centralized management the average cost of caring for them has been reduced, and a material saving made to the State. The purchase of supplies on joint account has been extensively introduced under centralized management, and a saving has been made in that way. It is impossible to estimate with any degree of accuracy what the cost of caring for the insane was under local management. The figures in New York and Kings counties were juggled, and in the case of other counties it was found that frequently the books were not kept so as to show the separate cost of caring for paupers and for the insane. (202, 204, 205, 206, 218.)

New York State Commission in Lunacy.—MR. GOODWIN BROWN says that when the insane were, by the act of the legislature, put under the care of the State, a State commission in lunacy, consisting of three members, was established. The

commission has sole and exclusive jurisdiction over the insane. It does not have jurisdiction over idiots and epileptics. The separation of these classes of defectives has proved to be a satisfactory thing. The powers of the commission have been constantly extended, and now it has control over all expenditures whatsoever connected with the care of the insane. It also has authority over the removal of the insane from the State and their deportation to other States and countries. The commission has established a uniform system of accounts, a uniform system of commitment, a uniform system of dietary, of wages, of salaries, etc. It has spared no reasonable expenditure in effort to discover the causes of insanity, and in the employment of the most skillful physicians, nurses, and attendants. (202, 203.)

Cost of caring for the insane.—Mr. GOODWIN BROWN says that last year the average cost of caring for each insane person in the State of New York was \$165. The average length of time which an insane person lives after commitment to an institution is from 10 to 12 years. The cost of buildings for the care of the insane is now limited to \$550 per capita. According to the estimate of the National Fire Underwriters, the life of a brick store building is 20 years. On that basis, the cost of buildings for each lunatic is \$375. Adding interest to the cost of maintenance and the cost of buildings, a conservative estimate would be that each lunatic costs the State a total of \$3,000.

The cost of maintenance for the insane in the State of New York is about \$4,000,000 per year. Of this amount the friends and relatives of the insane contribute about one-sixteenth. The law in the State of New York makes all the relatives of an insane person liable for his maintenance, in the order of their relationship. Practically, however, cousins are never called upon to pay, though brothers and sisters have been compelled to pay for the maintenance of the insane. (204, 205, 206, 214.)

Charitable societies.—Mr. MCSWEENEY says that representatives of more than 15 different charitable societies or missionary organizations meet the immigrants on their landing in New York. Thus the united Hebrew societies have an agent and an assistant at the barge office. There is a society especially for the protection of Irish girls. There are also a German society, a Russian society, a Methodist woman's mission society, and others. (85.)

Mr. STUMP says that Italians and Jews are almost never found in almshouses. Their friends care for them when in need. The immigration bureau pays expenses of such immigrants as become paupers within 1 year after landing. From \$20,000 to \$40,000 a year are thus expended, but the amount is amply covered by the receipts from the head tax. (11.)

Mr. ROSENDALE states that the Italians furnish a large proportion of the inmates of the almshouses, but few Jews go there. The Jews of Philadelphia, through the United Hebrew Charity Association, help their own poor and keep them out of the almshouses. The poor exist, however, under wretched sanitary conditions. (195, 201.)

Mr. HALL says that there are few Jews in jails or in poorhouses, although many of them are relieved by private charity. It is believed that a certain class of Russian Jews are incorrigible paupers, although the care of them falls almost altogether upon their own race. (68.)

Mr. MCSWEENEY says that the Russian Jews, although not of such large stature as the French immigrants, are much less subject to tubercular diseases. Those who are paupers upon landing, and who temporarily receive assistance from the various organizations of their own race, are not permanently pauperized by such a system, but within a few years themselves contribute toward aiding others. The Russian Jews have practically driven out all other nationalities from the clothing trade in New York, although there is some competition from Italians. The witness refers to the practice of these Russian Jews in establishing colonies, especially on the East Side in New York and at Brownsville. (94.)

Mr. WOLF declares that the Hebrew charitable and educational organizations throughout the country have as their work almost exclusively the dealing with the refugees from Russia. The Roumanian and other refugees are in a very large degree able to establish and maintain themselves. (248.)

B'nai Brith.—Mr. WOLF states that the B'nai Brith is nearly 60 years old. It was founded by a number of earnest-minded men, mostly German Jews, who had come here under normal conditions, as other immigrants came in those times. It was the revolution of 1848 that brought the first notable number of Jews to this country, chiefly from Germany.

The object of the order is the education and Americanization of its members. The membership is now about 20,000. It has 7 districts in the United States and 3 in Europe. There are lodges in Austria, Germany, Roumania, and the Holy

Land, and efforts are now making to start one in France. Besides its educational work, it maintains hospitals, orphan asylums, homes for the aged, and free libraries. It supports a national hospital for consumptives at Denver, which takes no pay patients whatever, and which, though established for Jewish consumptives, is open to the world without reference to creed or nationality. In Philadelphia there is a hospital originally established by the order and open to all people irrespective of faith. (248, 249.)

Mr. Wolf says that while the B'nai B'rith is a very important agency of Jewish charitable and educational work, it is by no means the only one. In New York there is a vast network of affiliated organizations, which are ramifications from the central body of the United Hebrew Charities. Besides the relief of physical necessities by hospitals, orphan asylums, and similar institutions, there is centered in the Educational Alliance a system of day schools, night schools, and manual training schools, which give instruction to thousands of pupils of all ages and of both sexes. A college in Cincinnati is maintained by the Union of American Hebrew Congregations. In every large city and in many of the minor towns charities have been organized and have worked earnestly to further the assimilation of Jewish immigrants. All of these societies have to deal almost exclusively with the Russian refugees. (248, 249.)

Mr. Wolf says that the American Jews have given special attention to educating and Americanizing the European refugees and immigrants of their faith. The great Educational Alliance in New York has an attendance which averages more than 5,000 persons a day. There is also the Hebrew Technical Institute, which educates Jewish boys in mechanical and scientific pursuits. The duties of patriotism are carefully inculcated, the Constitution of the United States and the Declaration of Independence are made part of the educational system, and a tiny United States flag is on the desk of every child. There are Jewish manual training schools in Cleveland, in Philadelphia, and in Atlanta. At the Hebrew Orphan Home in Atlanta the girls are taught to be housemaids and cooks, and the boys to be mechanics, artisans, stenographers, and typewriters. (248, 250.)

F. Contagious diseases.—Mr. FITCHIE, commissioner of immigration at New York, declares that although the present law requires all immigrants to be examined by the surgeon of the vessel before sailing and a sworn statement as to their health to be entered upon the manifest, nevertheless large numbers of persons with contagious and loathsome diseases are allowed to embark and have to be debarr'd, under the law, from landing in this country. The contagious diseases of trachoma and favus are especially increasing. The courts have held that the steamship companies can not be fined for bringing such persons unless they are actually landed. The law should be changed so as to make attempting to land such persons an offense, and a fine should be imposed sufficiently large to make the steamship companies more strict. (71.)

Dr. WILLIAMS, surgeon of the Marine-Hospital Service, detailed to inspect immigrants at the port of New York, submitted the following statement showing the number of cases of contagious diseases, etc., detected by the medical inspection service at New York:

Number of hospital cases for past year	1,862
Number of landed cases applying for relief for past year	235
Number of arriving immigrants certified to during past year	1,244
Number of cases certified loathsome or dangerous contagious diseases:	
Favus	48
Trachoma	312
Number of contagious cases deported:	
Trachoma	298
Favus	36

Dr. Williams states that such dangerous diseases as smallpox are reached by the quarantine inspection. Mild contagious diseases like scarlet fever and measles are treated in the isolation hospital connected with the immigration department; such cases as these develop on board vessel and, being only temporary, the immigrants are not returned. Practically the only forms of contagious diseases which call for deportation are trachoma, or granulated eyelids, and favus, or scaldhead, which are especially common among Italians and Syrians. Where these diseases are discovered, the board of special inquiry has practically no discretion, but must return the person afflicted. Where, however, the medical inspection reveals some physical defect in the immigrants, it is optional with the board to admit him or deport him. (127-129.)

Dr. Williams thinks that there would be less immigration of persons with contagious diseases if it were left to the discretion of the commissioner of immigration whether the immigrant should be immediately deported or should be kept in

the hospital until cured, at the expense of the steamship company. The companies would dread more the cost of maintaining the immigrant in the hospital than that of deportation. Moreover, such a provision would be advantageous from the standpoint of humanity. It often involves hardship to debar a person with a contagious disease who is a member of a family. (127.)

Mr. POWDERLY says that favus is a disease of the scalp, originating in filth, which ultimately destroys the hair. Where children are afflicted, it seems more humane to return them with one of the parents than to allow the spread of the disease. (85.)

G. Religious faith of foreign-born.—Mr. ROSENDALE, investigating the condition of anthracite miners in Shickshinny in 1897, found in the neighborhood 5 Roman Catholic churches, presided over by Italian and Polish priests; 1 Greek Catholic church; 2 Polish-Jewish synagogues; 1 Methodist meetinghouse, and another meetinghouse the use of which was divided between the Presbyterians and the Episcopalians. (188.)

Mr. Rosendale refers to the superstition of the lower classes of immigrant Jews—they depend upon the rabbis for charms against evil spirits, etc. He believes that the rabbis try to maintain these superstitious opinions in order to keep control over the people. An ignorant man, Mr. Rosendale thinks, can be much more easily controlled by the rabbis and priests than one who can read. This is one ground of Mr. Rosendale's belief in a restriction of immigration by an educational test. (198, 197.)

III. ECONOMIC EFFECTS OF IMMIGRATION.

A. Money sent out of the country.—Mr. HALL says that in 1892, according to the statistics of the Bureau of Immigration, each immigrant from France brought, on an average, \$55 into this country; from Germany, \$35; England, \$26; Sweden, \$21; Russia, \$22; Austria, \$14; Poland, \$12; Italy and Hungary, \$11. Roughly speaking, the more illiterate the race the smaller the proportion of money brought.

Mr. Hall says, further, that immigrants to this country send out a very large amount of money to their homes in Europe. The amount is not definitely known, but an estimate made by the New York Herald in 1892 that \$25,000,000 went back to Europe every winter is believed to be too low. Italians send back large sums through their bankers, storing them in the old country until they can accumulate a sufficient amount to establish themselves comfortably at home. (52.)

Mr. ALLEN, a representative of the Advanced Labor Club of Brooklyn, presents an argument in favor of restricting the immigration of those who come to the United States temporarily, returning to their native countries after accumulating money. He declares that the movement in favor of such restriction is based on economic reasons, and race prejudice has nothing to do with it. The witness believes that immigrants who do not intend to stay in the United States are more dangerous than those who are uneducated.

Mr. Allen insists that the proportion of temporary immigrants is constantly increasing. He says that the number of immigrants who arrived in the United States during the 10 years ending June 30, 1891, was 5,246,613. Besides these there were probably 950,000 coming from Canada who were not enumerated. There were only 2,569,604 more foreign-born persons in the United States according to the census of 1890 than there were according to the census of 1880. Since only part of the immigrants remain in this country, an allowance of 10 per cent of those who arrive for deaths is a fair one. With this allowance it appears that 3,007,348 of foreign-born persons must have returned home from the United States during that decade. (161, 162.)

Mr. Allen declares that the loss of money sent or taken away by immigrants is a serious menace to the finances of the United States.

In 1892 the New York Herald, on the basis of testimony of padrones, steamship agents, and others, concluded that the average amount taken back to Europe by returning Italians was \$250 each. The witness considers this estimate too low, especially for skilled laborers, but accepting it as a basis he declares that the amount of money taken back by returning immigrants would be fully \$118,000,000 yearly, aside from the cost of passage both ways.

Mr. Allen thinks that the exportation of money in this way was the chief cause of the financial panic of 1893. He shows that the export movement of gold averaged only \$54,000,000 from the years 1885 to 1893, which is less than the amount which aliens must have taken with them. Moreover, the outflow began before the passage of the Sherman Act and continued after its repeal, so that it can not be attributed to that act. Most of the gold that went abroad during those 4 years

was shipped to France and Germany and thence largely reshipped to Austria, as stated by the Director of the Mint. Austria held no American stocks at that time to constitute a claim for money, nor would the Rothschilds, who were then negotiating a loan for Austria, have been likely to borrow gold in the United States, where it was scarce and dear, while it was plentiful and cheap in England. An Italian banker testified before a Senate committee in 1893 that his firm alone had sent away \$2,000,000 the year before and that there were about 80 other Italian banking firms in New York, some of which had sent away even larger amounts.

Mr. Allen declares further that our present financial condition is not sufficiently assured so that we can afford to lose the gold which aliens are continually taking away from us. In 1898-99 the balance of trade in our favor was \$580,000,000, while our net imports of gold and silver were only \$25,000,000. This great difference can not be altogether accounted for by the return and sale of American stocks held abroad, for there is reason to believe that fully as many stocks were bought by Europeans during that year as were sold. The witness thinks that the amount of money paid as interest on foreign investments is underestimated, but that the chief mistake of those who seek to explain the difference between the balance of trade and the imports of gold and silver arises from the disregard of the money taken out by temporary immigrants.

The witness says, further, that for the last financial year the balance of trade in favor of the United States as against Canada was \$52,000,000, but that we received only \$18,500,000 in cash from Canada, the balance having gone as the hoardings of the Canadian laborers who come to the United States. (161-164.)

B. Standards of living.—Mr. ROSENDALE describes in detail several cases which he investigated during his study of the slum districts in 1899. In one 2-story frame building, formerly a dwelling house, he found a grocery store in the front room; the back room used as a workshop for making shirt waists, and occupied by 6 working girls; and the second story, containing 4 bedrooms, occupied by 3 different families. Twenty-two people lived in the house. All were Russian Jews. Only 2 adults could speak English, and they very poorly. There were 8 children, none of whom attended the public schools. They were sent to the Hebrew school to learn to read Hebrew—not to translate it, but only so that they could read their prayers. The children sold matches and newspapers. Everything was very filthy, and there was no sanitary regulation. In another case a Jewish woman whose husband had left her had got a divorce from the rabbi, not from the courts, and had married again. In another case a man displayed a sign consisting of 3 Hebrew words. The first indicated that he was a killer of animals according to the Jewish rites. The second indicated that he was licensed by the chief rabbi to perform the rite of circumcision. The third indicated that he was licensed by the rabbi to perform marriages and grant divorces. Several other cases are described. (192, 193.)

Mr. Rosendale says that the rising generation of Jews, Italians, and Hungarians mean to live for the most part in the same surroundings as their parents. His impression is that they are growing up to be unskilled laborers. (196.)

Anthracite miners.—In 1897 Mr. ROSENDALE found the children of the miners not in the schools but mostly working as helpers, pickers, etc., in the mines. He found a great many women working in the mines as helpers, leaving their infant children in the shade of trees. In 1884 he had seen an entirely different class of people, contented, living in clean dwellings. He was told that many of those Welsh and Irish miners could not stand the competition of the newcomers, with their low standard of living. They had gone West to try to find employment in other mines, where the influx of the foreign element was not so strong. (189, 190.)

Mr. Rosendale found the social conditions of the anthracite miners in 1897 deplorable. Fights and quarrels were very frequent among them. They lived huddled together like cattle in dilapidated shanties. Mr. Rosendale found 20 Hungarians living in one shanty and hiring one woman to cook for them. (188.)

Poles.—Dr. SENNER quotes from a letter by the collector of customs at Buffalo regarding the Polish colony in that city. The population of the Polish colony in 1893 was about 55,000 and Poles owned about 3,000 city lots valued at \$8,181,100. They had 5 large churches and 4 schoolhouses. They appear more anxious than any other class of foreigners to secure their own homes. They pay taxes more promptly than any other nationality and take a great interest in informing themselves as to American politics. They are better educated than many other immigrants and are industrious, frugal, and law-abiding. (170, 171.)

Roumanian Jews.—Mr. WOLF declares that the majority of the Jewish refugees who have recently come from Roumania possess means enough to establish themselves in the United States and require no assistance. The report of an inspector of the United States Immigration Bureau sent to Roumania to investigate the

the hospital until cured, at the expense of the steamship company. The companies would dread more the cost of maintaining the immigrant in the hospital than that of deportation. Moreover, such a provision would be advantageous from the standpoint of humanity. It often involves hardship to debar a person with a contagious disease who is a member of a family. (127.)

Mr. POWDERLY says that favus is a disease of the scalp, originating in filth, which ultimately destroys the hair. Where children are afflicted, it seems more humane to return them with one of the parents than to allow the spread of the disease. (35.)

G. Religious faith of foreign-born.—Mr. ROSENDALE, investigating the condition of anthracite miners in Shickshinny in 1897, found in the neighborhood 5 Roman Catholic churches, presided over by Italian and Polish priests; 1 Greek Catholic church; 2 Polish-Jewish synagogues; 1 Methodist meetinghouse, and another meetinghouse the use of which was divided between the Presbyterians and the Episcopalians. (188.)

Mr. Rosendale refers to the superstition of the lower classes of immigrant Jews—they depend upon the rabbis for charms against evil spirits, etc. He believes that the rabbis try to maintain these superstitious opinions in order to keep control over the people. An ignorant man, Mr. Rosendale thinks, can be much more easily controlled by the rabbis and priests than one who can read. This is one ground of Mr. Rosendale's belief in a restriction of immigration by an educational test. (193, 197.)

III. ECONOMIC EFFECTS OF IMMIGRATION.

A. Money sent out of the country.—Mr. HALL says that in 1892, according to the statistics of the Bureau of Immigration, each immigrant from France brought, on an average, \$55 into this country; from Germany, \$35; England, \$26; Sweden, \$21; Russia, \$22; Austria, \$14; Poland, \$12; Italy and Hungary, \$11. Roughly speaking, the more illiterate the race the smaller the proportion of money brought.

Mr. Hall says, further, that immigrants to this country send out a very large amount of money to their homes in Europe. The amount is not definitely known, but an estimate made by the New York Herald in 1892 that \$25,000,000 went back to Europe every winter is believed to be too low. Italians send back large sums through their bankers, storing them in the old country until they can accumulate a sufficient amount to establish themselves comfortably at home. (52.)

Mr. ALLEN, a representative of the Advanced Labor Club of Brooklyn, presents an argument in favor of restricting the immigration of those who come to the United States temporarily, returning to their native countries after accumulating money. He declares that the movement in favor of such restriction is based on economic reasons, and race prejudice has nothing to do with it. The witness believes that immigrants who do not intend to stay in the United States are more dangerous than those who are uneducated.

Mr. Allen insists that the proportion of temporary immigrants is constantly increasing. He says that the number of immigrants who arrived in the United States during the 10 years ending June 30, 1891, was 5,246,613. Besides these there were probably 950,000 coming from Canada who were not enumerated. There were only 2,569,604 more foreign-born persons in the United States according to the census of 1890 than there were according to the census of 1880. Since only part of the immigrants remain in this country, an allowance of 10 per cent of those who arrive for deaths is a fair one. With this allowance it appears that 3,007,348 of foreign-born persons must have returned home from the United States during that decade. (161, 162.)

Mr. Allen declares that the loss of money sent or taken away by immigrants is a serious menace to the finances of the United States.

In 1892 the New York Herald, on the basis of testimony of padrones, steamship agents, and others, concluded that the average amount taken back to Europe by returning Italians was \$250 each. The witness considers this estimate too low, especially for skilled laborers, but accepting it as a basis he declares that the amount of money taken back by returning immigrants would be fully \$118,000,000 yearly, aside from the cost of passage both ways.

Mr. Allen thinks that the exportation of money in this way was the chief cause of the financial panic of 1893. He shows that the export movement of gold averaged only \$54,000,000 from the years 1885 to 1893, which is less than the amount which aliens must have taken with them. Moreover, the outflow began before the passage of the Sherman Act and continued after its repeal, so that it can not be attributed to that act. Most of the gold that went abroad during those 4 years

professions of law and medicine, and even of mechanical arts, are well represented. The ratio of Jews in the mechanical department of the University of Pennsylvania is showing a good increase. (194, 195.)

E. Effects on native labor.—1. *In general.*—Mr. POWDERLY says that there is no satisfactory statistical information as to the effect of immigration. Trade unions believe the effect injurious in depressing wages and standard of living, and in increasing unemployment.

Mr. SCHULTEIS does not admit that immigrants of low intelligence are desirable to do rough work, since we already have several millions of idle and unskilled workmen in this country, especially the 3,000,000 colored men in the South. If the lowest grade of labor is badly paid on account of the competition of the foreign born, higher grades suffer correspondingly. Southern Europeans are especially undesirable. (23, 24.)

Mr. SCHONFARBER, of the Knights of Labor, believes that the Irish and Germans who came to this country before 1875 added materially to its growth and prosperity. On the other hand, the lower classes who have been coming since that time, especially from southern and eastern Europe, have had not only an injurious social effect, but have been exceedingly injurious to American labor. The unskilled labor of the country has suffered especially. Miners have perhaps been more seriously affected by the importation of unskilled labor than any other class. At the same time many skilled immigrants have been imported, largely under contract, and have displaced skilled labor by working at lower wages. The witness thinks that the proportion of skilled immigrants is likely to decrease, but that at the same time the effect of the immigration of unskilled labor will become more and more widespread, because machinery is tending constantly to decrease the proportion of skilled workers in this country, reducing all to the ranks of common laborers. (485, 486.)

Mr. HALL admits that the earlier immigration to this country has had a beneficial effect in building up States and cities. In Chicago, Buffalo, Pittsburg, Cincinnati, and other cities the comparatively recent immigrants and their descendants have largely built up the State and paid the most of the taxes. Even Italians have become a large and valuable element of the population in some cases. The witness would not have considered an education necessary or desirable 10 or 12 years ago. It then cost more to come here and immigrants were of the better class. At present, however, immigrants are not desired. (58, 59.)

Dr. SENNER says that immigrants, especially on account of their inability to speak our language, often fail to receive full recognition of their merits. He declares that very soon immigrants become effective consumers and that without them the United States could never have built up its unparalleled home market. Immigrants improve rapidly under contact with our civilization, as is seen in the contrast between new arrivals and friends who meet them at the pier. (170.)

Dr. Senner says that he can understand how the laboring classes in times of industrial depression and enforced idleness should feel jealous of immigrants, but while there may be a sentiment in favor of restriction on the part of a great many people, there are also many who oppose it, as the witness has found out in connection with his work as secretary of the Immigration Protective League. The representatives of labor who favor restriction are usually sadly misinformed as to the effects of immigration. Most of the evils of which they complain arise from the presence of immigrants who have been here a long time, and would be little affected by present restrictions. (180, 181, 184.)

Dr. Senner thinks that whatever political or economic dangers formerly existed from immigration will more and more decrease. The country with a population of 70,000,000 is naturally better able to absorb 300,000 immigrants yearly than it was able to absorb from five to seven hundred thousand when the population was only forty or fifty millions. Moreover the European countries are rapidly advancing so that the character of immigrants is bound to improve. (173.)

1. *Immigration and wages.*—Dr. SENNER declares that the influences affecting wages are so exceedingly complex that it is impossible to determine the effect of immigration alone has had upon them. He denies emphatically, however, that wages have fallen since the great tide of immigration. In 1891 a Senate committee declared that wages had been highest during the years of heaviest immigration, which naturally coincide with periods of prosperity, and that there has been a steady increase of wages during the past 3 decades. A table prepared by the department of labor in 1898 compares the average daily wages of men in certain occupations in 12 of the largest cities in the United States for the years 1870 and 1898. The summary of these tables by trades shows an increase in every case, ranging from 1 to 20 per cent, the average increase being between 5 and 10

XXVIII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

er cent. The following table, also submitted by the witness on the same authority, shows the average wages in these occupations for each year since 1870, together with the annual immigration:

Year.	Average wages.	Increase as compared with 1870.	Immigration into the United States.	Year.	Average wages.	Increase as compared with 1870.	Immigration into the United States.
		<i>Per cent.</i>				<i>Per cent.</i>	
70.....	\$2.20	387,203	1884.....	2.49	12.9	518,592
71.....	2.39	8.5	321,350	1885.....	2.47	12.1	895,846
72.....	2.45	11.1	404,806	1886.....	2.47	12.1	334,203
73.....	2.35	6.8	459,803	1887.....	2.49	13	490,109
74.....	2.30	4.4	313,339	1888.....	2.50	13.7	546,889
75.....	2.24	1.7	227,498	1889.....	2.51	14.1	444,427
76.....	2.18	1.1	169,986	1890.....	2.52	14.6	455,302
77.....	2.24	1.8	141,857	1891.....	2.54	15.4	560,819
78.....	2.30	4.6	138,469	1892.....	2.56	16.1	623,084
79.....	2.32	5.2	172,826	1893.....	2.54	15.3	502,917
80.....	2.34	6.1	457,257	1894.....	2.49	13	314,467
81.....	2.40	9.2	669,431	1895.....	2.47	12.1	279,948
82.....	2.44	11	788,992	1896.....	2.45	11.5	843,267
83.....	2.47	12	603,322	1897.....	2.44	10.9	230,823

Dr. Senner declares further that wages have a much higher purchasing power present than 20 or 30 years ago. He submits tables prepared by the Massachusetts bureau of statistics of labor comparing the average retail prices of the leading articles of household consumption in Massachusetts for the years 1872 and 1897. These articles are the chief standard food products, with a limited number of items of fuel, cloths, rents, etc. A corresponding table shows the amount of these different commodities that \$1 would purchase in 1872 and 1897, together with the percentage of the increase in purchasing power for the latter year. This table shows an increase in purchasing power as regards all but two of the commodities enumerated, the increase in most cases being more than 30 per cent, reaching 124 per cent in the case of wheat and 117 in the case of sugar, while the increase as regards shirting, sheeting, and other cheap grades of cloths has averaged more than 100 per cent.

Dr. Senner also denies that a decrease in the wages of unskilled labor tends to bring about in the course of time a decrease in the wages of skilled labor. (170, 6-178, 184.)

2. "*Birds of passage.*"—Mr. MCSWENEY says that a very large number of stive Canadians come yearly into the United States to work during the busy season, returning to Canada during the winter. This number has been estimated as many as 50,000 or 70,000 annually. The competition of these Canadians is most severely in the neighborhood of Boston, where it has affected especially the building trades. This temporary immigration is alike injurious to Canada and to the United States, and the witness believes that the Canadian government disapproves of it. Canada loses the benefit of the labor of these persons in developing its industries, since she has need of labor; and while the United States gets value for their work, it loses because they do not spend the money they earn largely in this country and also because they lower the wages of citizens of the United States. (92, 93.)

Mr. POWDERLY declares that Canadian labor is not necessary to keep the cotton mills running. It has depressed wages and has checked increase of native population, since young men can no longer afford to marry. (89.)

Mr. Powderly and Mr. Schulties refer to the large temporary immigration of Canadian labor. Along the border many even cross daily into this country to work, returning at night. (18, 28.)

Mr. HALL says that a large proportion of Italians who come to this country have no intention of remaining longer than is necessary to accumulate sufficient money to make themselves responsible at home. A great many come to this country several times. An examination of the 8,174 Italians who landed at New York in April, 1896, showed that 27.7 per cent had been in this country before, some of them two or three times, according to their own statements. These men do not usually bring their families, the proportion of women among the immigrants being very low. So far as Italian women do come to this country, however, the witness thinks that the conjugal morality is comparatively high. (53.)

Mr. QUINLAN, contract labor inspector, says that he has personally investigated at least 1,000 cases, chiefly of Italians, who have come to this country for a second

time. Each of these brought to the United States only a small sum of money, but on his previous return to Italy had taken with him from \$200 to \$1,000. With this money they often bought homes in Italy, and returned to this country to earn money to lift the mortgage which had been given for part payment. While in this country they buy nothing except what they eat and drink. In the fall the steerage of many of the lines is crowded with persons of this class returning to Italy.

The immigration department has no power to exclude these "birds of passage," but if they be found with a very small sum of money they are debarred as likely to become paupers.

There are also a considerable number of skilled laborers, carpenters, bricklayers, and others who come to this country from Ireland, Scotland, and England during the summer, returning for the winter. Some of these hold international union cards, but that is not the rule. (122, 123.)

Dr. Rossi declares that Italians who come to this country in the spring to work return to Italy in the winter only because the enterprises on which they are employed are suspended and they can not find work here. They are not to be blamed for returning under these circumstances. Many Americans go to Europe yearly and spend millions of dollars there, far more than Italians take back with them. Moreover, Italian immigration is becoming more and more permanent. (160.)

Dr. SENNER says that, although many Italians for some years keep up the habit of returning to Italy in the winter, they are very apt on their second or third return to bring their families and become permanent residents. The increasing permanency of the immigrants is shown by the growing proportion of women and children who are coming. While in 1883, of the Italians who arrived, 23,217 were males, 3,567 females, and 2,528 under 15 years of age, the proportion in 1890 was 40,717 males, 11,082 females, and 8,759 children, while in 1898 there were 40,248 males, 18,365 females, and 11,935 children. (170.)

Mr. STUMP says that large numbers of steerage passengers annually return to Europe. These are often persons who work here during the season and spend the winter in Europe because living is cheaper. There has been great confusion of immigration statistics because of repeated entries of such persons. Many thus returning to Europe are, however, bona fide residents of this country, going to visit friends and relatives. (8.)

Mr. TER KUILE thinks that the number of Italians who return from this country in the fall is relatively decreasing. Formerly fully one-half of those coming each year return, but now the proportion does not exceed one-fourth. Those who do return a single time are apt on their second coming to settle permanently in the United States. (115.)

3. *Unskilled labor.*—Mr. SCHWAB, agent of the North-German Lloyd Company, declares that the immigrants who come to this country are absolutely needed to do the rough work, such as construction of railways, sewers, etc., which Americans are unwilling to do. The influx of immigration has not depressed wages; as a matter of fact, wages have risen during the past 25 years, while at the same time there has been a great decrease in the cost of living. The witness does not even think that the country is injured by those who come here for a short time merely, since they contribute to advance our industry during their stay. (108, 108.)

Mr. MCSWENEY, testifying in July, 1899, expresses the opinion that, owing to the general revival of business, there was at that time a demand for all the unskilled labor which was likely to arrive in this country. There have been many inquiries at the immigration office for unskilled labor, although the department has no power to assist in securing employment for immigrants. (96.)

Mr. POWDERLY says agriculture is little affected, and skilled trades much less than unskilled. Most immigrants are ordinary laborers, though many are tailors. In the shoe trade, for example, subdivision of labor and use of machinery has made the employment of cheap labor possible, and this tends to depress the wages of all trades. (82-84, 89, 42.)

4. *Padrone system.*—Mr. STUMP declares that the padrone system formerly existed extensively among Italians. Italian bankers in New York had arrangements with steamship companies or had agents of their own in Europe. Money was advanced to pay for the passage of the immigrant on agreement to work for the contractor in the United States. These bankers would send gangs of laborers to railways, etc., under charge of a boss. He would put up a cheap shanty, charge laborers \$1 a month or more for bunks, furnish them with all food and clothing, and account for their wages to the padrone. The laborer thus found himself a debtor and slave for years. This practice is now largely broken up by the contract-labor

law, but has started afresh among Assyrians, Arabs, Turks, Greeks, and Armenians, who are being brought here to peddle goods, black boots, and often to beg. (7, 8.)

Mr. SCHULTEIS says that the padrone system still flourishes to a limited degree. There are about 80 Italian banks in New York City which still maintain the system, and can furnish men in lots of 50 to 100. They care for the immigrants' money, write their letters, and save their earnings until they amount to perhaps \$400, which is a sufficient capital to enable Italians at home to cease manual labor. The system of importing contract labor has been largely broken up, partly through the effect of law, but largely through the sentiment of the people affected themselves. (30, 31.)

Mr. MCSWEENEY believes that while the practice among bankers and padrones of making contracts in Italy to furnish labor to immigrants has been largely abandoned, the immigrants are still aware that they are practically certain to find employment through the padrones on reaching this country, and a large proportion of them put themselves under the control of the padrones on reaching here. The system still flourishes and the immigrants themselves prefer that it should continue. (38.)

Mr. POWDERLY says that the padrone system still exists in Pennsylvania coal mines in a form hard to detect. An active Italian or other foreigner, who knows English, is asked to write to his friends, warning them against disclosing the fact of agreement for employment. The law should be amended so that fact of coming in response to invitation of any kind, except from relatives, should debar. Instances exist where workmen thus brought over are compelled to work practically 2 years before being able to repay the passage money advanced, and are then discharged to make room for other victims. Such employees live in the rudest fashion, and if killed in an accident will not be received by their associates, but must be buried at public expense. Nearly everyone of the Italian banks is employed in the padrone business. (33, 43, 44.)

Dr. ROSSI declares that the padrone system was formerly a very great evil in this country, but asserts that it has been considerably mitigated by the efforts of the Italian bureau. The recent failure of some of the Italian bankers has also weakened the system. The witness admits, however, that Italian laborers in the United States are still to some extent under the control of padrones. There is an element of slavery in the employment of many Italians, but the control of the padrones is not as complete as before. (155, 156, 159.)

Dr. ROSSI says that through the efforts of the Italian bureau correspondence of padrones in Italy—ticket agents and others—have often been discovered and punished by the home Government, especially by the withdrawal of licenses from agents of steamship companies. (159.)

Dr. ROSSI says that there have been a considerable number of failures among Italian bankers in recent years; that these have occasioned discredit among all of the bankers, so that many of the immigrants prefer to keep their savings in their own hands. There are, however, some honest and straightforward Italian bankers.

The witness is unwilling to give any estimate as to the amount of money sent back to Italy from the United States. (156.)

Mr. TER KUILE thinks that the padrone system no longer exists. Years ago Italian immigrants preferred to put themselves under the care of padrones, and the system became a great evil. At present the Italians no longer feel as helpless as before, and they need little assistance from the padrone. The Italian bankers with whom the immigrants still continue to do business are often responsible persons or corporations, although some of them are not responsible. (115, 116.)

Armenian and Greek immigration.—Mr. MCSWEENEY says that there is a considerable immigration of Syrians, Armenians, and Greeks. Armenians have gone to Minnesota to a considerable degree. The Syrians are mostly peddlers. There is to a considerable extent something similar to the Italian padrone system among this class. It is also believed that the immigrants are largely under the control of a central organization which sends them out as notion peddlers, although information as to this practice is not definite. (83, 88.)

Mr. STUMP also refers to the development of the padrone system among these nationalities. (8.)

5. *Coal mines.*—Mr. POWDERLY says that American labor and that of early Irish, Scotch, English, Welsh, and German immigrants, whose standard of living was high, has been largely displaced by importation or immigration of less desirable foreigners, especially Italians, Hungarians, and Poles. The number of Hungarians and Italians in the mines is now about equal. These foreigners were first brought about 1869 to replace men on strike. At present few English-speak-

ing miners remain, and a large number of miners are out of employment. Wages have been reduced and business injured. Though many Italians, Hungarians, and Poles remain in this country, others, especially from south Italy, come here only temporarily and save most of their wages. They live in exceedingly crowded houses and spend barely 15 cents of their daily wage of \$1. Other causes have contributed to the reduction of wages, but immigration is the chief cause. (82-84, 44.)

Mr. ROSENDALE understands that the first Italians who came to the anthracite region were brought by the wife of a coal man in Wilkesbarre, who was traveling in Italy, and who sent them over at her own expense, because she took pity on them. Though Mr. Rosendale considers the result deplorable, he thinks the act was one of pure philanthropy. (189.)

Mr. Rosendale doubts whether 2 per cent of the anthracite miners were Italians, Hungarians, or Polish Jews up to 1882, or possibly up to 1884 or 1885. It was in 1884 that they began to come in small numbers, and they came in alarming numbers from 1888 on. There was a slight decrease in 1894 on account of the panic, but a rapid increase at the time of Mr. Rosendale's testimony, January, 1900. (191, 200.)

Mr. Rosendale says that he was in the anthracite region in the years immediately following the war as a mining engineer, and found the miners Welsh, Irish, Americans, Germans, and Scandinavians. In 1897 he made a study of the conditions there and found Italians and Hungarians in the majority. A report of a legislative committee at that time said 60 per cent were foreigners. (188.)

Mr. Rosendale states that a Pennsylvania legislative committee made an investigation in 1897 of the condition of the miners both in the anthracite region and in the bituminous region. The report on the bituminous region was printed, but that on the anthracite, for some reason, was not. (188, 192.)

Earnings.—Mr. ROSENDALE, in 1897, investigating the condition of the anthracite miners, found that earnings ranged from \$4 to \$5 a week for adults, and from \$1.50 to \$2.50 for boys and girls. (188.)

Relation of wages to price of coal.—Mr. ROSENDALE does not think there has been a fall in the price of coal commensurate with the lowering of the wages of the anthracite miners. The wages have fallen not so much by a lowering of rates as by the restriction of production, so that a man is permitted to work only 6 months, or perhaps only 3. (190.)

Unemployment.—Mr. ROSENDALE states that in 1897 if the anthracite mines were worked to their full capacity they could not give employment to all the miners for more than 6 months. (189.)

Company stores.—Mr. ROSENDALE states that when he investigated the condition of the miners in the parts of the anthracite regions in 1897 he found nothing but company stores. The only other source of supply was Polish Jews, who carried packs upon their backs from house to house. The small grocery stores and dry goods stores that existed 20 or 30 years ago were broken up. Mr. Rosendale found the prices in company stores higher than elsewhere. He says that Mr. George Chance, president of the United Labor League, of Philadelphia, made a special study of this question and found a difference in prices of 20 or 25 per cent. Mr. Rosendale has seen slips marked with circles and red crosses, which he was informed by the recipients were warnings that if they did not buy more at the company stores they could have no work. The Pennsylvania legislature passed a bill a few years ago taxing the scrip of company stores 10 per cent, but it was vetoed by the governor. (188, 192.)

Independent anthracite operators and railroads.—Mr. ROSENDALE says that when he was in the anthracite regions in 1880, the great difficulty of the individual owners of mines was discrimination by the railroad companies in not giving them cars to take their coal to market. "In 1894 I heard very little complaint of that; but it seems to me there are no more individual operators. I think that is because I did not hear any more complaints." (190.)

6. *Sweat shops.*—Mr. ROSENDALE says that there is not now the misery and starvation in the clothing manufacture and cap manufacture that existed in 1894 and 1895 and up to 1897; but if new immigrants continue to flock, the same result must reappear—a surplus supply of labor; "and it is getting worse and worse." (196.)

Mr. Rosendale states that in 1894, at the request of the factory inspector, he undertook an investigation of the sweat shops of Philadelphia. He stuck to it for two days and gave it up. He found the conditions too hard—such filth, vice, and immorality, such suffering and actual starvation. (192.)

Mr. Rosendale declares that it is impossible for the factory inspectors to keep track of the sweat shops. The law requires that every such place be registered

and take out a license, but he himself stumbled by chance on a room back of a grocery store where 6 girls were engaged in making shirt waists. The place was not registered and the factory inspector could not be expected to find it. (192, 194.)

Mr. WOLF asserts that the popular idea of the prevalence of sweat-shop work among the Jews is exaggerated. Nearly all who are in the work are Russian Jews. The Jew is innately individualistic and ambitious, and, while he makes the struggle of competition keen even among his own people, the low wages are to him only the stepping stone to higher wages. The economic question involved in the presence of the Russian Jews would quickly solve itself if the conditions out of which it has grown were put an end to, so that the stream of refugees could cease to flow. (251.)

7. *Cigar makers.*—Mr. PERKINS, president of the International Cigar Makers' Union, says his organization has twice declared, by a general vote of the members, in favor of laws restricting immigration, although not for absolute prohibition. The trade has suffered severely from immigration. Many of the immigrants, especially Jews, have been given some training in the cigar trade in schools of a charitable nature and have then begun competing with American workmen. Many of these immigrants were assisted to come here. In New York City, where they are most numerous, only about 6,000 out of 20,000 cigar makers belong to the unions.

The following is a resolution adopted by the Cigar Makers' Union in 1893:

"Resolved, That the convention of the C. M. I. U. of America recommend to the executive officers of the A. F. of L., the various States' Federation of Labor, and the executive officers of all trades and labor unions to cooperate and demand of Congress and the Federal officers of the United States the absolute necessity of placing more restriction upon the present influx of such immigration."

In 1896 or 1897 the American Federation of Labor submitted 7 questions for vote by trade unions, inquiring whether their members favored (1) restriction of immigration further than at present, (2) exclusion of criminal and pauper elements, (3) increasing the power of the consular and immigration service to enforce the laws, (4) making employers punishable by imprisonment for violating the alien contract labor law, (5) holding steamship companies responsible for a term of years regarding character of their passengers, (6) requiring stricter civil and educational tests for naturalization, (7) requiring every immigrant to declare his intention of becoming a citizen. On all these questions the vote of the Cigar Makers' Union was affirmative by about 4 to 1. (Perkins, Vol. VII, Reports of Industrial Commission, 179, 180.)

8. *Boot and shoe trade.*—Mr. EATON, of the Boot and Shoe Workers' Union, thinks that fully 85 per cent of the workers in the boot and shoe trade are still native-born, although there are persons of various foreign nationalities also in the industry. In addition to the Irish, Germans, and French Canadians, a considerable number of Italians and Armenians have come into the trade within the past few years. They come to this country in destitute circumstances, knowing nothing of the customs and standards of living here, and they have had a very bad effect on the trade. These immigrants have also been an important factor in breaking strikes, having been especially imported for that purpose in certain cases. (Reports of Industrial Commission, Vol. VII, 869.)

9. *Iron and steel trades.*—Mr. SCHAFER, president of the Amalgamated Association of Iron, Steel, and Tin Workers, says that the introduction of the lower class of foreign labor to the steel mills has done much to reduce wages, increase hours, compel Sunday work, and to lower the standard of the people. A large number of Poles, Hungarians, and Slavs have displaced unskilled American labor in steel mills. The proportion of foreign-born skilled laborers is comparatively small, since they are usually much less competent. They lack in knowledge, intelligence, and skill. It is found, however, that the second generation of the foreign classes are creeping up into the skilled work, having been educated by contact with American civilization.

In the tin industry foreign labor has competed very extensively, even in the skilled work. This industry being new in the country, it was perhaps natural that foreigners should be imported, although at about the time of the introduction of the tin manufacture there had been a considerable displacement of men in the boiling of iron and in the sheet-iron mills, and these men had, in considerable numbers, entered the tin mills. Many of the foreign laborers who have come into the trade have joined the unions and have become citizens; but some of them do not intend to remain, and they work excessively hard, without regard to the evil effect upon themselves and upon the trade. While the output per man has been raised gradually, according to the official agreements, from

about 8,900 pounds in 1895 to 5,750 pounds in 1899 (on 80 gauge), the witness has recently known of a foreigner who has made as much as 7,500 pounds in 8 hours, defending this excessive work on the ground that he was making his money to go back to the old country. (Reports of Industrial Commission, Vol. VII, 392, 393.)

10. *Granite cutters.*—Mr. DUNCAN, of the Granite Cutters' National Union, says the granite cutters have not been materially affected by the importation of labor from abroad or from other States, but the quarrymen and paving cutters have suffered seriously by this practice. In fact, it has been the means of destroying in Maine and Massachusetts the prosperity of an industry which was a staple in both States a few years ago. It was then rare to find a paving cutter receiving less than from \$2.75 to \$3.50 per day. Italians and Finlanders have largely been brought in. Instead of being hired by the day, a part of the quarry is assigned to some 2 or 3 Finnish families, who work together, employing the boys of the families, supplying their own tools, and receiving so much per ton or thousand for the blocks cut, at rates so low that wages have been driven down to about \$1.20 per day. The paving cutters' union has been destroyed. These low-paid men are shifted from one locality to another, according to the interests of the employers, being often used to fill the places of men on strike.

The witness attributes the riots among the foreign-born in Pennsylvania to this practice of importation of labor. He considers the protection which the authorities of various States have given to employers bringing in labor from other States unjustifiable, and believes that workmen generally approve the position taken by Governor Tanner, of Illinois, Governor Jones, of Arkansas, and Governor Waite, of Colorado, in refusing to place the militia of the State at the disposal of the moneyed interests in this way. He does not approve of violation of law, however, nor do trade unionists generally so. The granite cutters have recently had a very unfortunate experience with the padrone system upon public works in New York. The law of that State requires that mechanics employed on public buildings shall be paid prevailing wages and work the prevailing hours. These in New York are \$4 for 8 hours. It has recently been proved in court that contractors on public buildings have arranged with padrones to furnish Italian workmen in large numbers. These workmen pay the padrones \$6 per week commission, which he turns over to the contractor, so that the real wage paid is only \$3 per day instead of \$4. The padrones manage the workers like so many sheep or horses. They are cautioned so that they may evade the law. Often they assume new names and falsely declare their intention to become citizens.

In the case of the particular padrone concerned in the transaction just described it was proved that he often gave to applicants for work, in case they refused to pay the required commissions, letters of apparent recommendation to contractors, which, because lacking some private mark, really indicated that the men were not to be employed, so that they would be put off with excuses.

Padrones sometimes endeavor to evade the law by not charging cash commissions, but by furnishing goods, renting tools, etc., to workmen at excessive rates.

Mr. Duncan advocates making it a criminal offense to act as an agent in such proceedings. He would also favor annulling the contracts for public works in case the contractor connived in such a padrone system. The licensing of employment offices by the State would also be advantageous. (See Reports of Industrial Commission, Vol. VII, Duncan, 206, 207, 212, 218.)

F. Distribution and employment of immigrants.—*Italian bureau.*—Dr. ROSSI, chief of the Italian bureau at New York, testifies that that bureau was established in 1894 and is supported by the Italian Government. Its first object was to restrict the evils of the padrone system by giving information to the Italian immigrant to protect him from the padrone and to render the padrone's services unnecessary. A second object was to find employment directly for Italian immigrants, scattering them throughout the States, especially in the agricultural districts. This latter part of the programme has not yet been carried out, as it would require large expenditure. The witness believes, however, that the existence of the bureau has mitigated to a considerable degree the evils of the padrone system. A great many immigrants bring with them a letter of introduction from some steamship agent or other person in Italy addressed to a banker or hotel keeper who is in connection with a padrone. Such immigrants are required to state to the Italian bureau the person to whom they are going and the reason for going there. In many cases the bureau informs the immigrant that the banker upon whom he has a draft can be compelled to bring the money to the bureau to cash it. Frequently Italians whose destination is to some distant point are assisted to go there directly without coming into contact with the middleman or labor speculator at New York. The bureau has also in various cases called

LXXXIV THE INDUSTRIAL COMMISSION:—IMMIGRATION.

the attention of the Italian consul to abuses of Italian subjects by padrones. (154-156, 159.)

Mr. POWDERLY states that this bureau was established about 1895. It met the immigrants at Ellis Island, nominally to give them information. The immigration commissioner became convinced that it assisted immigrants to evade the law and was practically an agent of the padrones. It was abolished, but later, on request of a representative of the Italian Government, was allowed to be reestablished. (43.)

Mr. MCSWEENEY says that by an arrangement between Secretary Carlisle and Baron Fava, the Italian ambassador, the Italian Government was permitted in 1894 to establish an agency at the immigration office in New York, primarily for the purpose of protecting Italian immigrants against imposition by padrones. It was understood that the arrangement was an experimental one, and the witness thinks that it has proved disadvantageous. The Italian bureau is supposed to be restricted in its action to the examination of passports and the aiding of immigrants who give their destination as New York. Those who are destined to railroad points are not reached by the bureau. The witness believes that at times the bureau has sought to fix the decision as to the admission of immigrants, and has otherwise interfered with the American officers, although there has been less difficulty in this regard during the past year than before. Moreover, the fact that Italians believe they will be protected on arriving in the United States tends to encourage undesirable immigration. The witness thinks also that the arrangement has proved ineffective as regards the breaking up of the padrone system.

The Government of Austria-Hungary also has a bureau at New York for aiding the immigrants from that country. It is carried on in an entirely different manner, however. The bureau has no office directly at the immigration office, but its purpose is to protect Austrians of all classes, furnishing them temporarily with lodging if necessary, and assisting them to secure labor. It is conducted by a private society for a subvention from the Government. (86-89.)

Mr. HOLMAN, secretary of the board of special inquiry at New York, says that although the board has never recognized the right of the Italian bureau to interfere in its proceedings, the bureau formerly did try to interfere. The head of the bureau, Dr. Rossi, disclaimed knowledge of this interference and took steps to prevent it. The witness thinks that there is no necessity or advantage in the maintenance of such a bureau at the immigration office itself. (135.)

Dr. Rossi, chief of the bureau, specifically denies that the Italian bureau has ever sought to interfere with the United States immigration authorities. He declares that it is absolutely impossible for anyone to come in contact with the immigrants at all until after they have passed the inspection officers, although those who are temporarily detained for some reason, not being under the jurisdiction of the board of special inquiry, may be approached by representatives of the Italian bureau, as they are by steamship agents, representatives of benevolent societies, and others. No illegal means of reaching immigrants have been employed by the bureau.

Dr. Rossi declares, however, that there is great need for the existence of the bureau, especially for the sake of preventing impositions upon immigrants by padrones. The work of the bureau can not be attended to satisfactorily outside of the barge office, since it consists largely in warning immigrants against those who meet them immediately after leaving that office. Most of the immigrants could not be reached at all after they once fell into the clutches of their countrymen who are awaiting them. The witness, with his 3 clerks, is able to give information to such as are in special need of assistance, or to investigate the cases of those who arrive under suspicious circumstances and who are evidently likely to be defrauded by padrones. No other country, except Italy, has such need of a bureau of this sort for the protection of its immigrants. The Germans, English, and Irish when they arrive here are practically arriving at home. Italian immigrants arrive without even the most elementary knowledge of American customs and language. The bureau gives much important information. (155-157, 160.)

Mr. HALL thinks that the special agency of the Italian Government, the main purpose of which is to prevent immigrants from falling into the clutches of the padrones, has been, on the whole, beneficial. There have been charges made that the bureau has been in collusion with evasions of the law. (64.)

Austro-Hungarian Home.—Mr. RITTER, manager of the Austro-Hungarian Home and Free Employment Bureau, says that this institution is supported in part by the Austrian Government, and for the rest by the Austrian Society of New York and the Hungarian Relief Society. The Austrian consulate has supervision of it. Its work is to receive newly landed immigrants from the Austro-Hungarian Empire, to help them to reach relatives, when they have relatives, and

otherwise to find employment for them. Its agent has a permit to go to Ellis Island and take out immigrants from the Austro-Hungarian monarchy. Immigrants are investigated as to their eligibility to land before being delivered into the care of the society, and the home, while it gives no bond, is regarded as responsible for the self-support of the immigrants. It undertakes to watch them for a year, with a view to the provisions of the law, to see that they do not become public charges within that time. Mr. Ritter thinks that the home handles about one-half of the Austro-Hungarian immigrants. The immigrants were afraid of the home at first, but now they have confidence in it. It has existed about 3 years. The men are put into positions as laborers in factories, and sometimes as porters in hotels or restaurants. Even intelligent men have to work as laborers, because of their ignorance of the English language. The women are largely provided with places as servants. Most of the single men settle down near New York. The labor market is greatly overcrowded there, and the agency is trying to disperse the immigrants over the country. A record is kept of every immigrant who comes to the home, his name, the place he comes from, his language, how much money he brings, the ship by which he came, his occupation, his destination, and, in the case of girls, the address of relatives. (219-222.)

G. Legislation governing employment agencies in New York.—Mr. BEALIN, superintendent of the Free Employment Bureau of the State of New York, says there is a law governing employment agencies in Buffalo, and one covering Brooklyn and one for New York; but there is no effective power of supervision in any officer. Moreover, there are persons who act as employment agents without a license. There is evidence to show that servants have repeatedly found places in families on the recommendation of employment agencies and have carried on a regular system of robbing their employers. The employment agencies in such cases are at least guilty of criminal negligence. (227, 228.)

Mr. Bealin states that the law requires the State Free Employment Bureau to keep a register of all applicants for employment, showing address, occupation, nativity, name of last employer, character, and duration of employment, cause for being unemployed, and whether they would be willing to go to the country. A reference blank is sent in each case to the last employer. Occasionally a fictitious address is given, as that of the last employer. There are very few applicants whose last employers do not speak of them as competent, sober, honest, willing, and obliging. The bureau has been in operation since July 20, 1896. It now averages a little more than 5,000 applicants for work in the year. In 1899 it found employment for 45.4 per cent of the applicants; in 1900, for 51.7 per cent. (223.)

In illustration of the need of State employment bureaus Mr. Bealin refers to the case of a woman of 50 whose husband and children were dead and who came to his bureau for employment and found it. If, he says, the State had not found her an opportunity to support herself it would have had to support her in the almshouse. (229.)

Mr. Bealin says that in the fall of 1896 the commissioner of labor made an investigation of the methods of employment agencies in New York. It was found that women were sometimes treated very coarsely and brutally, and that, contrary to law, fees paid to employment agencies were not returned when work was not found. Reports of similar conditions still come to Mr. Bealin's office, and he believes that matters are not much changed. He reports such cases to the commissioner, but the commissioner has no authority to act. A law like that which came near passage a year ago, giving the commissioner of labor supervision over the employment agencies, would go far to remedy these evils. (224.)

Mr. Bealin says that there are many respectable employment agencies in New York which recognize the wrongs which exist in the system and which favor a law to limit the possibility of these wrongs. (228.)

Mr. Bealin refers to the freight handlers' strike in Buffalo, which was caused, he says, by the necessity of going to a certain employment agency kept by a liquor dealer in order to get a place as a grain shoveler. The men who spent the most money at the bar were given the preference. In consequence of the strike that particular evil was cured, but similar conditions exist all over the State. (224.)

Mr. BROWN, deputy chief of the bureau of licenses of New York, considers that the fact that so few intelligence offices are complained against shows that the existing license law is a good one, and that as a rule the people in the business are reputable. There are offices which have been doing business under licenses for 18 or 20 years continuously without any complaint against them. There have

been instances, however, in which a number of persons have paid fees to an intelligence office and the proprietor has then disappeared. He has got as many fees as possible and left the town. Statements have occasionally been made to the bureau about the sending of persons to places of ill repute, but the bureau has never been able to find that such things had been done. (232-284.)

Mr. HOTCHKISS, manager of the St. Bartholomew's Employment Bureau, New York City, states that this bureau is divided into 4 distinct departments—domestic, professional, mercantile, and labor and mechanical trades. The so-called professional department is chiefly for matrons for institutions, housekeepers, nurses, trained and untrained attendants, and similar workers. A fee of 10 per cent of the first month's wages is charged in the domestic and the labor department and 15 per cent in the mechanical and the professional. Until very recently a registration fee was charged, whether employment was obtained or not, of 25 cents for the domestic department and 50 cents for the other three. This has now been abolished, and no fee is charged except that contingent upon employment.

The number of applications from employers in all departments during the year ending October 31, 1900, was 3,713, and the number of applications from workers was 5,169. Employment was found for 2,592 persons, or almost exactly half the applicants. In the domestic department 72 per cent of the applicants obtained employment—20 per cent in the mercantile, 11 per cent in the professional, and 36 per cent in the labor department.

The expenses of conducting the office for the year were \$5,759.93, or \$2.23 for each person placed in a position. The average per capita expense in the last 5 years has been \$2.15. Mr. Hotchkiss declares that the office is operated as economically as an office could possibly be. The bureau has hitherto been self-supporting, but since the abolition of the registration fee it has operated at a loss. Mr. Hotchkiss hopes, however, that it will be possible to cut down the expenses and bring them within the income. It is desired to make the agency self-supporting, chiefly in order that those who apply to it may know that they are not applying to a charitable institution. (240, 241, 243.)

Regulation of fees.—Mr. BROWN says that the New York law requires that if a fee is paid by an employer the employer must be supplied with a servant, who shall stay at least 1 month. A fee paid by an employee, with the understanding that he shall be provided with a place, must be returned unless a place is actually found for him. According to Mr. Brown's interpretation of the law it is permitted to divide a fee into two parts, one of which shall be a fee for registration and for the privileges of the office and the other a fee for procuring employment. If such a division is made, or if any fee is paid with the distinct understanding that it is paid for the privileges of the office, such fee need not be returned, even if employment is not found. This seems to Mr. Brown just, because the keeper of the office pays rent and hires clerical help and furnishes a place where employer and employee may meet. He performs an actual service, even if a given individual does not get employment. As a matter of fact, some intelligence offices charge a fee for registration and a further fee if employment is obtained. Some charge a fee only to the employee, and some charge both him and the employer. There is no legal limit on the fee that may be charged. Some intelligence offices, if they get hold of a man who is very anxious for work, will extort a large fee from him, if he has a little money, in consideration, perhaps, of a very poor place. Others deal fairly and even generously. Places are often found for servant girls without their making any payment, the keeper of the office trusting to their honesty to pay out of their wages. In many cases such debts are not paid. (231-233.)

Mr. HOTCHKISS, counsel of the Protective Association of Employment Agencies of New York State, considers that an employment agency is entitled to reimbursement for services rendered, even though no employment results. Even if no service were rendered beyond that of keeping a registry of names in a public office, applicants for employment might reasonably be expected to pay a fee for the maintenance of such registry. But an employment office is an active agency, requiring intelligent conduct of the search for employment by agent, and subject to expense for advertising, stationery, postage, etc., as well as rent. There are only two State laws which require that the agent shall receive no fee unless a position is obtained. One of these is that of Massachusetts. In Maine a fee of not over \$1 may be retained when no position is secured. The ordinance of the city of Buffalo is similar. Mr. Hotchkiss considers such a fee fair for domestic and hotel agencies and for those which place workers at labor and mechanical trades. It would be inadequate for teachers' agencies. In addition to this registration fee, there should be a fee contingent upon employment, and preferably based upon the rate of pay. In New York city fees of from 10 to 15 per cent of the first month's salary, according to the character of the employment, are usual, though there are wide differences between those of different agencies. (240-242.)

Frauds.—Mr. HOTCHKISS says that his knowledge of frauds perpetrated by employment agencies rests altogether upon hearsay. He quotes a passage from an article by Professor Bogart, enumerating certain frauds which are said to be common. The least of the abuses, says Professor Bogart, is "the universal practice of accepting a fee whether there is a prospect of finding a position or not, and of refusing to refund it when a position is not secured." More strictly fraudulent practices are the sending of laborers to distant cities, after accepting their fee, to fill purely fictitious positions; the maintenance of an agreement between an agency and a foreman, under which laborers, having paid their fees, are given employment for a few days and then discharged to make room for others; sometimes, in addition to this collusion between agency and employer or foreman, the sending of applicants to a guaranty agency which is also in the league, and which exacts another fee for looking up the references. "It is a not uncommon plan to have the employment agency located in the rear of a dramshop, which the men, who are purposely kept waiting in the hope of securing a position, will unfailingly patronize."

Mr. Hotchkiss, while he quotes Professor Bogart's statements without marked dissent, suggests that a person who is out of employment may easily persuade himself that he is a victim of fraud; not to speak of the possibility of consciously false accusations. In many cases, says Mr. Hotchkiss, allegations of fraud have been made when the proof was not forthcoming. (237.)

Mr. BROWN, deputy chief of the bureau of licenses of New York, states that during 1900 his bureau issued 91 new licenses and 335 renewals to intelligence offices in the city of New York, showing a total of 426 licensed offices. Seventy-two of the licenses and 276 of the renewals were issued for the boroughs of Manhattan and the Bronx, comprising the territory of the old city of New York. In the old city 39 new licenses and 152 renewals were issued in 1900. The growth has been gradual and fairly uniform. Some licenses are issued to church and charitable organizations, and many are issued to individuals who are held responsible for the business, although others are associated with them in the actual conduct of it. The fee is \$25 for new licenses and \$12.50 for renewals.

The law does not define an intelligence office. It simply provides that no person shall engage in the business of keeping an "intelligence office, employment bureau, or other agency," except under specified conditions. In practice, the licensed offices are chiefly for furnishing domestic help. A few restrict themselves to the furnishing of female help only, or of male help only, but most furnish help of both sexes. Some are accustomed to supply only help of particular nationalities. Some restrict themselves to certain kinds of service; for instance, cooks, or waiters, or barbers. (230, 231, 234.)

Mr. BROWN says that the bureau of licenses of New York City has attached to it as a part of the police department a squad called the "ordinance squad," and one or two men are usually charged with seeing that the licensed employment agencies comply with the law, and that no employment agencies do business without licenses. The bureau has power to hear complaints and to revoke licenses for violation of law. The commonest complaints relate to the retention of fees, without furnishing employment, if the fee has been paid by an employee, or without furnishing a servant, if the fee has been paid by an employer. In such cases the usual course of the bureau is, after a hearing, to order that the fee be returned, or if it has been paid by an employer, that the agreed service be rendered. Mr. BROWN declares that out of 426 licensed employment agencies he thinks the complaints are confined to perhaps 10 or 15. Yet he says, speaking of the number of complaints, "some days we have quite a number and other days none at all."

The present law does not require the keeping of registration books by employment offices, but the bureau is in the habit of requiring them to keep records, on the ground that proper records are implied in proper conduct of the business. Some agencies invariably investigate the references given by servants, and give employers the benefit of the results. (231, 232.)

Employment and politics.—Mr. BEALIN, superintendent of the free employment bureau of New York, says that the common laborer in New York, outside of the labor organizations, if he wants to get a job, for instance, on sewer digging or on the subway, must go to his district leader. If he is vouched for as faithful to the political organization which is locally dominant, he gets employment for a time, until he is displaced to make room for another. (224.)

Proposed law.—Mr. Bealin quotes in full the bill which was presented in the New York legislature, with the sanction of the university settlements, the Society of St. Vincent de Paul, the Bureau of Labor Statistics, and the better class of private employment agencies. It provided that no person should keep an employment agency in a city of the first or the second class without a license from the

LXXXVIII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

State controller, costing in cities of the first class \$50 for the first year and \$25 for each succeeding year, and in cities of the second class \$25 for the first year and \$12.50 for each succeeding year. No saloon keeper might conduct an employment agency in any building where liquor was sold or offered for sale. Every employment agency must enter in the register the name and address of every applicant for employment, the name and address of his last employer, and the name and address of the person who should employ him. The name and address of every person who applied for help, with the name and nature of the employment, must also be registered. These registers must be open to the inspection of the commissioner of labor or his agents. The bill forbade publishing any false or fraudulent notices or advertisements, giving any false information, making any false promise as to work or employment, or making any false entry in the registers. Mr. Bealin explains that these provisions would make it possible for the agents of the commissioner of labor, by comparing advertisements with the registers, to determine whether fraudulent advertisements had been published. The bill also forbade the sending of any female help to any place of bad repute. It required giving a receipt for every fee, and provided that if employment was not found, or was not accepted through the agency, within one month, the fee must be returned on demand. This bill was passed by the assembly and finally died in the senate committee merely for lack of time. (235, 226.)

Mr. HOTCHKISS, counsel of the Protective Association of Employment Agencies of New York State, presents the objections of that association to the Ford-Kelsey bill, which failed to pass the legislature of New York, and which Mr. Bealin quotes in his testimony and regrets the loss of. In the first place, it is regarded as an unjust discrimination to exempt teachers' agencies and agencies for actors from the operation of the law. Second, the bill, as first presented, required an annual license fee of \$200. This would be not a license fee but a tax, and would wipe many agencies out of existence. Indeed, the provision was advocated on the ground that the lessening of the number would make inspection easier, as well as on the ground that the surplus receipts of the tax would enable the department of labor to establish free employment bureaus in various parts of the State. Such taxation of the city in order to establish free bureaus elsewhere is an added injustice, and the suppression by excessive taxation of many agencies which are performing valuable services, both for employers and for employees, is unfair to the agencies and detrimental to the public good. Mr. Hotchkiss believes, on the basis of a North Carolina case which he refers to, that the suppression of such businesses by law, directly or indirectly, is unconstitutional. The Protective Association of Employment Agencies, however, assented to a fee of \$100 for the first year and \$50 annually thereafter. This is regarded as sufficient to pay for the administration of the law, including all expenses of inspection.

The Protective Association favors a bond of \$2,000, with responsible sureties, but Mr. Hotchkiss's individual opinion is that such a bond should run not to the municipality, but to the party aggrieved by any fraudulent practice, so that he might receive compensation.

The Protective Association favors the requirement of the keeping of certain books and the entering of certain information in these books, so that proper officers may make a proper inspection and the police may be aided in tracing thieves who may have registered at employment agencies. The association does not think, however, that the Ford-Kelsey bill outlined a proper system of books. Moreover, while the association believes in a system of inspection, it holds that inspections should take place only on the sworn complaint of an applicant for employment or an employer. This would avoid unnecessary disclosure of confidential communications, and would avoid the possibility of making lists of unemployed workers for partisan election purposes.

Finally, the bill is held to be unconstitutional as to the section which forbids that any fee be retained in the case of an applicant for employment who shall not obtain or accept a situation. Mr. Hotchkiss quotes an opinion of Mr. Carl L. Schurz to this effect. Mr. Schurz points out that the conduct of an employment agency requires outlays of labor and money, and that to command, as the bill in question does, that persons be permitted to make use of the facilities of the agency without payment is to take from the licensed person his time and his money without reimbursement. It is admitted that the prices to be charged in certain kinds of business affected with a public interest may be regulated by law. This bill does not propose to regulate prices, but orders that certain work be done without any payment whatever. The phrase "or accept" is especially objectionable, since it leaves to the option of the applicant to take from the employment agent the entire fruits of his labors, however faithful and successful they may have been. Finally, it is even questionable whether this business is one so affected

with a public interest that legal regulation of its charges is admissible. All the cases in the United States which have sustained such regulations relate to commercial carriers, ferrymen, hackmen, etc. (287-289.)

Mr. BROWN dislikes paternal government and thinks the less legislation we have changing the existing laws about employment agencies the better. For instance, to require a bond of the keeper of such an office would be very hard upon many married women on the east side, who add to the family income by keeping intelligence offices and who keep entirely reputable places. Mr. Brown would, however, approve a law which should provide a small fee for registration and a further fee to be paid when the place was found, and to be graduated according to the value of the place. (234, 235.)

Employment agencies—Field of work.—Mr. HOTCHKISS, manager of St. Bartholomew's Employment Bureau, New York City, says that the bulk of the work of hiring labor and seeking employment will continue to be done directly between workmen and employers, and that the labor bureaus can not serve the workmen of organized trades so efficiently as well-managed trade unions. The organized workers look out for themselves. The chief field of usefulness of labor bureaus is likely to be found, not necessarily in the less skilled employments, but in those which are unorganized. (241.)

Organized labor—Care for unemployed.—Mr. BEALIN says that the labor organizations find work for their own unemployed. Some unions have places where men out of employment are taken care of. Some, as the printers, have a regular system of publishing information as to opportunities for employment. It is the business of the walking delegate to find work for the members of his union. (223, 224, 229.)

Age as a cause of unemployment.—Mr. BEALIN says that the average woman who earns her living as a domestic can find no place after she is 45 years old. The average man can find no place as a common laborer after he is 50 if he shows his age. (223.)

IV. CAUSES INDUCING IMMIGRATION.

A. In general.—Dr. SENNER says that the causes affecting immigration are very complicated, partly local, partly individual, partly national, partly economic. It is impossible to regulate the amount of immigration by statute, since the causes acting in foreign countries are beyond our control. Dr. Senner does not think that overpopulation of European countries is the chief cause of immigration from them. People who come to this country largely do so from a desire for better opportunities; they are ambitious. A few come on account of the republican principles of our Government, as in the case of the Mennonites, but this is not usually an important motive. (167, 183.)

Dr. Senner attributes the increase of immigration from southern Italy and other countries of southern Europe largely to the desire to anticipate the enactment of educational restrictions. He says that only three years ago a new steamship line was started exclusively in view of the restriction agitation in this country. On the other hand the decrease in immigration from Germany and other northern countries of Europe, in spite of the prosperity of the United States, is chiefly due to the restrictive effect of the existing immigration law, with its inconvenience and vexations, even to those not coming under the excluded classes. The decrease in immigration from these countries can not be altogether explained by the development of their own industries or by the thorough settlement of the United States. (167, 168, 179.)

B. Prosperity of country.—The most important influence affecting immigration, says Mr. HALL, is the degree of prosperity in this country. Thus there was a great falling off of immigration immediately after the panic of 1837, and again in 1844. In 1854, during a period of great prosperity, the immigration was 427,000, a number increased by the Irish famine and the revolution in Germany. In 1860 the outbreak of the war reduced the immigration to 90,000. The immigrants numbered 438,000 in 1872 and only 261,000 in 1874, after the panic. A maximum was reached in 1882, during a period of general prosperity, which was followed by a decrease during a period of depression. The immigration then increased gradually up to 1892, when it reached 580,000. Since that time the hard times have kept the immigration low, but the history of the past leads to the opinion that as soon as industrial conditions are favorable the tide of immigration will again rise.

The fluctuations of immigration according to the prosperity of the country are largely accounted for by the fact that immigrants come in many, if not most cases, by the inducements of friends and relatives who have come before. The

reports of the immigration bureau for 1896 show that, of 263,000 persons arriving, 95,000 were going to join their immediate families, mostly having had their tickets prepaid. (49.)

Dr. SENNER also says that immigration tends to fall off in times of industrial depression. This effect would be seen the more clearly if the character of the immigrants who arrive during periods of depression should be carefully studied. A large proportion of them would be found to be members of the immediate families of former immigrants or persons who had already been in this country before. (182.)

C. Advertising in Europe.—Dr. SENNER declares that the effect of advertising by the land-grant railroads, immigration associations, etc., has been greatly exaggerated. Though such advertising is being done continually, the people have become accustomed to make much allowance in considering it. Several of the States—Michigan, Wisconsin, and others—have permanent colonization bureaus in Europe, but their effect is very small. Comparatively few colonies are established in this country by immigrants. (183.)

D. Steamship companies. (See also *Existing legislation*, p. CIII.)—Mr. SCHULTEIS declares that steamship companies use all means to procure steerage passengers, because of the high profit. The average steerage passage fee \$22.50; the cost to the company only \$1.70. Over \$118,000,000 is invested in steamship lines; practically all owned by foreigners. Dividends as high as 17 per cent are paid by some lines. The companies sell prepaid tickets largely. They advertise that free public land can readily be obtained in the West. Some advertisements state that each family can get 160 acres, an additional 160 acres by timber culture, and 160 acres more for each adult in the family. (24, 25.)

Steerage rates.—Mr. HALL says that the reduction in steerage rates on ocean vessels has been a material factor in increasing the number of immigrants. At times of rate wars the immigration has been especially heavy. The advertisements of opportunities in the United States by railroad and steamship lines and by steamship agents has had an important influence. The antisemitic agitation has had the effect of driving Jews to this country. (49.)

Mr. ROSENDALE understands that the steamboat lines have their agents in the little European villages to entice men to come to America as miners. He has been told by men, who would be glad to go back if they could, that they were enticed by circulars scattered in their villages by the steamship agents. These circulars stated that a miner could earn \$2.50 to \$3.50 per day, a fabulous sum to those people.

The steamship agents also work among the people in this country and entice them to buy tickets on the installment plan for their relatives and friends. The agents drum up custom like life-insurance agents. (189, 200.)

Mr. RITTER, manager of the Austro-Hungarian Home, of New York, says that nearly all the Hungarian and Slavic immigrants get their tickets from agents who induce them to come over. He believes, however, that these agents work simply for the commission they get on the transportation tickets and are not employed by persons or corporations in this country. (221.)

Mr. SCHWAB, agent of the North-German Lloyd Company, declares that the carrying of immigrants is relatively a less important part of the business of steamship companies now than in former years. The cabin business has increased with great rapidity. It is not true that the revenues of steamship lines are excessive. The North-German Lloyd Company during the past 20 years has paid 5 per cent dividends on the average. (103, 105.)

Mr. Schwab states that the steerage rate on the express steamers of the North-German Lloyd Company is \$38.50 from Bremen to New York, and on the slower steamers \$36.50. (104.)

Mr. TER KUILE, agent of the Fabre Steamship Company at New York, states that the fare from Naples to New York by that line is \$28. He thinks it was about \$25 in 1881 when the company commenced operation. (115.)

Mr. FLOYD, of the Cunard Steamship Company, says that the steerage rate from Liverpool to New York on that line is \$35 on some tickets and \$27.50 on others. He thinks the present rate is a reasonable one, but that the former low rates probably had some effect in stimulating immigration. (117.)

Mr. LEDERER, of the American and Red Star lines, says that the steerage passage from Antwerp to New York is \$29.50. He does not think that the increase in the rate has affected immigration. (119.)

Messrs. Schwab, Floyd, and Lederer agree in thinking that the steerage rates at present are about 50 per cent higher than in 1880.

Mr. SCHWAB testifies that the increase in steerage rates has been due to an

agreement between the steamship lines made in Europe. There are three "conferences" of transatlantic lines—the North Atlantic, the Mediterranean, and the Continental. The lines of the Mediterranean conference have the exclusive right to book American passengers from Italy. There is no combination of agencies by the different lines, but simply an agreement concerning rates. The rates could not profitably be advanced beyond the present figures, since to do so would tend to reduce traffic. (107-109.)

Mr. FLOYD also refers to this agreement concerning rates, as well as to the consultations held by agents of different lines on this side of the ocean. (118.)

Mr. SCHWAB, of the North-German Lloyd Company, believes that 60 per cent of all immigrants come on tickets bought in this country or with money sent from this country. He declares, however, that this is assisted immigration of the right kind. Immigrants come under these circumstances only when their friends and relatives in this country know of openings for them. When the country is prosperous the number of persons coming in this way increases. (104.)

Mr. TER KUILE, of the Fabre Steamship Line, says that about half of the immigrants by that line in 1898 came on prepaid tickets. (115.)

Mr. LEDERER, of the American and Red Star lines, states that about 40 or 45 per cent of the immigrants on those lines come on prepaid tickets. (118.)

Mr. SCHWAB declares that no reputable steamship company is guilty of attempting to induce immigrants to come to the United States. Moreover, this is prohibited by stringent laws in most of the European countries, for the reason that these countries depend for military service on the young men who are likely to emigrate. Only agents licensed by the government are permitted to sell tickets, and Mr. Schwab declares that numbers of agents of the North-German Lloyd have had their licenses revoked because they have sent circulars to persons whom they thought would emigrate.

Similarly the agents who sell prepaid tickets in this country do not attempt to stimulate immigration or to solicit the sale of tickets. It would hardly be possible for them to do so if they tried, and the small commission on tickets, \$2, takes away the motive. (103, 107.)

Mr. Ter Kuile, of the Fabre Steamship Company, believes that the class of immigrants from Italy has decidedly improved during the past 5 or 6 years. Most immigrants come from the agricultural districts. The number who come in defiance of law is constantly decreasing. The Italian Government aids in rejecting those immigrants who might be rejected in this country. One of the regulations of law prohibits agents of steamship companies from procuring "the departure or embarkation of persons whose immigration is not permitted to the countries to which they are directed." Immigration generally is discouraged by the Italian Government. (115, 116.)

Prepaid tickets.—Mr. MCSWEENEY believes that, while the proportion of immigrants who come to this country upon tickets actually bought for them by friends on this side may not be more than from 40 to 55 per cent, yet if those persons be also included whose tickets are paid for by money sent from this side the proportion whose passage is prepaid would be about 65 per cent. The witness believes that the majority of persons coming on prepaid tickets are a desirable class. But there are many tickets sold by peddlers on the installment plan, and the chances are that those coming on such tickets will be of a more undesirable class. For the sake of checking this practice a provision has been suggested prohibiting the sale of tickets except by authorized agents of steamship companies. Mr. McSweeney thinks that the reputable steamship companies would favor such a statute. (95.)

Mr. LEDERER does not think that the agents of the steamship companies in the United States solicit the fellow-countrymen of possible immigrants to buy tickets. Such a practice would not be successful even if tried. A man who wishes to bring over one of his friends or relatives seeks the ticket agent.

Mr. Lederer also declares that European countries prohibit the solicitation of emigration. (119.)

E. Assisted immigration.—*Attitude of British Government.*—Mr. MCSWEENEY says that at present the chief source of assisted immigration is Great Britain, and such immigrants come largely by way of Canada. The practice on the part of the British Government itself of giving wholesale assistance to criminals and paupers to emigrate has been largely discontinued, but the various local authorities seek to pass on paupers from their own jurisdiction, and finally they are apt to reach Liverpool and be given passage to Canada. It is a common boast among steamship officers that such immigrants can easily find their way to the United States. (87, 88.)

Mr. HALL says that the laws and the actions of the courts in foreign countries to some extent tend to aid the emigration of undesirable persons to the United States. It was formerly the case that certain British societies made a business of aiding discharged convicts to emigrate, but this is scarcely done at present. (80.)

Mr. SCHULTEIS says that the law prohibiting the landing of convicts is laxly administered. European countries largely send criminals here to get rid of them. There are 160 societies organized in England for this purpose. Evidence as to such action is obtained from statements of societies themselves, from money orders cashed here, etc. Judges in England encourage emigration by giving short sentences in prison with long periods of surveillance after discharge. Crime increases in years when immigration is high and in localities where immigrants chiefly settle. (26, 27.)

Mr. STUMP says that not more than 2 or 3 persons are returned yearly on ground of being criminals. The local governments of Europe sometimes pay the passage money of criminals, but the steamship companies do not connive knowingly with evasion of our law. Previous to 1893 the Prisoners' Aid Society, of London, sent ticket-of-leave men to the United States, but since the act of 1893 it has ceased to do so, and believes that none are sent from England. An isolated case of a habitual drunkard sent to this country by local authorities in Switzerland was also mentioned by this witness. (12, 13.)

Attitude of Italian Government.—Mr. STUMP says the Italian Government is entirely willing to have its subjects come to the United States, since they usually save money and return to Italy to spend it. The Government does not desire that United States laws be violated, but desires that they be fairly enforced, so as not to prevent those really eligible from immigration. (14.)

Mr. McSWEENEY says that it is the policy of the Italian Government to encourage emigration, especially temporary emigration, of those who return and bring money to Italy. On the other hand, during the war with Spain and the depression of industry about that time, the Italian Government instructed the local officers to discourage emigration. During 1898, however, as stated in the letter from the American embassy at Rome, the Government reduced the railway fare to the seaboard for all emigrants by 50 per cent. (89.)

Dr. ROSSI denies that the Italian Government seeks to encourage emigration to the United States. He admits that emigrants frequently return with money or send back money which is invested in property from which the Government collects taxes, but does not think that the Government gains especially by this fact. The Government continues to treat as Italian citizens, designated as "colonists," such persons as come to this country but have not taken out naturalization papers and are subject to military service in Italy.

Dr. Rossi states, further, that every Italian who is deported from New York is given by the Italian bureau at that port a card stating why he has been deported. Under the Italian emigration laws the immigrant is then entitled to prosecute the agent who has sold him the ticket. The Italian Government has, on the complaint of the bureau at New York, withdrawn the licenses from various steamship agents in Italy and punished others. The witness states, also, that the Italian Government has adopted the practice of giving to convicts who emigrate to the United States a certificate, stating the causes of imprisonment, the length of the term, etc. The witness knows of only one case where a convict has come to the United States from Italy with a passport, but without such a certificate. Italian criminals sometimes come to this country from ports in other countries of Europe and over which the Italian Government has no control. (154-160.)

Dr. ROSSI, chief of the Italian Immigration Bureau at New York, says that the circular referred to was issued by the Italian Government at the suggestion of the Italian bureau at New York in view of the fact that many immigrants had landed at that port without the proper address of relatives or without sufficient money. The circular simply urged the various local officers to see to it that no emigrant should be given a passport unless he could meet the conditions required by the United States law, and added that this was the more to be recommended since the United States was then engaged in war with Spain, which would naturally reduce the demand for labor. After the war ceased emigration to the United States naturally increased. (158.)

Attitude of Austro-Hungarian Government.—Mr. RITTER, manager of the Austro-Hungarian Home, says that the Austro-Hungarian Government does not desire emigration to this country, but would prefer to keep its people at home. Neither the Government nor provinces or municipalities encourage emigration, and Mr. Ritter does not think that any undesirable person has received public aid in emigrating to this country. (221.)

Hebrews.—Mr. WOLF estimates that there are between 9,000,000 and 10,000,000 Jewish people in the world, of whom 5,000,000 or 6,000,000 live in Russia. The

ancestors of the Russian Jews moved eastward from the Rhineland under the persecutions during the middle ages, and were welcomed by the Kings of Bohemia and Poland. They lived there in peace until Bohemia was conquered by Austria and Poland by Austria and Russia. Investigations made by Mr. Wolf and others in 1876 indicated that at that time there were only 150,000 Jews in the United States. Recent estimates show between 800,000 and 900,000. These estimates are based upon the returns of the synagogues.

Mr. Wolf asserts that there were more Jews in both the Northern and the Southern army during the civil war in proportion to population than men of any other faith. (250.)

Mr. SCHULTEIS says that various European countries have laws restricting immigration, which, though general in scope, really apply only to Jews. Wealthy Jews, especially the Hirsch Immigration Society, aim to bring all pauper Jews to the United States or elsewhere. At present they are paying fully \$30,000,000 a year to sustain 3,000,000 paupers within Russia itself. Jews entering this country do not join labor unions. They monopolize the tailoring business and similar light work, but will not do heavy manual labor. They increase the number of middlemen also. (28, 29.)

Mr. STUMP says that emigration of Jews from Europe has been largely assisted by the Baron Hirsch fund, which is managed by an incorporated company with a capital of \$10,000,000. This company does not now aid emigration to the United States, but rather to the Argentine Republic. Many Russian Jews, however, come to this country, chiefly from Libeau. The German steamship companies have secured a law of Germany to inspect persons entering Germany from Russia, which largely restricts the coming of Jews. Russia has some excuse for severe measures against the Jews, since they often claim to be subjects of Turkey and refuse to pay taxes or render military service. (13, 14, 22.)

Mr. WOLF declares that there is scarcely any Jewish immigration from countries where the Jew is recognized as a citizen and treated with equality. Of the Jewish immigrants who entered Philadelphia in the year ending November 1, 1900, more than 99 per cent were registered as coming from the Slavic countries of Central Europe. It is in those regions, Russia, Roumania, and parts of Austria-Hungary, that the violent persecution of the Jews has existed. Of the immigration to the United States from Austria-Hungary during the fiscal year 1900, 16,920 out of a total of 114,847 were Jews; of the 6,459 immigrants from Roumania, 6,183 were Jews; of the 90,787 immigrants from Russia, 37,011 were Jews. On the other hand, there were only 17 Jews among 1,739 immigrants from France, 337 among 18,507 from Germany, 4 out of 1,190 from Belgium, 2 out of 735 from Holland, 114 out of 4,247 from the Turkish Empire, 133 out of 48,237 from the United Kingdom, and only 2 out of more than 100,000 from Italy. In the most of these countries there are many Jews. There are Jews in the Parliament of Italy, in its army, and in all the walks of civilized life; but in all these countries the Jews are free to live like other citizens, and they cling to the lands of their birth. Among the 31,151 immigrants within the year from Denmark, Sweden, and Norway there was not a single Jew, though these countries contain a considerable number of Jewish inhabitants. (247, 252, 253.)

Dr. SENNER says that at one time the Russian edicts against Jews greatly increased the emigration from that country to the United States, and that a considerable proportion of those then coming were assisted immigrants. The effect of those edicts has now ceased. The Baron Hirsch fund was never used to any considerable extent in assisting immigration, except in the way of helping families to come together. It was largely applied to more or less unsuccessful agricultural experiments, but principally to educational purposes. (171.)

Mr. WOLF calls attention to the fact that the political rights of the Jews of Roumania were guaranteed by the treaty of Berlin. That treaty has, however, practically, though not formally, been repudiated. The provisions of equality of rights for the Jews have been evaded. The Jewish inhabitants have been placed by gradual encroachments in the legal status of foreigners, and naturalization laws have been so framed as to make the acquisition of citizenship by Jews practically impossible. The Jewish children have been excluded from the schools; private schools established by the Jewish people have been harried and taxed into insignificance, and the existence of the Jewish community has been made impossible, except on condition of unbearable burdens of taxation. Within the last 2 or 3 years, as a result of the Dreyfus agitation, antisemitism has broken out afresh in Roumania. In May, June, and July, of 1900, a veritable panic arose among the Roumanian Jews. During those 3 months more than 20,000 of them left their country. Some went to Turkey, some to Cyprus, and the rest turned westward toward England and America. The resultant industrial disturbance brought on a commercial crisis in Roumania, which resulted in the overturning

of the antisemitic cabinet, and in an improvement, at least for the time being, of the condition of the Jews. (247, 253.)

Mr. Wolf states that the American Jews have always discouraged the immigration of European Jews, and that they are in full accord with the laws to prevent the immigration of criminals, paupers, and diseased persons, and all persons who are unfitted to enjoy the franchise. Yet Mr. Wolf declares that the vast majority of the immigrants of all nationalities who have come in the last 50 or 60 years, and who are now the bone and sinew of American citizenship, came in practically the same condition of poverty in which the majority of immigrants now come, and which is often made the pretext for projects of exclusion. (245, 246, 249.)

Mr. Wolf says that the first organized effort of American Jews to care for Jewish immigrants was made at the time of the Russian persecution in 1882, and the consequent exodus. The American Jews at that time undertook to care for such Russian Jews as found their way to America, distributed them in various parts of the country, cared for their necessities, and provided them with means of work as well as means of subsistence. At the same time they took measures to discourage the movement to this country. They appointed representative men to go to Europe and confer with leading Jews in London, Berlin, Frankfurt, Vienna, Paris, and other centers, to divert as much as possible the stream of refugees. Notices were published in the Jewish press of the disturbed districts, warning the people against precipitate flight from their homes, and especially against indiscriminate immigration to America. A great deal was accomplished by this means, and only a fraction of the immense number of expatriated Russian Jews came here.

After continuing for a year or two, the exodus diminished for 7 or 8 years, until 1891. Then the same conditions, or worse, broke out again. The neighboring States of Austria and Germany tried to stem the tide of refugees. The condition of the poor people became most deplorable. Despite efforts to prevent it, a considerable number came to the United States, and a large proportion of them settled in New York.

There has never been among the Jews of the United States any organization which has encouraged or desired the wholesale influx of European Jews. Since the immemorial traditions of the Jewish people require that they care for their own, such immigration places a heavy burden upon the American Jews, and one which they by no means desire to take up. There is no fund available in this country for paying the transportation hither of any of these refugees or immigrants. (245-247, 249.)

A paper quoted by Mr. Wolf asserts that while the value of the Zionists' hope can hardly be appreciated by the Jews who live under American conditions, the way of Palestine is the nearest way to the redemption for the Jews who live in the shadow of the Middle Ages in Russia, Roumania, and Austria, and its goal is nearest to their hearts. (254.)

V. EXISTING LEGISLATION RESTRICTING IMMIGRATION.

A. History of legislation.—Mr. MCSWEENEY states that the first immigration law, passed in 1882, sought to regulate immigration rather than to restrict it. It provided for a head tax to defray the expense of regulation and the relief of immigrants who fell into distress. The law declared that no convict, lunatic, idiot, or person unable to take care of himself without becoming a public charge, should be admitted to land. But there was no provision for returning such persons to their homes. Between 1882 and 1891 Congress sought to restrict the immigration of contract labor. In 1891 the law was amended by more strictly defining the persons to be excluded and the methods of excluding them. This act was amended in 1893. The new law excluded a still larger number of persons, it being estimated that as a result of the law fully 50,000 persons were refused the sale of tickets within a year after it was passed. Various administrative changes were also made, such as the requirement that immigrants shall be manifested by the steamship company in groups of 80, and the establishment of a board of special inquiry to investigate doubtful cases.

The excluded classes as at present defined are as follows:

"All idiots, insane persons, paupers, or persons likely to become a public charge, persons suffering from a loathsome or a dangerous contagious disease, persons who have been convicted of a felony or other infamous crime or misdemeanor involving moral turpitude, polygamists, and also any persons whose ticket or passage is paid for with the money of another, or who is assisted by others to come, unless it is affirmatively and satisfactorily shown in special inquiry that such person does not belong to one of the foregoing excluded classes, or to the class of contract laborers excluded by the act of February 26, 1885." (77, 78.)

Mr. McSweeney states that the supervision of immigration at that port was under the control of State commissioners appointed by the governor of New York up to 1890, when it passed to the United States Government. In January 18, 1892, the station at Ellis Island was first occupied. At present, that station having been destroyed by fire, the inspection is carried on at the Barge Office, on the Battery, in New York. The witness believes that the administration has been much more efficient under the United States than under the State. (76.)

Application of immigration laws.—Dr. ULLO, counsel of the immigration bureau at New York, states that the United States immigration laws sometimes use the word "alien" and sometimes the words "alien immigrants." Some of the courts have held that the law applies only to alien immigrants and not to aliens generally. Many immigrants formerly declared that they were coming to visit or as tourists. Moreover, the courts have held that a person who has been in this country before is not to be considered an immigrant, so that there was no way for the time being of applying the law to "birds of passage." In 1894, in connection with the appropriation for enforcing the Chinese exclusion act, Congress enacted that the examination of aliens by the immigration department should be final unless appeal should be taken to the Secretary of the Treasury. This has been held to apply to all aliens, not merely to Chinese, but at the time of the testimony of the witness, July, 1899, a case involving the application of this provision was pending. (141.)

B. Inspection and registration.—Dr. SENNER declares that the recent increase in immigration is largely due to the restrictive effect of the law of 1893. This is shown conclusively by the failure of immigration to increase during the last year of great prosperity. The steamship companies and their agents, being financially responsible for debarréd immigrants, exercise extreme caution, rejecting large numbers of applications for tickets, while a still larger number of would-be immigrants are deterred by the annoyances of the minute inquiry made by the agents. On landing in the United States the immigrant is scarcely ever delayed less than 24 hours, and if his admission is doubtful he may be held for 1 or more weeks, during all of which time he is subject to constant vexations and is treated as a prisoner. The steerage passengers are not allowed to leave the ship until after every cabin passenger has left. There are only 4 or 5 lines of persons passing through the inspection office at the same time. When there are 800 or more immigrants on a vessel the progress is very slow, and a large proportion have at least to be detained until the next day. One of the chief objections to the educational test arises from the necessary increase in these delays and inconveniences. (168-179, 180.)

Although Mr. HALL believes that the methods of inspecting immigrants are at present fairly satisfactory, he asserts that under the present law only a very small proportion of the undesirable immigrants are excluded. The actual number debarréd varies from one-half of 1 to 1 per cent of the total number of immigrants. The question whether a person is likely to become a public charge by no means a definite one. The inspector is frequently hurried and can not ask question in sufficient detail to learn the facts. In case of appeal or reference to board of special inquiry, the procedure is so cumbersome that it is not frequently resorted to. (58.)

Mr. McSWEENEY states that each emigrant on buying his ticket is required to answer a list of questions identical with those on the manifest list of the steamer and with those asked by the inspection departments in this country. His answers to these questions are forwarded to the captain of the vessel at the port of embarkation, and the names are made up into lists of 30. These lists are sworn to by the captain of the ship and attested by the United States consul. (77.)

Mr. McSweeney says that it is possible for immigrants to make misstatements concerning the questions asked in the manifests prepared by the steamship companies. The last 4 or 5 questions on the manifests especially are usually answered without special thought. Moreover, the character of the paper and writing materials used in the manifests is so poor that they are likely to become valueless records within a very short time. (92, 101.)

Mr. FITCHIE, commissioner of immigration at the port of New York, describes the organization of the immigration bureau at that port and its methods of work. The department is divided into several branches—the contract labor bureau, Marine-Hospital Service, registry division, board of special inquiry, statistical division, boarding division, matron's division, and law department.

Certain officers of the department go down New York Harbor to meet incoming vessels. They examine first and second cabin passengers on the vessel itself unless it is necessary to land certain ones at the office for further investigation. The steerage passengers are brought to the Barge Office in New York City. There

they are first examined by the marine-hospital surgeon, and those suffering from contagious and other diseases are excluded. Passengers are then examined by the registry clerks, being asked the same questions which appear upon the manifests prepared by the steamship companies. If there is any doubt in the mind of a registry clerk as to the desirability of an immigrant, he is referred to the board of special inquiry for further examination. This board consists of 4 of the inspectors specially designated by the commissioner. One hearing is held by the board with no one but the immigrant present; at a second hearing his friends and others are admitted. The finding of this board is final unless appeal is taken to the Treasury Department at Washington. The decisions of the board are usually sustained by the Department. (70-72.)

Mr. STUMP says that when a vessel arrives at New York an immigration officer boards her and examines the manifests. Passengers in the first and second class cabins are also examined to prevent evasion of the contract-labor law. When immigrants are landed they are passed before a registry clerk and are required to answer again the same interrogatories as appear on the manifests. Doubtful cases are referred to a board of 4 inspectors. All immigrants are specially examined by a surgeon. Matrons examine women as to health and pregnancy. (9, 10.)

Mr. DOBLER, an inspector at New York, states that no person is permitted to mingle with the steerage passengers while or after reaching quarantine until they have passed through the inspection office. He believes, however, that if immigrants are detained at the office the steamship agent or near relatives are permitted to communicate with them in the presence of an inspector. There are cases where railroad agents and others attempt to communicate with passengers, but it is always detected and prevented. (149, 150.)

Mr. MCSWEENEY says that the first examination of immigrants is by the medical department. As the immigrants pass in line on their way to the registry or inspection clerks the doctors draw to one side all whose appearance is suspicious and they are specially examined. The immigrants then pass to the inspectors in several lines, each containing 30 persons who have been entered together upon the manifest prepared by the steamship company. The registry clerks almost all speak German, Italian, and Yiddish, and there are some who speak the Slavonic languages, and at least one who speaks the Oriental languages. The immigrants are questioned in their own language. Each registry clerk has the steamship manifest before him and examines each applicant to ascertain if there is any discrepancy. If there is any doubt as to whether an immigrant is entitled to admission, he is referred to the board of special inquiry.

Although sometimes as many as 4,000 persons pass through the office in a day the witness believes that the verification of the manifests is quite correct, at least so far as the counting of the immigrants goes. Occasionally there is a discrepancy between the number of names on the manifest and the actual number of immigrants on board. Some passengers may have decided not to embark at the last moment, or others may have come on board too late to be entered in the manifest, which is prepared at the head office of the steamship company. Occasionally an immigrant who is entered upon the manifest escapes inspection, but this is not common. (81, 84, 85.)

Dr. SENNER declares that there is great inconvenience and delay under the present methods of inspection. There should be a larger number of inspectors, so that at least 10 different lines of immigrants shall be undergoing inspection at the same time. Great difficulty also arises from the inability of the inspectors to speak the language of the immigrants. Speaking through an interpreter requires double the time, besides involving great uncertainty as to the correctness of the replies. The interpreters at New York are paid only \$1,000 per year, whereas court interpreters are paid about \$2,000. During Dr. Senner's administration, 1898-1897, there were no permanent interpreters for the Portuguese language or for some of the Asiatic languages or for some of the Slavonic dialects. There should be more permanent interpreters employed with provisions for securing interpreters temporarily for rarer languages. The inspectors themselves, especially those belonging to the board of special inquiry, ought to have a large command of languages. (180, 181.)

Qualifications of immigration inspectors.—Dr. SENNER thinks that the immigration officers at present are scarcely qualified for the satisfactory performance of their duties, however honest they may be and however well determined to carry out the law. An immigration inspector ought to be able to judge each individual according to his merits on the basis of many considerations. For this purpose he needs especially knowledge of the language of the immigrant. To rely upon a few poorly paid and incompetent interpreters is to secure incorrect information. It is also necessary that the inspector understand the peculiarities of the various

racess and nationalities. It would doubtless be advisable to send immigrant inspectors to foreign ports that they might mingle with immigrants and detect attempts to evade the law by direct observation; but this is impossible since the inspectors can scarcely, if at all, speak the language of the immigrants. (169, 170.)

Mr. FITCHIE testifies that all of the appointments in the immigration department, except those of laborers, are protected by the civil-service regulations. As a result there have been few changes in the staff at New York when the commissioner has been changed. Practically the same force has been employed during the 2 years of Mr. Fitchie's administration as during the 4 years preceding.

Mr. Fitchie does not think that the application of the civil-service examination to the position of immigration inspector is desirable. The system is satisfactory enough for clerical positions, but no academic examination based on book learning or linguistic knowledge can be a guaranty that the person will have the necessary common sense and honesty to decide whether an immigrant is desirable or not. The bureau at New York has had difficulty with men who have been chosen under the civil-service rules. The law moreover protects men who have never taken an examination. The witness refers especially to an instance of the appointment of an assistant engineer for a period of 4 months during the winter. A man having long experience in steam and electrical engineering was appointed by the commissioner, but the Civil Service Commissioners sought to supplant him, recommending men who had passed an examination but who had had little or no experience. It was finally decided, however, to allow the first appointee to remain. In another case a man who had been rejected by the chief engineer as unfit for the position appeared at the head of the next list of eligible candidates sent from Washington.

Mr. Fitchie does not think that the protection of a civil-service law is necessary to prevent the displacement of competent men. The appointing power can refuse to recommend the dismissal of men who are essential to the work. Moreover, civil-service laws throughout the country often fail to prevent the displacement of good men, evasions being winked at in many cases. (72-75.)

Inspection of cabin passengers.—Mr. DOBLER, an inspector at New York, testifies that he has charge of the inspectors who board the incoming steamers at quarantine for the purpose of examining cabin passengers. He has under his direction 3 contract labor inspectors and 6 assistants. The passengers are examined during the hour or hour and a half between touching at quarantine and landing at the dock. This scarcely gives sufficient time for thorough examination. Whereas each registry clerk at the Barge Office meets only 30 immigrants at a time, usually in the second cabin of the steamer 2 men are confronted with 100 or 150 passengers, and the procedure is necessarily less systematic. Nevertheless, most of the immigrants are questioned, although sometimes passengers, especially those in the first cabin, are permitted to go without examination rather than to detain them. Sometimes, however, passengers are detained temporarily on shipboard until examined.

Cabin passengers are asked questions calculated to ascertain whether they are likely to become a public charge or whether they come under contract to perform labor in the United States. To ascertain these facts they are asked concerning their occupations, their intentions in coming here, their destination, etc. If a person is found who has no occupation or who has little means, or who is suspected to be a contract laborer, he is brought to the Barge Office for further investigation. The boarding division also sees to it that unprotected women who have no one to meet them are taken to the Barge Office while awaiting their friends.

Mr. Dobler says further that officers of the foreign consulates or other persons are sometimes permitted by the customs authorities to board the steamers at quarantine, and in that case they have free access to the cabin passengers, but no one is allowed to mingle with the steerage passengers until they have passed through the inspection office. (147-150.)

Medical inspection.—Dr. WILLIAMS, of the Marine-Hospital Service, detailed to inspect immigrants at New York, testifies that the law requires that the medical inspection of immigrants shall be made by a medical officer of the Marine-Hospital Service. Some of the medical inspectors under Dr. Williams board the vessels at quarantine and examine the first and second class passengers. The steerage passengers are examined by the witness and an assistant, and to some extent by the chemist of the department at the Barge Office. The witness thinks that the force is fairly sufficient.

The rigidity of the inspection depends upon the general appearance and character of the immigrants. There are many shiploads in which passengers are so obviously in good health that only casual inspection is necessary. The greatest

difficulty is found with the Italians and Syrians, especially the latter, who are peculiarly subject to trachoma. These are usually stopped and their eyelids examined. (126-128.)

Dr. SAFFORD, a surgeon in the immigration service in New York, testifies that the medical inspection of steerage passengers is usually conducted by 2 and sometimes by 3 inspectors. The first inspector looks chiefly at the hands, head, and eyes of the immigrant. The second looks for other matters, while the third checks the other two. Suspicious persons are taken from the line and examined more thoroughly. Sometimes such persons are required to remove their clothing or are sent to the hospital for inspection. Immigrants needing treatment are sent to the hospital. The medical inspectors report those who are afflicted with dangerous contagious diseases to the commissioner, who attends to their deportation. A record is also kept of physical defects, incipient blindness, heart disease, etc., and these circumstances are taken into consideration in the decision of the board of special inquiry as to whether the immigrant is likely to become a public charge.

Dr. Safford states further that the medical department has occasion sometimes to examine those who have been landed for some time in whom a contagious disease afterwards develops. Such persons are sometimes returned to Europe, the evidence of their affidavits as to the disease being checked by the records of the original inspection and by the evidence of the diseased condition itself.

During the month of May, 1899, out of 44,754 examined, 178 immigrants were deported on account of contagious diseases, while in addition record was made of 1,224 cases of minor defects. (130-132.)

Mr. POWDERLY declares that the present medical examinations of emigrants before embarkation are insufficient. If examined in England, the inspection is exceedingly hasty, passengers passing the physician at the rate of about 2,000 an hour, often without even uncovering their heads. The English physician is under no obligation to the United States, but acts only under British laws to protect the health of the emigrant while on ship. The United States should have its own physicians to examine before embarkation. (35, 38.)

Dr. WILLIAMS, of the immigration bureau at New York, does not consider the medical inspection of emigrants at European ports very efficient in most cases. The inspection at Liverpool is better than anywhere else. The ship surgeon there examines all passengers, sometimes on shore, but sometimes necessarily on board. In addition the Government has 2 medical inspectors, who examine the steerage and second-cabin passengers on board, with a view to excluding those having contagious diseases.

The witness believes that some cases of contagious diseases are rejected by the ship surgeons in Europe. The surgeons, however, practically do not recognize the existence of trachoma (granulated eyelids) or favus (scaldhead), which are not so readily observable as some other contagious diseases. There is no attempt to isolate those having trachoma or favus while on board the ship.

Dr. Williams says that at present there is no requirement of law that all emigrants shall be bathed and disinfected before going on board, except in case the United States, under the quarantine law of 1893, sends a medical officer to some foreign port to inspect passengers where there is special danger of contagious diseases. The witness thinks that it would be desirable to require bathing and disinfection, although the steamship companies would object to it on the ground of the delay after the emigrant arrives at the port of embarkation. The requirement is more necessary because of the crowded condition of the steerage. (129, 130.)

Inspection of women.—Mrs. STUCKLEN, matron of the immigration bureau at New York, states that it is her duty, together with her assistant, to inspect the women as they pass in line with a view to ascertaining whether they are pregnant. Those who are believed from a superficial examination to be in that condition are taken to one side for further inspection. Those who are with their husbands, or are going to their husbands, are allowed to pass. If a pregnant woman is unmarried, but is going to her intended husband, an attempt is made to bring him to the Barge Office and get him married to the woman. On an average there is 1 marriage at the office every day, frequently under these circumstances. There are many other marriages of persons who have come together on the steamship and have been cohabiting there or before embarkation. During the fiscal year 1898-99 52 unmarried women who were pregnant were deported. In some cases—24 during that year—relatives of such women receive them in this country.

The matron's department also detains and cares for women and children awaiting the arrival of relatives, or assists them to take passage on trains for their destination. Sometimes children as young as 2 or 3 years of age are sent in charge

of the steamship officers to be forwarded to relatives in this country. The matron's department sees to it that such children are sent on the proper trains and that their relatives are duly notified, or they are held until their relatives come to New York. (145, 146.)

Mr. POWDERLY says that there is frequent evasion of the law as to the entrance of women. Steamship companies or friends arrange with some man on this side to meet a woman coming alone and claim her as wife to avoid difficulty. Frequently a man and woman becoming acquainted on steamer claim to be married purely for this purpose. An instance is cited. (42, 43.)

Board of special inquiry.—Mr. MCSWEENEY says that on the average from 85 to 87 per cent of the immigrants were passed by the registry clerks directly. The remainder, amounting in 1898-99 to about 25,000 persons, were examined before boards of special inquiry. The proportion of those who require special examination varies greatly in the case of different vessels. The amounts paid by the different steamship companies for feeding and caring for immigrants during their detention afford a fair index of the character of the immigrants. These amounts vary from 2 cents per capita for the passengers on board to 50 cents. On some vessels only 3 or 4 may be detained for further examination, while a ship bringing immigrants from Italy may have one-half or three-fifths of its passengers detained. In such a case the work of the immigration bureau extends over many days, and sometimes there are several boards of special inquiry sitting at the time. Delay is not caused by ignorance of the language, since most of the inspectors have a smattering of a number of different languages, and there are competent interpreters as to practically all. (90, 96, 101.)

Mr. HOLMAN, secretary of the board of special inquiry at New York, testifies that that board consists of 4 inspectors specially designated. It examines cases referred to it by the registry clerks or by the medical department. After taking the testimony of the immigrant or of others a vote is taken as to permitting him to land. An affirmative vote of 3 members is required for admission. Any member dissenting has the right to appeal to the Secretary of the Treasury, and the immigrant has the same right. The decisions of the board, however, are seldom overruled.

The board usually examines during the busy season about 100 cases per day, the time for each case sometimes being insufficient. Some cases require more investigation than others; this is especially true of contract-labor cases. Sometimes 3 or 4 boards are in session at the same time, although usually 1 is sufficient. (134.)

Mr. WEIHE, a member of the board of special inquiry at New York, says that from 75 to 125 persons are usually examined by the board daily. Families will be questioned as to their destination, as to who paid their passage, where they obtained their money, etc. If they have relatives in the United States or have sufficient means they are admitted. Sometimes they are held until it can be learned whether the persons to whom they are going are able to care for them. Sometimes the evidence of such persons and of friends is awaited. Questions are asked of immigrants as to whether they have been guilty of crime. Questions also concerning contracts for labor, although this matter has been previously investigated by the contract-labor bureau. Sometimes persons suspected of coming as contract laborers are held for several days to await further information. The longest period of detention is perhaps 3 or 4 weeks. (150, 151.)

Care during detention.—Mr. MCSWEENEY says that while they are being detained in the building the immigrants are fed at the cost of the steamship company. The meals are furnished by a contractor under competitive bids. It is in the power of the commissioner to supervise the character of the food, and Mr. McSweeney believes that it is entirely satisfactory. (85, 86.)

Mr. STUMP also says that the expense of maintaining immigrants during investigation is now met by the steamship companies, although there was some dispute as to it at first. The companies also bear expense of deportation. They usually cheerfully comply with all laws and regulations. It is the duty of the companies also to communicate with the friends of the immigrant. (10, 20.)

Dr. ULLO, counsel of the immigration bureau at New York, says that the inspection system has been greatly improved under the United States administration. The methods were formerly mere chaotic. The system of preliminary examinations with ultimate decisions by a board of special inquiry is particularly advantageous. The steamship companies seldom complain as to the judgments passed concerning immigrants, but they do complain of the fact that immigrants prolong their detention by appeals to the Secretary of the Treasury, thus increasing the expense of the steamship company for maintenance. (189.)

C. Chinese immigration.—Mr. ALLEN, a representative of the Advance Labor Club of Brooklyn, believes that the number of Chinese in the United States is constantly and rapidly increasing. He refers to a report of the House Committee on Immigration of 1892, stating that Chinese were being smuggled into the United States at the rate of 20,000 per year. He says that while the census of 1890 put the Chinese population at 107,000 the secretary of the Chinese Equal Rights League, in his petition against the Geary law, claimed that there were 150,000 Chinese in that organization in this country. There is a steady expansion in the Chinese quarters of New York and other cities. The witness quotes from an article from the New York Herald of November 28, 1896, in which it was stated that the Chinese inspector stationed at New York had submitted an elaborate report to the Secretary of the Treasury specifically charging collusion on the part of the officials at Malone, N. Y., in admitting Chinese laborers brought by the Canadian Pacific Railroad. This report also charged that many Chinese landed at New York from Cuba, either falsely claiming to be merchants and thus not subject to exclusion or else giving their destination as some point in Canada and being permitted to land under bond that they would continue passage to that country, a stipulation which was evaded in various ways. (162, 165.)

D. Contract labor.—Inspection methods.—Mr. QUINLAN, supervising inspector of the contract-labor bureau at New York, states that there are in his department about 30 employees, 15 being regular inspectors. The officers of the quarantine division of the department board the vessels not belonging to the regular lines; those of the boarding division meet incoming steamers at quarantine and examine cabin passengers, while those of the contract-labor bureau proper examine steerage passengers at the Barge Office in order to detect violations of the contract-labor law and to work up cases in shape for presentation to the board of special inquiry. The inspectors of the contract-labor bureau usually stand beside the registry or inspection clerks and listen to their questions and answers, which sometimes serve to bring out suspicious circumstances, and if any case attracts attention the immigrant is taken to one side and subjected to special examination. There is a considerable degree of cooperation between the registry clerks and the contract-labor inspectors. Occasionally the bureau is notified in advance that some person is expected to arrive who has been sent for to take the place of an American workman. On the whole, however, the bureau receives little assistance from organized labor.

Mr. Quinlan thinks that the contract-labor bureau should have a larger force and that it should receive greater appropriation than that of \$100,000 which Congress now gives it. There should be at least 10 more inspectors. In the rush of work at present, through the shortness of the force, many suspicious persons must be permitted to slip through. For example, the fact may be noticed that a group of immigrants are all destined to the same place and that each has a small sum with him. Nothing can be proved without detailed investigation. If the bureau had a larger force, a man might be sent to follow such groups and to obtain evidence. About 4,000 contract laborers have been deported during the 6 years in which Mr. Quinlan has been connected with the department, but he believes that many contract laborers have come in in spite of all possible vigilance. (120, 123-125.)

Mr. DOBLER, an inspector of the division whose duty it is to examine cabin passengers on board vessels, states that in his opinion many persons coming to perform labor under contract take passage in the cabins, especially in the second cabin, with a view to escaping the stricter examination to which steerage passengers are subjected. The inspectors on shipboard do all they can to discover such persons and to bring them to the Barge Office for further investigation. The witness states further that passengers sometimes declare that they are coming to take employment in the belief that they will be more likely to be permitted to land on that account, since they would thus be less apt to become public charges. In examining cabin passengers, persons making such statements are sometimes found on second examination not really to be under contract and are permitted to enter without detention at the Barge Office. (149, 150.)

Mr. HOLMAN, secretary of the board of special inquiry at New York, states that in the case of persons suspected of coming to labor under contract the immigration inspector reduces the result of his examination to an affidavit, which the immigrant signs. This affidavit is presented to the board of special inquiry and the immigrant is further examined. Usually such cases are given prompt attention, since if the immigrant finds that he is to be deported he may change his mind and claim that he is not under contract. Some immigrants have the idea that if they do not have work promised they may be sent back as likely to become public charges, but the board usually warns them that this is not the

case and simply urges them to tell the plain truth. After this first hearing the person who has promised the work or other persons often appear, frequently with the means to employ a lawyer.

The witness thinks that the law should be amended to make it more possible to punish the persons who offer inducements to immigrants. (135, 137.)

Deportation of contract laborers—Penalties, prosecutions, etc.—Dr. ULLO says that there is no very specific provision of the laws giving authority to the immigration department to debar contract laborers. The title of the original law of 1885 implied this power, while the law of 1887, which in its terms referred only to the persons who make contracts in this country, nevertheless states that persons included under the prohibition of the act shall not be permitted to land, but shall be sent back. The law of 1891 also mentions contract laborers under the list of undesirable aliens who may be deported. (140, 141.)

Mr. WEIHE, an inspector, of New York, declares that it is not the intention of those who proposed the contract-labor law that persons coming under contract should be deported, as is the present custom. The main purpose was to punish the contractor in this country rather than the immigrant, but it has been found impossible to convict the contractor as the statute now stands. (154.)

Interpretation of contract—Relatives, etc.—Dr. ULLO says that the courts have held that where an immigrant coming under contract is debarred and deported the person making the contract in this country can not be held, since the immigrant has not been actually imported. (140.)

Further difficulty, Dr. Ullo states, is occasioned with regard to the interpretation in the provision in the contract-labor law which excepts aliens coming to perform work in a "new industry not at present established." It is very difficult to determine what is a new industry, as was found in a case relating to diamond cutters. Moreover, it is uncertain whether the law refers to industries not established in 1885, when the original statute was passed, or to those not established at the time of the importation. (140.)

Dr. Ullo refers to the case of the importation of a minister for service at Trinity Church in New York. The lower court decided that, being under contract, he was to be excluded, since ministers were not provided for by the specific exceptions in the law. The Supreme Court of the United States, however, decided that this was not within the spirit of the law. Since then the law of 1891 has made an exception for ministers and for persons belonging to any recognized profession. But this last exception is held not to apply, for instance, to managers of great business enterprises or to newspaper men. Sometimes a house which has business both in the United States and in Europe may wish to bring one of its managers from Europe to this country, and there is doubt as to whether he is entitled to enter under the law. (144, 145.)

Dr. Ullo testifies that the contract-labor law especially provides that no person in the United States is prevented from sending for a relative or friend who does not belong to the excluded classes. The witness does not think it advisable to hinder efforts of immigrants in this country to help their friends to find positions. (143.)

Mr. WEIHE refers to one particular case in which a company, through its manager, wrote to Wales for men, promising them a certain wage. The department of immigration was told that the case could not be prosecuted because the company was not criminally responsible for the acts of its manager, who had written a letter making the contract. (151, 152, 154.)

Mr. STUMP says that fines as high as \$30,000 or \$50,000 have been imposed; e. g., against Phillips Hosiery Company in Rhode Island, but cases are usually compromised. (19.)

Evidence of contract.—Mr. QUINLAN says that it is usually difficult to prove that the head of any enterprise has formally made a contract for bringing laborers from other countries. The more common practice is for the foreman of a mine, for example, to inquire of his foreign workmen whether they have any friends or relatives whom they would like to bring to the United States. The object in each case is to replace Americans by those who are willing to work for less money.

The witness also refers especially to the recent case where about 15 Croats came to this country, destined for Rathbun, Iowa. They stated that they were farmers, but immediately on arriving went to work in a coal mine. They were about to be deported, but it had been impossible to prove that their coming had been due to formal contract. (123.)

Mr. Quinlan declares that the requirement of the courts that it must be proved that a contract has been made in a foreign country in order to convict the person making the contract makes it practically impossible to secure the necessary evidence. There have been thousands of deportations by the department on evidence

sufficient to convince the inspectors, but there have been very few convictions of those importing the labor. Most cases which have actually been brought have been compromised. The only recent case of conviction was that of John Wana-maker, who imported a salesman from London.

The witness refers especially to one recent instance of the importation of a number of stevedores. These persons came to New York on the inducement of a letter, but the counsel of the department declared that it would be impossible to convince a judge that this constituted a violation of the law. In another case two cigar makers came from Habana on the strength of a letter which stated: "If you come over here you can go to work in my factory on Murray street at \$20 per week." This was a contract, but the judge charged the jury that the contract was not made in foreign lands, so that there was no case.

In view of this condition Mr. Quinlan advocates an amendment to the contract-labor law, authorizing the exclusion of any alien who comes to this country on the strength of any inducement, request, or suggestion that work can be secured, and also the punishment of persons who shall make such inducements, requests, or suggestions, whether in this country or elsewhere. (121, 122.)

Mr. WEIHE declares that it is very difficult to get accurate information as to contract labor. Most of the evidence comes through the confession of immigrants themselves. Before those who confess are deported, however, evidence is often taken from the alleged contractor, who usually denies that a contract has been made. The authorities believe that persons have often secured work for the immigrants who swear that they have simply invited the immigrants to come to the country and sent passage money as friends. The witness believes that laborers are often coached as to what they shall say in order to avoid detection. The usual way in which such immigrants come is by invitation from some one of their own countrymen who has been made foreman of a gang in this country.

Mr. QUINLAN says that the immigration authorities use some discretion in their application of the law excluding contract labor. If a man comes to this country to work with his brother he will not be interfered with. On the other hand if a tailor or a person in a skilled trade should write to his first cousin or other relative saying, "If you come over here I can get you a job," the witness thinks the immigrant ought to be sent back. The inspectors have not so far excluded farm laborers. It is possible to make the law ridiculous by being too stringent. What the witness desires is to protect the laboring man in established industries against the foreigner who is willing to work for less money. Just at present there is a demand for additional labor in this country, but for the most part imported labor is simply destined to take the place of American labor. (124.)

Working of the law.—Mr. STUMP, while believing that wholesale importation of contract laborers has practically been stopped, also refers to the difficulty of securing the punishment of the person making contract in this country, since the chief witness, the laborer himself, is promptly deported. The law is also evaded by making promises to make a contract upon arrival. It is desirable to pass an amendment to reach this practice. (5.)

Mr. WEIHE says that there are still many cases in which groups of from 5 to 100 laborers come to the United States under some sort of an arrangement amounting to a contract, even where it is impossible to prove the contract definitely. The witness refers especially to a recent case in which a number of Italians each claimed to be going to join a cousin in Wampum, Pa. In another case about 30 Dalmatians and Croatians arrived. They denied that they had been promised work, but were all destined for Rathbun, Iowa. Investigation shows that when they arrived at Rathbun they were immediately put to work in the mines. It appears that some of their relatives or friends had secured this work for them, and at the time of the witness's testimony they were about to be deported as being contract laborers. The witness believes that in most such cases the men are induced to come to this country because they will work for low wages, and that they accordingly displace American labor. American labor organizations have no particular objection to immigrants coming to this country without previous contract and taking their chances in the same way as American laborers. (151-153.)

E. Criminals.—Dr. ULLO refers to the fact that the immigration law provides only for the exclusion of persons convicted of crime. Cases have arisen where immigrants have landed who were charged with murder and who were confronted with witnesses against them, but in the absence of action by the Government of the country from which they come the Immigration Bureau has no power to debar them. In one case the American courts held that there was sufficient evidence to justify the extradition of a criminal, but it was only on the ground that he had no money that the Immigration Bureau was able to order his

deported. The statute also gives no power to deport immoral persons generally. (141, 142.)

Exclusion of polygamists.—Mr. MCSWEENEY testifies that there is a constant stream of Mormon converts coming to this country. These usually come in the charge of a Mormon elder and travel in the second cabin of the vessels. The great majority of them are women; the witness has been told that from 90 to 95 per cent are usually women. They will deny that they are polygamists or intend to become such, and the Immigration Bureau has been unable to prove anything against them that would warrant exclusion. (90.)

F. Immigration through Canada and its inspection.—Mr. MCSWEENEY refers to an address made in the Canadian parliament in 1890, in which it was stated that from 1870 to 1890 341 675 persons landed in Canada from Europe. By comparing the total number of foreign-born persons in the country, according to the censuses of 1870 and 1880, making allowances for deaths, it appeared that 184,820 of these had been lost, doubtless chiefly by emigration to the United States. Similarly while 653,510 immigrants came into Canada during the period from 1881 to 1890, more than one-half have gone into the United States. The Canadian people apparently do not wish thus to lose a large proportion of their immigrants. (92, 93.)

Mr. STUMP states that the law does not provide for restriction of immigration from Canada. An attempt was made to secure the cooperation of the Canadian Government in restricting immigration of Europeans through Canada to the United States, but it was opposed by the Canadian people. Finally the United States Commissioner made an agreement with the Canadian steamship companies which were anxious to secure immigration business to aid in inspection, allowing United States officials to board ships. Finally they agreed to pay the United States head tax as to those destined to this country. The railways agreed to transport none without a certificate of inspection. The companies even pay the head tax on persons who remain some time in Canada before entering the United States. Canadians themselves not restricted. (15-18.)

Mr. SCHULTZ says that a large number of immigrants evade the head tax by giving some place in Canada as their destination, and remaining there a short time only before entering the United States. Canadian workmen themselves protest against British policy of allowing free immigration to Canada. Inspectors should be placed along the Canadian border. (28.)

G. Hardships of deportation.—Mr. MCSWEENEY states that hardships often arise in the enforcement of the exclusion provisions. Thus the law is peremptory in excluding idiots, insane persons, and those suffering from trachoma or dangerous contagious diseases. Cases sometimes arise where a child is brought by its parents who must under the statute be excluded, and no power is given to the Commissioner to consider the fact that the parents are able to care for the child, and he is in doubt whether to allow the parents to land, sending back the child, or whether to send the family back. A regulation of the Treasury Department that one parent should be returned in such cases has been held invalid by the courts. On the other hand, the provision of the law that persons shall be excluded who are likely to become a public charge can not be effectively applied to children coming with their parents who are likely to be supported for the time being, and yet who may be miserable degenerates, and sooner or later very apt to become burdens to the community. (78.)

Mr. STUMP says that the rigid terms of the law often work hardship, separating families and preventing single individuals from making arrangements with friends, relatives, and others in order that they may not land without anything to do. An amendment is recommended that the law shall not prevent near relatives from aiding each other to immigrate, whether by pecuniary aid, maintenance, or promise of employment in connection with the business of such relative. (5, 21.)

Mr. POWDERLY says that usually when persons send for their relatives and promise employment in their own establishments, this is not treated as a violation of law. No restriction should be placed on assistance in any form to near relatives (48.)

H. Steamship companies.—*Inspection before embarkation.*—Mr. STUMP says that previous to 1893 steamship agents in Europe were little restricted as to persons to whom they sold tickets. The result was an indiscriminate emigration to the United States. The act of 1893 requires captains of vessels to prepare lists of passengers, and to swear that they know of none prohibited entry by United States law. The steamship surgeon is also required to swear that no passenger is unfitted for labor, or afflicted with prohibited diseases. The companies have

accordingly instructed agents to exhibit the United States laws, and not to sell tickets to persons prohibited, holding agents responsible for the expense of returning rejected immigrants to their homes. Agents thus become the most effective inspectors under the law. (9, 20.)

Dr. SENNER, declares that the examination of immigrants by the ticket agents of steamship companies who are officially responsible for those who are debarred is the most efficient means of excluding undesirable classes. (180.)

Dr. ULLO thinks that there are instances in which steamship companies willfully bring persons who belong to the classes excluded by United States law. Instances have been proven in which the companies have taken deposits from passengers in order to protect themselves in case of nonadmission. The witness thinks that steamship companies should be subject to punishment if such willful action can be proved, and would favor giving the passengers who have been induced to come over the right to prosecute the companies. Dr. Ullo thinks also that the steamship companies, or the company rather than the officer or individual, should be held responsible for violation of the law. (142, 143.)

Mr. SCHWAB believes that the present practice of holding steamship companies responsible for immigrants brought is just in principle and highly effective in practice. The agents who sell tickets in Europe are compelled to exercise careful scrutiny of every passenger, since it is for the interest of the company that no passenger shall be subject to debarment. The North German Lloyd Company, at any rate, has carefully instructed its agents, giving them full statements of the laws and holding them responsible for the expense of returning debarred immigrants. The witness believes that this inspection by the agents of the company is much more effective than inspection by consular officers or through direct representatives of the United States Government. The steamship companies wish always to be on the safe side and are, if anything, excessively cautious. Agents of the North German Lloyd Company in Europe frequently cable to the representatives of the company in the United States inquiring whether it would be wise to accept certain passengers, and the reply is usually in the negative. Circulars issued to agents selling prepaid tickets in this country also contain careful statements concerning the class who are excluded under the law.

In support of these general statements, Mr. Schwab submitted a number of circulars addressed by the North German Lloyd Company to its agents in different parts of Europe, together with the notice which is appended to the printed letter sent to applicants for steerage passage, the question blank attached to each ticket, which must be filled out before it is sold, and translations of the American immigration laws into various foreign languages for posting in the offices of agents in Europe. These various documents seem to show clearly that the most explicit instructions concerning the excluded classes are given to all agents, and that they are warned to exercise great caution in accepting passengers and are held responsible for those who are debarred. (102, 104, 109-114.)

Mr. STUMP says that the rules of the American Line state in detail the classes excluded, inform agents that the law is strictly enforced, and request them to use the utmost care in accepting immigrants and to consult the head office in doubtful cases. Agents are held responsible where they have failed to exercise due care in excluding prohibited persons. (20.)

Mr. SCHWAB says that all immigrants sailing from Germany by that line are subject to medical inspection by a doctor or doctors in the employ of the company. This inspection is held at Bremen, 30 miles from the actual point of embarkation.

Since most of the dangerous diseases are found among passengers coming from the south of Russia, the North German Lloyd Company has established 7 "control stations" on the frontier between Prussia and Russia, for the examination of emigrants from that country. At each of these there is a practicing physician and a force of attendants. The other steamship companies sailing from Germany and Holland contribute toward maintaining these control stations and make use of them.

The regulations of the steamship company also require careful inspection of the passengers on board of the vessel daily. On the larger vessels there are two physicians, and on the smaller one. These must have passed the rigid German medical examination. The purpose of this inspection, which is not required by law, is to avoid danger of contagious diseases, which might result in long delay of the vessel at quarantine. The inspection is scarcely as effective in stormy weather as at other times. (105-107.)

Mr. FLOYD, of the Cunard Steamship Line, says that all passengers of the Cunard Line are examined at the port of embarkation, and if there is any doubt as to their admission into this country under our immigration laws they are rejected.

Moreover, the ticket agents are very careful to inquire as to the character of immigrants, since they are held accountable for those who are rejected. (117.)

Mr. FLOYD, of the Cunard Steamship Line, says that as regards Scandinavia that company has a system of detaining and inspecting emigrants in the interior of the country. British and Irish passengers, who have to come but a short distance from their homes to the port, are examined at the port of embarkation. (177.)

Mr. LEDERER, of the American and Red Star lines, testifies that the agents of those lines in Europe are furnished with verbatim translations of the United States immigration laws and are given explicit instructions to refuse tickets to those who would be excluded under the laws. Similar circulars are sent to agents in the United States engaged in the sale of prepaid tickets. These two companies do not seek to take passengers who are likely to be returned. Immigrants must be at the port of departure for inspection 48 hours before the vessel sails. (118, 119.)

Mr. Lederer says that immigrants are required to be at the port 48 hours before the vessel sails for the purpose of medical and other inspection. (119.)

Mr. TER KUILE, of the Fabre Steamship Company, thinks that the inspection of immigrants by that company at Naples is very rigid, having been materially improved since the report of an American commission as to the inefficiency of the examination at that port. (115.)

Mr. HALL, of the Immigration Restriction League, admits that the steamship companies make some efforts to prevent undesirable emigrants from taking passage for fear that they may be compelled to return them to Europe. On the other hand, a company sometimes takes a doubtful person and charges him double the passage money in order to protect itself. (61.)

Return of deported persons.—Dr. WILLIAMS mentioned several specific instances where persons who had been deported on the ground of being afflicted with loathsome and dangerous contagious diseases had returned again within a short time on the same vessel or upon other vessels or other lines. He states that the agents of steamship companies are informed of the deportation of any immigrant, so that they are put on their guard against bringing him back again. (128.)

Dr. ULLO says that cases have been proved in which immigrants, after being deported, have been brought back to this country by another steamer. Immigrants have stated that the officers and agents of the steamship company told them that they could come back, and have put them in the first or second cabin for the sake of evading inspection. (142.)

Dr. SAFFORD also mentions instances in which persons who had been rejected and deported on account of contagious diseases or for other reasons have afterwards returned to the United States. (131.)

Mr. TER KUILE, of the Fabre Steamship Company; Mr. FLOYD, of the Cunard Line, and Mr. LEDERER, of the American and Red Star lines, all deny knowledge of any case in which a person who has been deported from the United States has subsequently returned to this country by the same line. They declare that the companies have no desire to incur the risk of a second rejection. (114, 117, 119.)

Sailors—Kidnapped by crimps.—Mr. ROSENDALE tells of a case in which a Jewish immigrant, 4 months in this country, was enticed by crimps, made drunk, and shipped as a sailor. He worked for 4 months and when he landed again in Philadelphia his wages were \$3.75. (193.)

VI. PROPOSED AMENDMENTS TO IMMIGRATION LAW.

A. Need of further restriction.—Mr. SCHONFARBER, of the Knights of Labor, says that organized workmen throughout the country, even those who are unskilled, believe that some restriction of immigration is absolutely necessary. Even men, like the witness himself, who are sons of foreigners believe in some restriction. The witness thinks that statements concerning the opposition of the Germans and Irish in this country to restriction of immigration must be taken with a grain of salt. The Knights of Labor have at various times demanded that Congress should enact restriction laws. The organization believes that only those foreigners should be admitted who will add something to the material welfare of the country by bringing a certain amount of money and giving assurance of ability to earn a living. The witness himself, however, does not believe in the property qualification for immigration, nor does he think that the Knights of Labor lay much stress upon it. A mechanic or laborer of intelligence and ability will add more to the wealth of the country than a rich man. The Knights of Labor have also expressed themselves in favor of the educational restriction under the Lodge bill. Mr. Schonfarber doubts whether the people of the United States generally understand that proposed measure sufficiently well to know what they

think about it. He does not believe that an educational restriction will be altogether effective in protecting American labor, so long as capitalists are able to import skilled workmen to take the places of native labor. (435-437.)

Mr. SCHAFFER, of the Amalgamated Association, would favor the exclusion, if possible, of certain undesirable classes of immigrants, especially those from south-eastern Europe, the Hungarians, Poles, Russians, and Italians. He suggests as a possible means of accomplishing this end an increase of the head tax to \$25 or even \$100. This would compel skilled laborers to contribute more to the revenue of the Government and would shut out unskilled laborers. The witness has known of skilled men who have earned as much as \$12 or \$15 per day in the steel mills, but who have never become citizens. A prohibition upon the entrance of "birds of passage" would be desirable if practicable. At any rate, it would be well to require all immigrants on landing to take oath of allegiance to this country, making them subject to our laws and to taxation, but not conferring full citizenship. (394, 395.)

Mr. EATON, of the Boot and Shoe Workers' Union, says that the rank and file of trade unionists favor a restriction of immigration. His own organization has voted for restriction. Restriction is advocated even by some of the foreign born themselves, although their tendency is usually against it.

The witness doubts the advisability of an educational test. Its restrictive effect at any rate would be slight, since investigation shows that only a comparatively small percentage of immigrants would be unable to read in some language. Moreover, strong capable men would sometimes be shut out by this requirement. The witness sees no gain to be obtained by requiring an oath of allegiance from the immigrant immediately upon landing.

Mr. Eaton considers the present inspection system little more than a farce. He has himself observed its working at Ellis Island. He thinks that there is too close an affiliation between immigration and the transportation interests. The system of consular inspection would probably be advantageous in stopping immigrants before taking passage. (370, 371.)

Mr. ROSENDALE declares that the leaders of organized labor, so far as he has come in contact with them, whether native born or foreign born, are all in favor of restricting immigration. It is true that men who come from abroad with union cards are often admitted at once to labor organizations in this country and to places in their workshops. Such men, members of labor unions, would almost invariably be admitted under an educational qualification. They are the better class of workmen. In Germany there is not a member of a labor organization who can not read and write his language. Even in London, if a man is a member of a union, he becomes more intelligent. There are no labor unions in Italy, and in Russia, Poland, and Austria they are not tolerated. (19", 198.)

Mr. Rosendale says that our present immigration law has not kept out many immigrants. They are admitted, to a certain extent indiscriminately. Only a few formal questions are asked. It is not possible to subject such crowds to any proper inspection, especially with so small a force. It is true that the more rigid enforcement of the laws by Mr. Powderly will have a more beneficial effect, not only by sending back some, but by discouraging others from coming, but the laws are not strict enough. (200, 201.)

Restriction of immigration and protection.—Mr. ROSENDALE says: "While we have a protective tariff—and I am in favor of protection to the manufacturer—the manufacturer can scour the markets of Europe where he can get the cheapest labor and import it free of duty. I think if protection is given to the manufacturer, protection should be given to the workingman; and the only protection he needs is not too much competition in the labor market."

He thinks that many of the manufacturers are not willing to give equal opportunities to the workingmen. They want all the protection themselves. (197, 200.)

Importation of labor.—Mr. ROSENDALE states that a committee of the State legislature of Pennsylvania, after investigating the condition of the coal regions in 1897, recommended that the State prohibit the importation of pauper labor. Nothing, however, was done. (191.)

Past advantages to this country.—Mr. ROSENDALE declares that we should never have come to our present condition except through immigration, and that American manufacturers ought still to have the right the right to bring men over to teach new arts and new industries to American workmen. The success of the American manufacturer has been greatly promoted by the employment of men who have seen different methods in other countries and by the selection of the best methods. But the immigrants who have built up our industries were an intelligent class. It is a very different class that we now wish to keep out by restrictions upon immigration. (198, 199.)

Immigration Protective League.—Dr. SENNER, secretary of the Immigration Protective League, says that its object is "to oppose any further restriction of immigration to the United States and to protect and advance the interests of persons immigrating to this country." He declares that the league represents a large body of citizens. (185, 187.)

General argument against restriction.—Dr. SENNER thinks that it is impracticable to restrict the absolute number of immigrants. It is only possible to exclude undesirable classes, and opinions differ as to those who are undesirable. The only policy which can be recommended is one which will be for the best for the whole country. In many parts of the country immigration is still desired. The witness does not believe that the country is by any means thoroughly settled; much of the land is certainly not thoroughly cultivated. Moreover, the evils which are specially complained of—the driving out of native labor from certain sections or trades—are accomplished facts, and can not be remedied by restrictions on future immigration. If naturalization be restricted, the country will soon be able to assimilate immigrants and the problems arising from immigration will be solved. (167, 169, 182, 184.)

Dr. Senner declares that there is no ground for apprehension as to an increase in immigration. Notwithstanding the almost unprecedented prosperity of the United States, the number of immigrants in 1898-99 (311,707) is more than 10 per cent less than in 1896, and much less than in any year from 1880 to 1893. Immigration is largely coming from countries which are not densely populated. The witness attributes the decrease in immigration largely to the restrictive effect of the laws. (167, 168.)

Ambiguity of existing laws.—Dr. ULLO points out various respects in which the immigration laws are inconsistent or vague. He states that the later laws have not expressly repealed the law of 1882, and that there is considerable doubt as to what is the existing statute in various points. For this reason he thinks that a general revision of the immigration laws is highly desirable. (140, 141.)

Dr. SENNER admits that the existing immigration laws are ambiguous and defective, but thinks that the existing difficulties can be solved by court decisions and administrative regulations. On the other hand, a recodification of the laws would introduce new complications and would reopen many settled questions. (169.)

Exclusion of unskilled immigrants.—Mr. HALL thinks that, although immigration of unskilled labor is in few cases desirable, it would nevertheless be impossible to attempt to make a law of exclusion on the basis of skill. Not only would the application of the test be unsatisfactory, but some desirable elements would be shut out. The proportion of the unskilled among the total number of immigrants is very great. Moreover, the labor unions object quite as much to the coming of skilled as of unskilled labor. (65.)

Race restrictions.—Mr. HALL does not think it would be feasible, especially in view of political opposition from foreign countries, to attempt to restrict immigration by races in the same way as is done regarding the Chinese. (62.)

B. Proposed administrative amendments to immigration law.—*Report of immigration investigation commission of 1895.*—Mr. MCSWEE-NEY summarizes the recommendations made by the immigration investigation commission, consisting of Dr. Senner, Mr. Stump, and Mr. McSweeney, which was appointed by the Treasury Department in 1895. The proposed amendments were as follows:

(1) That steamship companies should be required to make manifests as to each outgoing alien passenger, giving his name, age, nationality, and occupation, and stating whether he had declared his intention to become a citizen and whether he intends to return to the United States.

(2) That the sale of prepaid ocean tickets be prohibited, except by duly authorized agents of the steamship companies.

(3) That there be added to the excluded classes persons imported for the purpose of prostitution.

(4) That power be given to the Secretary of the Treasury to arrest any immigrant who has entered unlawfully, at any time within 2 years after arrival, and to deport him after due hearing. Any alien who becomes a public charge within 1 year shall be deported and the company bringing him to the United States shall be subject to fine as in other cases.

(5) That the contract-labor law be made broader by adding the words "by any undertaking or promise of employment upon arrival in the United States."

(6) That immigration officials be empowered to administer oaths.

(7) That aliens who come unlawfully shall be sent back upon a vessel of the company bringing them, where possible, but in other cases shall be returned upon

CVIII THE INDUSTRIAL COMMISSION:—IMMIGRATION.

some other vessel at the expense of the company bringing them, such company to be subject to fine for refusal to return the alien or to pay for the passage.

(8) That money received from fines, penalties, and other sources be paid into the immigration fund.

(9) That in order to ascertain those who come to this country repeatedly, additional questions be inserted in the manifests prepared by the steamship companies. These should inquire whether the immigrant has been in the United States before, how many times, how much money he brought each time, how much money he carried back each time, and also various facts concerning his family and his property.

(10) At present the immigration authorities are authorized to inquire how much money the immigrant has, provided it does not exceed \$30. It is recommended that they be empowered to demand information as to the actual amount in every case.

(11) Strike out the provision in the existing law that no more money shall be spent in maintaining the immigration department at any port than is collected at that port.

(12) That greater care shall be taken by steamship companies in preparing and verifying manifests.

(13) That debarred immigrants shall be returned to the country whence they came, provided that those who come in transit to contiguous territory shall be returned to the country in which they were last resident.

(14) That transportation lines shall not be permitted to collect from the debarred immigrant any charge for returning him or his belongings.

(15) That transportation companies shall be subject to a fine of \$10 for each person concerning whom the required information is not given in the manifests.

(16) That false testimony before the board of special inquiry, or false affidavit as to the financial responsibility of a security on a bond, shall be punished as perjury.

(17) That the commissioners of immigration be empowered to temporarily suspend the execution of the decision of boards of special inquiry, subject to appeal to the Secretary of the Treasury.

(18) That persons assisting immigrants to evade or falsely answer inquiries shall be deemed guilty of a misdemeanor.

(19) That members of the board of special inquiry shall be empowered to exclude such aliens as appear to them suspicious or disreputable characters, unless they shall establish a good reputation.

(20) That when, under the contract-labor law, a person is ordered debarred, his testimony may be taken, after short but reasonable notice to the person charged with inducing him to immigrate, and that this testimony may be used as evidence against such person.

(21) That the boards of special inquiry may admit conditionally such persons as intend to settle in the United States, and later to bring their families, and within 1 year thereafter may reopen the case and take into consideration the admission of the whole family as if all had arrived at the same time. A person thus received would perhaps be required to return with his family in case it should be found that the family contained an idiot or other debarred person.

Finally, Mr. McSweeney declares that the immigration laws as a whole need to be codified for the sake of clearness and simplicity. (97-100.)

Discretionary powers of immigration commissioner.—Mr. FITCHIE, commissioner of immigration at New York, thinks that the commissioners of immigration at the respective ports, being the officers directly appointed by the President and responsible to him, should be given greater control over the acts of their subordinates. At present the law gives to each inspector the power to pass any who are, in his judgment, clearly and beyond doubt entitled to admission. If the inspector admits any person regardless of the facts in his case the commissioner has no definite right to reverse his decision. Similarly the commissioner has no control over the boards of special inquiry, whose decision is final unless appeal is taken to the commissioner-general of immigration. (75.)

Mr. McSWEENEY believes that the commissioners of immigration at the various ports should be given plenary power to act according to their discretion in cases where no precise provision of law exists, or to modify the requirement of the law in certain cases where injustice would clearly be done otherwise. (80.)

Discretionary powers of inspectors.—Mr. HOLMAN, secretary of the board of special inquiry at New York, also thinks that great discretionary power should be given to the commissioner of immigration and the board of special inquiry at each port, with a view to preventing hardship arising from the too strict application of the tests of exclusion, as well as to enable these officers to exclude those not

coming under any specific provision. In this connection the witness expresses the opinion that to make ability to read and write an absolute requirement would result in injustice and hardship, but that such ability might well be made one of the considerations on which the board of special inquiry should base its decisions. That board should approach as nearly as possible to a jury in its character and powers, so that a person whom it considers unfit for admission could safely be excluded. (136, 137.)

Mr. MCSWEENEY says that although the law at present provides for excluding persons convicted of felony or other infamous crime or misdemeanor involving moral turpitude, there is no provision for excluding other immoral persons, such as, for example, those who are fleeing from justice. The law excludes polygamists but does not exclude married men who run away with women or women not the wives of the person with whom they come. Such immoral persons usually have a sufficient supply of money and can not be excluded on the ground that they are likely to become a public charge.

The witness thinks that the law should be amended so as to give the immigration authorities greater discretion as to excluding such persons not coming under the precise provisions of the law. (79, 80.)

Inspection by consuls.—Mr. HALL says that the plan of requiring United States consuls to examine emigrants and grant them certificates looks attractive since the consuls have apparently better opportunities for information than inspectors on this side. But the system would necessitate a large increase in the consular force. The inspection would often be made by some clerk on a small salary subject to the temptation to accept bribes, especially if he were a native. The number of immigrants from a single port is often very great, and careful inspection would be impossible. The services of the consuls are already required and the witness has seen manifests sworn to in blank without any actual investigation. The system also would divide the responsibility, the inspector in Europe trusting that the one in America would detect any one not entitled to entrance, while the American inspector would rely upon the European one.

It would be still more undesirable to rely upon the governments of the foreign countries themselves to inspect the emigrants. They would have no motive to act as efficient agents in enforcing United States laws and might even wish to get rid of undesirable population.

The system of consular inspection would constitute a direct notice to the foreign governments to ascertain in connection with it whether persons who might be available for army service were seeking to leave the country. The military laws of Europe have made it difficult for the United States to secure a good class of immigrants.

The proposed system might also encounter political difficulties. It would be practically to establish an extraterritorial court and would require treaty stipulations. (59-62.)

Mr. STUMP says that European countries, especially Germany, are now passing laws to prevent emigration of their citizens, which has proved injurious to them. Consequently there is less need for inspection by American consuls. (22.)

Deportation of immigrants.—Dr. ULLO, counsel of the immigration bureau at New York, states that the immigration laws are indefinite as to the place to which persons who are deported must be returned. With regard to convicts, the statute declares that they must be sent to the nation to which they belong and from which they come. The port from which the immigrant has come may not be in the nation to which he belongs. The United States has no power to force a steamship company to transport a passenger by land from the European port to his own country. Indeed, while the United States has complete jurisdiction over steamship companies so far as their vessels are within the limit of 3 miles from our shores, it has no power to compel performance of its orders outside of that limit, and could have no such power in Europe, except by treaty with European countries. At present it is the custom of the immigration department to order persons debarred to be returned to the ports from which they come. In fact, the law does not consider that an immigrant has been landed at all, the examination being supposed to take place on board the vessel, even when it is actually made on land.

Dr. Ullo thinks that the form of order concerning the debarred immigrants should be simply "Not permitted to land." The steamship company would then do as it saw fit with regard to the contract with the immigrant or to the payment of damages for nonexecution, and would take such steps as it found necessary with regard to the return of the immigrant. (138, 139.)

Deportation of the insane.—Mr. GOODWIN BROWN, counsel for the New York State Commission in Lunacy, says that about 168 insane persons are sent out of the State of New York in the course of a year. About 100 of these are sent to

foreign countries. A trained attendant is always sent with the lunatic and arrangements are made beforehand with friends and relatives to take care of him. These arrangements must be made, for there is no way in which a lunatic can be compelled to go. No lunatic is ever sent into a State until careful investigation has shown that he should be sent there. There is great difficulty in sending insane persons to foreign countries, as the steamship companies object to having a lunatic on board. There ought to be some provision whereby, in case a State wishes to return lunatics or other dependent persons to a foreign country, the steamship companies could be obliged to take them if they were properly accompanied. In cases where the insane are sent back in accordance with the provision of the immigration law which compels a steamship company bringing them over to return them, when insanity, due to causes arising prior to their coming to this country, develops within a year from their coming, the lunatics are simply delivered to the steamship company. Probably much suffering and hardship is endured by these people when they are taken back under those circumstances.

The steamship company when it returns them simply deposits them at the point of departure and leaves them. There ought to be some provision made so that they should be sent back to the place from which they come. (207, 208, 209, 215.)

Proposed amendment to the immigration laws.—Mr. GOODWIN BROWN, referring to the section of the immigration law providing that when an immigrant becomes insane within one year from the time of his arrival in this country from causes which arose prior to his departure for this country he shall be shipped back at the expense of the steamship company, says that a period of one year is altogether too short a time, and that the time should be extended to two years at least. The clause "from causes existing prior to his landing" should be stricken out, because it is practically impossible to prove that the causes of insanity existed prior to the coming of the immigrant to this country without a very elaborate investigation. The law also should be amended so as to exclude idiots, epileptics, and imbeciles, and to exclude persons who have been insane within ten years previous to their coming to this country. The United States, and even the State of New York, could better afford to keep at every port one or two trained alienists to examine immigrants for insanity than to allow these people to come in and become a public charge. In May, 1898, a bill was introduced into the United States Senate by Senator Fairbanks at the solicitation of the lunacy commission providing for an amendment to the immigration law along the lines suggested. It is not known to a certainty that foreign countries deliberately deport many of their insane and imbeciles to this country, but there are certain facts which indicate that the thing is being done. (208, 209, 210, 211, 212.)

Contract-labor law.—Dr. ULLO, who has had charge of the preparation of testimony in nearly all contract-labor cases, declares that under the existing provisions of the law scarcely 1 in 1,000 can be brought to conviction. The law makes it unlawful to import into the United States any person under contract made previous to the importation. The courts hold that this contract must be of such a character that it could have been enforced at law. It is very rare that any one makes such formal contract before coming to this country, and it is practically impossible to prove the existence of a contract made on the other side.

Where the immigration officers decide to refuse admission to an immigrant under the contract-labor law, it is possible to take his testimony *de bene esse* before he is deported. But since the person thus taking the testimony does not know what the defense on the other side will be, the testimony thus taken in written form is of little value as compared with the oral testimony of the defendant in court. Although the law permits a contract-labor case to be taken up at any time within 1 year after the landing of the immigrant, it is naturally difficult to get testimony from the person who is at work for the defendant in the case.

The witness accordingly advocates an amendment to the law making it unlawful to offer inducements to any person to bring him to this country. The decision as to what constitutes an inducement will then be left to the jury under proper instructions from the court. (140, 143, 144.)

Dr. Ullo thinks that the immigrant brought to the United States under contract should be given a right to sue the person who has made the contract and to collect part or all of the fine. The immigrant is frequently an innocent man. He does not know the law of this country and is not presumed to know it. He has disposed of his property and broken up his home, and on being debarred has to build up a home again. To grant to private parties generally the power to sue for violation of the contract-labor law would tend to make the enforcement of the law much more effective. (143.)

Mr. MCSWEENEY believes that the contract-labor law should be amended to make it less difficult to prove violations. The courts have construed the law strictly, declaring that it must be proved that the contract made is such a one as would entitle the contracting parties to enforce it. Evidence of contract can be secured in only 3 ways: (1) Through parties present at the making of the contract. Since the contract is made outside of the United States in most cases the witnesses to the contract are outside and can not be secured. (2) By the confession of the alien contracting for admission. But he knows that he will be punished by deportation. Moreover, if once he is allowed to land he presumably goes straight to work for the person importing him and is not likely to betray him. (3) Through the person importing the alien, who will certainly seek to conceal the fact since he is threatened with a fine.

For these reasons very few fines have been imposed under the act, although a considerable number of persons have been deported. The administrative officers value evidence in a different way from judicial officers, and are willing to take the responsibility of excluding men where the evidence is not sufficient to secure a legal conviction. As a matter of fact, this deportation is done without any specific authorization by statute.

Mr. MCSWEENEY thinks that the contract-labor law should be amended so that evidence that any inducement or allurement has been held out to aliens to come to this country for the performance of labor should be sufficient to make the importer subject to fine. (77-80.)

Mr. POWDERLY speaks of the difficulty of proving contract, and especially of proving that it was made abroad. The law should be amended so that the fact of coming in response to invitation of any kind should be sufficient for debarment. (33.)

Mr. FITCHIE, commissioner of immigration at the port of New York, thinks that the contract labor law should be amended so as to make it an offense on the part of the steamship companies to attempt to land persons brought under contract. The penalties also should be made more severe than at present. (71.)

Mr. SCHWAB, agent of the North German Lloyd Company, thinks that the law should be amended so as to punish the person who sends for the contract laborer rather than the unfortunate laborer himself, who comes to the United States ignorant of its law on the subject. (102.)

Mr. QUINLAN advocates an amendment by which any attorney who declares that he has evidence as to a violation of the contract labor law may go before a United States district attorney, and in case the district attorney does not see fit to take up the case may himself prosecute the alleged offender and on conviction receive one-half of the penalty, the court to have power to award the other half of the penalty to the witnesses. Mr. Quinlan believes that such a provision would make every labor organization a contract labor inspector and that many more convictions would be secured. At present only the district attorney may bring action. It is objected that the change would tend to further blackmail. (121, 122.)

Mr. ROSENDALE favors the bill which was once passed by Congress and vetoed by President Cleveland, providing that no male alien who has not in good faith declared his intention to become a citizen may be employed on any public work of the United States or may come regularly or habitually into the United States to engage in any mechanical trade or manual labor for wages or salary, returning from time to time to a foreign country. (148.)

Temporary immigration.—Mr. MCSWEENEY says that there are many aliens who come to this country during the labor season and return to their homes during the winter, so-called "birds of passage." The witness thinks that the immigration authorities should be given discretionary power to exclude this class, since they are usually undesirable and displace the laborers of this country. The status of aliens who have acquired a residence here and who return to their native land should be more carefully defined in the law. (80, 81.)

Mr. POWDERLY thinks it is necessary to establish inspectors along the border between Canada and the United States. The present Canadian inspectors can not examine immigrants destined for Canada, and many really coming to the United States are manifested as going to some point near the United States border, whence they enter this country. When such are later discovered, the law only allows deportation to Canada as the country whence they last came. It should be amended to allow return to their original country. Such immigrants frequently change their names to avoid detection. The greater part of those who become public charges come by way of Canada. (38.)

Steamship companies.—Mr. POWDERLY states that the law requires the master of each vessel to prepare a manifest containing answers to numerous questions as to

each alien passenger. Formerly this was required only as to steerage passengers, but many persons prohibited entrance evaded the law by coming in the first or second cabin, so that the requirement was recently extended by the Immigration Bureau to these. American citizens are not manifested, and aliens sometimes evade the law by claiming to be citizens. The examination in preparation of manifests is hasty and insufficient, and should be replaced by more thorough examination on board ship by an immigration agent or by the purser, or by examination by United States agents before embarkation. (37, 38.)

Mr. SCHULTZ declares that the steamship companies have used strong influence against the Lodge bill and other restrictive measures. The efforts of Dr. Senner and Dr. Glavis were especially vigorous. This influence was largely exerted to keep the press silent or favorable to immigration. The companies have furnished free excursions to New York and entertainments on steamers, have advertised largely in papers, etc. Many German-Americans who really favor the educational test were led through Dr. Senner's bureau to sign petitions against the bill without knowing their contents. (24, 25.)

Mr. SCHWAB declares that the statement that the steamship companies have maintained a powerful lobby in Washington to oppose immigration legislation is an absolute untruth. The late Dr. Glavis did represent steamship companies in Washington, but not as a lobbyist, and since his death the companies have had no representatives except ordinary passenger agents.

Mr. Schwab also declares that it is the policy of the steamship lines to comply with the laws of the United States and to forward the interests of this country. The witness believes that the existing statutes represent the right principle in holding the steamship lines themselves responsible for the passenger.

Mr. Schwab believes that the present inspection of immigrants by agents of the steamship companies is much more efficient and effective than inspection by consular agents would be likely to be. We have very few consuls in the countries from which most of the immigrants come. It would be necessary practically to have an agent of the United States at the side of every one of the agents of the steamship companies. The steamship companies would not object to the system of consular inspection. (102, 105, 107.)

Condition of steerage.—Dr. WILLIAMS thinks that in most ships there is now sufficient provision of air space in the steerage for the ordinary needs of passengers during the trip across the Atlantic. The steerage often appears exceedingly dirty, even filthy, upon the arrival of the ship in port, but this is not always the fault of the company, since the passengers are often very filthy in their habits. Moreover most dirt is more repulsive than dangerous. (130.)

Protection of immigrants at sea.—Mr. MCSWEENEY does not think that there is an adequate supply of life preservers and other means for protecting the lives of immigrants at sea. The Commissioner-General of Immigration should be given supervisory power in this matter. (94.)

C. Distribution of immigrants.—“*Immigrant clearing house.*”—Dr. SENNER, former commissioner of immigration at New York, declares that there is great need of facilities for distributing newly arrived immigrants throughout the country in the sections where they are especially needed, and that means should also be taken, if possible, to distribute more satisfactorily the foreign-born already in this country. For this purpose the witness approves the suggestion that the heads of the various State bureaus of labor statistics should be made agents of the Federal Government for collecting information as to the conditions of trade and labor in the various States.

Dr. Senner especially advocates the establishment of “an immigrant clearing house” at Ellis Island. At this establishment there should be a permanent exhibition showing the products and resources of the various States. Each State should be represented by a permanent bureau with agents, subject to rigid examination as to their honesty and reliability, to give information concerning conditions of labor. Representatives of railroads and other bodies could also be admitted. In this way the immigrant could learn what sections he would find best adapted to his abilities and desires. At present the immigrant does not know in one case out of a hundred what he is going to do in the United States. (174, 185, 186.)

Mr. STUMP thinks that as a remedy for congestion in large cities and in particular sections there should be a system of cooperation among officers of different States for furnishing information, at a central office at Ellis Island, as to opportunities for employment and local conditions throughout the country. An exhibition hall should be erected for displaying the products of different States and presenting inducements for immigration. (5.)

Mr. MCSWEENEY is disposed to question the desirability of attempting to establish an exhibition hall on Ellis Island in which the States should show their products with a view to attracting immigrants. (96.)

Information regarding labor market.—Mr. POWDERLY believes that State bureaus of immigration and of labor should be designated agents of the Federal Government to collect information as to conditions of trade and employment for the guidance of immigrants. Post-office and other Federal authorities could also be employed to gather statistics as to local conditions. (39.)

Mr. PERKINS, president of the Cigar Makers' International Union, favors cooperation between the immigration authorities, the bureaus of labor statistics, and labor organizations to ascertain the proportion of men employed and of men needed in the various trades, with a view to limiting immigration of men skilled in each trade to a certain proportion of the number engaged in the trade, varying according to the conditions of employment. (180.)

D. Extension of period for deportation.—Dr. ULLO refers to the provision of the immigration law which permits the arrest and deportation of any person who has come in violation of law at any time within 1 year after landing. The law further declares that any alien who becomes a public charge within 1 year after landing from causes existing prior to his landing shall be deemed to have come in violation of law. This throws the burden upon the Government of proving that the causes existed before landing, and the law should be amended to make the fact of becoming a public charge sufficient ground for deportation. (144.)

Mr. SCHULTEIS also thinks the time limit within which immigrants found to be illegally admitted may be returned should be extended to 5 years. Where a person has been pauperized abroad by heavy taxation and low wages and is sent here to get rid of him, this country should have the privilege of returning him if he becomes a public charge. The same argument applies to criminals. European countries frequently send paupers to this country to get rid of them. The English Government pays its superannuated employees their pension in a lump sum if they will emigrate. Paupers are much more numerous in England than in the United States. (26, 27.)

Mr. STUMP says that much less than 1 per cent of immigrants are deported. Hardships are sometimes caused by separation of families and otherwise. Immigrants found within 1 year after arrival to have come contrary to law may be deported, but there is difficulty because the law gives no one formal authority to arrest such persons. So far as contract labor law is concerned, the suggested extension of this time limit to 5 years is scarcely necessary, but it would be of advantage where persons are discovered to be criminals or insane after the first year has expired. (11, 19.)

E. Bonds regarding immigrants.—Mr. POWDERLY says that the immigration authorities often require a bond that the immigrant shall not become a public charge. Such bonds are often given by mistaken charity or by collusion. The immigrant frequently evades liability by changing his name and giving a different port of entry than the real one. It is desirable to furnish a landing certificate to each immigrant, requiring its presentation when applying for naturalization or for public relief. A record of the same facts should be preserved by the Bureau of Immigration as an immigration directory. (45.)

Mr. POWDERLY declares that the limit of 1 year within which immigrant may be returned is insufficient. It should be extended until naturalization. A guaranty from steamship companies, or a bond of \$500 with 2 sufficient sureties, binding for 5 years, would be a great advantage. (40, 41.)

Mr. MCSWEENEY believes that the period for which immigrants are bonded should be extended to at least 2 years. He does not think that responsible steamship companies would oppose such an extension. (84.)

Mr. FITCHIE thinks that the provision permitting immigrants to be admitted on giving bond that they shall not become public charge needs to be carefully revised. It has been decided by one of the law officers of the Government that under certain conditions even members of the classes specifically excluded by the statute can be admitted on giving bond. Moreover the bond does not constitute a lien on the property of the persons giving the guarantee. By change of names and other methods the bond is often evaded, and the witness is sure that there are persons now supported in public institutions who have given bond not to become a public charge. The bond should be made a matter of record, and the immigrant giving it should be required to appear for inspection semiannually or annually. (75, 76.)

Mr. HALL declares that the attempt to prevent immigrants from becoming a burden upon the public by requiring bonds from steamship companies to support them in case of need has proved ineffective. From 1799 to 1873 Massachusetts required a bond good for 5 years, but the law was repealed as being absolutely unworkable. Immigrants frequently change their names for convenience, and in case they become public charges they are especially apt to deceive as to their names, as to the date of immigration, etc. During 1896 out of 373 cases of sick poor in Massachusetts only 133 could be identified to such an extent as to be turned over to the United States authorities for deportation. During 2 months there were 35 persons relieved from the Boston City Hospital as to whom too little information could be gained to satisfy the United States. These persons were all Russians, Hungarians, and Italians, and all illiterate except 2.

Mr. Hall thinks there might be some advantage in a requirement that immigrants should secure certificates identifying them and giving the facts concerning their landing, but it would furnish protection more in regard to naturalization than in regard to other questions. (93, 64.)

Mr. SCHWAB says that if it seem wise and necessary to extend the period during which the steamship companies are liable for immigrants to 2 years, the companies would consider it a hardship, but would not especially oppose the change. To extend the period to 5 years, however, would be unduly severe. The witness thinks there is no especial hardship in the law of this country to support alien paupers since it is benefiting by the labor of the great body of alien immigrants. (108.)

Dr. SENNER thinks that the United States is sufficiently protected by the present laws against the immigration of pauper immigrants. Although there are some recently arrived immigrants who become inmates of charitable institutions, often changing their names to avoid detection, these cases are rare. Most foreigners who are public charges came to this country some time ago. The existing law is effective in preventing wholesale immigration of undesirable elements. (184, 185.)

F. Head tax.—Mr. STUMP says that the original tax of 50 cents levied in 1882 has been increased to \$1 for each alien passenger, whether in the steerage or otherwise. This sum is paid to the collector of the port by the captain or owner of the vessel, and usually added by the steamship companies to the passage money of the immigrant. This sum has been sufficient to defray all expenses of the immigration bureau and care of immigrants who become dependent after arrival. The former buildings at Ellis Island were also constructed out of this fund. This tax is also paid by special arrangement by Canadian steamship lines upon passengers destined for the United States, or upon those who come to this country within a certain number of months after landing. (12, 18.)

Mr. POWDERLY favors an increase of the tax to \$2 for the purpose of furnishing sufficient revenue to establish inspectors at foreign ports and along the land borders of the United States. Such a tax would not be restrictive. Nor would a higher rate of \$16 to \$20 probably have much beneficial effect. Many persons who could not pay \$5 would be more desirable than others who could pay \$100.

Mr. MCSWENEY believes that the head tax should be doubled, especially for the purpose of avoiding all danger that the immigration service will be crippled for lack of funds as it was in 1892. (84.)

Mr. SCHULTEIS advocates an increase of the tax to at least \$10. Tickets to the United States cost \$8 less than to South American countries, and the difference brings many immigrants here. A large number would be excluded by such increase. (24.)

Mr. SCHWAB declares that the steamship lines are willing to accept whatever changes in the immigration laws are deemed necessary for effective enforcement. They would prefer that the head money remain unchanged, but would not oppose a reasonable increase. The tax is paid in the first instance by the steamship company but is, of course, reckoned as one of the items of cost in fixing the price of tickets. To increase the tax to an unduly high figure, such as \$5 or \$10, would exclude many immigrants. The character of the immigrant as a citizen depends very little upon his ability to pay such a tax. (102, 105.)

Property test.—Mr. SCHWAB declares that the amount of money which an immigrant brings to the United States is comparatively little indication as to his desirability as a citizen. (102.)

G. Educational test.—Mr. HALL, secretary of the Immigration Restrictive League, testifies that that body favors an educational test for admission to this country. The organization was formed in 1894 and includes about 700 persons as active members, while about 5,000 others assist the league and receive its

documents. The league does not advocate the exclusion of laborers or other immigrants of such character as to fit them for good citizens, but only the exclusion of undesirable elements. For this it considers the educational test the most effective. The league was instrumental in drafting the bill which was introduced in the Fifty-fourth Congress by Senator Lodge.

The league does not believe that an educational test is necessary evidence of moral worth, but an examination of the illiteracy of immigrants from different nations and a comparison of their criminality indicates that the more illiterate nationalities furnish proportionately the greater number of criminals. Similarly the greatest proportion of paupers and of unskilled laborers are found in the most illiterate nationalities. The proportion of money brought into this country is smallest among the most illiterate, while the tendency to congregate densely in the cities is also most marked among them. (See Mr. Hall's statistics on these points, p. 56.) In view of the increase in the proportion of illiteracy, and especially in view of the constantly increasing proportion of the immigrants who come from the southeastern countries of Europe as compared with the northwestern countries, the league believes that the educational test is especially desirable. (46, 50-54.)

Mr. Hall admits that the educational test is not an ideal one, but thinks that on the whole it would tend to exclude the more undesirable classes. Moreover, if we make public-school education the basis of citizenship in this country, we can scarcely consider the immigration of illiterate persons very advantageous even if they be morally upright. There must be some sort of test, more or less rigid. To attempt to ascertain directly by question or otherwise whether a person is of criminal character or whether he is unskilled or otherwise undesirable is very difficult. There must be hardship in individual cases through the application of any test. Mr. Hall does not believe that treaties with foreign countries stand in the way of an educational restriction of immigration.

The educational test, Mr. Hall declares, is very generally favored throughout the country. The Immigration Restriction League has ascertained by correspondence and otherwise the opinions of many organizations, a large number of chambers of commerce, of labor organizations, including the American Federation of Labor and Knights of Labor, of State legislatures and officers, and of factory inspectors. These mostly favor the educational test. Even in the Northwestern States, where there is the most room for a new population, and where offices and associations have been established for the purpose of promoting immigration, those classes of immigrants who would be excluded by an educational test are not desired. Although the advocacy of restriction is perhaps most marked near the Canadian border, it is by no means confined to that section.

The objections which have been raised to restriction of immigration have come either from theoretical economists, who have considered that the economic advantages from immigration offset any social disadvantages, or who have felt that it was against the rights of the individual to shut out anyone; or it has come from certain classes of the foreign population in this country. The opposition of this latter class, Mr. Hall asserts, has been largely developed by the actions of the steamship lines, which have sent out circulars misrepresenting facts and which have sought to stir up race prejudice. Mr. Hall quotes from such a circular, addressed to the Germans, in which it is intimated that the effect of the proposed legislation would be to completely cut off German immigration, and that there will afterwards be a tendency to oppress Germans already in this country. A certain amount of opposition has also been raised by Roman Catholic societies, who think that the measure is directed chiefly against immigration from Roman Catholic countries. (58, 61, 66.)

Mr. SCHULTEIS says that the educational test, as proposed in original draft of Lodge bill, would have excluded the Russian Jews, since the "native language" of such Jews is Russian, which most can not read or write. They can read and write Jewish, and thus would not be affected by amended bill. (29.)

Mr. Schulteis considers this the best method of excluding the undesirable element. Practically only those from southern European countries would be affected. At present those coming from Italy are chiefly from the southern part, the most undesirable of all. Practically one-fourth of the immigrants would be excluded by such a test. (23, 24.)

Mr. DUNCAN says the Granite Cutters' National Union is in favor of the Lodge bill. It believes that where a man is able to read his own language he soon becomes familiar with the facts regarding the relations of labor and capital and can readily be brought into trade-union movements. Uneducated men, on the other hand, discredit the well-meant advice of the unions. (Vol. VII, 207.)

Mr. ROSENDALE favors the Lodge bill for restricting immigration by an educational test. He states that such a test would keep out Italians as a class, and Hungarians, because they do not read their own language. He declares that it would keep out two-thirds of the Jews; but this seems to be connected with his statement that he would not recognize the Hebrew jargon as a language. He admits that a large per cent of the Jews can read that; but he says they are barely able to read their prayers in Hebrew, without understanding the language. (196, 197.)

Mr. Rosendale admits that the educational test does not directly gauge the ability of a workman. A workman may have high mechanical skill without being able to read or write. But all good workmen coming from such countries as Germany are, in fact, able to read and write, and some degree of education may be found among the better class of workmen generally. An educational test would, as a matter of fact, separate the higher classes of workmen in a great degree from those who could do nothing but common manual labor. (199.)

Dr. SENNER opposes the educational test on various grounds. He declares that its application would involve a doubling of the time required for examining immigrants and would greatly increase the vexations of the inspection system. The test, if applied to women, would result in injustice, and would especially hinder the obtaining of required servant girls from Europe. It would have no effect in protecting American labor, since skilled laborers, whose competition is most feared, could pass the examination. The United States still needs immigrants to perform its unskilled labor. The time to apply an educational test is at naturalization. (169.)

Dr. Senner thinks that the educational test should be strictly applied as a condition of naturalization. He deprecates exceedingly the fact that many States permit aliens to vote before naturalization, after a residence of six months or one year. He declares that it is his desire that the foreign-born population should become Americanized as rapidly as possible. (183, 184.)

Mr. SCHWAB thinks that an educational test would exclude many immigrants who are necessary for the development of the natural resources of this country. He declares also that illiteracy has nothing to do with criminality; that those countries whose immigrants are the most literate often show the largest percentage of criminals. (102, 103.)

Mr. STUMP thinks that the educational test would prove an efficient mode of restricting immigration, especially from southern Europe, but it would exclude a class of immigrants very beneficial to this country. American workmen are the most skillful in the world, and themselves perform the higher classes of labor; a cheaper grade of labor must be imported to do rougher manual work on roads, railways, sewers, etc. Such a test would exclude few from the northern countries of Europe, where education is as far advanced as in the United States. Educated rascals could not be excluded by such a method. (6, 21.)

Mr. HOLMAN, secretary of the board of special inquiry at New York, is disposed to doubt the wisdom of establishing an absolute educational test. Often it is more desirable to exclude certain persons who are well educated than others, young, able-bodied, and industrious, who have not been blessed with the opportunity of getting an education. Many persons of the latter class can easily overcome their lack of education and become good citizens. It is true that the educational test would exclude many undesirable immigrants, especially from certain countries, but it seems better to assign the real reason why these immigrants are undesirable rather than to assign illiteracy as the chief reason. The witness thinks that it would be legitimate to make ability to read and write one of the tests to be considered by the immigration officers if they were given discretionary power as to the admission of immigrants.

Mr. Holman believes, further, that the application of the educational test for naturalization is desirable. (130, 137.)

Mr. POWDERLY thinks it doubtful if the educational test is desirable as a condition of immigration, though highly desirable for naturalization. It would not check Chinese or Japanese immigration, and would have little effect on Russian Jews, who would soon learn to read a passage. (42.)

**HEARINGS BEFORE THE INDUSTRIAL COMMISSION
ON THE SUBJECT OF IMMIGRATION.**

INDUSTRIAL COMMISSION.

IMMIGRATION.

WASHINGTON, D. C., January 10, 1899.

TESTIMONY OF HON. HERMAN STUMP,

Ex-Commissioner-General of Immigration.

The commission met at 11 a. m. January 10, 1899. Vice-Chairman Phillips presided, and introducing the witness said, Mr. Stump, who was formerly Commissioner-General of Immigration, had been invited to appear before the commission and give testimony upon the subject of immigration.

Q. (By Mr. SMYTH.) Please state whether you were a member of Congress and had anything to do with the Chinese exclusion act.—A. I became a member of Congress on the 4th of March, 1889, when Harrison was inaugurated. I was placed on the Committee on Immigration at that time, and two years subsequently I was made chairman of the Immigration Committee. Upon my retirement from Congress I was appointed Commissioner-General of Immigration, and served four years, and until August of the McKinley Administration.

Q. Did you have anything to do with preparing the draft of the Chinese exclusion act?—A. I did. While a member of a joint committee of the House and Senate of the Fifty-first Congress, in company with Mr. Owen and Mr. Lehlbach, of New Jersey. I traveled extensively, collecting information in regard to immigration, and visited Detroit, Chicago, St. Louis, Cincinnati, and several other cities. That report was made to Congress by Mr. Owen, and you will find it on file. Subsequently we were directed to go to the Pacific coast, and with Senator Watson C. Squire we made investigations in regard to Chinese immigration. We visited Spokane Falls, Seattle, Port Townsend, Portland, San Francisco, San Diego, etc., and we made a report to Congress (House Doc. No. 4048, second session Fifty-first Congress), and subsequently I introduced a bill for the exclusion of the Chinese, which, with some modifications, was the same as what was called the "Geary Act," the present law relating to Chinese immigration.

Q. Did you later, as a member of Congress, prepare the present immigration law?—A. Yes. Mr. Owen, Mr. Chandler, and myself prepared the act of 1891. When I became chairman of the House committee, Mr. Chandler and myself drafted the act of 1893, but he was kind enough to say that it was the "Stump Act."

Q. How long were you Commissioner of Immigration?—A. Four years and some months.

Q. Was that act successful in limiting the immigration to this country?—A. Eminentlly so, I think, and, with very slight modifications, I doubt whether it should be changed for some time.

Q. Is immigration to this country affected by the degree of our prosperity?—A. Undoubtedly it is. Immigration to this country, I believe, is promoted very much by letters written by people here inviting their friends and relatives to come. They know the state of the country, and whether their friends can secure employment when they arrive, and they write to them when to come and when not to come. In that way I think immigration indicates the prosperity of the country.

Q. Did your Bureau take any cognizance of the number of immigrants who returned to foreign lands?—A. No, there is no law requiring these statistics to be furnished. I have urged Congress to pass such a law. We had to depend entirelly

upon the courtesy of the steamship companies, which would furnish us the number of steerage passengers leaving the country. We knew, of course, the number that came in.

Q. Will you tell us whether the present law can be amended to make it more satisfactory?—A. I think amendments should be principally in relation to minor details relating to the administration of that law. Its main features should not be altered. There are quite a number of minor suggestions which we have made both to the Secretary of the Treasury and to Congress. They were reported to the Secretary under the commission which Mr. Carlisle appointed, consisting of Dr. J. H. Senner, then commissioner of the port of New York, Mr. Edward F. McSweeney, then assistant commissioner, and myself. Under that commission we did considerable work, which was reported to the Secretary in the report of the Immigration Investigation Commission. You will find that that commission was directed to inquire and report upon the following interrogatories:

"1. What changes, if any, in the rules and regulations now in force are necessary in order to secure a more efficient execution of existing laws relating to immigration and the laws prohibiting the importation of alien laborers under contract?

"2. Whether said laws are defective in any particular, and what practical difficulties, if any, have been encountered in their execution?

"3. What effect, if any, immigration has had upon the wages of labor or opportunities for employment in the United States, and whether or not the existing industrial condition of the country is attributable in any degree to the influx of laborers from abroad?

"4. Whether any measures, and if so what, can be adopted under existing legislation to discourage the concentration of immigrant laborers in particular localities and to secure a better distribution of immigrants whose admission to the country is not prohibited by law?

"5. Whether the 'padrone' system exists in this country, and if so, to what extent and among what classes of immigrants, and what measures can be taken under existing laws to break it up and protect American laborers against its evil effects upon wages, and at the same time improve the social and economic condition of the immigrants?"

The commission was also directed to procure and report such information from all available sources, as would enable the Department to employ its official force in the most effective manner for the enforcement of the immigration and alien contract-labor laws according to their true intent and purpose, and to suggest such amendments as experience may have shown to be necessary to adapt them to existing conditions.

That commission was organized, I being made chairman. The first step we took was to address a circular letter to all the labor organizations of the United States of which we knew, and Mr. McSweeney had the assistance of Mr. Gompers and Mr. Sovereign and others. He was given lists of the organizations to which letters were directed. The circular letter first stated the scope of the commission, as given you, and then asked for such replies as they considered proper. The replies are contained in this book. The next step we took was to address the following letter to the various governors of States:

"1. Does your State, or any portion thereof, desire immigration? If only portions, what portions?

"2. What are the resources that need development? If agricultural, what character of products are to be cultivated, etc.? If mineral, what kinds of mines are to be worked? If artisans are required, please state the trades and occupations in which employment can be found. If unskilled labor is wanted, please indicate the kind of work for which it is needed.

"3. What wages are usually paid in each of the occupations referred to? Please also give any other information you think will be useful in guiding desirable immigrants to your section.

"4. State what nationalities are preferred, and the order of preference, numerically."

We received replies to this letter from probably half or maybe three-fourths of the governors of the States of the Union. You will find those replies in the report of the Immigration Investigation Commission.

With regard to the distribution of immigration, the commission recommended a plan which had not been thought of before, and the more I consider it the more I am convinced it would be wise to have it adopted. I will now speak of the port of New York, where nearly three-fourths of the emigrants to the United States are landed. Many of them have a fixed destination and go there. Many of them arrive in New York, where they remain an indefinite time in order to determine where they should go. Some would go to Chicago, some to Cincinnati, etc. We

found that the larger cities of the United States were being congested with immigrants who really desired to find employment elsewhere. It is a known fact that two, three, or four hundred thousand immigrants come into New York yearly. In ten years that would be a vast number of newly arrived immigrants, but most of them find employment elsewhere after they have expended what little means they had and have become impoverished. For that reason we suggested to the Secretary that we should have erected on Ellis Island, by private enterprise, a large exhibition hall, where the various State immigration bureaus or authorities could have rooms and an opportunity for displaying the products of their State, informing the immigrant what inducements they could offer him and giving him all other information which it would be necessary for him to obtain. He would also ascertain there that in certain States and portions of States, take New York and Pennsylvania, for instance, no immigrants were desired. In that way the immigrant would have an intelligent idea where he could locate. He would be informed regarding the prices of land and labor, adaptability of the soil, mines, the working of railroads, and all places where labor is desired throughout the United States, and before leaving the station could make an intelligent selection of locality for settlement. We regarded it as a large distributing center for immigration, and of course States that did not desire immigration would not be represented there. Railroads that wanted laborers would be represented, and it would be a clearing-house for immigrants. Bills were introduced by Mr. Lodge and by Mr. Chandler to carry out that intention, when the buildings on Ellis Island were burned down, and I suppose the project is now in abeyance.

Q. How did the law forbidding the importation of contract labor operate?—A. I found, when I came into office, that that law was exceedingly defective. I administered it to the best of my ability and, I think, quite successfully, meeting the approval of the labor men. At the time that law was passed there were various strikes in the country, and employers imported directly all kind of immigrants with the view of giving them the places of American workingmen. That law was so successfully administered, that the wholesale importation of contract laborers was stopped. We found sometimes that four or five, or maybe eight or ten men, would come under promises from mining people to take the place of American labor. Those men we sent back, to the best of our ability, upon information we received from labor organizations, and we had the privilege of doing so until after they had been here for a year. We found many isolated cases in which a brother would write to his brother saying if he would come out to his farm he would give him employment until he could find another place. I do not believe that when this law was enacted it was intended to reach a case like that. But we rigidly enforced the law and separated families in that way. I think it was a hardship and that that feature of the law should be modified. It is perfectly natural for a man who has his family over there to promise aid and assistance to his relatives until they can find something to do; but the law, as it stands, compels us to send them back. If an employer could go to his workman and say, "Have you not a brother in Germany? We are in need of a man; write to your brother to come"—in that case there is no hardship at all. Those people were sent back.

Q. Do you think that phase of the law is successfully enforced?—A. I think so. It was during my administration in many cases which I thought entailed great hardship. The difficulty of sending these men back is, that in the law which was drawn, I have been told by Mr. Powderly, there is this language:

(Mr. Stump here read the first section of the act of February 26, 1885, known as the "Contract Labor Law.")

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act it shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation, or in any way assist or encourage the importation or migration of any alien or aliens, any foreigner or foreigners, into the United States, its Territories, or the District of Columbia, under contract or agreement, parol or special, express or implied, made previous to the importation or migration of such alien or aliens, foreigner or foreigners, to perform labor or service of any kind in the United States, its Territories, or the District of Columbia."

The courts have uniformly held that there must be an express or implied contract entered into abroad, which must be proved before the party can be deported. That is almost an impossibility. The prosecution of the contractor is almost invariably impossible. The immigrant comes here and we examine him and ask him: "What induced you to come to America?" He replies: "Such and such a party told me if I came here he would give me certain wages." We sent that fellow back. We can not prosecute the employer because, in the first place, what

little testimony we had we banished to the other side of the water. But his testimony would not be sufficient because the courts have held that that contract must be made abroad; and he has merely said: "If you will come here, we will do so and so." We could not prosecute the contractor, but sent back the person who had sold out all his little possessions and become separated from the land of his birth, and the guilty man escaped. In order to rectify that I suggested that the law be amended by inserting one or two words which I thought would cover the difficulty. Some twenty suggestions were made. I will show you one which I think is most important. The amendment I suggested to section 1 of the act of 1885 was by adding thereto, after the words "United States, the Territories, or the District of Columbia," on the seventh line and wherever else it may be necessary, the words "or by undertaking or promise of employment upon arrival in the United States, or under any contract," etc., expressed or implied. That made the party guilty who, by any offer to the foreigner, induced his immigration into the United States. Of course it was not necessary to have the contract made abroad, but if he was induced to leave home upon a promise to make a contract on his arrival it would be sufficient to procure conviction, and I think that would go far toward breaking up this induced immigration by persons who desire to employ workmen to take the place of American labor.

Q. If you deported the immigrant, would you have lost your witness?—A. We would not deport that person, but we deport the immigrant before because we knew it was useless to hold him to convict the principal. We sent the immigrant back, but could do nothing with the party who made the contract. Here, if he testifies that this party induced him to come over by letter or otherwise (frequently they have the letter inducing them to come over), we would hold that party as a witness, because he would be of service then, but would not be of service unless the law was changed.

Q. Was there not an act passed in the last Congress amending the immigration laws which failed because Mr. Cleveland did not sign it?—A. That was what was called the "educational bill."

Q. Did it provide an educational test affecting immigration?—A. Yes; and it has been pending since in the present Congress.

Q. What are your views in regard to that?—A. I have not seen the bill as it is now presented, but my views on the educational test are fully set forth in the report of the Immigration Investigating Committee. We reported on the educational test. If you desire to get the most efficient mode of restricting immigration, I would take the educational bill with some amendments, but if you desire to get a class of immigrants here who would be most beneficial to our country I think the educational bill does not reach it. My idea of immigration is this: We have, in my mind, the most skillful and the best laboring class in the world. I think American workmen are superior to others. It may be in some of the finer arts, where it takes long years to acquire the skill that is required, it is not so, but for the production of work, with our improved machinery, we can beat the world. We are also an educated people. We find that Americans are performing higher classes of labor. We want our sons to become our clerks, accountants, and business men and find employment in the higher walks and occupations. We must necessarily have a certain other class to do our manual work—not menial exactly, but work which is honorable but at the same time of a lower order, which requires no skill or education at all. We want laborers upon our roads, upon our railroads, to clean our sewers and streets, and everything of that kind, and when you look around I think you will find that Americans are getting beyond that. I think the importation of good, able-bodied workmen into the United States has tended to elevate our own people. A young able-bodied man who comes from a foreign land to settle here, with energy and willingness to work, is an acquisition to the country, and while we do not want him to occupy the positions which education would enable him to occupy, we want him to occupy the positions where it does not much matter whether he knows his A B C's or the single rule of three or anything else; but as a rule, with few exceptions, I think you will find that even the steerage passengers coming over here are as well and better educated, as a class, than the Americans. Take the Swiss, German, Swede, Norwegian, Englishman, and Irishman, and the percentage of those unable to read and write is much less than the United States census gives as the percentage in the United States. It will astonish you, but such is the fact. On the other hand, if you go into the southern countries of Europe, you will find that education has been woefully neglected. From the last report I made, at the end of the fiscal year, June 30, 1897, page 6, I state that—

"Under the present laws ability to read and write is not essential to the admission of the immigrant, and the question of illiteracy has only been taken up for statistical purposes.

"The educational attainments of the immigrants who came during this fiscal year show a marked improvement over those who came in 1895-96. For instance, the percentage of illiteracy was in those who came from—

Country.	1896.	1897.	Country.	1896.	1897.
Austria-Hungary.....	0.39	0.29	Sweden.....	0.0116	0.0087
Russia.....	.41	.28	Denmark.....	.0095	.0048
Italy.....	.54	.50	Switzerland.....	.079	.011
Germany.....	.0296	.019	France.....	.0488	.042

By the United States census of 1890 the illiteracy of the whole United States was 0.1314 per cent. As I say in my reports, illiteracy and undesirability of immigrants seem to go hand, in hand because we find that while the people of the north of Italy are good people and desirable immigrants those coming from Naples, from Palermo and Messina (all of whom ship from Naples) are objectionable, as a rule. Undesirable immigration comes from the south of Europe, and in these countries the greatest illiteracy prevails. Below a line drawn, say, south of France, running through the Pyrenees, which would leave Spain and Portugal south, thence to Naples, thence northward toward Vienna, thence toward St. Petersburg, illiteracy is dense.

Q. (By Mr. KENNEDY.) Do you refer to the immigrants coming into this country?—A. Yes, sir.

Portugal is 0.7769 per cent illiterate. Of the southern countries Italy will come next. Italy is 0.5459 per cent. Austria-Hungary is divided up into several provinces, and there we get the Poles and Slavs. Take Hungary, it is 0.4651, and Gallacia is 0.6037. Russia is about the next. Russia proper is 0.4114. I say that south of a line between France and Spain and running a little north into Hungary and Poland the education of Europe seems to be very much neglected, while in the northern portion the educational facilities are far superior to those in our own country, where the percentage of educated people is very much less. We have 0.1343 per cent of illiteracy. It is hardly generous to treat the comparison in that way, for this reason: The census gives the percentage looking at the educated and uneducated of the whole country; but here we have only investigated the educational qualifications of the steerage passengers; and we find that education in Europe is carried to much greater extent than it is really in America. I suppose in our country the negro population would add very much to the illiteracy and percentage. Taking our New England States as an example, and although I have had no occasion to look into that, I imagine that the percentage of illiteracy there is as low as in any portion of Europe; and for that reason, I dare say, you could draw a line in the United States in the same way between the northern and southern portions. There is a highly educated class in the South, but they have at the same time the most ignorant negro class.

Q. (By Mr. C. J. HARRIS.) Is the effect of these ocean steamship companies bringing immigrants here good or bad?—A. Well, the ocean steamship lines are only the means of transportation. If you will read carefully the act of 1893, you will find that it does not add another class to the excluded people, but is an administrative act and is directed to secure a proper examination of immigrants before embarkation. It has led to a very great restriction of immigration, as my reports will show throughout. Steamship lines have agents throughout the whole of Europe. They are located in almost every little town, and are more numerous in places from which immigration comes. They had a system by which they gave a commission to their agents for every ticket sold, so that their agents were interested in selling as many tickets as possible, totally regardless of the character of people that bought them. The result was an indiscriminate flow of all classes to the United States, and largely of the most undesirable classes. There were "padrones," Italian bankers, and so on, who were largely interested in bringing these people over, and they were probably associated with, and maybe were, steamship agents. I know Italian bankers in New York who are really "padrones," who furnish money to immigrants in Italy. I went over there to look into it myself. The agent abroad would approach a man and say: "Would you like to go to America?" and he would say: "Yes; but I have no money." "Well, if I give you a ticket, will you work for me for wages in America," and so on. The consequence was he made that agreement, and when he arrived in New York he became body and soul the slave of that "padrone." The Italians are a quiet, peaceable, genial, hard-working race. They work on little lots of land. They are exceedingly good cultivators of the soil. They are the best masons, I suppose, you can find anywhere, and always ready and willing to work; but when they arrive, say

in New York, and go to their banker to whom they belong, he puts them in gangs and sells their labor out to corporations, railroad corporations, or various employments, and he sends with them what is called a "boss." Take 500 or 1,000 men, contracted to go out to some of your States to work on a railroad. They arrive there under the charge of this boss, they speak no English, and will have nothing to do with anybody but that boss. The boss will buy \$100 worth of lumber, will rig up a shanty, and will charge those Italians each \$1 a month for sleeping bunks. If he lodges some 500 in that shanty, it is paying him \$500 a month. He has the supplying of all they eat and wear. When pay day comes the boss receives the wages, and he accounts to the "padrone," and the poor Italian finds himself a debtor and slave for years under that system, and it is the slavery which I, under the directions of the Administration, tried to eradicate. I think the success with which we have met must be admitted. The "padrones" lately call themselves bankers. They say they have got enough Italians in this country now, and that they do not want any more. The last case I investigated, I think, was in Brunswick, Ga., in connection with the building of sewers or something else. You will find a report of it in the report of the Immigration Investigating Committee.

Q. (By Mr. KENNEDY.) Is that system now broken up?—A. Yes, sir; you may say it is pretty well broken up; but I will tell you where it has broken out afresh, and it will need a very great surgical operation to cut it out. It is among the Assyrians, Arabs, Turks, Greeks, and Armenians coming into this country. They are all under the bosses that I spoke of in relation to the Italian immigrants, and they are brought here generally to peddle goods, to black boots, to be scissors grinders, and actual beggars on the streets. These men will import and pay well to get a woman to come here with a child in her arms to shed tears on the streets and solicit alms, which she gives to her employer. These things may astonish you. Forty of them were arrested at Ellis Island some days ago. They were going down to one of the Southern States. I think they were ticketed for New Orleans. They serve their master for so much a day, and are obliged to turn in every evening what they collect. You will find them with push-carts in the streets of New York. My experience is that they have an idea that they require \$25 to get in. They arrive at Ellis Island, and almost every one of them will have \$25 in American gold, and the mystery is where they get it. It is the impression of immigration officials that the gold they have on their persons at the time they arrive is immediately taken from them and shipped back to the country from which they came, to be returned with others. That money goes backward and forward.

Q. (By Mr. FARQUHAR.) What is the percentage of this class of people you are speaking of in relation to the whole immigration of a year?—A. We can give you the exact figures.

Q. I mean the class owned by "padrones."—A. I do not think there are so many. I think they are nearly all that class of people that come from the countries I named. From those countries it is almost all induced immigration.

Q. Has the alien contract labor law really partly stopped all padroning?—A. That is not due so much to the alien contract-labor law as it is to the immigration law. They are entirely distinct, but both operate in this case.

Q. I think in your last report you mention the fact that the immigration of 1896 and 1897 had been smaller than it had been from 1870, and in the returns of the steamship companies on the steerage passenger lists returning to Europe and elsewhere, that same fiscal year, there were nearly 112,000. Does the padroning system exist among those people who were returning?—A. I suppose a great many thousands went back to visit their friends in Europe, because the season for labor had expired, and to come again another year. It is cheaper to live in Europe in their own homes and pay their passage back at the winter rate, than it is to live in America idle.

Those returning over the steerage may be bona fide residents of our country. They are sons who live in the West and have their parents in Europe. They make visits to their parents, and probably in the spring bring their parents, and sisters, and brothers with them. A great many have gone back because it is hard to procure labor, because of hard times, in the United States. I must call your attention to the fact that no money is required of an immigrant to land in America—not a cent. A man, under our present law, who is able-bodied, ready and willing to work, is entitled to admission whether he has a dollar in his pocket or not. Now, that is lost sight of for the reason that under the act of 1893, Mr. Chandler and myself desired, as far as we were able, to ascertain, only for statistical purposes, how much money immigrants brought into the United States. It was not a sine qua non as to their landing, and we arrived at the conclusion that we would ask them whether they had as much as \$30, and if they had \$30 only, we required them to show it, not that it was necessary for them to have any

money, but we wanted that as statistics to show how many came with \$30 or less. Then we said it would not do to ask them how much money they had over \$30, because we would make them the objects of designing men, and probably they would be robbed or deprived of their funds if they were required to disclose it upon our records. Therefore, we said, "Have you got \$30 or less?" and if they said less, we said, "How much?" If they said they had \$30 or more, no other question was ever asked. It was not for the purpose of admission.

Q. In the decade before 1891 the average of the immigration into America was about 472,063, and the average in 1894 to 1897, during your administration, was only 279,000. How do you account for that difference of nearly 50 per cent?—A. We can not claim all the credit of the decrease in immigration for the act of 1893, because there was great depression throughout this country and it was not as desirable for immigrants to come to America as it had been; but, fortunately, we had administered this law so rigidly that we sent back, maybe, three or four persons to every little hamlet where they were coming from before, and they carried the news to those who purposed coming, and they were thus deterred from coming, and that restricted immigration.

Something carried me away from what I was going to tell you in regard to the purchase and sale of tickets and the inspection of immigrants abroad, and the purposes of the act of 1893. I said that these steamships had their agents in all the various little towns and places, and paid a commission for the sale of tickets. The act of 1893 required that before the embarkation of any immigrants upon any vessel the manifest should be sworn to by the captain of the vessel before the consul of the United States, stating that he had no (designating the prohibited class) aboard his ship; then the surgeon was required also to make an affidavit that there was no immigrant aboard that ship who was not physically able to work, and that there were no diseases aboard that ship that were prohibited. When the steamship companies found that agents throughout the country had sold tickets and the immigrants had arrived at the port of embarkation, and that many upon being examined were not allowed to go aboard the ship, they immediately gave instructions to all their agents, who became the best inspectors of immigrants we had. These agents were located in towns and villages, and had the opportunity of knowing and coming into personal contact with the people to whom those tickets were sold. By that law, wherever a ticket was sold, the man selling it had to have exhibited all the laws of the United States with regard to immigration, showing who were prohibited and who were not, and they called their attention to them. The steamship companies said: "If you sell a ticket to a man or woman who is rejected at the point of embarkation we will not only take away your commission, but we will charge you with the expenses of returning that immigrant to his home." So that the very ticket seller himself became one of the inspectors for the benefit of the United States. That was the first inspection, and I found it the best inspection of all, because they punished their ticket agents if they sold to a person who was rejected at the point of embarkation or when he arrived in the United States.

Q. Were the medical inspector and agent at these foreign ports of embarkation under the employ of the steamship companies or the Government?—A. In all the foreign countries I visited they have a health officer, who is a Government employee, and he makes an inspection. We have also our consuls at every point. The shipmaster and surgeon, though, are the men who make the affidavit.

Q. He is a medical inspector, then, of the immigrant?—A. Yes; and he is required to make a daily report of the condition of those immigrants, which is brought with the quarantine guard and exhibited to the immigrant officials at the time of landing, when they come to be inspected on arrival.

Upon the arrival of a ship at quarantine, at New York, for instance, officers of the immigration service board that vessel, with the health and customs officers, and they examine the manifests. They examine the first and second class cabins. If they have any information as to any person who is in the first or second class cabins that they are either contract laborers or trying to evade the laws, they inspect those two cabins especially. We generally get such information from labor organizations. Diamond cutters and glass-blowers slip in in the second-class cabins, and we generally get onto them. If any persons are found in there whom we want to examine further, we direct the captain of the vessel to send them with the steerage passengers to Ellis Island. Then they are arranged in groups, and the manifest that has been made in Europe, which has the oath of the captain and of the surgeon of the vessel and certificate of our consul attached to it, is placed on the register's desk, and these men are grouped according to the lists. When the immigrant appears the registry clerk has exactly what is stated by the captain, the company, and the surgeon in regard to his case, and the immigrant has to answer all those interrogatories, and the clerk goes over that again to see whether there is

any variance between the two, and if, to all appearances, the immigrant is entitled to land he is immediately passed by that registry clerk, and he goes where he pleases. When a person appears whom the registry clerk has any suspicion of, or who does not show sufficient ability to work, who is aged, poor, etc., he is detained to go before a special board of inquiry, and those cases are tried just as you would try any case before any other tribunal. There are four inspectors detailed for that duty, and it requires the vote of three of them to land anybody. In the meantime all women have been examined by a matron with regard to possible pregnancy, and all immigrants are especially examined by a surgeon of the United States Marine-Hospital Service, and if they appear weakly or diseased they are put in another room for a special examination. If the surgeon certifies that a man, in his opinion, is not capable of earning his living in the United States or is suffering from disease, mental or physical, he sends his certificate, with his report, to the board of examiners. He is rejected by the board and deported. They make this examination. They send for witnesses. If a woman comes over and says her husband is in this country, and shows no money, she is detained. A telegram is sent to where she says her husband is, and unless that husband reports, in all probability she is sent back. Pregnant unmarried females and lewd women are returned. In the same way, if a boy comes and no one turns up to take care of him, and he is not otherwise capable of landing, he is sent back.

Q. (By Mr. SMYTH.) Are they kept at the expense of the Government?—A. No, sir; they are kept at the expense of the steamship company. The law is that they are quasi aboard ship until they have been examined and passed. Ellis Island and the immigration station are for the accommodation of the steamship companies. A vessel coming into New York with a thousand immigrants cannot unload or do anything until she gets rid of those immigrants, and they are sent to the island and fed at the expense of the steamship companies and treated exactly as if they were aboard a ship. The steamship companies have their agents there, and when a man or woman is detained they telegraph and bring the case to the attention of the immigrant's friends and furnish desired information to this board of special inspectors, so that the Government is not at any expense in regard to the matter. If they are rejected they are returned to the country from which they came, at the steamship company's expense, and for that reason their agents in Europe are exceedingly particular to whom they sell a ticket, because the expense which has been incurred by reason of the sale of that ticket is deducted from their earnings.

Q. (By Mr. FARQUHAR.) Is there any penalty attached to the steamship companies for bringing this undesirable class of passengers?—A. If they do it designedly they are liable to quite a heavy penalty. You will find that in the act of 1891. It is always better to go to the law. I can not recollect those items.

Q. Are there many cases involving steamship companies that bring immigrants under the contract-labor law that go into court now?—A. No, sir; I am afraid I am responsible for that. When I went to California, looking into the Chinese question, I found that United States officers there had pending three or four thousand habeas corpus cases relating to the Chinese. A Chinaman would, as a general thing, come to the United States and in two or three years accumulate one, two, or three hundred dollars, which was a fortune to him, and go home. He would arrive, and immediately he would be detained. A writ of habeas corpus would be obtained for him, straw bond would be given, and that case would not be heard for years. The Chinaman would go back in the interim, and the result was the Government had to pay costs and was out an enormous amount for habeas corpus proceedings. What was called the "Japanese Case" was tried about that time, I think in 1893, by the Supreme Court of the United States. It rendered a decision that the executive branch of the Government had the right, under the immigration laws, to hear and determine these cases, and to hold these people, and the immigrant had the right of appeal from the decision of the board of inquiry that I spoke of, to the Secretary of the Treasury. That practically did away with the right of courts to interfere, and, as I told you, we are sustained by that decision, and the consequence has been that when these cases have recently been taken before the courts upon writs of habeas corpus the immigrant has been remanded to the custody of the immigration officials, and a like decision was made in Chinese cases.

Q. When your board in New York decides to deport an immigrant, has the immigrant the right to appeal?—A. Yes, sir.

Q. Has the inspector the right of appeal also?—A. Yes, sir; that was a new feature in that law. The idea was that many persons were landed there through sympathy or for reasons of humanity when they should have been deported, so the right of appeal was given the inspector as well as the immigrant.

Q. What was the percentage of deportations there under your administration

out of the whole number arriving?—A. I do not think it ever reached over 1 per cent. and prior to my administration the proportion was very much less.

Q. Have the general immigration laws as amended up to 1897 and the alien contract-labor law practically suppressed the padrone and alien contract systems?—A. I think they have, in a very great measure. I think, with few exceptions, isolated cases, the importation of contract labor has been suppressed; but there is some padroning still existing in the case of the importation of Armenians, Assyrians, Turks, and Arabs. You can find bodies of Armenians in the wire works about Chicago, and another body about Lynn, Mass., and you will find beggars and others scattered throughout the United States, and I think the duty of the immigration authorities is to eradicate this condition.

I heard of a case the other day. There were about forty of them and they got separated. The authorities got their story separately from each of them, and it gradually leaked out that, although they stated they were going to New York, they were obliged to state that a certain party, naming him, had induced them to come and had furnished them with money, and it developed that they were going to a certain place in the South for the purpose of peddling goods to be furnished by this padrone.

Q. (By Mr. SMYTH.) Is that the padrone system?—A. The features of it are the same that formerly existed with regard to Italian labor.

Q. (By Mr. PHILLIPS.) Is it a fact that crime and pauperism are decreasing among the most enlightened nations of Europe, while it is on the increase in America?—A. Oh, I do not agree with that at all; I think it is really the reverse. I do not think crime and pauperism are increasing in the United States; certainly not in our prosperous times now.

Q. I have seen statistics sustaining that view, but I quote from memory only. The statement was made that both crime and pauperism were on the increase in America.—A. I can not think that is so. I think the statistics must be wrong. Take the foreign population—the Italian, or the Jew—can you name any Jews who are paupers in any almshouse in the United States? Can you name any Italian? These people are able-bodied workmen and when they land here they are able and willing to go to work. We admit only such persons. Such a man is of value to this country the moment he lands. He has not cost us anything. He has lived in the old country. He is ready now to give us the benefit of his labor, and he does it willingly. If the next day he meets with an accident, he has no place under heaven to go to. You would naturally suppose you would find him in an almshouse. When you consult the statistics of those who were born in foreign countries and look for them in the almshouses, you really do not find them; their friends try to take care of them. In the statistics which come from our eleemosynary institutions you will find the so-called foreign inmates are of foreign parentage. They are naturalized citizens and they are entitled to such care, but you will find very few who were born abroad in the almshouses here. By the act of 1892 a head tax of a dollar was levied—50 cents then, now a dollar—on every immigrant coming into the United States, which supports the Immigration Bureau, and it is provided that that money shall be paid into the Treasury for the purpose of paying the cost of the administration of the law and for taking care of such immigrants as fall into distress. The Immigration Bureau has always, for a period of one year, paid the expenses of every immigrant who went into any one of the almshouses of the United States, and under that law I suppose we have paid twenty, thirty, or forty thousand dollars a year for the care of those who were overtaken by sickness or accident. I know of no immigrant who landed in the United States who within one year was a charge upon any charitable institution. We invited all institutions to send us statistics.

Q. (By Mr. FARQUHAR.) Allow me to call your attention to section 11 of the act of March 3, 1891. As I read that law, if the transportation company or the corporation that brought this immigrant into the country can be found, it shall bear the expense. Is that the understanding?—A. Yes. The records kept by the immigration authorities are kept by such a system that at any time you can get the record of any immigrant who landed in the United States. If you could give us the name, the vessel, and the date, we will find a record of his landing, his condition, and where he went to. You will find in my reports that I sent persons back at the expense of the steamship companies, or paid for temporary sickness or disability out of the immigration fund. But I speak of those going to the almshouses who, having been landed, met with an accident or were taken temporarily sick with typhoid or scarlet fever, or anything of that kind. The steamship companies can not be held responsible for them, and their trouble is of such a temporary nature that the United States would not be justified in sending them back. But if a steamship company brings a person here who is, say, half gone with consumption, and within one year we find that man in an almshouse, we write to

that company and say, on such and such a day we will send you such and such a person who has become a public charge from such and such a cause, from which he was suffering on his arrival. We have sent many insane back in that way. These are the people you will find mentioned in our reports.

Q. How is the immigrant head money expended?—A. It can not, under the law, be used for any other purpose than as expressly authorized by section 1 of the act of 1882. It is most scrupulously guarded by the Treasury officials. That fund is turned in to the Treasury and you have to draw your warrant showing the purposes for which it is drawn. Section 1 of the act of 1882 provides as follows:

"That there shall be levied, collected, and paid a duty of fifty cents for each and every passenger not a citizen of the United States who shall come by steam or sail vessel from a foreign port to any port within the United States. The said duty shall be paid to the collector of customs of the port to which such passenger shall come, or if there be no collector at such port, then to the collector of customs nearest thereto, by the master, owner, agent, or consignee of every such vessel within twenty-four hours after the entry thereof into such port. The money thus collected shall be paid into the United States Treasury and shall constitute a fund to be called the immigrant fund, and shall be used, under the direction of the Secretary of the Treasury, to defray the expense of regulating immigration under this act, and for the care of immigrants arriving in the United States, for the relief of such as are in distress, and for the general purposes and expenses of carrying this act into effect. The duty imposed by this section shall be a lien upon the vessels which shall bring such passengers into the United States, and shall be a debt in favor of the United States against the owner or owners of such vessel, and the payment of such duty may be enforced by any legal or equitable remedy: *Provided*, That no greater sum shall be expended for the purposes hereinbefore mentioned, at any port, than shall have been collected at such port."

It is under that act we care for immigrants in charitable institutions for the period of one year after their arrival.

Q. (By Mr. PHILLIPS.) Does that fund accumulate each year or is it exhausted?—A. Oh, I have always had, during my administration, and I think there is now, \$150,000, or \$200,000, or \$250,000 surplus, and not one of the immigrants nor the administration of the law has ever been a charge on the people of the United States.

Q. (By Mr. FARQUHAR.) Has it been used properly as a help to the immigrant?—A. Before I came into the office the immigrant fund contributed very largely to the payment of the construction of the buildings on Ellis Island. Acts of Congress to assist the immigrant fund were passed, one, I think, for \$100,000 and another, I think, for \$150,000; and it was stated that the \$100,000 appropriated was to be repaid from the immigrant fund in four annual payments. During my administration I paid that \$100,000, and had an accumulation, in round numbers, of about \$250,000 more, and then we were really acting against ourselves, because we were passing laws to restrict immigration, thereby curtailing the funds we were receiving. On the 14th of June of last year the buildings on Ellis Island were burned down, and I do not know whether Congress has appropriated money for reconstructing them or whether this surplus will be used for that purpose.

Q. Did the Government establishment on Ellis Island cost about \$750,000 before it was burned?—A. Yes, sir.

Q. (By Mr. KENNEDY.) Was that paid out of the head tax?—A. Nearly all of it. Q. What will be the cost of the buildings they contemplate erecting now?—A. I think the estimate was about \$1,300,000.

Q. Would the head tax have to be increased to pay for these buildings?—A. I think the Government has appropriated that money out of the general Treasury, and not made it a charge on the immigrant fund, but the immigrant fund will be obliged, probably, to put up the surrounding buildings. There is a hospital, the main building, kitchens, restaurants, and other buildings.

Q. (By Mr. PHILLIPS.) Under your administration did many criminals come over?—A. Very few that we knew of. We would have to ask a man if he were a criminal or not.

Q. Are there any means taken to detect criminals?—A. I do not think we sent back more than two or three such characters each year. If a man had committed an act abroad against an immigrant who was at present in America, when he came over that man would be right at the door to see that he should be sent back because he had done certain things abroad.

Q. It is generally stated, and believed, by a large per cent of our people who look into this matter abroad, that criminals are sent to this country as well as paupers.—A. I have not found that the steamship companies do anything of that kind.

Q. Do the municipal governments send them through the agents?—A. There is a great deal to be said about the steamship companies, but I am of the opinion that it is really the municipal governments that send them and pay their passage

to the steamship companies. The steamship company is bound to receive and carry them unless they can discover that they are not proper persons to be landed in the United States, and then they will not receive them.

Q. Have the municipal governments abroad connived with the agents for the purpose of shipping here criminals who have served time?—A. I went to the Prisoners' Aid Society in London, and they did not know who I was. I questioned them with regard to what they did with their ticket-of-leave men. They had not gone far when I thought I was not acting fairly, and I told them who I was. The official stated that during the war (we passed an act to encourage immigration in 1864, when we wanted men over here they did send us all their ticket-of-leave men, and he supposed they went into the Army. He said that continued until 1893 and that his jurisdiction was London and a certain territory. He assured me that when the act of 1893 was passed, by which, as he supposed, the emigrant had to swear that he had never been convicted of crime, their society had voted that it would never send any more, and he did not think any from England had gone.

I did find one case in Switzerland, and it was a source of great annoyance to the Swiss minister. There was an habitual drunkard in one of the cantons in Switzerland. In Switzerland every inhabitant has an interest in the property of the canton in which he lives. They wanted to get rid of him, and in order to do so they had paid him his interest in the public rights and with the money purchased him a ticket for America. He came over here and we captured him and his papers. We immediately brought the case to the attention of the Swiss Government, and it apologized and said it should not occur again. That man was not a criminal, but merely a worthless fellow that they wanted to get rid of. I do not know during my administration of any landing of criminals upon us or of any landing of paupers, except a few and assisted Jews.

Q. Can you show the proportion of crime committed in this country by foreigners and Americans?—A. no; I can not.

Q. Are there statistics that define it fully?—A. I have heard of such statistics. I think you will find them in the State reports. As I told you, they are generally persons of foreign parentage.

Q. (By Mr. KENNEDY.) Do you know whether Russian Jews are still coming in this country through the Baron Hirsch fund?—A. Yes; I went over there to make an investigation in regard to that. I have letters from Baron Hirsch. I think you will find one of his letters published in my reports. I went to Hamburg and found one of the directors of the company. It is an incorporated company, limited. I ascertained that the company's capital was, I think, £2,000,000 (\$10,000,000). Of that I think Baron Hirsch contributed about \$9,999,000 and gave a small interest to five men in whom he had confidence and made them directors. At Hamburg I met one of them. He agreed to have the other four directors meet me in Paris at Baron Hirsch's house, and I went there and found the directors there, but Baron Hirsch was away. He was in Austria shooting. When I came home I received a letter from him. I also got all the notifications and warnings which they gave to the Jews with regard to coming to America.

The letter referred to by Mr. Stump as having been received by him from Baron Hirsch follows:

"[Telegraph address, Abrahamsh, Paris.]

"JEWISH COLONIZATION ASSOCIATION, 2 ELYSEE STREET,
"Paris, October 15, 1894.

"The SUPERINTENDENT OF IMMIGRATION, New York.

"DEAR SIR: On learning that you came to pay me a visit in Paris at the time of your recent voyage, I sincerely regret to have missed an interview, which would have procured me the honor of making your acquaintance and would have furnished me the occasion of explaining to you personally my ideas on the emigration of the Jews of Russia better than I can do it to-day in writing. It would have been easy for me to reassure you on the question of their emigration to the United States. Far from favoring this emigration, I have busied myself since a few years to turn it toward the Argentine Republic, where, as you know, without doubt, the work of the Jewish Colonization Association has already founded several colonies and is now preparing others. In fact, in consulting the latest statistics, you can not fail to notice that to-day the greater part of the Jews in search of a new fatherland (country) turn their looks toward Argentina, thanks to the efforts of the Jewish Colonization Association. Therefore, I am convinced that in a few years the United States will perceive how mightily our action will have contributed in turning from them the flood of emigration of which they are so apprehensive.

"I should add that the Jewish Colonization Association not only does not contribute in directing the emigration toward the United States, but to my knowledge there does not exist a single society whose aim would be to push our coreligionists to establish themselves in your country by helping them directly or indirectly. Nobody could possibly hinder a certain number of isolated ones from going to North America of their own impulsion and at their own expense and risk. Nevertheless, it is to be presumed that this class of emigration will become more and more scarce when we will have succeeded in creating a stream of colonization toward the countries of South America.

"I would have liked, dear sir, to have given you all these explanations with more details, but as this pleasure has been denied me I hope that the declarations preceding are sufficient to enlighten you as to our intentions and to dissipate the apprehensions which you might otherwise have conceived.

"Accept, dear sir, the expression of my most distinguished feelings.

"M. DE HIRSCH."

Q. (By Mr. FARQUHAR.) Did any of these colonies go into New Jersey?—A. I have heard it said that that New Jersey colony was from Baron Hirsch.

Q. Do you know anything about the condition of the colony now?—A. I do not. I think they came to grief. I have had during my administration the rabbis and others beg that we return these Jews, saying they were unable to take care of so many and that they ought to be returned. They have done so in New York and in other cities. The Jew will take care of one of his race to the utmost of his ability, but they came so thick and fast they could not do any more and wanted us to keep them out.

Q. (By Mr. PHILLIPS.) Did they come largely from Russia?—A. They came from Russia. They came from a place called Libeau. Principally Russian Jews come from there. They came also from the frontiers of Prussian Russia; but, to the credit of the Hamburg and Lloyd people, they have instituted, and I think they have got an enactment of legislation in Germany, a law which prevents any person from entering Germany from Russia. This was directed principally against the Jews, with the view of preventing them from embarking for America, unless at the frontier they showed they were desirable people to come here and would not come within the prohibition of the law. That was done by force of the act of 1893, because when these people arrived, we will say, at Hamburg, or at Bremen, and were rejected, they became paupers upon those cities at once, so the German Government took the precaution to institute an inspection on the borders of their country to prevent these Jews from crossing their frontier, ostensibly to go to the United States. All those things combined tended very greatly to restrict immigration.

Q. (By Mr. FARQUHAR.) Did the action of the Italian Government under Rudini make any difference whatever in the restriction of immigration from Italy?—A. The Italian Government is perfectly willing, both Premiers Crispi and Rudini told me, that their subjects should come to the United States. They think an Italian will never expatriate. They go to America and make money and return. If they do not return one year they return the next. What the Italian makes here he sends home; and I have had pointed out to me little towns and villages in Italy where there are improvements, and they will say, "Those people have been in America." They say they will not encourage emigration from their country to this country, yet they are not inclined to restrain those to whom we have no objection, and will take advantage of what there is for their people here. So many Italians were returned as likely to become public charges, they inquired what we meant by "likely to become a public charge," and wanted to have explained to them the features of the contract labor law. It was rather impolitic for us to write a definite explanation and say what we meant by becoming a public charge, because we can confine or enlarge it to suit almost any class of people we desire to exclude. Mr. Carlisle and our Secretary of State said that I should go over and explain it to the Italian Government verbally, and have no correspondence. I was sent, and I reported the results of my visit when I came back. The report was thought of sufficient importance to be sent immediately to the House and Senate, and you will find it in Senate Document No. 9, reported to the Senate December 3, 1896. I found those people exceedingly anxious—while they would not do anything in violation of our law and would do anything to prevent undesirable people from leaving Italy, still they were rather inclined to hold that those who were eligible should not be prevented from coming across the water.

[Mr. Stump's report and the action taken by the Italian Government is given in Senate Document No. 9, second session Fifty-fourth Congress.]

Q. (By Mr. PHILLIPS.) Would you oblige the commission by giving it a list of

documents, reports, and books on the subject of immigration?—A. I will try to do so. There are not many of them.

Q. (By Mr. FARQUHAR.) While we were on that question of the head money and the \$100,000 voted for the alien contract-labor law—do you really think that the head money received, and that amount of money from Congress, is sufficient to make that Bureau of the Government in its administration efficient enough to carry out the law?—A. The head money yields a surplus for carrying out the purposes of the act of 1882. As far as the alien contract-labor laws are concerned, I found \$100,000 amply sufficient. I never did expend the whole sum in any one year during my administration. I always returned money into the Treasury.

Q. I notice in the conclusion of your report of 1897 that you say it seems proper to suggest the importance of maintaining the immigration service separate and distinct from the customs administration. Where is the trouble? Are the immigration servants customs servants also and inspectors?

WASHINGTON, D. C., *January 12, 1899.*

The examination of Mr. Stump was resumed at a meeting of the Industrial Commission convened at 11 a. m., January 12, 1899.

MR. STUMP. A question was asked me in regard to customs, which would properly be the first one to come up. Under the act of 1832 the collectors of customs of a port were directed to collect the head tax, and the officials under him were placed in charge of the administration of the law regarding immigration. Subsequently immigrant inspectors were appointed by the Secretary of the Treasury. Article 3 of Regulations of Immigration, issued by the Treasury Department, says:

"Collectors of customs on the Canadian frontier and at all points where commissioners of immigration are not employed are charged within their respective districts with the execution of the laws pertaining to immigration and all importation of laborers under contract or agreement to perform labor in the United States. They will employ all customs, immigration, and other officers assigned to them for duty in the enforcement of the immigration acts; and all such officers are hereby designated and authorized to act as immigration officers."

Q. (By Mr. FARQUHAR.) Were they to be both custom house and immigration inspectors?—A. Yes; when the Immigration Bureau was created and immigration officers appointed they were charged solely with the execution of that duty, and the immigration service became efficient. What I allude to in my report is that while the immigration fund is amply sufficient for the compensation of all immigration officers, my experience had been that where customs officers were charged with the duties pertaining to customs and also to immigration that the one or the other would be neglected, and it is policy, I think, to have them entirely separate in order that there should be more efficient duty performed by each. I do not think either should be charged with the other except in places where there is very little customs or very little immigration.

Q. Were the immigration officers charged with looking into infractions of the law of customs as well as smuggling, etc.?—A. Oh, yes; the immigration officers were also directed, wherever they saw any violation of the customs laws of the United States, to make arrests.

Q. It is your opinion that they should be entirely separate?—A. I think so; as far as possible.

Q. Are the functions of the immigration officers sufficient to take all their time, instead of being troubled with the investigation of smuggling, etc., on the borders?—A. Yes; except in isolated cases where there is very little to be done. Where there is little dutiable goods coming and very few immigrants, I would not make objection. I think one officer of the United States Treasury Department should be sufficient to execute both duties at such a place.

Q. Are the duties of a United States inspector of immigration in Canada simply to inspect immigrants who have declared their intention to come to the United States and who have come that way?—A. Yes, sir.

Q. Have they no inspection duties over the general Canadian immigration?—A. None at all.

Q. Is it a fact that on the whole Canadian frontier, certainly as far as Winnipeg, that the trades unions and organized labor have done an immense amount of work through their own officers and their own means in spying out foreigners or Canadians who attempt to come into this country in violation of the law?—A. As to the European immigration through Canada, by an arrangement I made with the steamship companies landing passengers at Quebec, which permitted a United

States officer to go aboard those ships there and make the inspections under the laws of the United States, as is done at the port of Boston or New York, you must recollect that we have no law to prevent Canadians coming and going as they see proper. For instance, take Detroit and Port Huron, and all along the lakes, wherever a foreigner presents himself he is obliged to exhibit a certificate that he has been examined and passed at Quebec, which is provided for under this agreement: but if a Canadian is coming into the United States he is not interrupted, because there is no head tax. It is expressly provided by law that there should be that intercourse between these countries until Congress should enact laws to meet that case. I will show you that act, which may be of interest to you. I find it in section 23 of the act of 1884. There has never been an act to provide for persons coming in by land carriage, neither has there been one providing for persons coming by water, from contiguous territory.

Q. Would the question be on the alien contract-labor law?—A. That is all there is to it. Another matter that has occupied the attention of Congress, both by my recommendations and more especially by the various trades unions, is this: I have been to Detroit, and while on ferryboats between Windsor and Detroit, with the committee, of which Mr. Owen was chairman (see Mr. Owen's report), saw how many carpenters, masons, etc., came daily with dinner buckets from Canada into the United States to work. That is a sore which Congress has not remedied. I think Mr. Corliss had a bill two years ago, as had Mr. Mahany, of Buffalo, on this subject. It has caused much friction between the two Governments and, I think, entered into the work of the joint commission of Canada and the United States in regard to settling immigration and other matters.

Q. When you were Commissioner General were you not the authority in the Treasury Department to decide whether when Canadians, who were members of the International Typographical Union and of a local union, say of Ottawa or Toronto, came to Detroit and had well-defined notions where they were to work in the United States, were under contract for labor or not?—A. It would depend entirely upon whether we could arrest them. We would certainly examine into the matter, and if no contract had been made abroad we could not hold them. If they were induced to come in without any contract, it is that very amendment that I spoke of the other day as being necessary for us to hold such people. We had, at Buffalo especially, an inspector at the end of the bridge and also a Mr. De Barry in Buffalo, and they were very efficient officers, and while I think Mr. De Barry stretched the laws considerably, yet we never interfered with him if he did send a person out. Had some of these cases been brought to our attention by appeal they would have been decided on their merits. But Mr. De Barry sent a good many out when I did not think the law justified his action.

Q. (By Mr. SMYTH.) What is your opinion as to the effects of immigration on the wages of skilled and unskilled labor in this country?—A. I suppose immigration in some branches has had a slight effect. My view in regard to this matter has been that while our country is so great and comparatively sparsely inhabited, when you compare it with European countries, there is a constant demand for labor and it is seeking new fields all the time. In that way immigration has no great effect on the prices which have prevailed heretofore. Skilled labor coming into this country tends naturally to diminish, but owing to our increasing demands does not effect prices to any perceptible degree.

Q. What is the effect on unskilled labor?—A. I think the demand for unskilled labor is so great that it will not have any effect at all. The only trouble is the distribution of immigrants when they come here. When they arrive they get into our Eastern States and go into our cities, and in that way labor here is congested, but gradually they work their way out to where there is a demand for them, and we find that while there is no great demand in the East, there is a great demand in the West, and, like water, labor will seek its own level. If our country were fully settled, of course every addition to its population would have an effect on the working people, but it will not have an effect on them here for years and years to come.

Q. It has been stated, and generally believed, that in certain congested portions of the United States there is a large number of unemployed people seeking employment and unable to find it. Does not this large mass of unskilled labor, brought into this country by immigration, tend to swell the number of unemployed?—A. That is very true of localities. You can go into the mines of Pennsylvania and to a few other portions of the United States and you will find that immigrants are induced to come by letters written by persons who have employment in these various localities, and you will find that when these immigrants come many of them will be unable to find work there. In that way those places have become overcrowded. As I said the other day, a bureau for distributing immigrants would be a vast benefit to the United States.

Q. As you proposed having on Ellis Island?—A. I only mentioned that as one place, but I do not see why smaller bureaus could not be put in other localities, so as to distribute these immigrants.

Q. Can you tell the commission about what proportion the number of skilled immigrants in this country bear to the whole number?—A. I am hardly capable of answering that question. You know I am an agriculturist and lawyer, and my mind has never been directed to that. When I came into public life, I was assigned to this immigration question, and afterwards to the execution of the laws under it. When you go into those questions of labor and industries, I am not a competent witness. But I will tell you what the Bureau has done. It has given the most exact data with regard to each and every immigrant who has come into this country. You will find in the reports the tables which furnish this information, and it will enable you to arrive at your own conclusions. If I considered myself an expert on labor and industries, I would gladly give you my opinions, but they are not worth anything except as mere surmises. In the first tables we give the number of immigrants arriving at the various ports; that is, the total immigration.

Table No. 2 shows the immigrants arriving in the United States, their sex and their nationality, and those debarred and returned during the fiscal year. We next give the age of immigrants and number of illiterates over 14 years of age, by countries of origin, arriving during each fiscal year. We next give a table of the immigrants over 20 years of age, by nationality, bringing \$30 and over. In one year they brought over \$1,000,000, and probably they brought \$10,000,000 that we could not ask about, being over \$30 each.

Q. (By Mr. FARQUHAR.) Is that the report of 1896 and 1897?—A. Yes, sir.

Q. (By Mr. PHILLIPS.) I understood from a speech made by Senator Gibson on the immigration question, in the Fifty-fourth Congress, that he estimated that they brought about \$800 per capita.—A. I have always estimated that they brought four or five times more than what was actually ascertained from examination.

Q. Is there any data from which you could get those facts?—A. No, sir; only what you see.

Q. Do you think \$800 per capita is an overestimate?—A. This statement is made on page 4 of that report:

"The fact disclosed by the table on this subject is that the immigrants during this fiscal year brought with them and exhibited \$3,541,241. How much more these immigrants brought can not be stated. From experience it can be safely estimated that the money brought into this country by these immigrants is very much greater than the figures herein given."

Table No. 5 gives the arrivals, by nationalities, during the fiscal year, with relation to those who have not been in the United States before, going to join families, etc. Table 6 shows the increase and decrease each year. Table 7 gives the nativity of alien steerage passengers landed at the ports of the United States in that year. It tells whence they came, nativity, and gives the States to which they went.

Table 8 gives the nativity and occupation of alien steerage passengers landed at the ports of the United States, and in Table 9 you will find the number of actors, artists, clergymen, editors, engravers, lawyers, and everything, and the skilled and unskilled labor. That is exact. The last thing I did was to have a table prepared which gives the destinations and occupations of alien steerage passengers landed at the port of New York, so we can see how many skilled and unskilled laborers went into each State and the occupation of each of them.

Q. (By Mr. A. L. HARRIS.) Do your tables give the percentage of illiteracy among the immigrants that reach this country?—A. Yes, sir; as far as we were able to get it. We had no law authorizing us to examine in regard to that, because it does not matter at the present time whether they can read and write—it is not essential to their admissibility; but, in view of legislation in Congress, we had instructed our registers to ask every one of them whether they could read and write and we took their answers down, and that is the table I presented to you.

Q. (By Mr. KENNEDY.) Mr. Shulteis says that if this commission would probe into the question of immigrants escaping the head tax by coming in from the Canadian border, they could suggest legislation that would result in reimbursing the Government for the entire expense of the commission. What is your opinion in regard to the efficiency of the service in that particular? Could anything be suggested by the commission to remedy the trouble?—A. I will explain how that agreement was entered into. I was directed by the Secretary to go there and see what inspection of immigrants could be inaugurated throughout our border line. That line is nearly 4,000 miles long. I had authority to see all customs officers at the various ports of entry along that line as immigration officials. Before I left here I suggested to the Secretary that if I could make an arrangement with the Cana-

dian government by which at the seaboard, the port of entry of all European immigrants, I could have an investigation, that it would obviate the expense and the necessity of establishing this border line. I visited Ottawa and communicated with the government and the government was inclined to grant it, but the newspapers got hold of it and there was great excitement in Canada in regard to Canadian officials permitting United States officials to exercise their functions within their territory, whereupon the Canadian government retired from the arrangement. I then made an arrangement with the transportation companies themselves; that is, I found four or five trans-Atlantic lines bringing immigrants into Canada and I found only two railroads, the Grand Trunk and the Canadian Pacific, conveying these immigrants west. You will find it on page 17 of the report for the year ending June 30, 1894. The steamship lines were exceedingly anxious to have the business of bringing the immigrants by way of Canada into the United States and to give us every facility for inspection. They were not inclined to pay any head tax.

There was no law for us to compel them to pay a head tax. If they could bring immigrants into Canada, and in that way into the United States, without paying any tax, the steamship lines running into New York might just as well close their business. I told them I would discontinue negotiations unless they paid the head tax, and finally they agreed to it. I fear Mr. Shulteis is not an authority on this subject at least, and that the Commissioners will be without pay if they depend upon getting it from this source. They agreed, as you will see, to allow our inspectors to go aboard their ships and inspect in the same way they do at the ports of the United States. Those destined for the United States were examined by us. When immigrants were not eligible to enter the United States they were not permitted to enter. In order to prevent their entering after we had rejected them, we required our authorities to give each one a certificate, showing to what place he was destined, the description of the person, and that he had been examined. He was required to present that certificate to the customs or immigration officials when he entered the United States, and it entitled him to land. The railroads entered into a compact that they would transport no one destined for the United States without that certificate. If that law is properly administered—and it was during my administration—I do not see how they could get in. Subsequently I ascertained that persons would come, ostensibly for Canada, and they would stay maybe a month or two in Canada, and then come to the United States. Whereupon I instructed our officials to enter into a new contract with the steamship companies providing that they would pay the head tax on all those persons who entered the United States so many months after their arrival, and they paid it. In that way every business safeguard was thrown around it while I was in office, and, I believe, still continues. You will find that agreement in my report; and the supplemental one follows, I suppose, a year or two afterwards.

Q. (By Mr. FARQUHAR.) Who really pays the head tax, the steamship company or the immigrant?—A. It is very much like the question who pays the tariff duty. One says the consumer pays it, and the other says the importer pays it. The steamship companies add it to the passage money. It is not only the immigrant who pays that head tax, but every alien coming into the United States. If he comes for pleasure, or comes a dozen times a year on business, he pays it every time.

Q. (By Mr. SMYTH.) Does he pay it to the steamship company or to the Government?—A. He pays it to the collector of the port. For instance, here is the tourist visiting the United States for pleasure; he is manifested on the steamship company's manifest as Mr. Jones, of England. Being an alien, the collector of the port collects the tax from the steamship company, and it goes into the immigration funds, the same as a head tax from an immigrant.

Q. (By Mr. FARQUHAR.) Do you collect directly from the immigrant or from the steamship company? Do not the steamship companies pay this head tax?—A. Oh, yes; but the bill presented to the steamship company is presented by the collector of the port. In New York we found that that business was better attended to by the immigration authorities, so that the manifest of all passengers was sent to our depot there, and we made up the bill of all tourists and aliens and sent it to the collector of the port and the steamship company also, and the company paid the collector.

Q. (By Mr. PHILLIPS.) Do nations in Europe charge a head tax?—A. No, sir.

Q. No nation?—A. I could not say they do. I never heard of it.

Q. (By Mr. KENNEDY.) Do you know anything about the case of a gentleman, formerly a United States Senator, who contracted to build a State house for the State of Texas, at Austin, imported thirty Canadians into Texas or brought them in under contract to work, was fined \$30,000, and the fine never collected?—A. No, sir; I do not.

Q. (By Mr. FARQUHAR.) Could they make a fine of \$30,000?—A. Yes, sir; it is \$1,000 in each case.

Q. Under the alien contract law?—A. Yes, sir; I think I have had a fine of as much as thirty, forty, or fifty thousand dollars against a concern in Rhode Island.

Q. (By Mr. SMYTH.) Were those amounts paid?—A. The Solicitor of the Treasury, at the suggestion of the United States district attorney, who had found the bills and had the cases docketed, consented to a compromise. The defendant paid three or four thousand dollars and all the expenses of the cases, and they were dropped. I think that was in the Phillips Hosiery Case, up somewhere in Rhode Island. In one of my reports I showed how many cases I prosecuted. I do not know of any cases where there has been a conviction upon trial before any court, and for that reason wherever we had these cases and parties desired to compromise it has generally been done because of the impossibility of getting testimony necessary to convict the employer. The poor immigrant who came in—the innocent party—was sent back, and it was almost impossible to convict an employer.

Q. (By Mr. FARQUHAR.) We spoke of the displacement of American labor by the importation of both skilled and unskilled laborers to this country. It has been stated that in 1860 or 1864, until the alien contract-labor law became thoroughly operative, all the labor employed in the coal mines of this country during, say, twenty-five years was displaced by European labor. Is that a fact?—A. Of course I knew of those things when they were brought to my attention. I believe it to be a fact. We endeavored to return every person going into the mines of Pennsylvania to Europe. That is one of the congested localities I said I wanted to eradicate. I think the case of the Pennsylvania coal fields is always cited by persons opposed to immigration, forgetting its benefits elsewhere.

Q. (By Mr. KENNEDY.) If a person is found in the United States in violation of the immigration laws within a period of one year from his arrival, may he be deported?—A. Yes, sir.

Q. A high officer of the immigration service—not the Commissioner General of Immigration—says he thinks the law might very well be amended by extending that limit to five years. I would like to ask your opinion in regard to that.—A. It might be extended to five years. An alien comes into this country, is examined, and swears positively that he has no contract to work for any particular person. You may feel assured that that man is telling you an untruth. We have traced such men to the mines in Scranton, exactly where we knew they were going, though they swore they were going to some other point. Knowing the provisions of the law that within a year we could arrest them, we have permitted them to go and subsequently arrested them and sent them out of the United States. Whether it is necessary to have that period extended over a year or not is a matter of fancy. I think it is scarcely necessary to increase the period, because if you do not get the man immediately you may as well give up.

But there are other cases. When a criminal comes in and you do not discover it for four or five years you can not send him back. A man comes who has a weak mind, and maybe insanity develops. In that case you want to return him after a year; but in regard to the alien contract-labor law I see no necessity for a change. I will tell you another very important amendment that I have contended for; the right to arrest a party after he has been landed. An immigrant, by false statements, secures his admission into the United States. The law says that the immigration authorities can return the man at any time within a year. There is no person appointed to execute that law and arrest the man. The United States marshals have refused over and over again to do it. It is simply like the acts declaring a thing illegal without attaching a penalty clause to it. You must give the immigration authorities power to sue and right to make an arrest, or you must give it to the marshals of the United States. When I came into office I found that each Secretary of the Treasury had positively declined to issue an order to that effect. I applied to Mr. Carlisle, and we examined into it, and he was the first Secretary that ever issued an order to arrest a contract laborer after he was landed, and the first case I know of was a very hard case. It was a South Carolina case. I arrested a man by the name of Williams, who had made a contract to go into partnership with a man. Williams said they got hold of what little substance he had and then informed upon him; that the company wanted to get rid of him. They had actually robbed him and then informed upon him, and obliged us to deport him. It was making us use the machinery of the Government to gratify private spite and hatred.

• Q. Do you believe, for certain purposes, the time limit should be extended?—A. Yes; it might be in certain cases, but I do not think so in the matter of alien contract labor, because all labor unions are anxious to get rid of a man at the time, but if there is delay nothing can be done.

Q. There is quite a general belief throughout the country that the steamship companies exert an influence to prevent the adoption of new legislation on the immigration question. Have you any knowledge of other influences working in that direction?—A. I have not. On the contrary, while I suppose it is perfectly

natural, I am not aware of their using any influence one way or the other. In regard to the laws as enacted, I always found that they cordially aided and assisted the service and observed the law as far as they could. I have had friction with them, but it always ended agreeably, and the matter, upon investigation, was adjusted one way or the other and things went on as usual.

The steamship companies have their agents through Europe as they have in America. They have their agents in America selling tickets in almost every city and village. Their greatest business is the selling of prepaid tickets; that is, families here will prepay a ticket for a relative, or somebody over there and inclose it in a letter, and that relative or friend comes over. I told you that the steamship companies, in accordance with the act of 1893, did establish rules and regulations in Europe. I will show you the rules established by the American Line, and I know it was done by the Hamburg-American and by the North German Lloyd, but I take this one set of rules:

"The classes not admitted to the United States are such immigrants as are liable to become a burden to the State, paupers, criminals, consumptives, and those suffering with loathsome and contagious diseases: the blind, lame, deaf and dumb, and crippled persons, women with children without any relatives in the country, single females in pregnant condition, and single females with children.

"We beg to advise you that the law will be enforced strictly. In view of this we request you to use the utmost care in accepting emigrants for transportation, and in doubtful cases to consult us, giving all the details and conditions, before you enter into a contract.

"If we approve of the acceptance of a passenger or passengers, you will be in no way held responsible, but if you enter into a contract for transportation of emigrants of whom with a certain degree of attention you could have known beforehand that they would come under that class of emigrants who are refused admittance to America, we will be compelled to charge you 80 marks for every adult for return transportation and also the transportation cost from the port to the home of the passenger."

That was issued by the steamship companies when the act of 1893 went into effect, but, as I told you, whenever an agent located in these villages sold a person who would not be admitted into the United States and he was returned, they were fined the cost of transportation, so it really made it the best inspection.

Q. Did you know the late Dr. Glavis?—A. Yes, sir.

Q. Did Dr. Glavis ever attempt to interfere with you in your administration of the Immigration Bureau?—A. When I went into the office I immediately came into contact with Dr. Glavis, and for probably eight months or a year our relations were not as agreeable as they became subsequently. Subsequently our relations when we got into working condition and he found that there was nothing to be gained became harmonious.

When I came into office the main question was the maintenance of immigrants by steamship companies on Ellis Island. For instance, a wife coming to her husband would be detained four or five days while they were telegraphing, finding out whether she had a husband or not. Sometimes there were contract laborers. They were detained four or five days or more so as to give everybody a hearing. We claimed their expenses should be borne by the steamship companies. At that time the question had not been settled. The contention on the part of the steamship companies was that we should examine these parties, and if we held them over for our purposes that they should not bear the expenses. I contended that they were liable, and I prepared what we called the rules and regulations for the maintenance and support of immigrants while they were detained and rules for maintenance and deportation of alien immigrants were embodied in Circular 177, of November 29, 1893.

[The substance of this circular is embraced in Department Circular 159, of August 16, 1898.]

After they were issued we had no further friction. I found the steamship companies always ready to cheerfully comply with all laws and regulations when they thoroughly understood them and they were conclusively established; but, as a matter of course, while they thought they had the right to contend they contended, and I think the rules and regulations which were drawn at that time have subsequently been submitted to the Attorney-General and been approved by him. You will find that on page 31, report of 1894, and in Treasury Circular No. 174, the Secretary approved them and they became Treasury regulations, which are equivalent to law, because by the act of 1892 the Secretary of the Treasury is given power to make these regulations. As it is now a law, I apprehend there will be no further difficulty. The only friction grew out of the fact that the Immigration Bureau was then new and did not get into working order until I took charge of it. Mr. Owen preceded me, but there was some difficulty which prevented the Bureau from exercising its just powers.

Q. Have you familiarized yourself with the Lodge bill now pending in the House?—A. I do not know the one now pending. I recall the one that was vetoed by Mr. Cleveland.

Q. You know something about the educational test that was in that bill?—A. Yes, sir.

Q. That is the same test. It provides that the immigrant shall be able to read in some language a few sentences from the Constitution of the United States?—A. Yes, sir.

Q. In view of your testimony of day before yesterday in regard to the very small percentage of illiterate immigrants coming to this country from Germany, England, Sweden, and all those countries of northern Europe, would such a test interfere very much with the volume of immigration coming into this country from those desirable parts of Europe?—A. Very little.

Q. (By Mr. PHILLIPS.) Do you think such a law would be of great benefit in restricting undesirable immigration to this country?—A. It would restrict the undesirable, but I would say that the educated rascal that comes into this country is the most dangerous, and if you want "hewers of wood and drawers of water" you better not turn these immigrants back and let the forgers, scoundrels, and thieves in.

Q. Is the law pretty comprehensive on that question now?—A. Yes. I believe, as is now the case, that able-bodied and healthy immigrants, able and willing to work, who come here for the purpose of settlement, should be admitted into this country; but I think the utmost pains should be taken by immigration authorities to rigidly deport all undesirable immigrants—the class meant in the act of 1891, section 1. I want a strict examination and inspection of immigrants.

Q. Have you any suggestions to make in regard to further legislation on the immigration question?—A. No; I do not think I have, except the amendments I suggested to the act of 1893 and the amendments recommended by the Immigration Investigating Committee. I do not know what other provisions you could make.

Q. Do you think the Lodge-McCall bill would be very effective if enacted into law?—A. That would be effective only in restraining Italians, Poles, and Russians from coming in on account of their want of education.

Q. (By Mr. FARQUHAR.) When the alien contract-labor law came into somewhat effective force toward the end of your administration, was it your opinion that the law had effected very nearly a thorough remedy in respect to the importation of alien labor?—A. Except in isolated cases—individual cases chiefly at the present time. Sometimes you will find that immigrants will meet aboard ship and form plans as to where they are going, and sometimes four or five of them will unite and together go to some particular locality. They will go to the mines of Pennsylvania, the iron works at Chicago, or the wire works, and so on. In that way they are liable to suspicion. When they say they are going to one place, the immigration officials might think they are contract laborers and examine them very rigidly. Sometimes, in fact, they have come over because some friend has written them to come to a certain place, saying they will get work, and they are going there. While the wholesale importation of laborers under contract has been very greatly decreased and almost exterminated, a man abroad will make arrangements so that he won't land in a foreign country without anything to do. He has prudence to secure a place for himself when he does land, and he is a great deal more desirable immigrant than those who leave without any definite purpose or intention. I sent back many a deserving man, and the men who were sent back as alien contract laborers are as distinct as a class from those who are sent back as paupers as day is from night.

The very best immigrants in a great many cases were those who went back as contract laborers, because they had been prudent in making arrangements for their livelihood.

Q. (By Representative OTJEN.) Where you find an immigrant has made arrangements through his friends here do you send him back?—A. We were obliged to do so under the law. I have sent back men who came to a brother. A baker will write for his brother to come over here, saying he has employment for him and will pay him so much wages in his own bakery. I was obliged to send that man back, and for that reason I have suggested another amendment to the law. It is contained in the "Report on Immigration Investigation," page 42 (reading):

"Nothing contained in the immigration or alien labor laws shall prevent near relatives, not more remote than first cousins, from aiding each other to migrate to the United States, either by pecuniary aid or by the promise of maintenance until the immigrant can obtain work, or the promise of or contract for work in the business or trade of such relative, conducted personally by himself and under his own direction and management. The burden of proof in all such cases shall be upon the immigrant or such relative."

natural, I am not aware of their using any influence one way or the other. In regard to the laws as enacted, I always found that they cordially aided and assisted the service and observed the law as far as they could. I have had friction with them, but it always ended agreeably, and the matter, upon investigation, was adjusted one way or the other and things went on as usual.

The steamship companies have their agents through Europe as they have in America. They have their agents in America selling tickets in almost every city and village. Their greatest business is the selling of prepaid tickets; that is, families here will prepay a ticket for a relative, or somebody over there and inclose it in a letter, and that relative or friend comes over. I told you that the steamship companies, in accordance with the act of 1893, did establish rules and regulations in Europe. I will show you the rules established by the American Line, and I know it was done by the Hamburg-American and by the North German Lloyd, but I take this one set of rules:

"The classes not admitted to the United States are such immigrants as are liable to become a burden to the State, paupers, criminals, consumptives, and those suffering with loathsome and contagious diseases: the blind, lame, deaf and dumb, and crippled persons, women with children without any relatives in the country, single females in pregnant condition, and single females with children.

"We beg to advise you that the law will be enforced strictly. In view of this we request you to use the utmost care in accepting emigrants for transportation, and in doubtful cases to consult us, giving all the details and conditions, before you enter into a contract.

"If we approve of the acceptance of a passenger or passengers, you will be in no way held responsible, but if you enter into a contract for transportation of emigrants of whom with a certain degree of attention you could have known beforehand that they would come under that class of emigrants who are refused admittance to America, we will be compelled to charge you 80 marks for every adult for return transportation and also the transportation cost from the port to the home of the passenger."

That was issued by the steamship companies when the act of 1893 went into effect, but, as I told you, whenever an agent located in these villages sold a person who would not be admitted into the United States and he was returned, they were fined the cost of transportation, so it really made it the best inspection.

Q. Did you know the late Dr. Glavis?—A. Yes, sir.

Q. Did Dr. Glavis ever attempt to interfere with you in your administration of the Immigration Bureau?—A. When I went into the office I immediately came into contact with Dr. Glavis, and for probably eight months or a year our relations were not as agreeable as they became subsequently. Subsequently our relations when we got into working condition and he found that there was nothing to be gained became harmonious.

When I came into office the main question was the maintenance of immigrants by steamship companies on Ellis Island. For instance, a wife coming to her husband would be detained four or five days while they were telegraphing, finding out whether she had a husband or not. Sometimes there were contract laborers. They were detained four or five days or more so as to give everybody a hearing. We claimed their expenses should be borne by the steamship companies. At that time the question had not been settled. The contention on the part of the steamship companies was that we should examine these parties, and if we held them over for our purposes that they should not bear the expenses. I contended that they were liable, and I prepared what we called the rules and regulations for the maintenance and support of immigrants while they were detained and rules for maintenance and deportation of alien immigrants were embodied in Circular 177, of November 29, 1893.

[The substance of this circular is embraced in Department Circular 159, of August 16, 1898.]

After they were issued we had no further friction. I found the steamship companies always ready to cheerfully comply with all laws and regulations when they thoroughly understood them and they were conclusively established; but, as a matter of course, while they thought they had the right to contend they contended, and I think the rules and regulations which were drawn at that time have subsequently been submitted to the Attorney-General and been approved by him. You will find that on page 31, report of 1894, and in Treasury Circular No. 174, the Secretary approved them and they became Treasury regulations, which are equivalent to law, because by the act of 1892 the Secretary of the Treasury is given power to make these regulations. As it is now a law, I apprehend there will be no further difficulty. The only friction grew out of the fact that the Immigration Bureau was then new and did not get into working order until I took charge of it. Mr. Owen preceded me, but there was some difficulty which prevented the Bureau from exercising its just powers.

Mr. KENNEDY. You may be assured that in the consideration of the immigration question no question as to any man's religion will ever be asked by this commission.

Mr. STUMP. I have no doubt of that. I only alluded to that generally. I stated it as an illustration of my conception of your duty, that you would burden yourselves very much if you allowed the matter of a man's education and his ability to vote intelligently, or, I stated incidentally, his religion to bear upon this subject. That is all I meant to say. I did not mean that you would investigate either one or the other. A great many of my troubles arose, and I find the chief attacks upon permitting immigrants coming to the United States have been because in a few years they get the right to vote, and a great many get that right without being here a few years.

WASHINGTON, D. C., January 13, 1899.

TESTIMONY OF MR. HERMAN J. SCHULTEIS,

Ex-Special Commissioner.

The commission met at 11 a. m., Vice-Chairman Phillips presiding.

Mr. PHILLIPS. I will state that Mr. Schulteis is before the commission by invitation. He was one of the five commissioners who visited Europe in 1891 to investigate the subject of emigration to the United States.

Mr. SCHULTEIS. I have not prepared a general statement. If the commission would like to have suggestions which I may be able to make, which are dictated from experience and familiarity with the subject, I would be glad to make a short statement as to what I think the commission could do in the matter of the restriction of undesirable immigration and how it could be of service in relation to pending legislation.

Q. (By Mr. PHILLIPS.) We would be pleased to have you make a statement in your own way, Mr. Schulteis.—A. In the first place, I will speak of the pending illiteracy bill. That bill passed a previous Congress and is now before the House, having passed the Senate. In all probability it will be called up again, although the House refused to consider it the other day. In my judgment, it is the best method of restricting undesirable immigrants that could be devised. It restricts only the undesirable element of European immigration, and does not bar any citizen of Europe who would become a desirable citizen of this country. The questions of illiteracy and undesirability, as former Commissioner Stump told you the other day, go hand in hand, and the statistics of illiteracy particularly show that only emigrants from south European countries would be affected by that legislation if it were enacted into law, and it would reach the lowest element which degrades our citizenship when allowed to land here and at the same time depresses the price of wages. I do not agree with Mr. Stump that the lowest element of European citizenship is desirable on the ground that we have not enough men in this country to do our rough work. I know the contrary is the fact. I know that there are several millions of idle, illiterate workmen in this country who would like to have work. For that reason I do not see why we should import that class of workmen and further increase the ranks of the idle and thus further depreciate wages. It is the lowest class of workmen that depreciate wages. That is an economic truth. Wherever a hod carrier gets good pay a bricklayer will get good pay—much higher in proportion—and vice versa. If the lowest labor is illy paid all the higher labor will suffer correspondingly. For that reason the efforts of labor organizations have been directed against the lowest elements of European immigration. My experience in traveling, particularly through the various countries of Europe, convinces me that the south European immigration is the lowest class that comes to this country, and they are the people among whom the percentage of illiteracy is greatest. In southern Sicily the percentage of illiteracy runs as high as 90 per cent, according to the statistics of Señor Bodia, who is the greatest Italian statistician. He is the Giffen of Italy. He is an authority second to none in Europe. In northern parts of Italy the percentage of illiteracy decreases, and also the number of immigrants that come from that country decreases. In other words, the more desirable Italians do not emigrate in such great numbers as those from southern Italy, who embark from Naples and Palermo.

The Huns, Slavs, and Greeks have an average of 50 per cent illiteracy, and they are a very undesirable class. They come over without skilled trades. They are merely rough laborers, such as we have in large numbers in this country, and if there should be a scarcity of that class of labor it could be had from the South, where there are 3,000,000 colored men who can do all the rough labor such as

railroad digging and building and work in the mines. Aside from that, a large proportion of these foreigners, who are unable to read and write, and who are already in this country, flood the labor market, settle in the great cities, form colonies, and breed diseases and disorders of all kinds. I believe that the "Lodge bill" would largely restrict this class of immigration. I believe that it would affect 27 per cent of the number that are now admitted. When we can by one act restrict one-fourth of the least desirable of all immigrants, I believe it is a very good law to enact. I am very strongly in favor of it. I recommended it in my report of 1892-93. After a thorough investigation of the question both before I went to Europe, while in Europe, and after returning, I am convinced that there is only one more effective way to restrict immigration, and that way would restrict all classes. That method is to increase the head tax. But Congress for years has not been disposed to offer any drastic remedy in the form of a head tax to prevent a large influx of labor into this country. Still I think the tendency is toward a head tax that would pay the expenses of the immigration service, which the \$1 head tax does not do. In my judgment the head tax should be at least \$10, so that only immigrants with a well-determined purpose would come here. At present thousands of them come to this country when they really would prefer to go to South America, which is more of a Latin-speaking country. Their language, manners, and customs are more similar to South American than to our manners and customs, yet it costs \$8 more to go there than to the United States, and that \$8, which to us seems a small amount, appears very large to them. Where wages are from 14 to 19 cents per day, as in southern Italy, to save \$8 requires considerable time.

Q. (By Mr. KENNEDY.) Then the steamship companies make it an object to the immigrants to come to this country instead of going to South America?—A. Yes; the steamship companies and the railroad companies, particularly the land-grant railroad companies, have a direct interest in fostering immigration and getting people to buy their lands, and they make very low rates from New York to their lands for the purpose of getting those who have anything to settle there. The idea that there is a large amount of free public land to be had in the West, although advertised extensively by the steamship companies abroad, is a myth, and when the immigrants come here they find that out. They find that all the available and good public land in this country is fenced in, and if they want it they have to pay for it, and the lowest price I have heard of is \$1.25 per acre. Thousands of disappointed free-land seekers are now filling the slums of the great cities. But the steamship companies still hold out inducements of large areas of land that can be had for nothing. I read advertisements in Europe that immigrants could get 160 acres of land, an additional 160 acres for timber culture, and 160 acres additional for each adult in the family. In fact, there were four offers of 160 acres each that the immigrant supposed he could get gratis when he landed in this country. When they get here they find they can't get the land and that they have to settle down in the large cities, where they are at present. They are in every city, and even in this city the unemployed number 7,000. I made an inquiry some time ago at the Commissioners' office and looked over the list of those seeking employment in the street-sweeping and sewer department. I found there were 7,800, white and black, anxious to work at \$1.25 per day. They put on large numbers of them whenever a snowstorm comes, and the other day there were 648 additional men engaged to clean the streets of snow.

When I last examined into the condition of Chicago there were nearly 200,000 idle men looking for jobs. That was some years ago. The fact that immigration slackens in some years is due to the fact that times are hard here and we have labor troubles, which are reported in the papers, and the newspapers are sent abroad. The foreign papers republish these articles, and the people find that conditions are poor here and large numbers of them are deterred from coming. The only opposition I have noticed to the Lodge bill is that which comes from the literary bureau of the steamship companies and from the managers of the Hirsch fund of New York, and their labors here at the Capitol are a matter of public notoriety.

Q. I would like to have you tell us something about the operations of the steamship lobby in Washington to prevent proposed immigration legislation.—A. In my judgment the most dangerous thing that the steamship people have done is to try to get the press to be silent by giving them excursions to New York and by entertaining them on the steamers for two or three days. I remember an excursion of nearly all the newspaper men, some 78 men and their families, that went over the Pennsylvania Railroad—free passes, Pullman cars, everything to eat and drink they wanted; and they were entertained on the steamer *Sprea*, of the North German Lloyd, and then brought back to Washington. Of course this cannot be looked upon as a direct bribe, and yet it is in its influence on these newspaper men. They do not like to say anything unkind of these steamship people

or against immigration. They also do everything they can to influence the newspapers by editorials they write, a great many of which are published. I have seen editorials in Chicago and St. Louis papers that were duplicates.

Q. In what kind of papers?—A. German papers mostly. They advertise very largely in those papers. They advertise from a column to two columns all the year round. When they send these prepared editorials the editor lets them go in, not because they express the opinion of the editor or of the community where he resides, but because they get from two to five hundred dollars per year for advertising from them, and they hate to refuse an article they are asked to publish; and the result is it is published as though it was the opinion of the public or the editor. They have a great advantage in that, inasmuch as they have to advertise mostly in those foreign papers, for the foreigners are the ones who use tickets to return to their homes. Some of them visit their old homes two or three times. I have known persons to go half a dozen times, if they could afford it, in the course of ten or twelve years.

Q. What do you know about the opposition to proposed immigration legislation on the part of German-American citizens?—A. My experience has been that the German people who understand the question are all in favor of the Lodge illiteracy bill. It is only those who have been told it is a different bill from what it is who oppose it. The literature which is sent out from New York by Dr. Senner, formerly commissioner of immigration at New York, misrepresents the bill, and large numbers of Germans signed petitions against it without knowing what the petitions contained. When they found they were on record as opposing an illiteracy provision, they recalled their statements. The Immigration Restriction League of Boston has published a pamphlet on that subject in which it shows exactly how those petitions were signed and how the signatures were secured throughout the country by Dr. Senner's bureau in New York. He is one of the agents of the Baron Hirsch fund. He is an Austrian, was a countryman of Baron Hirsch, and wrote articles against restriction of immigration from the time he landed until he became commissioner of immigration at the port of New York. He was employed on a Milwaukee paper, and nearly all the antirestriction articles in the New York Staats Zeitung were written by him. For some reason or other he was made commissioner at the port of New York to keep out people he had advocated letting in for years, and after he went out of office he immediately went back into the same service, and tried to do all he could to defeat any restriction legislation. He is the principal agent of the opposition to the Lodge bill.

Q. Was Dr. Glavis the head of the steamship lobby here?—A. He represented the North German Lloyd, and he afterwards took charge of the business of the entire steamship trust, and was very energetic about the Capitol for years trying to prevent any restriction legislation. He had his offices in the Post building for some years. He died not long ago. I do not know who his successor is, but I know that some of his coworkers are still very active and busy, and succeeded recently on the floor of the House in defeating consideration of the Lodge bill. They can afford to engage able counsel because all above deck and first-class passage is clear profit when the steerage is full. They charge on an average of \$22.50 for passage, and it costs them \$1.70. The rest is clear profit. They walk into the steerage and walk out. They do not have to be wheeled in like freight or carried out. It is the most profitable ballast a foreign steamer can have. Of course, as business men, they are very anxious to procure all such passengers they can both going and coming. Their argument generally is that this class of immigrants is valuable to this country, but it has no weight with them when they try to get them to go back to Europe. They are just as active in trying to get them to return, for the purpose of getting the steerage-passage money, as they were to have them come this way. They have their agents all over this country where these people are most numerous, and sell tickets in blocks, prepaid, to both come and go. I have a copy of some prepaid tickets which were deposited, particularly in the mining regions of Pennsylvania with agents and even with postmasters, who get a commission on all the tickets they sell. Naturally they want to sell as many of them as they can, both going and coming. The alien steamship companies have a large capital invested. When I examined into the question some years ago, I found they had \$118,000,000 invested, and that their percentage of profit was larger than any other colossal investment in existence. There is no large investment of money that pays as well as ocean-passenger traffic. It runs as high as 17 per cent per annum.

Q. How much of that is American capital?—A. A very small quantity of it is American capital. Even the so-called American Line, when I looked into the question, was nine-elevenths foreign and two-elevenths American, as far as their steamers were concerned—foreign built and registered. The capital of this one line, however, is largely American capital, and all the other steamship lines are in

the hands of foreigners, and they are largely owned by one clique of bankers, who have their headquarters in London, Frankfort, Vienna, and Paris. They own the English, German, Scandinavian, and Italian lines of ocean steamers.

Q. (By Mr. PHILLIPS.) Is there a name given to this company?—A. They are all under different names.

Q. The same individuals own a large amount of stock?—A. The same individuals own the stock. The capital invested is foreign capital. Even steamers that have American names and registers now were not built here.

Q. (By Mr. KENNEDY.) Mr. Stump, ex-Commissioner-General of Immigration, said yesterday that he thought the time limit in which certain classes of immigrants who had come in in violation of the laws of this country could be deported might well be extended to three, four, or five years, but he made an exception in the case of those who came in in violation of the alien contract-labor law. Have you anything to say as to that matter, any suggestions to make?—A. I believe the time limit could be extended. I think that the pauper who was pauperized abroad should be supported by the community where he was raised and pauperized, and I believe that at any time when he becomes a public charge here, within four or five years, we ought to have the authority to send him to the community that neglected him or that caused his degraded condition. I do not think we are responsible, or that we ought to be held responsible, or ought to be taxed to support the people who are degraded by the conditions that obtain in certain countries abroad. They tax the people to death to keep up large standing armies and navies, and grind them down to the starvation line of wages by keeping them ignorant, and when their burden is so heavy they can not stand it, whenever they become charges, or when they get to the revolting point, they are anxious to get rid of them. Large masses of them have been sent here simply because they have arrived at the danger line. And societies abroad aid and foster the sending of that class of people to this country. I have in my report a list of 160 societies in England alone, called prisoners' aid societies, that make it their business to influence prisoners when their terms are over to come here. The judges often give them short sentences in prison, and the periods of surveillance are made very long and so objectionable and burdensome that they are anxious to get away. They have to report where they have been regularly to the officers of the law, or else they are thrown into prison again under what is called surveillance. These prisoners' aid societies have no difficulty in getting rid of these criminals for life when they offer them the small amount that is required to come here—£3 10s. It would cost as much to sustain them for two months at home as it does to send them here.

Q. (By Mr. PHILLIPS.) The law in this country prohibits the landing of paupers and criminals. Do you think it is not effective?—A. It is very laxly administered. Unfortunately the heads of the bureaus at the port of New York, where nine-tenths of the immigrants land, are old officials, kept in office under all Administrations since Colonel Weber took charge there. I investigated the prisoners' aid societies, and in one of my reports I gave the names of the people sent here, and gave the numbers of the post-office money orders which the societies sent to them after they got here. Then they have a system of sending their superannuated people over here. Under the English governmental system after they work twenty-five years they are pensioned, and the pension is paid them in a lump sum if they will emigrate here; but for fear they will not emigrate it is paid to them after they get here. Criminals are sent here, as well as paupers and the superannuated. They dump their poorhouses here. I have not looked into the matter of late years, and do not know of my own personal knowledge whether the percentage is kept up to the large proportion it was before, but it was done to a very large extent prior to the former commission's visit to Europe.

Q. Have you any statistics or facts that you could leave with the commission bearing on this question?—A. Yes; I would be very glad to leave the names of the secretaries of these societies as they existed at the time I visited them, and their addresses, and give any further data that I have. I looked into the post-office money-order office here and verified the statements I got on the other side, and found the money orders had been cashed on this side by the criminals, and they instanced that as a sharp way in which they got rid of their criminals. One of them, a Colonel Buchanan, showed me a letter he got from a criminal, stating that he had received his post-office money order on this side. I read the letter to Commissioner Powderly, who was with me at the time, and in it the criminal stated he had some difficulty in being identified at the Post-Office Department in getting his order cashed; that he walked out and looked around and copied a sign on the street to put on the order, and went in and got it cashed; and Colonel Buchanan gave that as an instance to show how smart their people were in outwitting us in our regulations here.

Q. (By Mr. KENNEDY.) Your identity was not known to them?—A. No. I

introduced myself in my capacity as a member of the Congress of American Charities and Corrections. I was one of the representatives of the District of Columbia in the American Congress of Charities and Corrections at the time, and showed him my commission as such, and pretended I wanted to know how they did things for the purpose of doing the same thing here. Frequently persons are discharged from the courts here on condition that they leave the locality. We have them go to Baltimore and sometimes some of them come here from Baltimore and surrounding places.

Q. (By Mr. PHILLIPS.) Did you find a large number sent here?—A. Yes; one society sent 40,000.

Q. (By Mr. KENNEDY.) In what period?—A. Since it was organized. I can refresh my mind by looking at the report. It must have been a considerable length of time.

Q. (By Mr. PHILLIPS.) And they were principally criminals and paupers?—A. Yes; poor people who had been convicted of some trivial crime and then released.

Q. And some paupers?—A. Yes; they were mostly paupers. The paupers are much more numerous abroad than in this country. The conditions are worse there. We have no idea of poverty in this country as it exists there. In Liverpool I have seen children of 16 years of age who have never had shoes on their feet or hats on their heads; their hair stood up like bristles on a hog's back; they had on one garment, held up with a string from northeast to southwest, and walked the streets. They are called wharf rats in Liverpool. We have no such class of illiterates. They have never seen the inside of a school building, and have never heard of a Supreme Being, or anything else except what they can see. They grow up in utter ignorance and squalor, and they have societies in England which gather them up and send them to this country. Dr. Bernado's Home has sent large numbers of these children here. They find their way into our eleemosynary institutions, and our statistics show that 40 per cent of the inmates of these institutions are foreigners or of foreign descent. There should be no such percentage of foreigners in institutions that we have to support.

Q. Do you know whether statistics show that crime and pauperism in this country are on the increase?—A. They increase very largely, strange to say, in years when immigration is very large. Crime increases in the localities where the immigrants settle. In Allegheny County, Pa., in the year 1891, there were 58 homicides, all of them committed by aliens or naturalized foreigners. I stated in my report: "The alarming proportion of the unemployed proletariat, the increase of insanity, pauperism, and crime is attributable to no other such prolific source as immigration."

If the commission would look after the lax counting of immigrants at the various ports of landing and recommend a cure for the evil, I think the Government would save enough money to pay the entire expenses of the Industrial Commission. The statistics at the port of New York showed 445,290 steerage passengers landed at the Barge Office in New York in 1891. That does not include the number of passengers that were landed at Baltimore, Boston, Barnstable, Brunswick, Galveston, Gloucester, Jacksonville, Key West, Mobile, New Orleans, New Bedford, Norfolk, Newport News, Philadelphia, Providence, Portland, Me., Portland, Oreg., Port Townsend, Pensacola, San Francisco, San Diego, and Wilmington, and those crossing the borders of British Columbia, Canada, and New Mexico; and, in my judgment, if these had been added there would have been 750,000 instead of 445,000 immigrants who came in. The statistics at the British Columbia and Canada borders were dropped in 1885, for some unaccountable reason, and we have no idea how many people have come across the border either of Mexico, British Columbia, or Canada, since then, except in late years, when they were, on my suggestion, resumed. Even now large numbers of them cross the borders and come here, pay no head tax, and are not counted. For years they had a rule, which was allowed by the Treasury Department, by which they counted two children as one person, and that falsified the statistics to a great extent, because there are more children than there are grown people in any community. In foreign families there are 6 or 7 to the family, and in this country they average 5. I made a protest to the Secretary of the Treasury, and that rule was rescinded.

Q. Are there not statistics in the various places you name, such as Baltimore, Norfolk, Port Townsend, etc., of the number that land?—A. There ought to be. The trouble is they take the steamship company's count, and the steamship companies frequently land large numbers of people as employees when they are actually passengers. Those who work their way over, if they only peel potatoes for a meal of victuals, are considered and counted as employees and are landed without being recorded, and that is the last of them. I think the commission should devise some plan by which a check could be had on the steamships' manifests, and that every passenger should be counted as he lands. The office of landing inspector

the hands of foreigners, and they are largely owned by one clique of bankers, who have their headquarters in London, Frankfort, Vienna, and Paris. They own the English, German, Scandinavian, and Italian lines of ocean steamers.

Q. (By Mr. PHILLIPS.) Is there a name given to this company?—A. They are all under different names.

Q. The same individuals own a large amount of stock?—A. The same individuals own the stock. The capital invested is foreign capital. Even steamers that have American names and registers now were not built here.

Q. (By Mr. KENNEDY.) Mr. Stump, ex-Commissioner-General of Immigration, said yesterday that he thought the time limit in which certain classes of immigrants who had come in in violation of the laws of this country could be deported might well be extended to three, four, or five years, but he made an exception in the case of those who came in in violation of the alien contract-labor law. Have you anything to say as to that matter, any suggestions to make?—A. I believe the time limit could be extended. I think that the pauper who was pauperized abroad should be supported by the community where he was raised and pauperized, and I believe that at any time when he becomes a public charge here, within four or five years, we ought to have the authority to send him to the community that neglected him or that caused his degraded condition. I do not think we are responsible, or that we ought to be held responsible, or ought to be taxed to support the people who are degraded by the conditions that obtain in certain countries abroad. They tax the people to death to keep up large standing armies and navies, and grind them down to the starvation line of wages by keeping them ignorant, and when their burden is so heavy they can not stand it, whenever they become charges, or when they get to the revolting point, they are anxious to get rid of them. Large masses of them have been sent here simply because they have arrived at the danger line. And societies abroad aid and foster the sending of that class of people to this country. I have in my report a list of 160 societies in England alone, called prisoners' aid societies, that make it their business to influence prisoners when their terms are over to come here. The judges often give them short sentences in prison, and the periods of surveillance are made very long and so objectionable and burdensome that they are anxious to get away. They have to report where they have been regularly to the officers of the law, or else they are thrown into prison again under what is called surveillance. These prisoners' aid societies have no difficulty in getting rid of these criminals for life when they offer them the small amount that is required to come here—£3 10s. It would cost as much to sustain them for two months at home as it does to send them here.

Q. (By Mr. PHILLIPS.) The law in this country prohibits the landing of paupers and criminals. Do you think it is not effective?—A. It is very laxly administered. Unfortunately the heads of the bureaus at the port of New York, where nine-tenths of the immigrants land, are old officials, kept in office under all Administrations since Colonel Weber took charge there. I investigated the prisoners' aid societies, and in one of my reports I gave the names of the people sent here, and gave the numbers of the post-office money orders which the societies sent to them after they got here. Then they have a system of sending their superannuated people over here. Under the English governmental system after they work twenty-five years they are pensioned, and the pension is paid them in a lump sum if they will emigrate here; but for fear they will not emigrate it is paid to them after they get here. Criminals are sent here, as well as paupers and the superannuated. They dump their poorhouses here. I have not looked into the matter of late years, and do not know of my own personal knowledge whether the percentage is kept up to the large proportion it was before, but it was done to a very large extent prior to the former commission's visit to Europe.

Q. Have you any statistics or facts that you could leave with the commission bearing on this question?—A. Yes; I would be very glad to leave the names of the secretaries of these societies as they existed at the time I visited them, and their addresses, and give any further data that I have. I looked into the post-office money-order office here and verified the statements I got on the other side, and found the money orders had been cashed on this side by the criminals, and they instanced that as a sharp way in which they got rid of their criminals. One of them, a Colonel Buchanan, showed me a letter he got from a criminal, stating that he had received his post-office money order on this side. I read the letter to Commissioner Powderly, who was with me at the time, and in it the criminal stated he had some difficulty in being identified at the Post-Office Department in getting his order cashed; that he walked out and looked around and copied a sign on the street to put on the order, and went in and got it cashed; and Colonel Buchanan gave that as an instance to show how smart their people were in outwitting us in our regulations here.

Q. (By Mr. KENNEDY.) Your identity was not known to them?—A. No. I

compelling them to live in the pale of settlement which includes the warmer and more fertile parts of Russia and the whole of Poland, extending from the Baltic to the Black Sea, and into the interior to the border of Courland and to the Sea of Azoff, where they were born and raised; and the Government did that for the protection of the Russian people. The Hirsh Immigration Society expects to bring all the pauper Jews to America.

Q. The Russian Jews are not criminals and do not become charges on the charitable institutions of this country, do they?—A. Their own charitable institutions take care of them. They do that in Russia, too. It costs the wealthy Jews of England, Germany, and France \$30,000,000 a year to sustain the pauper Jews in the pale of settlement in Russia. They are anxious to get rid of them and have them come to this country, and they give them a start here, peddling outfits, and they become self-sustaining after that. There are 3,000,000 pauper Jews in Russia, and at \$10 per head, which is the lowest estimate, it costs the wealthy Jewish committees \$30,000,000 annually to support them.

Q. Are they looked upon as an undesirable class of immigrants in this country? Do the labor organizations take any interest in restricting that class of immigration?—A. They do not enter into the labor unions, except in such trades as are very little worked—tailoring and clothing business, for instance, which they monopolize altogether. They also make hats and caps and do other light work. They will not dig, nor carry a hod, nor farm, nor do any productive labor. They do not interfere much with the labor organizations, except that they increase the class of middlemen in this country very largely, and the middleman is always a drain on the producer.

Q. What was your connection with the immigration service of the country?—A. I was connected with labor organizations some years ago, and was on their legislative committee before the committees of Congress as far back as 1884, and have acted in that capacity for some years. I was appointed at the request of the American Federation of Labor on the European Immigration Commission. Mr. Powderly was appointed to represent the Knights of Labor and I had the indorsement of the American Federation of Labor, which was then, as it is now, under the presidency of Mr. Samuel Gompers.

Q. This Mr. Powderly is not the present Commissioner-General of Immigration?—A. No; he is a brother of the present Commissioner. We investigated the question of immigration in the various countries of Europe, and submitted a report, which first appeared in January of 1893, and Congress has done me the honor to reprint my report in 1893. The other reports were not reprinted. There were reports made by Colonel Weber, and Dr. Kempster, Captain Cross, Mr. Powderly, and myself. We investigated the matter in all except the Scandinavian countries, and we did not go to Spain or Portugal, because there is very little emigration from there. We did not consider it worth while to go there. Scandinavian immigration is very desirable, and there is no more objection to it than there is to the German, French, English, or Irish. They are all welcome when they come up to the requirements of existing law.

Q. That is so of all the countries of north Europe?—A. They are all welcome, and are generally a good class of people and make good citizens.

Q. Have you any other suggestions to make, Mr. Schulteis?—A. I hope that the commission will investigate this subject by looking into the questions that are in their syllabi, and make a report before this Congress adjourns, because, if Congress is to have the benefit of their work and labor, now is the time, when an act is pending. I think the first report ought to be on the subject of immigration, and it would aid Congress materially in coming to a conclusion on this question, which has been before Congress for four years. It was passed by one Congress preceding this and vetoed by President Cleveland, and it was passed over his veto in the House within twenty-four hours after the veto message arrived by a vote of something like 197 to 25; it may have been 175 to 27.

Q. The educational clause of the Lodge bill would not even affect the Russian Jews, would it?—A. They can nearly all read and write the Jewish language. The bill as it was originally drafted would have affected the Russian Jews.

Q. How would it have affected them?—A. The original wording of it was in accordance with a recommendation in my report, "native language," and the words "native language" were struck out. The native language of the Russian Jew is the Russian language. They can not read and write the Russian language, but most of them can read and write the Jewish language. Lots of them are born in other countries and never take the trouble to learn the language of the country where they are born and raised. The prepaid-ticket clause in the existing law, if enforced, would bar them.

Q. Have you German statistics that show the number of Germans that come to this country for a certain year and then our statistics to put by the side of them?—A. Yes; I have here German statistics in one volume, Statistical Yearbook of the

German Empire, from 1871 to 1890, a period of nineteen years, and it will be found on page 14.

Q. Can you pick out a certain year when there was large immigration to this country and show the number that left German ports and then show our own statistics to show a discrepancy?—A. I believe I have that in my report on Italian statistics, immigration from 1869 to 1879. These tables are compiled from information received at the mayors' offices and the registered number of passports delivered and corresponds with the amount paid for them, and therefore these statistics are absolutely correct. They charge \$3.50 for a passport, and they get that money from the emigrant, and we only charge \$1 head tax. The foreign government makes more from the passport than we get from the head tax. The same is the case in Germany. That is another reason, in my judgment, why the head tax should be increased here. They make their service self-sustaining, and the money they get for the passports pays for every particle of the service and brings a revenue besides. The grand total for six years was 1,174,901, and in our statistics for 1890, published by the Hon. Carroll D. Wright, a smaller number is given for the entire country than appear in the city of New York alone. Italian papers make great sport of the fact that our statistics are so unreliable. I have read a statement in an Italian paper which makes this point that American statistics can not be taken as a basis: "It will be sufficient to quote the fact that the census of 1890 gave only 182,000 Italians living in the United States, while it is certain that the number then approached and now exceeds 500,000." This is taken from *Bollettino della Soc. Geog. Italiana*, Ser. III, Vol. VIII, Fas. X, p. 325. It is found on page 63 of the Quarterly for March, 1896, of the American Statistical Association, of which Mr. North, one of the members of this commission, is one of the counsellors. That is an authoritative statistical association, the best in the United States.

Q. Goes back for a series of years, does it?—A. Yes, sir.

Q. I would like to have you give us the total of emigrants leaving the ports of the German Empire for, say, a period of ten years, that we may compare that with our immigration reports to see if there is any disparity.—A. I will state that each port has its own separate reports.

Q. Are they not consolidated?—A. Yes; but that consolidation is, in my judgment, not as effective as to get the special reports. Take ports like Bremen and Hamburg and those ports where they go into the nationality of the emigrant. For that reason I prefer them to these. In our statistics we take everybody that comes from Hamburg and mark them down as Germans, although only one-third that emigrate from that port are Germans. All the Jews that come from Russia go on the boat at Hamburg, and the statistics we have in this country on immigrants from Hamburg are unreliable and are not to be depended upon. That is one thing I hope this commission will investigate and see that they are counted properly and according to the place where they were born, and not charged as being of the country from which they ship. English statistics are swelled by the fact that large numbers are sent to Liverpool and from there here and are called English people. They distribute them; particularly the Hirsch Society makes it a business of distributing them. I met immigrants that had been shipped at Hamburg to Liverpool and then from Liverpool here. It sends them down to Genoa. They used to be counted as Italians when they arrived in New York because they arrived from Genoa or any place in Italy or Palermo. That matter has never been presented to committees in Congress or been investigated; and yet my own investigation shows me that in order to get accurate statistics we should have the nativity of the immigrant and count him from that place as it appears on the steamships' manifests, rather than from the port from which he sails.

Q. (By Mr. PHILLIPS.) Have you any given year, taking the foreign statistics, complete or not complete, and ours, to show that there are more shipped from abroad than land here?—A. Yes; the year 1891; I examined into the question.

Q. What discrepancy did you find?—A. In Italian immigration, 50 per cent only were counted at the port of New York.

Q. (By Mr. A. L. HARRIS.) How far is the padrone system in execution in this country?—A. I believe there are about 80 Italian banks in New York City now, and most of them still keep up that system, but not to so large an extent as they did some years ago, because their own people have protested against the slavery that they impose upon Italians. There have been meetings in places like Boston and New York of Italian citizens, protesting against this state of slavery, and protests have been made here at Washington, and they do those things largely under cover now. I have copies of newspapers published in New York City—Italian papers—by these so-called bankers, who are simply immigration agents, and some of their sheets I have here. One is called "*Bollettino Della Emigrazione*." This was the official organ of the Italian Society of Immigration (Limited). Another is called "*Il Fieramosca*." Both are published in New York. These bankers

take care of the immigrants' money and write their letters and answer them. The Italian people are so illiterate that they have, in the streets of Naples, for instance, men as numerous as peanut vendors are in this country whose business it is to write letters for them. The bankers take care of their earnings until they get enough money to go home—say, \$350 to \$400. That is the average capital for an Italian. He never has to work himself when he gets home. He is a boss, and wears velvet knee breeches and silk hat and has his fellow Italians work for him at from 14 to 19 cents per day. He is a shining advertisement for the steamship agents.

Q. To what extent could persons or firms wanting labor be supplied through the padrone system?—A. They can get from 50 to 100 men at a time. I was offered 50 a day by one agent when I was in Italy. I pretended I was looking for contract laborers there.

Q. (By Mr. FARQUHAR.) Do you believe there are any blocks of alien contract laborers brought into this country any more?—A. Not in very large blocks any more, because, as I said, the Italians themselves have protested. Wherever there are blocks, the padrone system prevails, and that has been discountenanced by the Italian Government itself, and they now move in small lots of five or six.

Q. (By Mr. A. L. HARRIS.) You think it is passing away, partly through the execution of the law in this country and also the sentiment against it in Italy?—A. The sentiment against it, in my judgment, has more to do with it than the rigid enforcement of the law, because it has never been a popular law with the immigration officials, and yet it has had its effect. The mere knowledge on the other side that these things were prohibited has shown workingmen that there must be some reason why he is not wanted here, and as soon as he finds that the conditions are not as pictured to him (that this is a land of milk and honey and that gold can be picked up on the streets) they think twice before they emigrate, and in that way it has done a great deal of good. I think the law would have helped very largely and would have been more efficient if it had been enforced, but we had no means of finding who came under contract, except by going among the immigrants when they arrived. There should have been an inspector on these steamers unknown to them.

Q. You have made the immigrant question a considerable study, have you not?—A. Yes; I have studied it since 1884, and have been interested in the subject as a student of political economy and social science.

Q. I wish you would state what effect, if any, the colonization of immigrants in this country has on their customs and the inhabitants of this country and upon themselves?—A. I do not think the effect is very good, but very fortunately the question settles itself in time. The second generation, in spite of their colonization, generally learns how to read and write and speak the English language. It has a bad effect, unquestionably, to colonize them as I saw them colonized in the cities of New York, Chicago, St. Louis, Milwaukee, and Cincinnati. It is not a good plan, but they settle that way for convenience. Blood is thicker than water, and they would rather get together than to scatter, and for that reason the Latins would rather go to South America, if it were made convenient. They have a hospital in New York and treat immigrants when they land here. I have known as high as 600 to be in there at a time. If they were sound, as the ship surgeons swore they were, there would not be quite so many sent to the hospital on their arrival here.

Q. (By Mr. KENNEDY.) Do you think that Congress would, in twenty years, or any period of time, entertain such a proposition as increasing the head tax to \$10?—A. Yes; I believe Congress is ready, and I believe the next legislation will be on the head-tax question, and the head tax will be largely increased. The present Commissioner of Immigration, I understand, recommends an increase of the head tax.

Q. Yes; \$2.—A. Two dollars. That is only to cover the expense of buildings at Ellis Island. It will not make the service self-sustaining. The steamship people add it to the price of the ticket, and it is effectual as a remedy in proportion to the amount added. Two dollars would not be appreciable.

Q. (By Mr. FARQUHAR.) You mentioned that in Detroit you saw with your own eyes hundreds of Canadians come over there and work and pass back into Canada at night. What year was that?—A. That was in 1876-77.

Q. I thought it could not have been during late years.—A. I was in the governmental service at the port of Detroit for a year and a half at that time, and have visited there several times since.

Q. Are you aware that now there is no such thing in existence—that it is almost impossible to bring a Canadian over there and have him work and return the same day?—A. I understand that the present Congressman from Detroit, Mr. Corliss, endeavored very strenuously during the last two Congresses to get an amendment to the Lodge bill compelling persons who worked on the American side to live there also.

WASHINGTON, D. C., February 10, 1899.

TESTIMONY OF HON. T. V. POWDERLY,

Commissioner-General of Immigration.

The commission met at 2 p. m., February 10, 1899. Vice-Chairman Phillips presided and introduced the witness, Hon. T. V. Powderly, Commissioner-General of Immigration. He suggested that Mr. Powderly make a general statement, being guided by the commission's syllabi.

MR. POWDERLY. I note from your remarks that you very kindly afford me the opportunity to make a statement, but I did not come prepared to do anything of the kind; in fact, I have had no opportunity, since the receipt of your first invitation to come before the commission, to prepare anything; I have been very busy, and I would much prefer that you ask some questions which, of course, will lead up to the making of statements. I note here, "Effects of immigration in the several industries: on employment in skilled trades and unskilled occupations; on wages; on morale." In relation to the effects of immigration on the several industries I am not prepared to make any authentic statement; that is, a statement based upon any facts or data in my possession. No effort has been made, so far as I am aware, to gather information on this particular point except from among workmen through their organizations, and they note that the effect of immigration on some trades and occupations has been bad, particularly the calling of mining. In the anthracite region the effect has been very bad, and in order to get at a fair idea of it I think it would not be unwise for your commission to visit that region. You will there learn that—I believe in 1869, during a miners' strike which was then in progress—a man who was connected with one of the coal companies made the statement that in order to defeat the men in their demands it would be necessary to bring cheap labor from Europe; and shortly after that miners were noticed coming to the anthracite region in large numbers from Italy, Hungary, Russia, and other far-off lands. I do not think I am making an exaggerated statement when I tell you that at least three men are standing around in the coal regions awaiting each place. I do not think I make that statement too broadly when I make it in that language. The mines are not working full time, and those who are working find that neighbors of theirs are ready and anxious to take their places. You will find also, if you go to the coal regions, streets in towns—I will go further than that—a small town, where you may walk from end to end, and you will hear the American language spoken very rarely. Within the last two years I walked through that place, and I did not meet a man nor a woman who could speak our language. These people came here originally in response to the demands of the employers of miners. Their effect was bad upon business, because they consented to work for the lowest possible wage on which men could subsist; as a consequence the merchants felt it, the entire business community felt it, and it has had a very bad effect, not alone upon the miners but those who depend upon them. It has also been the means of draining our country of a vast amount of money. I am not prepared to give you figures, for I could not do it without consultation with the post-office authorities, but in the year 1896 something like \$40,000 went out of two communities in Luzerne County, Pa.: I give you this on hearsay; I am not prepared to make the statement and assure you that it is correct. In Lackawanna County, from the upper end, I have been told by business men that over \$100,000 went to Europe from men who are not citizens, who do not speak our language, and who have undersold the American miner in the market.

Q. (By Mr. NORTH.) Do these men intend to remain permanently in this country?—A. Very rarely do such men intend to remain. We have in Lackawanna County a vast number of Italians who came, and who have purchased little homes. They are paying for them and they are bringing up their children as Americans. They intend to remain. They are good people. We have Hungarians and Poles who do the same, who make very good citizens; but, in the main, the vast majority of those who come stay but a short time, and they will tell you that their desire is to reap the benefit of their labor here and carry a few hundred dollars home with them.

Q. To what nationality does that refer?—A. It does not apply to any particular nationality; the Hungarians, the Italians, and some of the Poles desire to go home, but, in the main, the majority of those who want to go back, and do go back, are from southern Italy. Those who come from northern Italy like our climate; they like our country, and remain. They make very good citizens.

Q. (By Mr. FARQUHAR.) Do you know, or believe, that the padrone system

exists in mining in Pennsylvania?—A. I believe the padrone system has existed for years, and in one form or another it has flourished. I believe it still exists, in that it has never gone out of existence since it was first inaugurated or established.

Q. Then the alien contract-labor law is not apparently sufficient in suppressing this padrone system?—A. No; because they adopt a method that is very hard of detection. For instance, a man comes to this country, bright, active, and intelligent; he learns the American language. He is taken in charge by his employer, who says to him, "You are acquainted in Italy (in Hungary, Belgium, or whatever land he comes from); I want four or five good men (or a dozen, as the case may be), but, under the law, I can not send for them. You can write for them and warn them against making any disclosure on arriving here that would indicate that they are contract laborers or coming here under any agreement." And these men come. Not long ago thirty men came from Syria, and they claimed they were all of one family. There were two facts. One was that they claimed they were of one family, the other that they were going to the one destination. Those were the only suspicious circumstances connected with that case, but I am convinced that they came here under an agreement. We are now investigating the matter.

Q. (By Mr. NORTH.) Have you any remedy under the alien contract-labor law?—A. We have no remedy unless we prove a contract. We must show that a contract was made abroad. There are rulings and decisions of the courts to that effect, taking the ground that unless a contract, expressed or implied, was made abroad we have no right to send them back.

Q. Have you any suggested amendment to the law?—A. In that respect I would suggest that when the fact that they came in response to an invitation of any kind is proved, even though they did not become a party to a contract on the other side, that that should be sufficient to class them as alien contract laborers.

Q. (By Mr. OTJEN.) Do you think that would be practical?—A. I do.

Q. Would men be privileged to write to their relatives suggesting that they come?—A. That, of course, would be different. There is nothing to prohibit one from giving information to his relatives abroad, sending for them, and paying their passage. I had reference to an invitation from an apparently uninterested party—from one not a relative.

Q. (By Mr. FARQUHAR.) The hiring must have something of a contract in it to come under the law?—A. Yes.

Q. (By Mr. PHILLIPS.) You spoke of those people—foreigners—having "under-sold" our people. Do you mean underselling their labor?—A. I mean their labor. They sell their labor much cheaper than our people do; but when I say our people I do not mean native Americans, I mean foreigners who have become naturalized, as well as those who were born here.

Q. (By Mr. FARQUHAR.) What have been the changes in nationality in the mining regions of Pennsylvania, say, for the last forty years? Were the original miners Americans?—A. The original miners in the anthracite regions were Irish, Scotch, English, Welsh, and German, in the order in which I give them.

Q. (By Mr. NORTH.) Naturalized?—A. Yes.

Q. (By Mr. FARQUHAR.) Have they been entirely driven out of mining by the nationalities that succeeded them?—A. I will take you to towns in the anthracite regions and point out to you houses, with four or five rooms, which I have visited, now occupied by anywhere from ten to twenty, twenty-five or thirty people and upward, maybe men, very few women. These houses were formerly occupied by a father, a mother, and three, four, five, or six children. They are now occupied by a number of men, poor fellows, stalwart men some of them, and good men, but in ignorance of their rights, with but little ambition save to work. They are industrious, and they have taken the places of the men of families.

Q. What is the prevailing nationality of the miners in Pennsylvania?—A. I do not think I could tell you. There are a vast number of Italians.

Q. What nationality stands first in numbers?—A. I think the Hungarians and Italians are about equal. There are a number of Welshmen yet.

Q. Was the standard of living of the old miners of Pennsylvania as good as the average standard of that class of labor throughout this country in any other calling?—A. The miner of Pennsylvania aspired to the very best in the land, and he had it as far as his means would go. He had his carpets on his floor, he had his sewing machine for his wife, his children were well dressed, there were pictures on the wall, mirrors, and all the comforts of a modern home, including in many instances organs and pianos.

Q. Under the law of July, 1864, which was virtually repealed in 1868 or 1869, we opened wide the gates of this country to immigration. Is it a fact that nearly all these changes came into the mining regions during that time because of this

foreign population?—A. The change began immediately following the war, even during the war.

Q. (By Mr. PHILLIPS.) In naming the various nationalities that were prominent in mining, in their order, you did not name Americans; were there any Americans employed?—A. There were Americans; yes. I thought the question related only to foreigners. Of course there were Americans.

Q. What per cent would there be of Americans now?—A. Very few Americans; that is, since the foreigners came. Americans, as a rule, took to mining very rarely.

Q. (By Mr. FARQUHAR.) Were the succeeding generations of foreigners there—which were mainly Britons—driven out by a lower race?—A. I would hate to say they were a lower race.

Q. I mean less skilled and working for less wages.—A. Put it in this way: Less lesirable.

Q. (By Representative OTJEN.) Less educated?—A. Less desirable. The children of some of these people are very bright, very good, and will make good Americans.

Q. (By Mr. FARQUHAR.) Do those of this second generation, or even the original immigrants, naturally take to trade organizations?—A. I think they do. I have known of great numbers of them joining labor organizations.

Q. Can you state the difference in the wage scales of the sixties and the early seventies and the present rate of wage there?—A. No; I could not. There are a number of other elements that enter into the lowering of wages and the lack of activity in the coal trade. Anthracite coal is expensive, and in recent years the gas stove, the gasoline stove, and the oilstove have displaced the anthracite cooking stove in the cities. Great inroads have been made upon the anthracite trade through these agencies.

Q. (By Mr. PHILLIPS.) Have combinations or trusts had anything to do with reducing the number of laborers or the output of coal?—A. No; I can not say that they have. The coal pool, which was intended to limit production for the purpose of keeping up prices, is the only thing in the shape of a trust that the anthracite region has had to complain of—at least that approaches nearest to a trust—but that was a matter of protection, and I do not think the trusts have figured very greatly in the reduction of wages of the men.

Q. Are there many combinations between large firms in the coal regions—have they any big combination regulating the output, to your knowledge?—A. No; I do not know of any, only, of course, what is known as the "coal pool" of New York.

Q. (By Mr. C. J. HARRIS.) Is it not true that instead of this former labor being forced out of employment it has gone up into a higher scale of employment into occupations which require more education? Does not the second generation go out of mining because it goes into those positions?—A. That is true largely, but the miners themselves—those who were actively engaged in mining—were obliged to go away. You read of the shooting of the miners who were on a strike at Hazleton, Pa., a year ago last September. It was known as the "Latimer shooting affair." A number of men were shot that day and they belonged to these nationalities that we have discussed here, and among those who did the shooting were the sons of former miners. I went to Wilkesbarre once during the trial of those who did the shooting, and engaged in conversation with one of the men whose father was at one time a miner in that region. He was among the deputies, or among those who made up the sheriff's posse. I asked him how he could find it in his heart to shoot at those poor fellows without orders, for that, as I understood it, was what they had done at the time, and I put the question to him in that way. His reply recalled an incident in my own experience. Sometime in 1881 I addressed a meeting in the Latimer schoolhouse, or that neighborhood, at the very spot where the shooting took place. There were present in the meeting a number of Irish, German, Welsh, English, and Scotch miners, and one of them made the statement that, "We will have to go away before this influx of cheap labor and leave here, leave our homes." There was a Scotchman who took up the discussion toward the close, and he said: "I am told we must leave here, and go away from these hills and valleys that we have beautified with our labor. I brought my family up here. I came here thirty-five years ago, raised my family, and gave them an education, and now, in the latter end of my life, I am told I must leave my home and go away. I will not do it." But he did do it, and relatives of his were among the men who held rifles that day, so that it did not require the order of the sheriff to impel at least some of them to shoot. I have this from his own lips; so that while I have nothing to say as to the shooting or its legal or moral aspect, that is a fact that must be taken into consideration in discussing it.

Q. (By Mr. PHILLIPS.) Did the "Molly McGuire" create a great disturbance in that region? It might be of interest to the commission to know how that

originated.—A. I can not say so much about that, because I never was a "Molly McGuire." I have so often been called a "Molly McGuire" that I look with suspicion upon any charge against another; and they charged the "Molly McGuires" with a number of things that they never did, and that no one else did.

Q. Was there any condition in the coal regions that led up to what was called the "Molly McGuire" movement?—A. Yes; there were conditions there, such as favoritism; I believe the principal offense on the part of those who were punished by the "Molly McGuires" was that they discharged certain miners and hired their friends and relatives in preference, giving them the preference in good chambers, drifts, and headings, and such things as that, known to the miners. They were largely personal matters.

Q. (By Mr. FARQUHAR.) Was it an organized labor quarrel?—A. The "Molly McGuires" was not a labor organization at all. It is charged they were a branch of the Ancient Order of Hibernians, but the Ancient Order of Hibernians had nothing in common with the "Molly McGuires."

Q. In what way do you think the alien contract-labor law is insufficient to exclude the undesirable and at the same time suppress the system of contracting for foreign low-priced labor in this country? Can you suggest any amendment, or can you state how it operates, what your means are for discovering where these contracts are made, how they are made, and whether steamship companies or the foreign boards of relief are concerned in bringing this class of labor to the country.—A. I believe that until very recently some of the poorhouses or charitable institutions in England, Ireland, Scotland, Wales, and Italy were drawn upon for immigrants to come to this country; but the inspection now is so rigid that they seldom attempt to send their cripples, imbeciles, and persons afflicted with disease here. I made a recommendation which the Secretary of the Treasury was kind enough to incorporate in his report. In this recommendation I said [reading]:

"In this connection it is deemed advisable to suggest that a law be passed which will exact a rigid medical examination of every immigrant. Its importance can not be overestimated when we consider that a vast tide of immigration from eastern Europe and the Orient finds its way through England to this country."

The tide soon changed from the Orient. We get a vast number of Asiatics, and they come afflicted with a number of diseases. A prominent physician in New York assured me that great numbers of them were tainted with venereal disease, and he had no doubt that leprosy frequently came through our ports. I delegated an inspector—Robert Watchorn—to go to Europe and watch the methods in sending people here from England, and he reports in this way:

"The inspection to a layman looks like a very rapid affair, the passengers passing the physician at a rate approximately of 2,000 an hour. Only in a few instances were heads uncovered. * * *

To show you the relevancy of that remark, there is a skin disease known as favus, a disease prevalent among children. It originates in filth, and eventually removes the hair from the head. Once the disease attacks the head it takes months, sometimes years, to eradicate it, and once the hair comes off it never comes back again. A great many good people find fault with sending back a child thus afflicted; they say that the child should not be returned. They say, furthermore, it is inhuman to send such a child back and oblige the father and mother to go with it. I took this view of it—that it would be more humane to send that child back than allow the little creature to run around among the children of our own citizens and spread its disease; that our duty was first to our own children; that we might inflict hardship on a dozen, a hundred, or a thousand, but we would in like proportion save our own children from contact with this disease or those afflicted with it. [Reading:]

"Only in a few instances were heads uncovered, so that it can not be said to have been a very searching inquiry, although it must be remembered that he had seen most of them at the lodging houses the night previous. This physician, it must be borne in mind, is under no obligation to point out that this or that emigrant is likely to be objectionable to the United States immigration authorities. His sole duty, under British laws and regulations, is to protect the health of the emigrants while on board ship."

I have recommended that we station agents of the Immigration Bureau, directly responsible to the head of the Bureau, at foreign ports, to examine those who come as to their health and morals—I mean those who have been convicted of some crime—and to examine them generally to see what class of people we are getting. If that is done we will be able to keep a great many people at home who would otherwise go to the expense and hardship of an ocean journey to our shores; it would be a benefit to the immigrant, and a benefit to our own people.

Q. Do you think you would get the cooperation of the foreign governments to carry out such a plan as that?—A. We have our consuls abroad now to examine them, but they do it so rapidly that they can not do justice to the law. We have

at this moment a request from the consul at Naples, asking that an immigration official be stationed there, and who states that he can not in any way do justice to the immigration laws in making the inspection.

Q. (By Mr. KENNEDY.) Do you desire to have that recommendation put in the form of legislation?—A. Yes.

Q. Do you not anticipate opposition from the steamship companies' lobby in getting such legislation as that?—A. No; I do not think the steamship companies would oppose that; I do not see why they should, because when we discover that a person who comes over is afflicted with a disease we send him back at the expense of the steamship company. It would be a saving to them, you know, to have the inspection made on the other side.

Q. (By Mr. NORTH.) How powerful is this steamship company lobby?—A. You are now leading me to unknown depths; I have never waded in.

Q. (By Representative OTJEN.) Under your present laws or regulations, have you inspectors stationed at any of these places?—A. No.

Q. (By Mr. PHILLIPS.) You have spoken of a class of people coming from Asia. What race or nationality are they?—A. A number of Syrians are coming. Japanese are coming in in vast numbers now on our Western coast.

Q. Are they subject to such diseases as you speak about?—A. Many of them are.

Q. (By Mr. NORTH.) What is the physical condition of the Russian Jews who come here?—A. The physical condition of many of them is rather poor.

Q. Are many of those people coming?—A. The tide is increasing; yes.

Q. Are they desirable citizens?—A. Some of them are; but, in the main, I think not.

Q. (By Mr. FARQUHAR.) Are they assisted immigrants, mainly?—A. A great many of them are assisted.

Q. From foreign funds?—A. Yes.

Q. (By Mr. KENNEDY.) Set up in business, after they get here, through the same agency?—A. There is no doubt of that. They come here and engage in peddling and in the vending of fruit, managing push carts, and following like occupations.

Q. (By Mr. NORTH.) How about settlements of Russian Jews—is there one in Tennessee?—A. I do not think that was successful. I have been informed it was not a success, but as to its progress I have no information. There was one organized. I believe, in New Jersey, with the intention of tilling the land, but it proved a failure.

Q. Was that a Baron Hirsch colony?—A. Yes.

Q. (By Mr. KENNEDY.) Have you heard any denials from the Baron Hirsch people of the charge that they are assisting Russian Jews to this country?—A. I have heard none. I make no charge that they are assisting, but it is quite evident that somebody must be doing it; of course, we can not tell.

Q. (By Mr. FARQUHAR.) In article 12 of the Treasury circular of August 16, 1898, we find the following:

"ART. 12. There shall be delivered to the commissioner of immigration at the port of arrival, by the master or commanding officer of the vessel, lists or manifests made at the time and place of embarkation of such immigrants, which shall, in answer to questions at the top of said lists or manifests, state to each of said passengers: (1) Full name; (2) age; (3) sex; (4) whether married or single; (5) calling or occupation; (6) whether able to read or write; (7) nationality; (8) last residence; (9) seaport for landing in the United States; (10) final destination in the United States; (11) whether having a ticket through to such final destination; (12) whether the immigrant has paid his own passage or whether it has been paid by other persons, or by any corporation, society, municipality, or government; (13) whether in possession of money; and, if so, whether upward of \$30, and how much if \$30 or less; (14) whether going to join a relative; and if so, what relative, and his name and address; (15) whether ever before in the United States; and if so, when and where; (16) whether ever in prison or almshouse, or supported by charity; (17) whether a polygamist; (18) whether under contract, expressed or implied, to perform labor in the United States; (19) the immigrant's condition of health, mentally and physically, and whether deformed or crippled; and if so, from what cause."

The commission would like to know if, in every report, this list or manifest is made out in Europe in good faith and supervised by our consuls; and also whether, when the immigrants reach this side, say, at Ellis Island, there is an adequate inspection to know how thoroughly it is carried out, and whether that regulation itself is sufficient in safeguarding this country against undesirable immigrants?—A. The circular to which you refer grows out of this law, section 1 of the act of March 3, 1893 (reading):

"* * * That, in addition to conforming to all present requirements of law, upon the arrival of any alien immigrants by water at any port within the United

States, it shall be the duty of the master or commanding officer of the steamer or sailing vessel having said immigrants on board to deliver to the proper inspector of immigration at the port lists or manifests made at the time and place of embarkation of such alien immigrants on board such steamer or vessel, which shall, in answer to questions at the top of said lists, state as to each immigrant the full name, age, and sex; whether married or single; the calling or occupation; whether able to read or write; the nationality; the last residence; the seaport for landing in the United States; the final destination, if any, beyond the seaport of landing; whether having a ticket through to such final destination; whether the immigrant has paid his own passage or whether it has been paid by other persons or by any corporation, society, municipality, or government; whether in possession of money; and if so, whether upwards of thirty dollars, and how much if thirty dollars or less; whether going to join a relative; and if so, what relative and his name and address; whether ever before in the United States; and if so, when and where; whether ever in prison or almshouse or supported by charity; whether a polygamist; whether under contract, expressed or implied, to perform labor in the United States; and what is the immigrant's condition of health, mentally and physically, and whether deformed or crippled; and if so, from what cause."

That is done on a manifest of steerage immigrants alone, and you notice in reading the law that it applies to no class of immigrants in particular, that it deals alike with the immigrant who comes in the first or second cabin as well as the immigrant who comes in the steerage. Year before last, shortly after I was appointed, I heard from a friend of mine in England that one of the most notorious and dangerous anarchists in Europe was to take passage for this country. He gave me the name of the vessel and stated that he was coming in the first cabin. He was an immigrant; it was his intention to take up his residence in the United States. I am not prepared to say just how he was forbidden or, rather, how he was prevented from coming here. I would rather not make the statement, but he was checked in his designs upon our people.

In October last, noticing for some time that there was no examination made of alien immigrants in first and second cabins, I drew up a circular requiring that it be done. Americans who go abroad dislike very much to be called into an office on the other side just as they are going aboard a vessel and answer all these questions. We would endeavor to make it easy for the steamship company and for the passengers—travelers—by having the inspection done on board the vessel and sworn to on this side, but, of course, that would not be in accordance with law, and we could not do it. I would like very much to see the law amended so as to allow the inspection to be made on board the vessels.

Q. (By Mr. NORTH.) Aliens only?—A. Aliens only. Of course, when it is once established that a man or woman is an American citizen or is coming here merely on business or a visit, we ask no further question. I suppose you saw in the papers recently an account of a prominent Englishman who was asked the question if he was ever in prison or convicted of any offense. He became highly offended. It is absolutely necessary for us to know who comes, but, inasmuch as the rates in the cabins have been reduced, a number of the most dangerous people will come that way. I have no fear of a poor man who comes in the steerage or cabin, honestly intending to live here, with no anarchistic tendencies. He will make a good citizen; but the man who comes here to stir up strife and act the demagogue, rich or poor, I would keep out, no matter who he is or where he comes from, and it is against such people that we make the provision.

Q. Is there no provision that pertains distinctly to anarchists?—A. None whatever.

Q. (By Mr. KENNEDY.) Do you mean that you would have the examination take place after they go aboard and the vessel has sailed?—A. Yes.

Q. And then have them sent back at the expense of the steamship companies if they are found to be undesirable?—A. Yes.

Q. Would the powerful steamship companies contend against that?—A. At present we are making the examination abroad as well as here, and it would be much better for the steamship company, it seems to me, to have the required examination made on the other side. The steerage immigrants are all inspected before they come over.

Q. (By Representative OTJEN.) Who makes that inspection?—A. Our consuls.

Q. (By Mr. FARQUHAR.) It has been stated that the counting of the immigrants that come into this country under these manifests in the collection of the head tax is not rigidly performed. Is the head tax paid under this manifest?—A. Yes.

Q. Is there any way of avoiding the counting, from these manifests, of the number of immigrants and the head tax in the system you have at New York?—A. Yes, there is, by reason of not making the examination of the cabin immigrants. We have, only to-day, a complaint of men coming over in the cabins of certain

vessels who were not manifested at all. We have also information that seven or eight men who notified the agent of the vessel on the other side that they were American citizens never were in this country at all. They are not on the manifest of the vessel. Now, what we want is—and I believe it is the wish of the Department generally—not to harass or embarrass either the traveling man or woman or the steamship company, and for that reason, to have these questions asked on board ship. We could arrange to have a slip of paper containing the questions and stating the reasons why they were asked handed to each passenger, so that before he went to the purser to make his statement he would know what it meant; but that, of course, we could not carry out, because it would be a violation of the law as it now exists. But if the law can be amended so as to do that it will be the practical way to do it.

Q. What percentage avoid paying the head tax?—A. I do not know.

Q. Is it 2 per cent or 3 per cent?—A. No; perhaps 1.

Q. Nothing like half?—A. Oh, no.

Q. Have you not made a recommendation to enlarge the head tax?—A. I have recommended that it be increased to \$2.

Q. What are your reasons?—A. My reasons are that we may have a sufficient force to patrol the entire Canadian and Mexican borders, and establish agents of the Immigration Bureau abroad. At the present time immigrants who feel that they will not be permitted to land at New York, whose ailments are manifest, take passage for Canada; purchase a ticket, we will say, to Montreal. We have a station at Quebec, and in the winter time they land at St. Johns and Halifax. It is removed to St. Johns and Halifax in the winter. We have no right to examine the immigrants landed there if they are manifested to any part of Canada, but if they are manifested to any part of the United States, then our commissioner and his inspectors at Quebec have the right to examine them. They have learned abroad of this method of making examination, and manifest the undesirable ones to some point near the American border. They come there, escaping inspection, and in a few days walk over the line, and we have them. We are constantly sending them back, but under the law we can deport them only to the country whence they came, which is Canada; and they cross the line at some other point.

Q. (By Mr. NORTH.) Would you have the law so amended that you could deport them to their original country?—A. I would. They are not citizens of Canada, and therefore can not claim to be citizens of Canada. Once the fact is established that they are citizens of a foreign country they should be sent back.

Q. (By Mr. A. L. HARRIS.) If they should be sent back, who would bear that expense?—A. The steamship company that brought them here.

Q. Suppose you could not prove it?—A. We would not have much difficulty in doing that.

Q. (By Mr. FARQUHAR.) What is the percentage that surreptitiously crosses the Canadian frontier?—A. I am not in position to answer that question. It is said some place that "All men are liars." They come over the border to us and they lie. They say they have been in this country five, six, or ten years. They go into a poorhouse. They change their names. Every once in a while it develops that a certain man or woman in a public institution was known by another name on landing. I have not the least doubt that the greater part of the infirm people that come to us, aliens that drift into our institutions, come by way of Canada.

Q. (By Mr. NORTH.) Are the statistics of immigration through Canada defective?—A. Yes; very.

Q. (By Mr. FARQUHAR.) How is your inspection there?—A. The inspection is all right, but we have no right to inspect a person who is not coming to this country.

Q. Would you catch them coming this way?—A. Yes.

Q. You desire the increase in the head tax, to put on more inspectors on the Mexican and Canadian frontiers?—A. To police the entire border; it ought to be done.

Q. (By Mr. NORTH.) Is that the only remedy?—A. That is not the only remedy; no. Another remedy is to make a thorough medical examination of all who come.

Q. Through Canada?—A. Everywhere. I would examine the men as carefully as our troops were examined when applying for enlistment during the late war. I contend that if it were necessary to select good, sound, healthy men, physically and mentally, to engage in the work of killing and being killed, that it is even more necessary to examine those who come to this country with a view of enlisting in the army of producers and to become the future citizens and fathers and mothers of citizens in this country. If that is done, we will send back every unsound man. If we have the inspection as it ought to be, in Europe and at these foreign ports, we can detect a great many who are coming here as alien contract

laborers, if the law is slightly amended so as to make any evidence of agreement or of an influence used abroad to bring people here, other than through family connections, a sufficient ground to deport. As to the healthy immigrant, I have no objection; I do not think anybody else has. There is another idea I advanced in my recommendations which I will read, and that is (reading):

"There is at present no way of certainly determining where the great bulk of immigrants go to after passing inspection at the ports. While they are manifested to certain points, they may in reality intend going to other places. Under existing laws and conditions they can not be directed to any designated locality or State with any degree of certainty that they will find employment on arriving at their destination. There are bureaus of labor and statistics in 32 States where manufacturing, mining, and commercial life is most active. The enactment of a statute designating each head of a State bureau of labor statistics an agent of the Federal Government, for the purpose of collecting information which would show where trade was brisk and where it languished; where certain classes of labor were in demand and where the labor market was overstocked, and at stated intervals forwarding this information to the Bureau of Immigration, would be of great benefit to arriving immigrants.

"With such information at hand the immigration authorities could intelligently direct the immigrant to a point where he would find employment. It is possible that many would not avail themselves of the opportunity thus presented, but the number who would go direct to places where they would find work, and thus save the money which would otherwise be expended in a fruitless search for employment, would be considerable. Through the post-offices or other governmental agencies accurate information concerning the state of trade and labor could be obtained from all points, and in States where no labor bureaus exist an agent of the Immigration Bureau could be stationed to attend to the compiling and forwarding of the statistics above indicated. It is not necessary to do more than suggest the plan here. The details will be submitted if it is deemed advisable."

Q. Are you aware of any part of the United States where there is an under supply of labor?—A. I am not.

Q. (By Mr. FARQUHAR.) You are aware where there is some congestion of labor?—A. I am.

Q. (By Mr. KENNEDY.) Ex-Commissioner General Stump, when before the commission, expressed approval of the illiterate immigration to this country, having the idea that it had a tendency to elevate the American; that there were not enough of the native Americans to fill the lower grades of labor, and that the foreigners came in and did the work, and that elevated the Americans. I would like to have you express your opinion on that.—A. I do not care to appear as taking issue with anyone who has preceded me; I simply say there are more working-men in this country than are necessary. The labor market is overstocked.

Q. (Mr. C. J. HARRIS.) Could the mills of New England run without this influx of Canadians?—A. Most assuredly they could.

Q. Where would they get their help from?—A. They could get their help in this country if they pay decent wages. Let them pay living wages and they can get all the help they want.

Q. In New England there seems to be no mill class that could be gotten unless these Canadians came in and took the places. Some three or four years ago the Americans all had large families; their children and women worked in the mills; now there does not seem to be any of that class of people there. What is your opinion about that?—A. I understand they have a curtailed production of children up there; but I think that industry would flourish again if the young men and women could afford to marry and raise families.

Q. (By Mr. PHILLIPS.) Do other nations of Europe have laws similar to our immigration laws?—A. They have educational tests in some European countries and in Australia and New Zealand.

Q. How is it in Europe?—A. I believe there are such laws in England. I will place at your disposal a report made by Inspector Robert Watchorn. It gives a great deal of information, and I know it will answer a great many of your questions as to foreign immigration.

Q. (By Mr. FARQUHAR.) Was your reason for recommending a head tax of \$2 to raise sufficient revenue from that source alone to pay the expenses of inspection and to make the Bureau self-supporting?—A. Yes.

Q. Was it your intention to make it in any way a restrictive measure against immigration?—A. Not by fixing it at \$2; that would not be restrictive.

Q. Will you name a figure that would be restrictive?—A. No; I do not know what figure would be restrictive. Here is the difficulty: Many a man who can not raise \$5 will be more desirable than the fellow who can raise \$100; and some-

times the dangerous man will, on the strength of his sharp practice, get money that would enable him to pay his head tax, while the poor, decent, honest fellow could not.

Q. (By Mr. NORTH.) Could the steamship companies pay a big head tax?—A. Ostensibly the steamship companies pay it.

Q. They really pay it, do they not, now?—A. They pay it, but they collect it from the immigrant.

Q. In every case?—A. Yes; they are not in business for their health; it is part of the fare. There are some steamship companies that feed the immigrants very well on board; they supply them with every necessity, that is, plain food; but there are one or two companies that take the price of their head tax out of their stomachs.

Q. (By Mr. FARQUHAR.) So you think there is no advantage in making the head tax \$10, \$15, or \$20?—A. I do not think it would affect the question much. I did at one time think \$5 would be enough to pay all expenses.

Q. Under section 11 of the act of March 3, 1891, it is provided (reading):

"That any alien who shall come into the United States in violation of law may be returned, as by law provided, at any time within one year thereafter, at the expense of the person or persons, vessel, transportation company or corporation bringing such alien into the United States, and if that can not be done, then at the expense of the United States; and any alien who becomes a public charge within one year after his arrival in the United States from causes existing prior to his landing therein shall be deemed to have come in violation of law, and shall be returned as aforesaid."

Q. Do you think that one year's time is a sufficient protection against immigrants who come here either with a disease that is not apparent to the inspector, or who through their own vicious habits contract disease, or in any other way become a public charge?—A. Most emphatically, no. I believe that until a man becomes a citizen of the United States, if he commits a crime or in any other way becomes a charge, he should be sent back to his own government.

On the 1st of January of this year I was at home in Scranton, and a former client called upon me and asked me to take up the case of a man in jail; he wanted me to procure a writ of habeas corpus and get the man out. I turned it over to another attorney, but visited the jail, and found that over 20 per cent of the inmates—248, I think, was the population of the jail—were aliens. The percentage of aliens in the population of our county is not so great as that, so that they exceeded their ratio in the jail. Last year, in May, I asked Inspector Layton to make an investigation in Pittsburg, and in one institution he found on a certain day that 1 per cent over one-half of the inmates were aliens. I sent a letter to the heads of several charitable and penal institutions, asking a question as to aliens in their institutions from the 1st of January, 1898, to the 1st of May, 1898, and the answer came back that, according to their books, they had so many foreigners. That led to the statement to them that it was not foreigners I desired to procure information about, but aliens; and I then learned for the first time that our institutions do not keep a record of aliens. If anything happens any of these in a public way, indemnity is demanded by the foreign government of which he is a subject, even if the man has resided here twenty years if he is still a subject of that government. So it would appear that if they have the right to demand indemnity for injuries inflicted we certainly have the right to send them back during the same period: at least I believe we have.

Q. (By Representative OTJEN.) Do you think a law requiring an educational test in the way of reading would be beneficial?—A. I am not so much in favor of the educational test, for the reasons I have given before. The worst people we have to treat are not the people who can not read and write; the curse we have mostly to treat is of those who can read and write in several languages.

Q. (By Mr. KENNEDY.) Would the educational test have kept out immigrants from Italy and Hungary?—A. I doubt it, because the Italians are very bright; and a friend of mine, now in Italy, has informed me by letter that the children over there, and older people, are rapidly learning to read and write, so that by the time this law would be passed we would keep few out. You know the law requires that the immigrant be required to read a passage in his own language.

That idea grew out of the agitation that began some fifteen or sixteen years ago, looking toward the improvement of our naturalization laws. I took the ground then, and do now, that no man should be naturalized who can not read and write the American language. I would not naturalize any man, no matter what language he reads or writes, to American citizenship unless he can read and write our language. The anarchist has a field there that we can not invade, and for that reason I would have the man who is admitted to American citizenship read and write the American language.

Q. (By Mr. NORTH.) Would you have him read and speak English?—A. I would have him able to read and write it.

Q. Is everything that tends to restrict immigration a good thing per se?—A. Everything that tends to restrict undesirable immigration.

Q. Educational test or otherwise?—Yes. I have in my mind an Irishman and a Scotchman; neither one could read nor write. They came to this country poor; they built homes for themselves; they raised their families here; the children of both are occupying high positions to-day, and neither of these men could read nor write. They were desirable acquisitions to our citizenship. They became citizens as soon as they could. I would not want to be accused of harboring race prejudice or bigotry, because I have not anything of it about me, but if the immigration was as it was that day, we could not get a better race than came from the British Isles and Germany.

Q. (By Mr. KENNEDY.) Would you place in the desirable class the Swedes and Norwegians from northern Europe, who go out on the farms in Dakota?—A. They are a very excellent people. I would put no bars against them whatever; in fact, against no industrious man, if we can determine he is such. I would have the supply regulated by the demand for labor. Our institutions are becoming perfect in that respect, and it seems to me it can be done through the agencies we have.

Q. (By Representative OTJEN.) Would you admit no more than we needed?—A. Yes. I made an effort some time ago, through the labor organizations, to notify the people abroad of the exact conditions here, and it had a good effect at that time. I believe it checked a good many immigrants—prevented them from coming.

Q. (By Mr. FARQUHAR.) Do you think the present law is adequate in the matter of alien contract labor, or does it need amendment?—A. The alien contract-labor law is not what it ought to be, not by any means.

Q. Will you state why?—A. The courts have ruled that we must produce evidence showing that a contract has been made abroad. That should be amended so as to include evidence of an agreement made either abroad or here, or the using of undue influence to bring people here other than, as I stated, through family connections.

Q. Do you think a guaranty from the steamship companies against pauperism for five years instead of one would be restrictive enough to separate the desirable from the undesirable?—A. It would go a long way toward safeguarding them this way, that no parties in Europe or elsewhere would ever send an immigrant to this country, providing they knew there was a bonded condition here of \$500, to last for five years, with two responsible bondsmen possessing real estate worth double the face of the bond. That would be a safeguard.

Q. If such a law has proven to be a safeguard in Australasia, colonies which are materially conditioned very much like America in respect to their naturalization laws, why would not that be a good law for this country?—A. Yes; I believe such a law should be passed.

Q. (By Mr. KENNEDY.) If a Norwegian owning a farm in Minnesota writes to his brother in Norway that he has work for him on his farm if he will come to America, and the brother accepts and comes, and you learn of that fact, would that be accepted as an agreement made on the other side, and would the brother be sent back to Europe?—A. No; I do not so consider it.

Q. We have been so informed.—A. Under certain conditions, yes; but as the brother owns a farm the question is viewed differently. If I have a brother in Europe and I own a farm and am engaged in farming, I see no reason why I could not inform him of that fact and have him come. The present law can be made to appear odious or ridiculous by applying its operations to cases not contemplated by those who favored its adoption.

Q. (By Mr. PHILLIPS.) Can you give us some information in regard to the effect of immigration on agriculture and manufacturing?—A. No; I can not. As to farming, I do not know how that is affected. I know of no means of gathering any statistics on it; I know of none that have been gathered on it. The farm is not troubled so much with immigration, because a great number of those who come here manifested as farmers do not engage in farming.

Q. (By Representative OTJEN.) Do they mostly congregate in the big cities?—A. An examination of the tables will show that 16,342 farmers and 1,604 miners were landed during the year according to their own statements on the manifests. (Reading):

"It will be noticed that the great bulk of the farmers were destined to California, Connecticut, Illinois, Iowa, Massachusetts, New Jersey, New York, and Pennsylvania, States in which the large cities are located, and it is reasonable to assume that they went direct to the great industrial centers of these States. Advices from the mining towns of Pennsylvania, Ohio, Indiana, and Illinois are to the effect that the number of immigrants that arrived during the year was at

least double that given in the foregoing table as miners, while a reference to the table giving destination and occupation will show that but 412 of those designated as miners were manifested to Pennsylvania, Illinois, Indiana, and Ohio."

They may have been farmers at home, that is true, but on arriving here they go right into the mines and the lower occupations. The skilled trades are not so greatly affected as are the unskilled.

Q. (By Mr. PHILLIPS.) Have you any remarks to make in regard to manufacturing?—A. The stonemasonry trade and the shoe trade of New England are badly cut up. Take the shoe trade as an illustration: Five years ago, I think, when I was connected with the labor movement officially, I think it took fifty-four parts to make a shoemaker; a tailor was composed of nine. I believe it is increasing. The less a man knows about his rights the better machine he will make. As a consequence, such people are welcomed to New England, where they will manage a part of the machine and work for the lowest possible rate of wages. He who receives small wages can spend but little, and it works its way around and around until it strikes at all. The "sin of cheapness" that Donald McCloud talks about is the sin of this century, and to get people cheap is why they wish to get people over here and in every way they can to stimulate the immigration to this country.

Q. (By Mr. FARQUHAR.) About what is the percentage of skilled and unskilled labor that comes into this country now, and what proportion does the skilled labor bear to the whole immigration?—A. The skilled labor bears a small proportion. Those who come are practically laborers—ordinary laborers and farmers. A great number of tailors come. They go to New York.

Q. (By Mr. KENNEDY.) Are you familiar with the provisions of the Lodge bill now pending in Congress?—A. The one that requires the educational test?

Q. Yes.—A. I have read it, but at this moment am not informed enough in regard to it to tell what its effect would be if it became a law.

Q. (By Representative OTJEN.) Would such a law tend to check immigration from Asiatic countries?—A. The educational test?

Q. Yes.—A. Yes; it will check them.

Q. (By Mr. KENNEDY.) Would it check the Chinese immigration?—A. It would not check the Chinese, the Japanese, nor the Russian Jews. It would check very few Russians.

Q. (By Representative OTJEN.) Can the Russian Jews read?—A. Nearly all read. As I stated, the original idea in that measure was that it should be grafted on to our naturalization laws. Some fifteen or sixteen years ago, when we began that agitation, it was not the intention to apply it to the immigrants on landing.

It would be a temporary check, but in a few years they would learn to read a passage; that would be all they would know: it would practically be of no benefit to us at all. You may have read within the last week or two of a family named Becker arriving at New York—a woman and four children. Her husband, who lived in Richmond—her alleged husband—went up to New York to meet her. She came from Russia. In answer to questions put to her by the board of special inquiry, she said her husband was in Russia; that she left him there; saw him the day she left; that he paid her way. She gave her name as Margioli Franck. She had four children, and one of them had favus, that contagious disease, and was sent to the hospital for treatment, or, rather, to know if she had it or not. We ascertained it was favus. She came on the 1st of January, was held by the board of special inquiry, and a man appeared on the 2d of January, calling himself Moritz Becker. He claimed he was her husband. When he was brought into the board room the woman was pointed out to him, and he was asked if that was his wife. He said, "Yes." She was then asked, "Is this your husband?" She said, "No; that is my brother." To the children: "Who is this man?" "He is our uncle." He claims and contends that he was in this country, came under the age of 18, for he goes back to Richmond immediately, and on the 4th of January, last month, takes out his naturalization papers, procuring witnesses to swear he came here under age and was thus entitled to them. He was asked to name his wife. He said her name was Dora; she gave her name as Margioli. He was asked to state the age of the oldest child. He said 15; she said 11; and he gave different names and ages to each one of the children. He said in an affidavit that he made that he went back in 1889 and came to this country in 1893. She had a child 4 years old with her, so that at least two of his children—

Q. (By Mr. KENNEDY.) Were they not his children?—A. It is at least reasonable to assume that there was a stretch of the procreative laws in some way. I do not know how to put it. He certainly could not be the father of the child 11 years old, for he was in this country when the child was born, and he was here two years before the other child was born. He claimed his first wife was dead, and he left his second wife in a pregnant condition when he came.

Q. (By Mr. PHILLIPS.) What did you do in this case?—A. We were obliged to

send the child back, and it would not be well to send her back alone, so we sent the mother back with her. We are endeavoring to ascertain the facts in the case. If my suggestion relative to landing certificates had been the law it would be difficult for the man to procure fraudulent naturalization papers.

Q. (By Mr. FARQUHAR.) What is the reason of the mystery in the matter; why should Becker assume the relation of father; to land them?—A. Having no husband, they must procure one.

Q. He was a convenience?—A. Yes; in every steamship that comes over we find a man and woman traveling together as man and wife. Investigation shows that they are not such; that they simply contract the marriage relation on shipboard for the purpose of escaping through the port at New York. I have here a list of cases, some eighty-four in number, of persons applying for relief in New York City, who came in in that way. The board of charities there reports them; and the last time I was at Ellis Island or at the Barge Office, a man came in, owing to a newspaper report that said Mrs. So-and-so—Mrs. Cooper, her name was—was destitute, giving the number and street in New York; that she came to meet her husband, and could not find him. We investigated and found she came over as a Mrs. Drew, I believe. We hunted up Mr. Drew, and he said he kindly consented to officiate as husband on board, and that he was doing it as an accommodation to her husband who could not come over then, but would come later. So you see we have all manner of people to meet, and owing to the fact that they are so extremely accommodating in that way, we have to be very cautious; sometimes we may do an injustice, but I think that is rare.

Q. (By Mr. NORTH.) They must be very anxious to come here.—A. They are anxious to come here.

Q. (By Mr. KENNEDY.) Is there such a thing at Ellis Island as the Italian Immigration Agency?—A. There is an Italian bureau. It was established, I think, in 1894 or 1895. I do not recall the year, but during Secretary Carlisle's administration of the office.

Q. Did you abolish that agency during your administration and then permit its reestablishment?—A. Yes; I did. I had reason to believe, from the reports made to me from inspectors there, that agents of this Italian bureau would go among immigrants before they were inspected, and thus prompt them to evade our laws before our special officers put the questions to them, and in that way were endeavoring to neutralize, or, rather, set aside our laws.

Q. No other country has such an agency at Ellis Island?—A. No; that was one of the reasons why I favored its abolition.

Q. Have you ever suspected that the padrone system was linked in any way with that agency or bureau?—A. I have been told that it was.

Q. Was Baron Fava, the representative of the Italian Government, the one interested in having it reestablished?—A. Yes. There is a man here in the city named Caesar Celso Moreno, and from him I have heard that that bureau is simply an agency of the padronni, and many of the things he told me, I know, were not borne out by the facts or by the circumstances as they transpired under my own observation at New York; others, I have reason to believe, he is pretty well informed on.

Q. What is the work of that bureau?—A. Its object was to take charge of Italian immigrants after they were landed or passed by the board of special inquiry, and if they were in want of information, give it; and in a general way look after their own countrymen, and see that they were not embarrassed in any way.

Q. (By Mr. FARQUHAR.) Is it a fact that the so-called "Italian banks" are agencies?—A. I believe nearly every one of the Italian banks in New York City is an institution having, for at least one of its objects, the procuring of men for employers. There is one there that I know is a very responsible bank. I do not think it is engaged in any such business.

Q. (By Mr. NORTH.) How many such banks are there?—A. There are a number of them—a great many.

Q. (By Mr. FARQUHAR.) If Germany, Sweden, and other nations ask for the same privileges as the Italians did, would they be granted to them?—A. No.

Q. Why not abolish the Italian bureau?—A. A representative of another government drew up a request for the establishment of such an institution there, and I refused to consider it, having this other matter under advisement at the time.

Q. It is not possible that the Italian Government has a special clause in its treaty rights under which it can claim such a privilege?—A. I believe not. I believe that when our buildings are erected at Ellis Island we can properly take care of every immigrant that comes—see that he is properly housed and attended to without the aid of any other institution. In fact it will be done. The Hebrew Board of Charities never interfere; they never go on the floor of the board room to examine anybody at

all; but once the immigrant is passed they afford him every kindness that can be shown to a man or woman. The Irish and the Germans the same, and it seems to me that every nationality should stand upon the same footing as regards the immigrant. Until he is landed by authority or due process of law they have no right to interfere with him.

Q. (By Mr. A. L. HARRIS.) Are there any cities outside of New York that have padrone banks?—A. I believe there are. I believe its ramifications extend pretty generally throughout the country.

Q. Are you acquainted with the hardships imposed on the laborer by the padrone system; to what extent are the laborers imposed upon by the boss padrone?—A. While making an investigation some years ago I discovered that a corporation in Pennsylvania had a foreman who advanced one of these men who had learned to speak English, and through him sent to Europe for workmen. He advanced the price of their passage, and when they arrived they were obliged to enter into a contract with him to set aside so much per month from their wages to reimburse him for the outlay in sending for them; and then, in addition to that, he demanded a fee for his services in procuring the situations for them, so that they were bled pretty well for a year and a half or two years after they landed. I followed it up and discovered that these men were discharged to make room for a new set of victims later on.

Q. (By Representative OTJEN.) After they had paid their bills?—A. After they had paid for their tickets. You will find in nearly every mining camp a certain man who is preferred by the boss, as they call him, who is a ticket agent, and while he ostensibly advances the money to pay for the tickets, the man back of him who desires the services of these men really advances the money. He does not pay it himself; he does not have it; he could not afford to do so; therefore those who want the men advance the money.

Q. (By Mr. NORTH.) Is he a broker?—A. He is a broker; intermediary; middleman.

Q. (By Mr. A. L. HARRIS.) Who furnishes the habitation or tenement for these people?—A. They usually have a few huts, small houses, or shanties around the mines; but they often rent them from residents of the place. Many of the men who formerly lived close to the mines have moved away now, and their houses are to let for those who work in the mines.

Q. Do the padronni make a profit out of these houses?—A. Of that I am not informed. If they invest their money in them, you may rest assured they do.

Q. Do you know anything about their charges for subsistence, whether there is an advance upon the ordinary price?—A. In a great many instances four or five men occupying a room will club together and buy a sack of flour, when they use it, or meal, more frequently, and in that way, while they may charge an extra rent for the house or room, it is in reality cheaper for them in the end than for our own people.

Q. Their living is of the cheapest kind?—A. The very cheapest. Very often the padronni leave very little money in the place where the work is done, owing to the cheap way in which they live. It was estimated by some statistician that they could live on 15 cents a day—receive a dollar and save 85 cents out of each day's wage.

Q. If the laborer got the 85 cents and went back to Italy, the 15 cents would be all that this country would get out of him?—A. Not only that; I do not say Italy, mark you; I do not speak of any country, but I speak of the people who are up there with us. Some of them are killed in the mines occasionally, and when brought home to their boarding house the boarding boss or the boarding mistress will close the door and say, "No; no admittance to a dead man." You will hear the expression all through the anthracite-coal regions, "Dead man no good." They will not allow them in. Where do they go? The undertaker takes charge of them and they are buried at the expense of the poor board, so that in Scranton and Lackawanna County we are constantly called upon to pay the funeral expenses of men who have sent their last penny to Europe and whose bodies have been turned out of their boarding houses. One visit to that county will establish that fact.

Q. (By Mr. PHILLIPS.) What will they do if they die in the boarding house?—A. If they can get them out before anybody knows it they will set them out on the street.

Q. (By Representative OTJEN.) No sympathy for them?—A. No sympathy at all on the part of their own people. I suppose, of course, in the scope of your investigation you will consider naturalization, and I hope you will lend your influence in behalf of this measure (reading):

"The naturalization laws of the United States have been violated in many instances by unscrupulous persons, who affirmed or swore in open court that they had resided the required time in this country. Conscienceless witnesses were produced to corroborate the statements made by the applicants for naturalization

papers. An alien, whose minor child arrived at the port of New York recently, and was debarred because she was afflicted with a dangerous contagious disease, fraudulently obtained naturalization papers for the purpose of claiming his child and preventing her deportation. The alien was indicted, the case tried, the defendant found guilty, and his naturalization papers revoked. A similar case is now being investigated.

"In a number of instances international questions have been precipitated through the arrest of persons abroad who claimed the protection of this Government because they had resided a short time in the United States, and during their stay had taken out 'first papers' declaratory of their intention to become citizens. The genuineness of some of these papers, questioned at the time, has never been established.

"Each arriving immigrant, when admitted to the United States, should be provided with a landing certificate setting forth the name, age, sex, birthplace of the immigrant, government to which allegiance is due, the port from which the vessel sailed, the name of the vessel, the line it belongs to, the port it arrives at, and the date of landing. The immigrant should be instructed, by means of a circular, to retain the certificate for presentation when applying for naturalization papers.

"A record of the facts stated in the said circular as to each immigrant, to be known as an immigrant directory, should be kept for each fiscal year by the Bureau of Immigration. An act of Congress authorizing such a course of procedure and requiring of the alien presenting himself for naturalization to produce such a certificate, or a duplicate from the immigrant directory, would facilitate the work of the courts and go far toward preventing the issuance of fraudulent naturalization papers in the future."

With such a law in force, the procuring of naturalization papers through fraudulent means would be reduced to the minimum, and each alien, on applying to a board of charity or other charitable institution, would be required to present his or her certificate. Immigration authorities are frequently called upon to land immigrants on bond. Good, well-disposed, charitable people will invariably come forward, sometimes with a mistaken idea of duty, I believe, and will become security that the immigrant will not become a public charge. Let me illustrate a case:

A man, whom we will call Joseph Zandol, arrives at one of the ports of this country and has an appearance indicating that he is likely to become a public charge and is refused admittance. His case appeals to the sympathies of such people as I have heretofore mentioned, who present a bond and it is accepted. Mr. Zandol goes to some point in the interior, where he remains, and some months later falls into distress, being unable to work, and is thrown upon the charity of the community; he applies for relief to some poor board or other charitable institution. The law requires that his bondsmen must make good any losses incurred by the institution, but Mr. Zandol, either through collusion with his bondsmen or because of his own dishonesty, selects another name than Zandol, and appears on the record of the institution as John Smith; he will also add to the deception by stating that he arrived at another port than the one he really landed at, from a different country, and on a different vessel than the one he really came over on. Under such circumstances the bond given in his case is worthless. You will see that, with such a certificate as I recommend, this practice will become obsolete, for the instrument will always serve to identify the holder. It will also protect the good, honest, deserving immigrant who may fall into distress, and who will have no hesitation in acknowledging the truth.

Q. (By Mr. PHILLIPS.) Would you advise that an educational qualification be embraced in our naturalization law?—A. I stated that emphatically. I wish to be as emphatic as I know how on that point; that no man should be naturalized until he can speak the American language.

Q. (By Mr. KENNEDY.) Then, a man 50 years of age coming to this country, being illiterate, would probably never become an American citizen?—A. Probably not, but he has every right that the citizen has, except to vote, and I contend that every man should be able to read and write before he is permitted to vote. A man who can not read his ballot does not know what he is doing at the ballot box. If you wish to have your watch repaired, you will not take it to one who does not know how to do it; and how much more delicate is the machinery of our institutions!

Q. (By Mr. NORTH.) Do you think that socialism, or the industrial collectivism as opposed to individualism, is increasing among the American workingmen?—A. I do not think it is; at least, I have no evidence of it.

Q. Is it spreading among the English workingmen?—A. Yes; it seems to be spreading among the Englishmen.

Q. And very strongly among the German masses?—A. Yes; but I do not see any united action at all among our American workingmen. And the American workingmen, no matter what their origin may be, are opposed to anarchy, except in

very rare instances. I know of many bright people who would like to proclaim themselves socialists, but do not do so because of the odium attached to the name alone.

Q. Do you think there is any danger of establishing institutions in this country through the organized efforts of socialistic movements?—A. No; I do not.

Q. (By Mr. KENNEDY.) How do you define the socialism that you say you are not opposed to?—A. Well, the socialist who is defined as a man who would improve the existing order of things by reasonable methods—rational, and without violence—is the socialist that we can say amen to.

Q. (By Mr. NORTH.) Is he the collectivist?—A. Yes; the collectivist.

Q. Are you in favor of collectivism?—A. I have no pronounced views on either of them; I do not want to go into them. The anarchist is the man who would improve the existing order by abolishing it.

Q. (By Mr. FARQUHAR.) Is one the destructionist and the other the constructionist?—A. Yes.

Q. Is it a fact that all the American labor unions are founded on the voluntary adherence of the man who goes into them?—A. Exactly; no compulsion.

WASHINGTON, D. C., April 8, 1899.

TESTIMONY OF MR. PRESCOTT F. HALL,

Secretary Immigration Restriction League.

The commission met at 10.45 a. m., Vice-Chairman Phillips presiding. Mr. Prescott F. Hall, secretary Immigration Restriction League, testified as follows on the subject of immigration:

Q. (By Mr. FARQUHAR.) Please state your name, residence, and official position.—A. Prescott F. Hall: residence, Brookline, Mass.; place of business, Boston, Mass.; business, attorney at law. I appear here as the secretary of the Immigration Restriction League, which is a national organization, nonpolitical, nonsectarian, with members from all parts of the United States. The actual membership is about 700 persons; that is to say, active members. There are about 5,000 other persons who are not strictly members of the league, but who assist the league in its work and receive the league's documents, and for all practical purposes might be considered members, although they do not pay any annual dues.

Q. Please state the objects of your league, and when it was formed?—A. This league was formed in May, 1894, with the objects, as stated in the constitution, "to advocate and work for the further judicious restriction or stricter regulation of immigration, to issue documents or circulars, solicit facts and information on that subject, hold public meetings, and to arouse public opinion to the necessity of a further exclusion of elements undesirable for citizenship or injurious to our national character. It is not an object of this league to advocate the exclusion of laborers or other immigrants of such character and standards as fit them to become citizens." In other words, the league advocates not a mere reduction of the number of immigrants by any particular plan, but simply the weeding out by some process of the least desirable portion of the immigrants who come to us now; and it believes that there is need for some such further sifting process.

I will very briefly take up certain features in the history of immigration which have a bearing upon what the league wishes to accomplish. The league was practically instrumental in drafting the bill introduced into the Fifty-fourth Congress by Senator Lodge in the Senate and by Congressman McCall in the House, which afterwards became the so-called Lodge Bill in the Fifty-fourth Congress, and also the bill introduced by Mr. McCall in the Fifty-fifth Congress.

Q. You mean by that the educational test bill?—A. Yes. The league was not the first body to advocate such an idea, but it had a great deal to do with introducing and advocating that measure in those two Congresses. I have prepared here some rather rough diagrams which bring out certain features in the history of immigration, to which I desire to call particular attention:

DIAGRAM A.

Immigration by Decades 1820 to 1890.

	1820	1830	1840	1850	1860	1870	1880	1890	Total
Male	1	2	3	4	5	6	7	8	39
Female	1	2	3	4	5	6	7	8	39
Both sexes	2	4	6	8	10	12	14	16	78

DIAGRAM B.
Relation of Immigration and Industrial Activity.

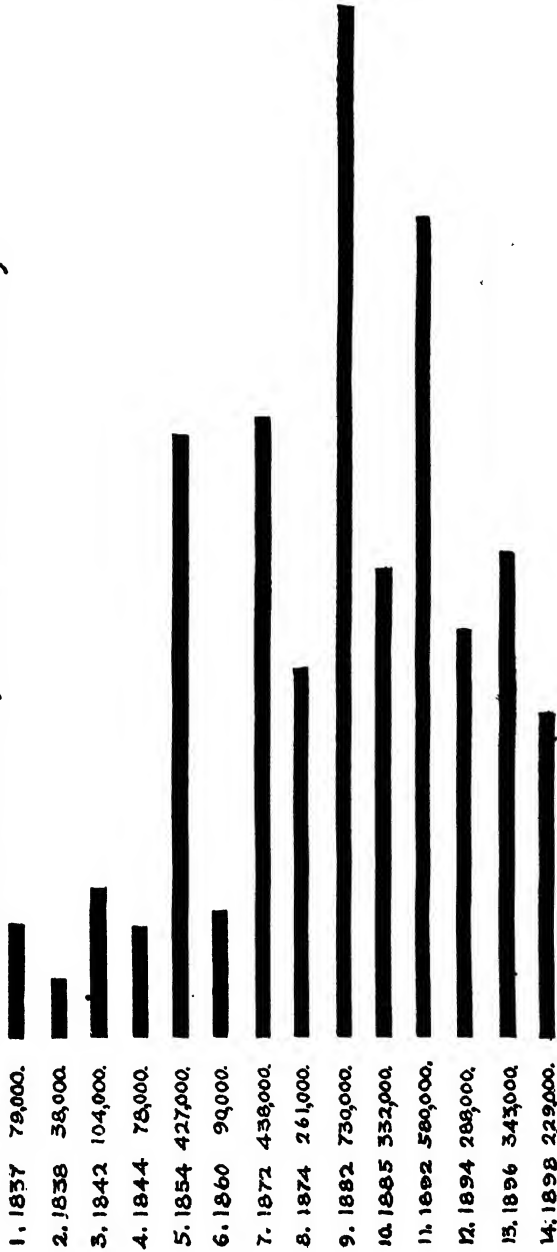

DIAGRAM C.
Immigration from South Eastern
and from North Western Europe.
1869 to 1898.

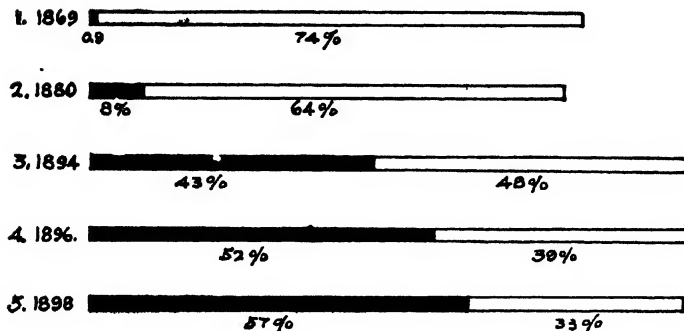

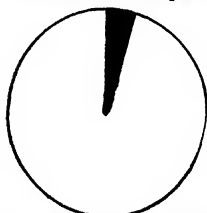

DIAGRAM D.

PERCENTAGES OF ILLITERACY AMONG IMMIGRANTS FROM THOSE NATIONS OF EUROPE WHICH SENT UPWARDS OF 2,000 IMMIGRANTS TO THE UNITED STATES DURING THE FISCAL YEAR 1895-96.

Coming from North-western Europe.

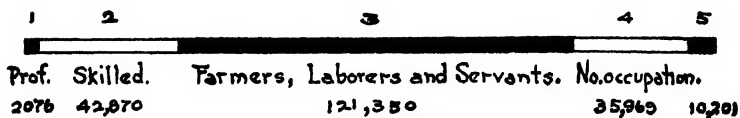

Average of Group, 4.5%.

Coming from Eastern and Southern Europe.

Average of Group, 47.9%.

DIAGRAM E.
Occupations of Male Immigrants.
1896.

Q. Before you proceed, please state the basis of the data, whether diagram or statistics.—A. Diagram A (p. 47) was taken from the reports of the Bureau of Statistics, and represents the immigration by decades from 1820 to 1890. From this diagram it appears that 35.1 per cent of the total immigration from 1820 to 1890 came in during the last period—1880 to 1890. The object of that is to call attention to the immense increase in very recent years, which, of course, is well known to everybody. Diagram B (p. 47) is taken from the same reports and shows the immigration for certain different years. This is with the view of showing the close relation between commercial and industrial activity and depression in the United States and foreign immigration. Here, for instance, is 1837, in which the immigration was, in round numbers, 79,000; then the panic came, and in 1838 the immigration dropped to 38,000. In the next year, shown on the diagram, 1842, immigration was 104,000. In 1844 it dropped to 78,000. In 1854 it increased to 427,000; that increase was due largely to the Irish famine of 1846 and the revolution of 1848 in Germany. In 1860, the outbreak of the war, immigration fell again to 90,000. After the close of the war, in 1873, it increased again to 438,000. In 1874, after the panic, it fell again to nearly half, 261,000. From that time it increased until it reached the maximum figure in 1882, 730,000.

Q. Have you any reason for that immense increase?—A. I do not think there was anything very special excepting the general increase of prosperity in this country following the revival from the panic.

Q. Was it due to the great amount of literature sent out from this country about the farming lands in the West, etc.?—A. Undoubtedly that had a great deal to do with it. In 1885 again there was a period of some depression, in which immigration fell to 332,000. It increased in 1892 to 580,000. Then came the cholera year and the panic year, when immigration fell off a great deal.

Q. You mean by "the cholera year" the action of the House of Representatives looking to the prohibition of immigration for one year?—A. Yes; quarantine. In the fiscal year of 1898 immigration stood at about 229,000, represented by the last line on Diagram B (p. 47). The point to which I wish to call attention is that while immigration at the present time is comparatively small, being only a little over a third of what it was at the maximum, there is every reason to expect, in the absence of some other cause coming in, that as soon as industrial conditions are improved here this tide of immigration will increase again, and therefore the fact that it is low at the present time is not conclusive as to the need of further restriction at the present time. I was about to mention the causes for this great increase in numbers. Of course the knowledge of conditions here, spread by immigrants, was very important; and another factor of perhaps equal importance was the reduction in steamer rates from the original rates on sailing vessels to the very low rates which prevailed when there was a rate war. Sometimes the rate was as low as \$9 from Liverpool to New York. Also the fact that the United States has been the cheapest place to go to: cheaper than Australia, South Africa, or South America. Another element has been the spreading of advertisements by railroads and steamship lines, especially in southeastern Europe, and also the establishment of the Mediterranean service of the German steamship lines. Another factor which you will all think of is the very large number of steamship agents in all the small towns in Europe, and the fact is well known that their representations have been so extreme that it has been necessary to prohibit the posting of various circulars and notices, limiting the agents in fact to posting the times of sailing of the steamships.

Q. Have you not omitted one very material reason—the Russian laws of 1882 and 1891?—A. You mean in regard to the antisemitic agitation?

Q. Yes.—A. Yes, that undoubtedly accounts for a great many of the Russian Jews coming in at that time. The part played by the people already here in inducing relatives to come, is shown by the large number that came in intending to join their immediate families. The reports for 1896 show that of 263,000 arriving at the port of New York 95,000 were going to join immediate families.

Q. Those were brought here under the prepaid-ticket arrangement?—A. Yes; families in this country sent over tickets to their friends, and various estimates have been made of the amount of money sent over.

The next point to which I wish to call your attention in the history of immigration is a very marked change in the locality from which the immigrants come, owing to some of the causes I have mentioned, particularly the increased facilities to come from certain parts of Europe. These figures (referring to Diagram C, p. 48) are taken from the reports of the Bureau of Statistics and the Superintendent of Immigration. The first line represents the year 1869. The first part of the line represents immigrants from southeastern Europe, under which head are included those from Austria-Hungary, Italy, Russia, and Poland; perhaps eastern Europe

would be a better term. The balance of the line represents immigration from northwestern Europe, under which head are included those from Great Britain, France, Germany, and the Scandinavian countries.

Q. Do you include Belgium in that?—A. Not Belgium. The Belgium immigration has not been very large. In 1869 immigration from southeastern Europe was only 0.9 of 1 per cent, while that from northwestern Europe was 74 per cent; in other words three-fourths of the immigration in 1869 was from races closely akin to us—either British or Teutonic races. In 1880 this had changed to this extent, that southeastern Europe furnished 8 per cent and northwestern Europe had fallen to 64 per cent; or about one-tenth in 1880 came from southeastern Europe. In 1896 southeastern Europe had increased to 52 per cent, or more than one-half the total, while northwestern Europe had fallen to 39 per cent, or less than two-fifths. In the last fiscal year the same process has been going on, and we find 57 per cent of the total from southeastern and only about one-third from northwestern Europe. That is very marked, you observe; and that has a close bearing on the question of new laws and on the need of further restriction at the present time.

These charts (referring to Diagram D, p. 48) are taken from the same sources. The upper circles represent the matter of illiteracy in the year 1896 of the two groups previously mentioned—northwestern Europe, and southeastern Europe representing Austria-Hungary, Italy, Poland, and Russia. In that year 4.5 per cent of the immigrants from northwestern Europe were illiterate—that is, unable to read or write; 47 per cent of the other group were illiterate. I might say these figures were taken for the year 1896 rather than any later year, because the last year or two the conditions which have made immigration fall off have been such as to make the basis of comparison more satisfactory when the numbers were somewhat larger, but I think the result would be very much the same. The line under the circles (Diagram E, p. 48) represents for the year 1896 the division of immigrants according to occupation. The little part of the line to the left represents the professional, and the next portion the skilled, forming together one-fifth only of the total immigration. The large class represented by the next portion call themselves farmers, laborers, or servants, and I might say here, what is doubtless very familiar to you, that "farmers" in the immigration reports does not mean farmers in all senses of the word, the landowner who understands the sowing of crops and that sort of thing, but more strictly a farm laborer, a peasant in most cases, who has slight knowledge in the way of practical farming, of crops, expenses, or control.

Q. (By Representative LIVINGSTON.) Do these "farmers" stop in the cities?—A. Mostly in the cities. This, by the way, is only the male immigrants, of course. The next portion of the line represents those with no occupation whatever. They formed in 1896 one-sixth of the total immigration. The next portion of the line represents the balance.

Q. (By Mr. SMYTH.) The chart showing the illiteracy does not apply alone to the males but to the total?—A. That applies to the total.

Q. (By Representative GARDNER.) Can you separate the male from the female in the matter of illiteracy?—A. I think you can under the reports of this year. In some of the older reports I do not think it is given in that way.

Q. Do you know whether there is any correct data whatever on that subject?—A. The females, as a rule, are more illiterate, I think, except in case, possibly, of those from Denmark. I think there is an exception in portions of Denmark, where the girls seem to have a better chance to go to school than the boys do, who have to work. On that, however, I have no special knowledge.

Q. (By Mr. FARQUHAR.) Is the basis of your illiteracy taken on persons over 15 years of age?—A. It is not in that chart. Statistics at that time were not available to show what that was. They have since been made so in response to a request from this league. In the statistics at the present time 14 is taken as the age, probably on account of the fact that the factory laws in a number of the States make 14 the limit of the school age. I have reckoned the illiteracy for the last 6 months—July to December, 1898—from figures furnished me by the Commissioner-General of Immigration, and have calculated the illiteracy for those over 14 years of age, and find it to be 21.8 per cent as against 23 per cent last year, so that the number of children does not make a great deal of difference in that respect.

I will now, if you please, take up certain effects of immigration, as shown at the present time by various other official reports. The Census of 1890, Part II, page 169, shows that of the foreign white element in the United States—that is, those of foreign birth and foreign parentage—representing two-fifths of the total white element, that element of two-fifths furnishes three-fifths of all the white criminals in the United States. In the New York City prison in 1891 three-fourths of all

the prisoners were foreign born, and nine-tenths of the balance were of foreign parentage. In Massachusetts the report of the prison commissioners for the year ending September 30, 1894, shows that 85 per cent of the commitments for the year were of persons of foreign parentage, 30 per cent those of foreign birth; and taking the proportion which the foreign born were of the total population, namely, 29 per cent, it appears that 100 persons of foreign birth furnished ten times as many criminals as 100 of native birth and parentage; and contrary to what is commonly supposed, the second generation, namely, those who were the children of immigrants and born in this country, furnished five-sixths as many criminals as the foreign born themselves.

Q. How many years does this comparison cover?—A. One year; the year ending September 30, 1894. These were the commitments during the year, and if we could take the matter of drunkenness alone, apart from other crimes, the foreign element furnishes three times as many commitments as the native element in the State of Massachusetts. I have prepared a table showing the commitments for the same year of persons from various nations, leaving out of account the matter of drunkenness. I would leave it out of account for this reason: a great many people are very good workmen, get paid off on Saturday, get hauled up in the police court on Monday morning, yet the balance of the week are comparatively proficient, and it seemed to me that it was perhaps fair, for this purpose, to leave out the matter of drunkenness on this account—that is, in considering purely criminal tendencies. I have taken the number of commitments for crimes, excluding drunkenness, for that year of persons of various nationalities, proportioned to the population in the State, coming from these different countries. I find the fewest from Germany, 3.6 per thousand; next comes Scandinavia, then Scotland then France, then Ireland, then England, then Russia. England has 7.3 per thousand; Russia has 7.9; then comes Austria, 10.4; Hungary, 15.4; Poland, 16; Italy, 18.2. The average of the native born is only 2.7 per thousand; the average of the foreign born 5.4; exactly twice as many. The idea to which I wish to call your attention is on the order of progression of these countries. Germany, Scandinavia, and the United Kingdom show the lowest; Russia, Austria, Hungary, Poland, and Italy show the most. That progression is exactly parallel to the illiteracy of foreign immigration, practically the same order. That is to say, you have a progression in the matter of illiteracy (with one exception, the Germans being more illiterate than the Scandinavians, but the discrepancy is slight), you have an exactly parallel progression between the number of commitments for crime and the illiteracy of those different races.

Q. Do you intend to show by that the relationship of illiteracy to crime?—A. I do not, because I do not think it is possible to do that exactly; the statistics are not full enough. At my request the prison authorities of Massachusetts attempted to prepare some for the following year, but they are not very conclusive either way. I am informed that in England the economists consider that there is some relation between the two, but in France, on the other hand, they do not consider there is any relation.

Q. Would you not stumble against the economical question that in England in that element there is hardly any crime at all?—A. Undoubtedly. I do not argue that the educational test is any evidence of moral worth. All I am citing this for is to show that any law that would tend to keep out illiterates would tend to keep out the large proportion of those who furnish the most commitments to prisons in the Eastern States. It is very unfortunate that the State statistics are very incomplete. Massachusetts is the only State I am aware of that gives the illiteracy of prisoners at all, and in fact the nationality is not given in most of the States. I think it is given in New York and Pennsylvania, but in most of the other States it is not. Conversely, we find what would be expected, that the proportion of the total number committed to all the prisons who are illiterate varies in very much the same ratio.

Q. (By Mr. PHILLIPS.) Would you think it advisable for this commission to suggest legislation to the various States along the line of nationality and illiteracy of prisoners in reference to statistics?—A. I should think it would be very valuable for future purposes. It would take some little time before the matter collected would be very valuable.

Returning for a moment to the census of 1890, we find, to sum up the matter, without going into details or figures, that the foreign-born population, constituting one-seventh of the total population, furnished about one-third of the total of the insane. In the matter of pauperism we find from the census of 1890, Part II, page 174, that the foreign-born white population, being one-sixth of the total white population, furnished one-half of the paupers supported in public institutions in the United States. In Boston, for the year ending September 30, 1897, of the per-

sons given aid by the Industrial Aid Society, which does most of that work, 56 per cent were foreign born; and 66 per cent of those aided by the Provident Society, the next largest body of that sort, although according to the census of Massachusetts for 1895, Volume 1, page 803, only 30 per cent of the population of the State were foreign born. In other words, the foreign-born population, being less than one-third of the total population, furnished more than one-half of the persons relieved by these societies. I mention this to show the large proportion of persons relieved outside of the regular almshouses, supported by the societies, showing that the same results, or even larger, are true, than shown by the census figures. We can sum up this matter by saying that, taking an equal proportion of foreign born and native born, the foreign born furnish once and a half as many criminals, two and one-third times as many insane, and three times as many paupers as the natives. The census of 1890 enumerates those persons, and gives a total of 80,000 criminals, insane, and paupers, being supported at the public expense. The cost of supporting a criminal in Massachusetts in 1893 was \$164; in the New York Penitentiary, \$110. In Massachusetts in 1893 the cost of maintaining an insane person was \$186. If we take \$150, roughly, as the average, we have a bill of \$12,000,000 a year for the United States for the public institutions alone in supporting these worthless persons who have come in, and this does not include the additional cost of police, law courts, or private charity. The legislative committee of Pennsylvania, in its report to the legislature in 1897, found in the public institutions of that State 20,000 alien paupers, costing the State \$1,500,000 a year. To offset this it will occur to you all that immigrants bring in a certain amount of money. I do not mention this as being connected with an immigrant's worth. The organization I represent has refused to consider a large head tax on the ground that it is an un-American test and that it furnishes no key to the immigrant's moral worth or his ability to become a good citizen in the future. It may be that that will be a necessary thing to do. I am only pointing out that the amount of money an immigrant has with him is not necessarily a test of what he is worth. We can all think of poor boys who have come in and risen to be prominent citizens.

Q. (By Representative LIVINGSTON.) Still you do not object to these immigrants paying the expense of our bureau?—A. Not at all. It may be that the head tax is not high enough.

Q. (By Mr. FARQUHAR.) Do you know whether there is any surplus of head tax in the Treasury now?—A. I can not say as to that. There has been for some years.

Q. How much do you think there is, a quarter of a million?—A. I was going to say about \$200,000. The average of money brought in has varied from about \$11 in 1896 to \$19.50 for the last 6 months, but if we examine the money brought by persons of various nationalities we find the same progression as in the matter of illiteracy and crime. France, for example, in 1892, as appears from the report of the Commissioner of Immigration, brought \$55 per capita; Germany, \$35; England, \$26; Sweden, \$21; Russia, 22; Austria, 14; Poland, \$12; Italy and Hungary, \$11. In other words, roughly speaking, the more illiterate races brought in anywhere from one-fifth to one-half less money than the northwestern races.

Q. (By Mr. PHILLIPS.) Does that mean men, women, and children—total?—A. Average total brought by everybody. It is to be said in that connection that a larger portion of immigrants from Ireland, Germany, and Sweden are females than from Italy, Austria, and Hungary; so that that is more favorable in a certain way to the people of southeastern Europe than it otherwise would be. Then, against the amount of money brought in we have to consider the amount sent out. A great deal has been written on that subject, and there has been a good deal of discussion of it, but there is very little that is definitely known. The British board of trade reports show that in 1886 for each immigrant from Great Britain and Ireland to the United States \$32 was sent back. That I have taken from Mr. Mayo Smith's book, page 99. The New York Herald in 1892 made an investigation of the matter, and found that \$25,000,000 were taken back to Europe every winter, but the chances are that that is very much underestimated, and the exact amount I do not think anybody could tell. A very large amount is sent back to Italy at the present time through Italian bankers.

Q. (By Representative GARDNER.) What is the amount of money that is annually sent from this country back to Italy by Italians?—A. That is a matter on which I am sorry to say I have no very definite information. I have recently seen some estimates obtained by inquiry among Italian bankers, but I would suggest that Mr. McSweeney, of New York, can probably give information on that point.

Q. Is the money sent to the relatives in Italy for their benefit or is it stored in

Italy by Italians in this country who have no intention of remaining longer than is required to accumulate a sum of money sufficient to make them respectable at home?—A. I have no statistics on that subject, but my general information and belief is that the latter is usually the case. I have talked with friends of mine who have traveled in parts of Italy, and who say it is possible to recognize districts and villages where more or less of the people have been to this country and returned, by the improved looks of the dwellings, etc.

Q. Do Italian immigrants from some districts come to accumulate \$500 to purchase a home; in other districts \$800, and in other districts, say, as high as \$1,200?—A. I can not say as to that. Of course a great many Italians come over several times, so that the amount of money they take back or send back on any one trip would not be conclusive of the amount they have sent back to Italy.

Q. Is there a considerable number of Italians who come here with no intention of becoming citizens, whose object is to accumulate what they consider a competency?—A. I personally examined a thousand manifests of Italian immigrants at Ellis Island, and found that quite a large number of those had been in the United States two, three, four, five, and six times before, according to their own statements, aside from any other evidence.

Q. (By Mr. FARQUHAR.) Do you mean the "birds of passage"?—A. Yes.

Q. Have you any figures on the "birds of passage"?—A. In April, 1896, of 3,174 Italians landed at the port of New York, 27.7 per cent had been here before. That is from personal observation. From data furnished me by the Superintendent of Immigration at the port of New York, in the fiscal year of 1895, 25 per cent had been here before.

Q. (By Representative GARDNER.) Including the entire number of Italians or only the male?—A. Entire number, males and females.

Q. You kept nothing to distinguish between the male and the female?—A. No, except at that time there was practically no female immigration among those I examined. I can give you that exactly. The percentage of females among those I examined was 10.8 per cent.

Q. Do you know whether or not they were generally of families, Italians who had been here before?—A. I can not say as to that. There was nothing to show on the manifest. I might say, however, as to that that Dr. Senner told me when he was commissioner at the port of New York that they had been obliged to make a rule that an Italian immigrant should bring over his wife before anybody else; that the custom had become so great of bringing other people over that they had to make a rule. An Italian's wife would come over and land on the dock, perhaps, with some other friend of the previous immigrant; the immigrant would go off with his friend and leave her there standing on the dock, from which I inferred that they are not particularly anxious to bring over their families.

Q. What reason did the Bureau of Immigration have for requiring that they bring the families before anybody else?—A. Simply on the grounds of general propriety and morality, and also thought they would be more likely to be permanent citizens.

Q. Is it true of immigrants in this country that on matters of morality the Italians are almost universally under the influence of the church to an unusual degree, and that the one thing to be said about them is that conjugal fidelity is very great?—A. I believe that to be generally true of the Italians, although I understand in some parts of Pennsylvania, where they are beginning to go into the mining regions—possibly from association with other races—that is not so true as in other places where they are settled by themselves.

Q. (By Mr. FARQUHAR.) Was it not the custom of Italian immigration for, say, 10 or 12 Italians coming from the same section to bring a woman with them, whether a relation or not?—A. That, I have been informed, is true in the case of Hungarians, Slavs, and others in the mining regions of Pennsylvania, and it is sometimes true of Italians.

Q. That accounted for the one-tenth?—A. I can not say.

Q. The woman was a servant?—A. I do not want to say as much as that. I do not mean to say that this 10 per cent of female Italian immigrants came over for any such purpose. I do not know anything about that. There is nothing to show.

Q. (By Representative LIVINGSTON.) What do the Italian females come over here for?—A. I do not know what the relations of the men and women may have been, but the rule which was established at Ellis Island was made because the Italians bring their friends, neighbors, male friends, while the wife may be left at home without any means of support or means of getting here, and some cases which were investigated I think were the cause for making such a rule.

I may allude once more to the fact in a general way that a very large per cent of immigrants have practically no occupation, or those who are farm laborers or

servants. In 1898 this amounted to 81 per cent of the total immigration, and it is about the same each year. It does not vary very much. Most of these Italians that I examined came from southern Italy; 85.8 per cent were laborers, practically unskilled; the few that were skilled were shoemakers, barbers, stonemasons, and sailors. If we take the occupation of the immigrants of various nationalities, the report for 1898 of the Superintendent of Immigration shows that among immigrants from Scotland there was only 1 skilled in 4; from England and Wales, 1 in 5; Belgium, 1 in 7; France, 1 in 9; Germany and Norway, 1 in 10; Italy, 1 in 14; Russia, 1 in 18; Ireland, 1 in 19; Poland, 1 in 27; Austria-Hungary, 1 in 29. In other words, there is the same progression in regard to nationality in the matter of skilled occupation; in regard to crime, in regard to pauperism, in regard to the amount of money brought, in regard to illiteracy. All that is important for these reasons: in times when there is a surplus of labor, these persons having no grade can do only one thing; if a person is a mechanic, in the time of trouble he can turn to unskilled labor; but if he is entirely unskilled he then becomes one of the large number of the unemployed. It is a somewhat curious circumstance that in 1898 in Massachusetts, 180,000 males, or about 30 per cent, were unemployed who had been employed before. You will remember that was a time when a large number of persons were out of employment all over the country. Of these 180,000, 30,000 were unskilled, and the previous year 25,000 unskilled laborers had landed at the port of Boston, giving their destination as the State of Massachusetts. I suppose that is, to a certain extent, a coincidence, but it is a rather curious coincidence; the number of unskilled men unemployed in 1898 was the same as the number of unskilled immigrants that landed the year before, and the officers whose business it was to find employment for persons out of employment in Boston, tell me their work is made very much more difficult by the large number of unskilled persons that come in from time to time; in other words, there does not seem to be now the exact adjustment between the amount of unskilled labor required and the number who come in. (See report of the Massachusetts board to investigate the subject of the unemployed. House Doc. No. 50, March 13, 1895, pp. xxxvii-xxxviii.)

Q. (By Mr. FARQUHAR.) Did all that immigration become residential in Massachusetts?—A. The immigration which came in the year before gave its destination as Massachusetts. It is impossible to say that all those became residents.

Q. It is simply a coincidence?—A. Simply a coincidence. Mr. Charles Stewart Smith, president of the New York Chamber of Commerce, in an article in the North American Review in 1892, quotes the president of the Board of Education of New York City as saying that it costs \$30 a year to educate children in the common schools of that city; and Professor Smith has shown that about 40 per cent of the foreign born that come here are above school age and are not likely to receive a school education. I simply mention that as having a bearing upon the probability of immigrants learning English, and learning that knowledge of trade conditions which comes from ability to read the newspapers, as bearing upon the general assimilation.

Q. Their schooling is paid for by the countries they come from. That is not a burden upon the United States.—A. They often have no schooling, and the fact they are above school age bears upon assimilation. Now, another very important matter in regard to distribution of immigrants after they come here: One gentleman asked me whether peasants, those who class themselves as "farmers" in official reports, settle on farms after they come here. The quarterly report, Bureau of Statistics, No. 2, for 1892, shows that of immigrants 44 per cent were found in 124 of the principal cities. When we investigate this matter by nationality we find exactly the same progression which I spoke of in other matters. Of persons born in Norway 20 per cent live in cities; then it goes up. England, 41 per cent; Germany, 48 per cent; Ireland, 55 per cent; Poland, 57 per cent; Italy, 59 per cent. In other words, the Italian in most cases has not the inclination to go West and settle the uncultivated regions, as the Germans, English, and Scandinavians have done. We all know how the Northwest has been built up by these latter races. The Italian usually has not money to go West, and by the time he has, he stays on the seaboard, except some who go into California and go to fruit raising.

Q. Do you not account for that very much on the idea of the old colonization system of the West?—A. I think it is probably that; it is fundamental in the character of the people. I do not think they have the energy and the roving disposition to face hardships.

Q. Do you not think, if you analyze the Scandinavian population, that the State of Minnesota alone has drawn seven-eighths of it, more by being colonized by Scandinavians?—A. Undoubtedly that has a great deal to do with it.

Q. Have not many gone back to the old countries again and brought these people to this country, and entered in with the Scandinavian population, and the British population, and the German rural population, and settled and colonized in great sections; and have brought the whole of their families with them and settled, very much as the New Englander did by taking his family with him? Does not that account for the whole matter of the Italian holding on to the city?—A. After some of them have got there, but not originally. There are plenty of unsettled regions in the country to-day where the Italians could now go if they had the energy and disposition to do so, but they do not.

Q. You will concede that both the Slav and Italian have not the inducements of other nations?—A. They have not.

Q. (By Mr. PHILLIPS.) Has the climate considerable to do with it, being colder than Italians are used to?—A. The difficulty with that is that the Italians do not go to the South.

Q. (By Representative LIVINGSTON.) What is the reason they do not go to the South?—A. The Hamburg-American line and North German line touch at Baltimore and do not touch at Texas; they have recently established a line to Texas, and in view of the fact I look for more Italian immigration to that point. The fact is that about 78 per cent of the Italians have settled in the Northeastern States, shown by the census of 1890, Part I, page cxxxvi; and it appears that only 4.6 per cent of Poles, 4.8 Hungarians, 10.8 Russians live in the Southern States or the western division, while in the Atlantic States there are 66 per cent of the Russians, Hungarians, and Italians.

Q. (By Representative GARDNER.) In the first place, has the climate anything to do with those people going South?—A. No, not very much.

Q. (By Mr. SMYTH.) Do you think it is more the objection to the negro?—A. I think that may have something to do with it.

Q. (By Representative GARDNER.) To what extent is it influenced by the fact that New York is the chief landing, and the inclination of people to get off at the first point near the destination?—A. I think that has a great deal to do with it, and another fact that they can obtain employment through bankers and the padroni in New York.

Q. If by some requirement the Italian immigrants had already been landed at Galveston, do you suppose a much larger number of them would now be in the South?—A. I think if there was a steamship line touching at that point you would immediately find the Italian bankers making such arrangements there to take care of them.

Q. (By Mr. FARQUHAR.) Is it a fact that the Italians stay in the northeastern States simply because they have a market for their labor there?—A. That is the principal reason.

Q. (By Representative LIVINGSTON.) Do I understand you to say there is a great deal of demand for that kind of labor in the Northeastern States?—A. There has been, yes.

Q. In what lines?—A. Chiefly in unskilled labor, contract work on sewers, railroads, engineering work, etc.

Q. Are you aware of the fact when we do that work in the South we can not get them to labor there?—A. I have no personal information about that. I simply know they do not go there to settle; what the reason may be I do not know.

Q. They build railroads and sewers down there; the question is, Why do not our men in the North, when the labor is wanted, get this labor?—A. I think my answer would be, there is plenty of unskilled labor right on the spot.

Q. What per cent of Irish go South and what per cent stay in the North?—A. 72 per cent in 1890 of all immigrants were destined for Illinois and Massachusetts, New York, and Pennsylvania, and only 11 per cent were destined for States south of the Potomac River and west of the Mississippi River.

Q. (By Mr. SMYTH.) Do you take out the South Atlantic States?—A. No. The largest percentage from any nationality going in the Southern States, according to the census, is from France. This is from the census of 1890, showing the distribution of the different nationalities, Part I, p. cxxxvi.

Q. (By Mr. FARQUHAR.) How do you account for the large Italian population in New Orleans?—A. I have not considered that subject especially; I suppose that New Orleans is rather central for the distribution of unskilled labor in the South, and possibly it has something to do with the kinds of crops; some Italians are skilled in growing different sorts of things down there; I can not answer that exactly. The fact that illiterate races settle entirely on the Atlantic seaboard disposes of the argument that further restriction of immigration by means of an illiteracy test would be an injury to the South—the argument always brought up that you are hurting the regions of the country which are not developed;

these facts go to show that such restriction would not cut off any of the people who go there.

At Ellis Island, of about 3,174 Italian immigrants examined by the league only 11 were going to the South and only 3 going to the Southern States. Of 1,000 of various nationalities examined only 1 was going to any Southern State, a German going to Georgia.

Q. (By Mr. C. J. HARRIS.) What reason do they give for not going to the South?—A. Those we talked with had no reason; they did not know anybody there to go to, and knew of no possible opening, and if they did, did not want to say so, on account of the contract-labor law; I think that the principal reason.

I will pass rapidly over the fact that in the Northern and Eastern States the races from southern and eastern Europe not only congregate in the cities, but in certain sections of the cities, and simply refer in that connection to publication No. 16 of the League, pages 5 and 6, taken from the Senate report of 1896, No. 290, Fifty-fourth Congress, or rather prepared by Prof. Davis R. Dewey, of Boston, and given by me to Senator Lodge to put into the report. This simply goes to show the congestion in certain cities and counties. Probably this is on account of factory employment; that is the case with the immigration we have had since 1880.

Q. (By Representative LIVINGSTON.) That 85 per cent which came in here without any occupation, if I understand you, stop chiefly in the large cities; would not the remedy be local? If New York does not want it they could prevent it; if Boston does not want it they could prevent it.—A. The experiment has been tried in New York by the Hebrew Aid Society in colonizing Hebrews. I think \$600 per family was expended in carrying some families out of New York City. In 2 years most of them were back again; they will not stay. I think you will find it the same way with the Italians, Armenians, Hungarians, and Slovaks. When I ask where the illiterates do go, I find they go to the cities; they go to the slum portion of the cities very largely.

Q. Where they have inducements to drink, make crime, and become paupers, etc.?—A. To a great degree.

Without going into details on the matter, on page 8 of the league's document No. 16, taken from the Seventh Special Report of the United States Commissioner of Labor, it appears that southern Europe furnishes 3 times as many inhabitants as northwestern Europe to the slums of Baltimore, 19 times as many to the slums of New York, 20 times as many to the slums of Chicago, 71 times as many to the slums of Philadelphia. That, of course, does not mean that all these people from southern Europe are in the slums, but that the slums are supplied in that proportion, and it shows that many of them are to that degree undesirable.

Q. Do you know any difference of character of the Italians, whether on account of the section from which they come, or family, or any other cause, by which they could be separated into people of entirely different classes without respect to the educational test?—A. There is a very clear and sharp distinction between Italians from northern and from southern Italy.

Q. Do you know whether those contractors or employers have any test by which they can separate people as to character at once, and do do it?—A. I do not know that they have any definite test as to personal knowledge of the men but the knowledge they get from other persons whom they have in their employ; they do not always succeed.

Q. Do you know, as a matter of fact, whether they do sort them for certain purposes?—A. I do not; of course, it stands to reason they must send a reasonably good grade of men; they would be liable to damages in some cases if their men were disorderly and produced destruction and damage. Of course, it stands to reason, and we know it to be a fact from the same reports, that illiteracy is very great among the elements of the slums, and it is very much greater among those coming from southeastern Europe than among those from northwestern Europe. In regard to the general population, for instance, the average of illiteracy of northwestern Europe in the slums of these four cities is 25 per cent; of southeastern Europe it is 54 per cent. The average illiteracy of the native American in the same slums is 7 per cent. It also appears from the census of 1890, Part II, p. 683, that 33 per cent of the aliens in the United States do not speak English. In Massachusetts it is 13 per cent.

Q. What is the per cent of all the immigrants?—A. That do not speak English? It is 38 per cent. A certain difference is noticed also in regard to another matter of assimilation besides the matter of language. Of course language is very important on account of the new standard of living and trade conditions which is required by it, but another matter is the question of naturalization. The census of 1890, Part II, pp. 600, 688, shows that the Slav, Latin, and Asiatic elements tend much less to become citizens than the British, Germanic, and Scandinavian.

The average of the Slav, Latin, and Asiatic aliens is about 33 per cent, and the average of the British, Germanic, and Scandinavians is about 9.9 per cent.

Q. (By Representative GARDNER.) What have you to show how long they have been here?—A. Nothing to show.

Q. Has this Slav and Italian immigration been gradually on the increase?—A. It has.

Q. Would their recent arrival here, the want of 5 years' time, account for their not being citizens, or are there other reasons?—A. It would to some extent, but I do not think to the extent of the difference between 9.9 per cent and 33 per cent. By an examination of the records of the courts you will find few applications for naturalization, even among those who have been here for some time. I can not say of the entire number of Italians who have been here a certain number of years how many apply for naturalization papers. I do not know. Some contractors and employers of labor are very desirous that employees should take out the first papers, and in many cases Italians who intend to go back to their country take out the first papers in order to facilitate passing inspection in returning to this country. It seems to me any data on that point would be rather misleading and not conclusive.

Q. Have you any idea how this commission could get at some estimates as to the number of Italian immigrants and Slavs and others who come to remain?—A. The only way that occurs to me would be to have some special agent look into the matter. If I might suggest at this point, it occurs to me that Henry E. Rood, former editor of the New York Mail and Express, went into the mining regions of Pennsylvania and spent a long time there, and is very familiar with the conditions of New York City and other cities on this point. I should suggest that he would be a very important witness. I am not able this morning to give his present address. He is no longer connected with the Mail and Express.

The report of the Immigration Investigating Commission of June, 1896, gives a large number of replies from governors of States and from commissioners of labor, showing what immigrants were desired and preferred. I have tabulated this in the following form: Of 52 replies, 15 expressed a preference for Germans, 12 for English, Scotch, and Irish, 3 for French, 2 each for Swiss and Italians, and 1 each for Dutch, Belgians, "North of Europe," and Americans. Ten States said they did not want any immigrants at all—Massachusetts, Rhode Island, New York, Pennsylvania, Illinois, Iowa, Mississippi, Minnesota, Nebraska, California.

Q. (By Mr. NORTH.) No Southern States?—A. Mississippi. Only 2 replies desired any Italian immigration at all; of these, one did not want unskilled labor and the other wanted only Italian farmers with money and with families. It is also an interesting point, although not an economic one, that on March 16, 1896, the city council, city of Duluth, composed entirely of foreigners, judging by the names, passed unanimous resolutions in favor of further restriction of immigration.

Now, coming down to what is wanted by this league in the way of legislation, we believe it is wiser to go somewhat slowly, to pass some restrictive measure and then wait and see what the effects of it are. The statistics are very indefinite. I believe we should get better results by trying some one plan first, and then perhaps trying something else; on that account the league has advocated the educational-test bill. We do not advocate this test on the ground that every illiterate person is undesirable, for it is of course true that there are many moral and desirable persons who can not read and write; but on the whole the statistics I have cited show conclusively that the illiterate races are those which send us immigrants who are ignorant of any trade or occupation, who bring little money, who drift into our city slums, who form a large proportion of our criminals, insane, and paupers, who do not assimilate with us or adopt our standard of living, who do not become citizens or permanently interested in our government or institutions. Exceptions are made in this bill in the case of aged parents or young children of immigrants coming in or already in this country.

Q. (By Representative GARDNER.) How do you establish that the percentage named by you of criminals, paupers, and insane who are foreigners and who are Americans is correct?—A. The figures which I have given, together with the source which I gave at the time I stated them, and the documents which I offered as exhibits in connection with my testimony, show that the illiterate countries do furnish a very large number of criminals, they do populate the city slums, they do furnish a large element who do not assimilate. The Massachusetts prison commissioners' report which I referred to will show the proportion. That is only from one State, for the reason that no other State gives them. I feel that it is not unjust to cite it, because a much better class of immigrants land at Boston than New York. In New York the information on pauperism comes from a source

which I have given from the testimony of people engaged in relieving distress, the Seventh Special Report of the United States Commissioner of Labor, and in connection with that the census, shows where these people tend to congregate. There are no figures showing whether the larger portion of the foreign insane are illiterate or not.

Q. You did not make any statement of that, but I want to know from what source you gave the information on which you based your statement on the percentage of insane?—A. Taken from the census.

Q. The best standard of fitness for citizenship upon which your association has been able to hit, according to its judgment, is the educational test?—A. Yes.

Q. Have you never found any connection between the large immigration and the succeeding depression?—A. I have found a connection in the diminution.

Q. I want this expert to say if immigration had anything to do with precipitating panics?—A. I have not considered that as an aspect of it, no.

Q. (By Representative LIVINGSTON.) What have you to say about a recommendation to keep out a certain per cent for a while?—A. You mean in what way; by limiting the number? I think that would involve us in diplomatic trouble.

Q. I do not mean immigration entirely, I mean that class of people you have been talking about, represented by that line in the center [Diagram E, part 3, page 48].—A. You would have to have some other test than simply what the immigrants said themselves, of course, because the minute you announce you are going to keep out the farmers, laborers, and servants, you do not keep out any at all.

Q. How are you going to keep it out if you are going to prohibit it at all?—A. It would be very desirable it seems to me to shut out a large number of that class, but you must have an artificial test to find out. You can not examine to see whether a man is an expert in machinery. It would be impossible for the Government of the United States to go anywhere and prohibit farmers and all these other classes from coming. There must be some artificial test like illiteracy.

Q. Suppose you have an immigrant, you examine him to know whether he is a criminal and all that; you have asked these questions; why not ask one or two more?—A. The immigrants would give false answers.

Q. (By Representative GARDNER.) Suppose the man was an expert stonemason, he could not get in.—A. Then to that extent there is a hardship. There is hardship about any test on some people.

Q. Do you know whether any considerable percentage of Italian immigrants are deserters from the Italian army?—A. I do not know.

Q. (By Mr. FARQUHAR.) You think that this educational restriction act would remedy a great deal of the trouble that we have in not being able to select the desirable immigrant from the undesirable?—A. I do for this reason: Under the present law the largest number of persons excluded is about 1 per cent. It varies from about half a per cent to 1 per cent; and of those who are excluded the largest number consists of those who are liable to become public charges. That question is not a definite question, capable of definite answer. It depends upon the judgment, in the first instance, of the inspector who asks the question; it depends, in the second instance, on the report of the board of special inquiry. In a great many cases where there are numbers of immigrants coming in, the inspector is hurried; he can not ask questions in enough detail perhaps to get at the whole facts. Even the board of special inquiry, which is a long and cumbersome proceeding, may not be able to do very much better. If an appeal is taken, as it can be done under the law, from the report of the board of special inquiry and that report is not sustained, in a great many cases the practical working of it is that it makes a great deal of trouble for the department and the department does not like it. And the result of that is that there is a tendency to be a little under the line of exclusion and a little less strict rather than a little more strict, so as not to have the decisions overruled by the Secretary of the Treasury. On the other hand, if you have a test which is not elastic, or which is as little elastic as you can get it, as when an inspector asks a man to read and write, you can tell right off in a minute, although that may be hard on some individuals. So that on the whole we can conclude from our personal investigations that that law would shut out a great many undesirable people. You have something definite which the immigrant can not evade, which he knows before he starts from home, so that there is no question of hardship in separating himself from his family; and if he chooses to take the trouble to stay at home a little longer and learn to fit himself for assimilation it is not such a hardship.

Q. (By Representative LIVINGSTON.) What about this recommendation also, that he must not only read and write before leaving his own country, but in addition he must declare his intention to become a citizen of the United States?—A. I have never made up my mind whether it was better to have this class of people vote or not vote.

Q. If he is required to declare his intention, permitted to do so under the law of the State in which he would settle, would that help to keep out the undesirable class?—A. I do not think it would have any effect at all one way or the other. They do it now if it is for their own advantage.

Q. And generally they lie all along the line?—A. Yes, and that is the advantage of the illiteracy test; they either read or they do not.

Q. (By Mr. FARQUHAR.) Have you had acquaintance in the large cities there with the class of immigrants who settle and acquire homes?—A. Not any very large acquaintance; I have known some.

Q. Do you think that those connected with your association have ever examined into the social and economic conditions surrounding foreigners that live in our big cities, not particularly in Boston or New York, to know what the character of the men is, the families that are being raised, and the readiness of their assimilation to our American customs and ideas?—A. We have done something of that sort, I believe.

Q. It does not need figuring; it would need personal inspection.—A. As I say, this Mr. Rood whom I have mentioned has made such investigations. He is a member of the league, and I think he can give you personal testimony on that point. We have also a number of members who are public officials and who come in contact with people in that way.

Q. Are you aware, if you take the city of Chicago, the city of Buffalo, Pittsburgh, and Cincinnati there, that those cities have really been built up by foreigners? They have made the city and pay the bulk of the taxes to-day?—A. Yes.

Q. In Buffalo 20 years ago there was a population of 1,500 or 1,600 Poles, which has increased to a population of 68,000 to-day. Probably two-thirds of these Poles own their own buildings, and many of them support their own schools, belong to the Catholic church or their own churches, own their own homes, and in the purchase of property and the transfer of deeds there is not one-half of those old Poles, possibly, that could sign their names to the deeds themselves. Would your association exclude these men?—A. I will answer that question by asking another; that is, if these Poles did not come over at least as long ago as 10 years?

Q. They have been over here nearly 20 years, but have increased to the present population—I mean the young Polish population that has grown up, families that average from 4 to 8 in the family; they are now American citizens; they have built in all this part of Buffalo there. Where would you apply your educational test?—A. I should have been the last person to apply the educational test 10 or 15 years ago, because the conditions of immigration were different then from what they are now. It cost more money to come here, it was harder to come here, and it was altogether a different class, even of Poles and Italians, that came here 10 or 20 years ago from that coming to-day. Ten or 15 years ago the Italians were from the north of Italy; they were a very energetic and desirable class, very different from the people who are coming now. It may be that some of the Poles that are coming to-day are good people. But now they do not go and build up Buffalo; they go down to the mining regions and live a life that is indescribable in its degradation. I think it ought to be borne in mind that the immigration problem is not the same thing to-day as formerly; there is not the same class of people.

Q. Do you care to make any further statement in respect to the educational bill for the restriction of immigration?—A. There are one or two words I might say, as comparing the educational test with the two or three other principal methods that have been suggested, namely, the head tax and the consular-certificate plan. At first the consular-certificate plan, I think, had the support of a very large number of persons; but the more that plan is examined the less satisfactory I believe it will be found to appear. And I have summed up here in the league's publication No. 14 certain reasons why the consular-certificate plan is not desirable, and, on the other hand, why the educational plan is desirable in those respects. The plan of having the consuls on the other side examine immigrants and certify to their fitness to come over at first sight looks very attractive, because it is supposed that the consuls, being near the points from which the immigrants come, will have better opportunities of information, and if the immigrant is stopped on the other side, it saves, of course, a great deal of trouble to him and it saves the trouble of an inspection here. That would necessitate in the first place a very large increase in our consular force. I do not know what the number of consuls, for example, in Russia is. I believe it is very small, and it would be totally inadequate to the examination of the large numbers of immigrants from that country, and an increase in the number would involve considerable expense. But the principal objection to that bill, as I see it, is that it divides the responsibility between the people in this country and the people in Europe. If you have any inspection on this side at all, the inspector here in a doubtful case is apt to say to himself the man over there knows more about it than I do

and therefore I will let the immigrant in. On the other hand, the man in Europe says if there is anything wrong in this man, the man in America will detect it, and therefore I will let the man go. You have that divided responsibility which is always a bad thing, and I believe there would be a lot of doubtful cases where the immigrant would be passed. Then it works a hardship on the immigrant, unless you make the consular certificate conclusive, because then there is always a doubt as to whether he will be allowed to land or not. He makes his voyage with that uncertainty; the immigrant may be turned back after he gets here. In practice at least, unless you increase the number of consuls very much, that work would be done, not by the consul himself, but by some clerk who would usually be a native and would be working on a small salary with considerable temptation to corruption and every inducement to favor his own countrymen as against anybody else. I do not mean to make any specific charges, but it would be apt to work that way. When you have 2,000 immigrants leaving Hamburg in a day, you can see how difficult it would be to get a subordinate official to examine them carefully; and I have myself seen, both at the port of Boston and the port of New York, manifests sworn to in blank; that is, I have found the consul's certificate to the oath of the steamship officer to the truth of the questions asked by him of the immigrants. I have seen the manifests filled in in blank beforehand with nothing else written in afterwards; that is to say, they were apparently made in blank and some of them were filled up by the ship's officer and some of them were not needed to be used and were left blank, therefore showing that such certificate does not amount to anything at all under the present system. And there would be a constant temptation to do something of that sort under any system.

Q. What do you think about the plan they call local certification?—A. I do not know it by that name.

Q. That is, that the certification should come from the officers of the Government itself, the country there, as to the character of the immigrants, and whether they have been convicted of crime, and the age and ability to make a living and everything of that kind?—A. Judging by the way things have worked in the past, I doubt very much if it be wise to transfer the sovereignty of the American Government to any other Government with the expectation of having these duties well done. And then they desire to get rid of their undesirable population while the other part must be retained for the army. There has been considerable complaint in the past with regard to Italy. I do not know whether it is true now.

Q. Do you not think, in the matter of consular inspection and local inspection, that the military laws of Europe have always stood between our being able to get good immigrants?—A. Undoubtedly.

Q. Is it not your experience and knowledge, after investigation, that a great deal of immigration we get is what we might call escaped immigration, that does not come under the military laws nor the local immigration laws of the various countries?—A. Undoubtedly.

Q. That is, as expressed by some, a catch-up?—A. No doubt the emigrant laws of foreign countries have hitherto and probably still to some extent operate to ship undesirable persons over here. A good while ago that was done a great deal, as it was charged, and within two years, I have been told by a gentleman who was visiting in England—this is only what he told me, to be sure, but it illustrates the principle, the way the thing works—that he went into one of the lower courts, and there were 2 men up for some crime like petit larceny or something of that sort. The father of one of those accused persons came in and stated that it was the first offense, and that he wanted his son to go to America, and produced a pre-paid ticket to New York. The other unfortunate accused had no such offer to make. In this one case the party who had the ticket to go to New York was let off, and the other fellow was given 6 months. I do not know that this is often done, but there is one specific case that has come under my observation; and probably without such extreme cases, there are plenty of cases where undesirable persons who can not support themselves are assisted somewhat to emigrate.

Q. Have you any knowledge of the British societies for the help of discharged prisoners or convicts working among certain immigrants?—A. That is denied now, and I have no proof of it. It used to be done, and I believe it was proved in some of the Government reports. I think there is some testimony to that effect. Another objection to the consular-certificate plan is that unless something else is added to it, it does not add anything to the excluded classes—that is to say, it simply gives the consul the same power and authority which is now held by our inspectors. It does not add at all to the class which is to be kept out, and we believe that something in that direction is desirable still. And almost identical with that objection is the objection that it does not furnish any more definite line of exclusion, does not diminish at all the discretion which the present law gives.

Q. Can you suggest any remedy for this, any remedy, at all, any new legislation that is needed to enforce the present laws of this country in respect to the inspec-

tion on the other side or the manner of certification?—A. I can not do that; no. It seems to me that you must attack it in some other way. I do not believe it could be done in Europe at all. I think that would be a great deal worse than the present system. Undoubtedly, with higher salaried inspectors and more of them the inspection could be increased indefinitely on this side; it could also be made more uniform at the different ports. There is considerable difference, or has been, at the different ports in regard to the strictness and the method of inspection.

Q. You made a statement a minute ago that you found a manifest signed in blank. Would simply the addition of more consular agents or commercial agents help us any if that is anything like the way matters work now?—A. I do not think that would help at all.

Q. (By Mr. KENNEDY.) Do you believe that this legislation which you believe to be desirable would be easy of accomplishment if it were not for the selfish position of the steamship companies and the racial prejudices which they stir up in opposition to it?—A. That undoubtedly had a great deal to do with the inability to pass the bill in the Senate over the President's veto in the Fifty-fourth Congress. The bill which we proposed passed the Fifty-fourth Congress, both the House and the Senate, by very large votes, and it was then vetoed by President Cleveland, and was passed by the House over his veto by a large vote, but failed to pass in the Senate. And I think that that would probably have been passed in the Senate if it had not been for the opposition to which the gentleman alludes, which also has somewhat prevented its consideration by the House in the last Congress. Practically the same bill passed the Senate in the last Congress by a vote of about 2 to 1, but consideration was refused in the House, and I think largely on account of this opposition to which the gentleman alludes, which made the members think they did not care to pass it last spring. Therefore consideration was postponed, and the war intervened, and the mind of Congress was taken up with other matters.

Q. The opposition is very largely reported to have come from the Germans in this country, and I see that you have a document that shows that a very small percentage, a little over 1 per cent of the Germans, are illiterates. Therefore that opposition based upon that ground does not seem to be good coming from that source?—A. I think as far as the Germans are concerned it is purely worked up, as far as I can find out, and in some instances it is based on a misunderstanding of the facts. There is one case I remember where a letter was written to Senator Fairbanks, who was at that time chairman of the Senate Committee on Immigration, in regard to some Germans of Evansville, which stated that they had indorsed a petition sent to them by the steamship people against the bill under a misapprehension, supposing it was intended to cut off a much larger proportion of immigration than it actually would. In the circular sent out by the steamship people they used this language: "If, in particular, the now comparatively feeble stream of German immigration is completely cut off, then they will succeed in oppressing Germans in this country and ruin the German element politically and industrially. To the great satisfaction and delight of the English-American press many a German newspaper, whose competition is a thorn in their flesh, will be forced to the wall. No German church building will then be erected any more or conserved; no German school could exist, and the German language will disappear from the public schools." I think any German who did not know the facts and received a circular of that kind might well be pardoned for protesting against legislation of that sort. The fact that such a circular was issued and protests came in, I think, proves conclusively that a good deal of it was manufactured opposition.

Q. (By Mr. FARQUHAR.) Have you examined very thoroughly all the circulars issued by the main steamship lines to their agents and subagents in Europe?—A. Yes, from time to time.

Q. Through the circulars you have seen, and the instructions, especially to agents and subagents, where they have imposed heavy fines for sending undesirable immigrants to this country, is it not your opinion that the steamship companies have really done as much as it was possible for any carrier to do to keep out undesirable immigration?—A. I think they have to a large degree. On the other hand, I understand that the thing works in this way: They take a doubtful immigrant and charge him double the passage money; that is, the passage over and back in some cases, and then if he succeeds in passing the examination, they keep the fare back, pocket it; and if he is rejected, they carry him back and make a profit on carrying him back. And that was done to such an extent that Baron Fava made a protest against it, and I believe the Italian Government passed some act giving the Italian people a right of action against the steamship companies, to prevent that thing being done.

Q. (By Mr. RATCHFORD.) Has the organization which you represent obtained any facts in relation to the encouragement of immigration either by employers or contractors, or by transportation companies, or by the home Governments?—A. No, we have no definite facts on that subject at first hand. I may say, in passing, that it may be of some use to the commission to have the statement of the contract labor law with all the decisions on the subject and some of the recommendations for changes in it, which is in an article in the Harvard Law Review for last April (1898), and I will put that in as an exhibit. Any system of consular inspection which was thoroughly carried out on the other side would be, as has been suggested, a direct notice to the foreign government as to the desirability of the immigrant, and therefore, as has been suggested, they would make every effort to prevent the emigration of the desirable people who might be available for the army, and the inspection, if it was public, would give them that information if they did not possess it already. On the other hand, if you had a secret inspection, ordinarily the chances are that the foreign government would not submit to it.

Q. (By Mr. FARQUHAR.) Is it not a fact that we must have treaty stipulations in order to carry out any part of this programme you are speaking of?—A. Yes; I think that would be another difficulty.

Q. That is, that the national legislation we may make is not binding on any of these countries unless through treaty stipulations, and we have no right to infringe on the sovereignty of any other country by these laws?—A. It would be practically an extraterritorial court.

Q. (By Representative LIVINGSTON.) The purpose of your association is not to get a better class of immigrants, but fewer of them?—A. I should say that we want to get a better class, without reference to the number particularly.

Q. You do not complain, then, of too many immigrants?—A. We do not complain of too many immigrants of a certain kind, if they are first class.

Q. (By Mr. FARQUHAR.) Are there not only just two reasons for making reductions or restrictions by law in the exclusion of immigrants—the moral reason and the physical reason? Do they not cover the whole ground?—A. There might be political reasons. I mean to say in the sense of unfitness for the body politic. I should say, if we demand a public school education as a basis of citizenship in this country, that illiterate persons from abroad are unfitted for civil life here to that extent according to our ideas of things, and we should, therefore, keep them out, although they may be morally good.

Q. Is it not a fact that the United States can restrict against a whole race on the ground that their civilization is not desirable in this country?—A. They have done so in the case of the Chinese.

Q. Why not others? Have you any reasons? Did your organization ever take up that matter?—A. The only ground, it seems to me, is that it would be practically impossible, on account of the political opposition of foreign countries. We should get into a war right off with other nations if we attempted to put them on the same level with the Chinese. Any nation that would be put on a level with the Chinese would regard it as a national insult.

Q. Is not the right to restrict and prohibit immigration based ultimately on the sovereignty of a nation over its own territory?—A. I suppose it is, politically speaking. I suppose, sociologically speaking, it rests on the doctrine of selection—of artificial selection rather than natural selection.

Q. (By Representative LIVINGSTON.) Have you looked into the rights of the States to regulate immigrants coming within their limits?—A. Not particularly, because we have been occupied in urging Federal legislation; but the different State laws were compiled by Mr. Endicott when he was Assistant Secretary of State. There has been more or less legislation affecting the conditions of employment on public works. (See report of the Department of Labor, 1896.)

Q. You are aware, I suppose, that the State of New York has a right to compel them to read and write the English language?—A. Yes.

Q. The foreigners must present certificates of good character, etc. Have you looked into that?—A. We have that same provision in Massachusetts as far as the reading and writing goes; but the trouble is there are 16 States that admit people to vote who are not citizens of the United States by naturalization. They may be citizens of the State for the purpose of voting, not being citizens of the United States by naturalization. But the trouble is when you try to have State legislation. Once an immigrant is inside you can not follow him, and it is pretty hard to do much with him. We see that in our relations with Canada. It is a great deal easier to stop a man on the seaboard than it is after he gets in. How can we prevent their coming in?

Q. Why can you not make State enactments?—A. Because Congress having acted on the subject of immigration by Federal law, I imagine the Supreme Court would say that that settled it.

Q. That does not prevent your asking it?—A. The State could do something with it, of course.

Q. (By Mr. FARQUHAR.) Has your association ever taken up the matter of issuing a certificate to an immigrant as soon as he lands containing an exact identification of him, where he is from, and everything in relation to him, to which he swears himself, the man to carry that about until the day of his naturalization, and only be naturalized upon producing it?—A. That might apply as to naturalization, but it would not furnish any protection against other difficulties.

Q. Suppose the United States laws were changed to exact a bond from every steamship company in a penal sum of, say, \$1,000 or \$2,000 on each immigrant brought here by a steamship company, that bond to be good for 5 years until naturalization; why would not that possibly be better than an educational qualification?—A. That law was passed in the State of Massachusetts in 1799, I think, and was in force until 1872, and was repealed as being absolutely unworkable. The trouble is, an immigrant comes in, and he may be a Hungarian or a Pole with a name of five syllables. He finds that he has not a good name to do business under and changes it to John Jones. There is no possible way to identify that man afterwards. You could provide that unless he could produce some certificate, as you suggest, he should be locked up, but the trouble is shown right here. It is provided now, as you know, by law that persons becoming public charges within one year after landing must be sent back to the country from which they come at the expense of the steamship company that brought them in; and right there in our own State of Massachusetts, in the fiscal year 1896, of 872 cases of sick poor for which the State of Massachusetts had to pay, only 138, or 35.7 per cent. could be identified, with all the efforts of the State officers, to such an extent as to be turned over to the United States for deportation. They give false names, they give false dates of the steamer, and when you look up their cases you do not find them there, of course.

Q. Are you aware that such a law as I gave you the main points of is the rule in the whole Australian colonies, and has worked to perfection?—A. I was not aware of that.

Q. It has in every one of them. I merely desired to know if you had looked up the whole of these Australian laws with respect to the bonding of the steamship companies there and the immigrants that come in?—A. I am not at all familiar with the bonding system in Australia. I do know myself that the bonding system in Massachusetts has not worked at all, and that the commissioners of charities there, and Mr. Wrightington, who was for some time the superintendent of immigration at the port of Boston, all agree that the bonding system would not work with the class of people we get there. Possibly they do not get the same kind in Australia.

Q. Are you aware that for hundreds of years it worked in Great Britain?—A. No, I did not know that. I may say, however, that 78 per cent of the foreigners in England are in London, which simplifies the matter; also, they do not have as much of a mixture of races to contend with as we do. The Russian and German Jews are the principal immigrants with whom they have any trouble; most of the other races come through to the United States.

Q. In your criticism of the immigrants in respect to pauperism and crime, have you excepted the Jews out of all of those you characterized as foreigners?—A. No; they are included.

Q. Have you ever had any statistics to show how many Jews are in the poorhouse and how many are in jail?—A. I have seen them; I have not them with me. There are very few in either the jails or poorhouses; but in the case of the poorhouse that is made up for by the fact that there is a very large demand upon the Hebrew societies for private charity, so it does not mean that they do not have to be supported.

Q. Does it not mean that the Jews take care of their own people?—A. Very largely.

Q. I mean entirely; you do not find Jewish beggars?—A. There have been a great many applications for work.

Q. Do they not furnish them means and work as much as they can?—A. To a large extent. It should be stated that Mr. White, I think it is, who is secretary of the Jewish society in London, complained of a certain class of Russian Jews who were incorrigible paupers, of whom nothing could be made, and I have been told that the Hebrew societies in New York are troubled the same way. They are a very bad class to deal with, but they do not come upon the community so far as their own people can prevent it.

Q. Have you anything to say about the system of inspection of immigration, or any suggestion to make as to better inspection?—A. I think the inspection recently has been very good as far as I have observed it; four or five years back it was by

no means as good, but I think it has improved very much since the agitation of this question.

Q. (By Mr. KENNEDY.) What have you to say about the exclusive privilege given to the Italian Government to have an agency on Ellis Island?—A. Of course, the purpose of it was to prevent the Italians getting into the clutches of the Padroni without proper instruction as to their rights and privileges, and so on. It was established as a matter of convenience to both sides. I am inclined to think, on the whole, it has worked very well. There have been charges made occasionally, when a man turned up as being the uncle of a great many different immigrants coming over in successive years, for instance, and getting them through, helping them through the inspection, agreeing to be responsible for them, and so on; and the charge was made that that was done more or less with the collusion of the Italian bureau, but as to that I have no personal information.

Q. (By Mr. PHILLIPS.) With inspection by the consular agencies or establishing a court there to make this investigation, would it not prevent almost all who are subject to military duty coming to this country?—A. It would have that effect.

Q. If I understand correctly, there are in Germany and other nations quite a number of people who are subject to military duty, people who would like to emigrate to this country, and it has been said that this inspection there would prevent largely that class from coming to this country?—A. Of course; they are prevented now so far as the various governments can do it, but inspection would make it harder for them to escape.

Q. They would have to be inspected, and they would have persons there guarding that point, watching for them?—A. Yes. And that would be true of a German who immigrated from a Russian port, or a German who immigrates from an Italian port, because the government can have their agents there for inspection.

Q. (By Mr. KENNEDY.) Was your league making an investigation of Ellis Island just previous to the burning of the building there?—A. I do not think we were immediately previous; we were there in the course of a year, but I do not remember just when.

Q. Were any matters or records in which you were particularly interested destroyed at that time?—A. I think there was a committee appointed to report upon the effect of immigration on manufactures, and I think Mr. McSweeney was the secretary. I guess that was the final report of the Immigration Investigating Commission. The final report was made and some very interesting facts and figures given in that by one or two Boston people. I think Mr. George E. McNeill, perhaps, has appeared before this commission. He furnished a considerable number of figures, and that report was destroyed in the fire, as Mr. McSweeney informed me. I do not know whether that answers your question or not.

Q. (By Representative GARDNER.) The question was asked if it were not possible to exclude immigration by races as the Chinese have been excluded. Is there any other race which could be excluded without running into several nationalities?—A. I should hardly think so.

Q. If the Latin race, for instance, were included, that would hit several nations, say, Spain, Italy, France, and Austria?—A. Yes; I understand so.

Q. You stated a few moments ago that in the relief of the poor among some people that it was impossible to get their identity, that they assumed names and all that sort of thing; to what nationality or race did they belong?—A. I have looked into that matter with considerable care, and it is rather curious, although it may not be essential, that, for instance, in 2 months there were 85 people relieved in the Boston City Hospital about whom too little information could be gained to satisfy the United States authorities. These 85 persons were all Russians, Hungarians, and Italians, and all were illiterate except 2 Italians.

Q. The proportion of Russians and Hungarians and Italians was not stated?—A. No; that we have not got.

Q. As one interested in the question of immigration, and also being a lawyer, is there any race or nationality among the immigrants that you find so disregardful of the value of citizenship that it is found impossible, practically, under our system, to convict any of their number, because where people of that nationality or race are witnesses they will fix the crime on one party before the grand jury and on another party before the petit jury?—A. I can not say as to that. Of course, there is a great difference in the criminality of the different races. Italians get into a row and knife each other; there may be very few involved in it, whereas there may be a large number of Irishmen who go on a spree, drink too much, and get hauled into court for being a little jolly; a large number of commitments in the one case and a few in the other. The two crimes may be very different in intensity.

Q. As a matter of fact, can you convict an Italian, for instance, for slashing anybody anyhow if the only witnesses obtainable are Italians?—A. It is very hard to do it, but I think it is through having to work through interpreters.

Q. (By Representative LIVINGSTON.) Do you consider that class of immigrants that you call farm laborers and common laborers needed in this country at all?—A. From the replies I alluded to from different States, I should say we did not.

Q. Then why not just exclude them entirely?—A. That would be all right if you can devise any method of doing it.

Q. Would not that remedy the trouble to a large extent?—A. I do not believe they are the worst class.

Q. If they were excluded as a class, would not that go a long way toward eliminating the troubles you have mentioned to-day—insanity, criminality, pauperism, and all those things?—A. It would undoubtedly to some extent; I am inclined to think, however, you would shut out some of the best elements.

Q. If you included the percentage of unskilled immigrants, it would be a very large exclusion, would it not?—A. Yes.

Q. On that point, have you any knowledge of what kinds of farm labor an Italian immigrant can do even when he says he is a farmer?—A. I think I mentioned that the farmer, in the immigration reports, practically means farm laborer and practically means manual laborer without any particular skill or capacity for direction or undertaking or managing crops or soils, except in the case of vine growers and fruit raisers and that sort of thing.

Q. The Italian farmer, as he calls himself, is rather expert in vines; he can use a hoe and cut weeds; he can lead a mule, he can not drive him. I live in a country where they abound. I have never seen an Italian who could plow before he had been over 3 years. I have never seen 5 persons competent at any time to take a team and plow, and I simply wanted to know if you knew anything about what they could do after they became farm laborers?—A. I have no personal knowledge, but all that I have heard coincides with what you say precisely.

Q. Does the bulk of the money come with that small per cent which do not come in as common laborers?—A. I understand so; yes.

Q. And the intelligence comes with the remainder and the skilled labor comes with the remainder; now, if you should cut off the 73 per cent, you would only lose in number the common laborers who come in here to compete with the hundreds and thousands we already have that are not half employed?—A. Yes.

Q. Would not that be a quick way to get rid of that trouble and at the same time get just as much money as the way it is?—A. You would find the labor organizations object quite as much, even more, to the skilled people than to the unskilled, because the skilled people compete with the organized industries where the unskilled do not. And that was so much the case that at one time it was more or less the custom at Ellis Island to shut out the skilled mechanic with \$100 in his pocket and let in the Italian peasant with 52 cents. This happened some years ago, but it may illustrate the point I am making. A cotton spinner from Manchester—a very bright, active fellow—found he could not do as well as he thought he ought to at home and came over here; and while he was here in detention for examination, he was so clever that he was employed in preparing some tables of statistics. His handwriting was remarkably good. While he was doing that he had occasion to go into New York City once or twice for some of the officers on this matter, and somehow there he learned there was not as good a chance for him as he had thought. He then wanted to do everything he could to be sent back free of expense. I happened to be at Ellis Island at that time, and I said that it was odd he should be excluded because he knew a good deal more than most other immigrants. When the thing was put in that way it did seem, perhaps, a little queer, and they let him through. But that was the policy at one time, on the theory that this country could absorb any amount of unskilled labor, whereas in the skilled occupations there was more competition. I do not mean to say this is true at the present time; it was some time ago. I simply tell this as bearing on the point of unskilled labor.

Q. (By Mr. FARQUHAR.) In view of the treaties we have with foreign countries, do you think we could make any more restrictive laws than we have now against the undesirable and the defective to exclude them?—A. I should say so; yes.

Q. You think that this educational test is one of them?—A. It seems to me so.

Q. And you really think that is substantially the remedy?—A. It seems to me that is the first thing. If that does not work it may be necessary to increase the head tax. Of course, the head tax is paid by the steamship companies and taken out of the steerage rate, so that it would not tax as heavily as it might appear at first sight, for in many cases the tax would be paid by persons in this country.

Q. (By Representative LIVINGSTON.) Suppose we say any man is a pauper that has not \$500 good money in his pocket when he lands?—A. That would stop immigration a good deal. The objection to that from my point of view is that the difficulty would be in getting such a measure through Congress.

Q. (By Mr. PHILLIPS.) Have you anything further to say as to the Lodge-McCall bill?—A. The only thing I would like to present is a single word on the other people who agree with me. I do not wish to cite a bushel basketful of authorities, which would not be conclusive, of course, about the desirability of the thing; but I would like to call attention to a few of the different kinds of organizations that do advocate this educational test, people who have looked into the matter and who have had practical dealings with just the kind of immigrants we wish to exclude. There have been quite a number of chambers of commerce, Boston, Cleveland, and various other cities; there have been a very large number of labor organizations, American Federation of Labor, the general convention of Knights of Labor, and a very large number of local and national organizations which appear in the list which I have handed in. And another class which we rely upon very much, the class of organizations which you would suppose would be heartily against this kind of thing, is the associations of the Northwestern States which were organized for the sole purpose of promoting immigration into those States, such as the Montana mining and immigration committee, the South Dakota Immigration Association, the Washington Immigration Association, the Sixth Congressional District of Minnesota Immigration Association. There is the legislature of Nevada, the legislature of Washington, and the legislature of California, the Nebraska Club, the Washington State Society at Seattle, the Montana Bureau of Agricultural Labor and Industry, the Farmers' Congress at Indianapolis. And then another class of people is the factory inspectors in the different States; the factory inspector of Pennsylvania, the chief inspector of the State of New York, and the convention of the factory inspectors that met last year. (See publications of the League Nos. 20 and 23.)

Q. (By Representative LIVINGSTON.) You sent out circulars to all these organizations asking them to join in this request. Is that the way you got that done—like the steamships got the other thing done?—A. Not precisely; we did it with this difference: What we put in were the actual facts and a great many of them, and we left it with them. With many of these bodies we held no communication whatever.

Q. (By Mr. FARQUHAR.) Is it not a fact that mainly these protests are on the Canadian line; that you had them from the local unions all along the Canadian line clear to Washington, a nearly uniform protest against any class of immigration coming in?—A. They are against it, but you will not find them in this list.

Q. Would not all of those organizations have sent in and given their approval of any restrictive legislation?—A. I suppose they would from the fact that Mr. Corliss introduced the amendment which he did. I suppose you mean the labor unions in the towns on the border line, like Detroit.

Q. (By Mr. PHILLIPS.) Will you please tell us the protest that came back from them against the passage of the bill and from what class of people?—A. The point I wish to make in reference to the immigration associations was this: That in the Northwest, which is not as much settled as other parts of the country, there is no demand for immigrants of this character. There is even a protest against immigrants of this character. The trouble along the border line, as I understand it, does not go as far as Washington, Montana, and Idaho—that is, the principal trouble is not out there with the Canadians. The trouble, as I understand it, with the Canadians is at Detroit, Suspension Bridge, and places along the border line of New York as far west as Minnesota.

Q. (By Mr. FARQUHAR.) Let me supplement what you were saying, by the whole border line, lumber line; the fight between the American unions on this side of the line as against all Canadians coming in—that is, where there was lumbering. There are two or three thousand people engaged in it. These are the people who have fought so fiercely against this Canadian immigration.—A. Yes; that would not apply to California; the trades and labor assemblies of Massillon, Ohio; here is Mr. J. H. Brigham, the president of trustees of Ohio State penitentiary; the Glass Bottle Blowers' Association of Philadelphia; the Trades and Labor Assembly of Ohio; the American Agents' Association of Louisville, Ky. In other words, it is true that some of the indorsements are on the border line. I do not mean to deny that those on the line are anxious to have the Canadian immigration restricted.

Q. (By Mr. PHILLIPS.) From what source did the protest come to Congress, if any, against the passage of this bill?—A. Up to the beginning of the session of Congress in the fall of 1898, so far as I know, there were two classes of objections.

One came from theoretical economists, like Mr. Edward Atkinson and Mr. David A. Wells, who said there was more gain from immigrants of any kind from an economic point of view than there was harm that they could do in a social way. There was another class of people who felt that we had no right to shut anybody out, like Mr. William Lloyd Garrison. That opposition was confined to a dozen individuals; at any rate, I did not hear of any more. After that the steamship people, apparently finding the bill was likely to become a law, sent out a large number of circulars, and the protests that came in were apparently very largely in answer to those circulars. There was also a certain amount of protest from certain Roman Catholic societies, who seemed to think this bill was affecting chiefly the Roman Catholic countries—was framed for that purpose. I think in their case they did not understand exactly the object of it, and, as I said before, in some cases where it was explained to them they changed their protest. There were something like 2,300 petitions, I think, in favor of the bill sent to the last Congress; I do not think there were over 50 against it.

STATE OF MASSACHUSETTS, *County of Suffolk*:

I swear that the statements made by me of my own knowledge in the foregoing report of my testimony before the Industrial Commission are true, and that all other statements I believe to be true.

PRESCOTT F. HALL.

Sworn and subscribed before me this 8th day of November, 1899.

FREDERIC S. GOODWIN,
Notary Public.

(Mr. Hall subsequently submitted the following supplementary testimony:)

APPENDIX A.

SUPPLEMENTARY NOTE ON ITALIAN IMMIGRATION.

The very remarkable increase in the last few years is worthy of comment. Whereas in 1869 the entire immigration from Austria-Hungary, Italy, Poland, and Russia was only nine-tenths of 1 per cent of the total immigration, during the fiscal year 1899, 76,489 Italians landed at the port of New York, constituting nearly one-fourth of the total immigration for the year. I speak of the port of New York because nearly all Italian immigration comes to that port.

Under the recent improvement made by the Government in the tabulation of immigrants according to races, the Italians are divided into northern and southern Italians. Northern Italians include the natives of Tuscany, Emilia, Liguria, Venezia, Lombardy, and Piedmont, also the people in other countries whose mother tongue is Italian. Southern Italians include the natives of the remaining parts of Italy, Sicily, and Sardinia. This distinction between the northern and southern Italian has been made in view of the great difference in characteristics and desirability of the people from the two regions.

Of the 76,489 above mentioned, 63,481, or 83 per cent, were southern Italians. Of both southern and northern Italians about 30 per cent were women, which is a much larger proportion than heretofore. Of southern, 2.1 per cent were debarred and returned, as against 0.7 per cent for northern Italians. The average illiteracy of all Italians over 14 years was 48.7 per cent; of southern Italians, 57.4 per cent; of northern Italians, 1.2 per cent. The average amount of money brought was for all Italians, \$13; northern Italians, \$21; southern Italians, \$8.

The very large number of 85 Italians were debarred as having loathsome or dangerous contagious diseases, and it is noticeable that of these only 6 were northern Italians, while 79 were southern Italians.

It thus appears that northern Italians are in many respects very desirable and are on an equal plane of intelligence with the natives of Germany, France, and Scandinavia, while the southern Italians show almost the largest per cent of illiteracy of any nation and are in other respects very undesirable. This simply confirms the evidence of actual inspection and knowledge of the immigrants after they land here.

APPENDIX B.

RECENT CHANGES IN THE NATIONALITY OF IMMIGRANTS.

[Specially prepared for the league from Quarterly Report, Bureau Statistics, No. 2, series 1892-93, and reports of superintendent of immigration.]

Year.	Immigrants from Austria-Hungary, Italy, Poland and Russia	Immigrants from United Kingdom, France, Germany, and Scandinavia.
1899	3,515	280,063
1890	36,812	202,903
1886	71,734	240,770
1887	124,781	332,748
1890	154,873	292,749
1891	222,020	292,059
1892	259,967	312,502
1893	189,149	212,167
1894	122,834	137,217
1895	102,850	136,790
1896	178,991	132,374

 Hon. Robert B. Smith, Governor of Montana.
 E. E. Clarke, esq., Grand Chief of Order of Railway Conductors.
 Illinois State Branch American Federation of Labor, Bloomington, Ill., September, 1897.

NEW YORK, N. Y., July 24, 1899.

TESTIMONY OF MR. THOMAS FITCHIE,

Commissioner of Immigration at the Port of New York.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City, July 24, 1899, Chairman Smyth presiding, Mr. Thomas Fitchie, sworn as a witness at 2 p. m., testified as follows:

Q. (By Mr. SMYTH.) Where do you live?—A. Brooklyn.

Q. What is your business?—A. Commissioner of Immigration of the port of New York.

Q. Instead of asking you questions we will request that you give us a general statement of the working of the immigration law.—A. We are authorized by law to examine all immigrants that land at the port of New York, as to their eligibility under the law of 1891. That is the latest law. Under our mode of procedure, our boarding officers go down the bay with the customs officers and meet the vessels. The boarding officers examine the first and second cabin passengers to ascertain if among the aliens therein there are any undesirable or coming in violation of law. If none, all are discharged at the dock. The steerage passengers are brought to the station in barges and examined by the registry clerks, and questioned as to their standing. The usual questions asked are, how much money they have, where they are going to, and where they are from; in fact, all the questions asked on the manifest of the ship that brings them over. If they are undesirable they are made what we term "S. I." and sent before the board of special inquiry for further examination. If there is any doubt in the mind of an inspector or registry clerk of their being of that character of people that are undesirable they are sent before the board and are there examined. One hearing is held without anyone being present, and at the second hearing their friends, if any, call for them, have an opportunity to come before the board and make such statements as they desire, and if satisfactory to the board, and they think that the immigrants ought to be landed, they are landed. Their finding is final unless an appeal is taken to the Department in Washington.

They are also examined by a Marine Hospital surgeon as to their health, who, if they are suffering from contagious or other disease, furnishes a statement to that effect, which is submitted when they come before the board of special inquiry, and they are usually excluded unless appeals are taken to the Department, which are submitted with my opinion to the Commissioner-General, and through him to the Secretary of the Treasury. If on appeal the Secretary of the Treasury reverses the decision of the board of special inquiry, they are admitted; but generally the decisions of the board are sustained by the Department. The men who are appointed on the board are specially designated by the Secretary or the Commissioner-General, from the force of inspectors employed here.

If they are barred, papers are then made out and furnished to the steamship companies, who, at the next sailing of any of their vessels, must take them back to the other side.

Sometimes security is offered for people who are excluded as likely to become public charges, and occasionally bonds are accepted under the provisions of section 7 of the act of 1893.

The officers are instructed to be very careful in carrying out the provisions of the law. The manifests are supposed, in every instance, to be sworn to by the officers of the steamship company, but notwithstanding that, there are a great many people brought here who have contagious diseases, as has been shown on a great many occasions. If the same care were taken on the other side as is taken here, a great many of the cases would never be allowed to embark.

Q. Do you know of any instance of immigrants having contagious diseases returned to the other side and being returned back here?—A. Yes.

Q. Can you give an instance?—A. One of the last was a woman who came here and was certified to by one of our physicians as having trachoma, a dangerous, contagious disease. She was deported and came back on the next sailing of the ship in the second cabin.

Q. She came over first in the steerage?—A. Yes, and she made an affidavit to the effect that a ticket was brought to her, and she was informed that she could return as a cabin passenger, and she came on the return of the same ship, and was detected again, I think, by the same surgeon at quarantine, and was deported. She was ticketed in the second cabin. A surgeon goes down with the customs officials and boards these ships at quarantine, and makes an examination as well as he can between the quarantine and the city, and he has detected a great many cases of that kind.

Q. Have you any reason to believe that the steamship company was a party to her returning the second time?—A. That we can not say. We were instructed a short time ago, owing to the looseness of the law as drawn, that a suit will not lie against the steamship company for bringing people of that character over here.

Q. What steamship company was this?—A. The French line.

Q. Do you suggest that the law ought to be more clearly drawn in that respect?—A. Yes. Some 2 or 3 years ago an order was issued by the Secretary that people coming with dangerous, contagious diseases should be placed in the hospital and cared for and cured, if possible, at the expense of the steamship company; but that order was changed afterwards, and people coming with contagious diseases, under the later order, were to be returned to the country they came from. Since that order has been received trachoma and favus have been on the increase. Trachoma particularly, to an enormous extent. I think about 65 cases have come in in 1 week. Of course, they are not all confined to one company.

Q. Can you suggest any changes in the law that you would recommend?—A. Yes; the law is susceptible of a great deal of amendment, or rather change, making a new law that will bear on the whole subject: and it could be made more practical than it is. I understand the reason the Attorney-General held that cases would not lie against the steamship companies was because these people were not landed. The law ought to be changed to "landing or attempting to land." They are not considered as landed until they have passed through the Barge Office, and as they are excluded and returned immediately they are not really landed. That bears not only on contagious diseases but upon contract labor. The whole contract-labor law ought to be revised so as to make severer penalties and penalties that can be believed and collected. My idea is that there ought to be a fine fixed for bringing in dangerous contagious diseases or contract labor sufficiently large to prevent the steamship companies from bringing them. It is utterly impossible for so many cases to develop in the course of a week on the voyage. European points are ten days, and yet our surgeon has repeatedly certified that if there had been any caution used by the surgeons of the ship or examiners, the disease could have been detected as well there as here.

Q. There is no medical certificate required on the other side before sailing?—A. Section 3 of the law of 1893, provides, "That the surgeon of said vessel sailing therewith shall also sign each of said lists or manifests before the departure of said vessel, and make oath or affirmation in like manner before said consul or consular agent, stating his professional experience and qualifications as a physician and surgeon, and that he has made a personal examination of each of the passengers named therein, and that said list or manifest, according to the best of his knowledge and belief, is full, correct, and true in all particulars relative to the mental and physical conditions of said passengers."

Q. (By Mr. FARQUHAR.) Is the examination made on board ship on the other side?—A. As they come on board, I presume. These manifests have to be sworn to by the consul at each station. "If no surgeon sails with any vessel bringing alien immigrants the mental and physical examinations, and the verifications of the lists or manifests may be made by some competent surgeon employed by the owners of the vessels."

Q. (By Mr. SMYTH.) You recommend a more rigid medical examination?—A. Or some other means to prevent the steamship companies inducing so many of their agents to bring here the very class of people we do not want. If a fine were fixed against steamship companies for every violation of the law they would be more careful. Of course we have had complaints from several of them because of our sending so many back. Invariably I have said, if they did not bring that class of people they would not have to take them back. I think we sent back about 10 per cent of one load at one time. I suppose they felt very sorry, but under the law we could not do anything else, and we did not propose to do anything else.

Q. (By Mr. FARQUHAR.) How many departments or divisions have you down there?—A. About 6 or 7. There is the contract labor bureau, Marine-Hospital Service, registry division, board of special inquiry, statistical division, boarding division, matron's division, where we have women that take charge of all the women and make an examination of all cases where it is necessary, and our counsel, who probably would give you a great deal of information in regard to the obstacles that he incurs in the prosecution of any cases that go up. I presume he would give you more suggestions in regard to the changing of the law than I could, because that is part of his business. He is the legal adviser of the board. Mr. Quinlan has charge of the contract labor bureau; Dr. Williams is the Marine-Hospital surgeon; William Weihe is chairman of the board of special inquiry; Mr. Holman is secretary of the board; Mr. Eichler is chief of the statistical division; Mr. Dobler is chief of the boarding division; Mrs. Stucklen is in charge of the matron's division, and Dr. Lorenz Ullo is counsel. That covers every division in our department. Mr. McSweeney is the assistant commissioner and executive officer. He is bristling all over with knowledge of immigration; probably no man in the country is better posted.

Q. Do you have frequent changes in your office?—A. There have been no changes since I have been here.

Q. How long have you been here?—A. Two years the 5th of next month.

Q. When you assumed your duties did you retain the old staff?—A. Every officer above laborer is protected by civil service, and there has been no change. I have recommended the dismissal of 1 or 2 or 3 since I have been there in the interest of the department on account of excesses while on public duty, drunkenness principally; and 1 man for interpreting something falsely.

Q. For good reasons?—A. Yes; very good reasons. There were a few changes, transferring from one place to another, above laborers, and a few laborers. Practically the same force is there as for the last 4 years prior to my time.

Q. Who preceded you in the office?—A. Dr. Joseph H. Senner, and prior to him Hon. John B. Weber.

Q. Have you made any changes for political reasons?—A. No.

Q. In the terms preceding yours, were any changes made there, to your knowledge, prior to the blanket of civil service being thrown over them?—A. There were changes, I believe, under Dr. Senner's administration; but a number of men under Colonel Weber are there now, and I expect they will remain there so long as they discharge their duties properly and keep sober.

Q. Do you regard the civil-service laws as advantageous in the discharge of the duties of your office?—A. No, I do not. In some departments civil service does well, but I do not think there is any civil-service examination that could test a man's qualifications for immigrant inspector. His knowledge of the law might come in, but a man in a business of that kind wants to be honest, and have a good deal of common sense, and a desire to carry out the law. You can not test a man's honesty by a civil-service examination. We have had some difficulty with men who were civil-service men. We have added some engineers and firemen since I have been here, on account of vacancies by death; but no removals. There was one man who was there on test and he turned out to be good for nothing. He

came here on trial and did not fill the bill as we thought he ought to and we asked the Commission to send on others in his place, which they did, and we have a very good class of men now. A short time ago a watchman's position was established, but he had to have the qualifications of an oarsman, and we had a good deal of trouble until we finally discovered a man that we thought would fill the bill and asked for his temporary appointment. He was appointed for 30 days and before the 30 days were up, along came a list of men for watchmen, and I sent for them all and asked if they had ever rowed a boat, and they were surprised. I classified them as watchmen so as to give more pay than a laborer, as it is an important position. It is to watch the telephone lines that run from Governors Island to Ellis Island, which was destroyed a short time ago, and we had the cables laid again at a very considerable expense to the Government, and established a watchman in a hut in a certain place to watch and keep vessels from anchoring, to keep them off. It is all at night time. No one on the list knew how to pull a boat. Of course I returned their applications with information as to what we wanted. They found 2 men on the list who had been sailors, and thought that they would fill the bill, and sent them on here, and I put them through the same examination. One of them said that 25 or 30 years ago he could pull a boat, and said he thought it was to watch railroad crossings. After a long while the Department finally consented to have this place made permanent provided each of the men would sign a note declaring he did not want the place. We got a man finally. It takes a good oarsman, and he is on duty all night. He has very little time to occupy the hut, but it is intended to shelter him from the weather. There are a great many cases where practical experience is of more service to the department than civil-service examinations. In the clerical positions civil-service is a good thing, but in the case of immigration and contract labor inspectors I do not think any examination will ensure that men who may perhaps be able by book learning and linguistic knowledge to pass, will have the requisite common sense and honesty to occupy one of the most important positions under the Government, and have the power to decide whether undesirable immigrants may be allowed to land or not.

Q. Has there been a request on the part of the Commissioner-General of Immigration to take it out of the classified service?—A. Yes. I wrote myself to the President about it, and I have made the request of the Commissioner-General, but no change was made.

Q. You think it would be an advantage to the service to have some of your employees taken out of the classified service?—A. Yes, I think we could improve on it. Then, again, there are some there that are invaluable on account of their long experience and willingness and anxiety to carry out the letter of the law.

Q. (By Mr. CLARKE.) If the classified service did not apply to these employees, how could you protect and keep there in the office those who were valuable?—A. By keeping them there.

Q. Suppose you were a politician and cared more about promoting the interests of the party than you did for the efficient discharge of the duties of the office, would they be kept there?—A. Yes, valuable men would be kept there.

Q. Suppose your successor was more of a politician than you are?—A. I could not tell what my successor would do.

Q. Is not there danger of that?—A. During the administration of General Harrison we had a good force there, and I guess a good many were kept over. It was not under civil service then.

Q. Suppose there was an administration that wanted to promote the party interest and reward some party workers.—A. They all do. My idea of the business is, that where you have good and efficient men in any position retain them; and not only in the United States service, but in all services.

Q. How can you make sure they will be retained unless protected by the civil-service law?—A. The civil-service law protects, in my judgment, men that ought never to be placed under the blanket of the civil service, because they have never taken an examination. I hold the Government is entitled to the service of the best men it can get. There are only two conditions we are interested in, the Government and the immigrant, and so far as I am personally concerned there are men in our department whose services are invaluable and there is not power enough in any organization to get me to recommend their dismissal.

Q. But do you not understand it has been the common experience throughout this country that good men have been displaced to make vacancies for party workers, irrespective of their qualifications for that service?—A. That is true not only in the United States but in the States and cities, and particularly in New York and Brooklyn.

Q. I would like an opinion as to how these men can be protected and kept in the service, whose services are so valuable to the Government?—A. By the appointing power in charge refusing to recommend their dismissal.

Q. But suppose he does not refuse?—A. You can not tell what Mr. Jones 4 or 5 years hence will do.

Q. We can tell what he will have to do if we have the law.—A. Even the law does not protect.

Q. In what respect does it not?—A. Your observation all over the country must have given you an impression that the law has been winked at not only in the United States but in States, cities, and in counties where it exists.

Q. If you know of any specific instance in your department of the public service — —?—A. (Interrupting.) Not in my department; there have been no changes there. I am speaking in a general way of the law being winked at in States and cities. In one instance it operated very hard against a very excellent man in our department, where they were so anxious to get a position as engineer for a man who was on the eligible list. He was entirely incompetent and had not had the experience of a man whom we had temporarily employed. Last winter we asked for an assistant engineer during the cold season. I recommended a competent man of 15 or 18 years' experience in steam and electrical engineering, and I recommended him because I knew he was a first-class man. I induced him to take this place with the expectation that he would be continued after the term for which he was called. During the first 30 days I received notification that a list of 3 men had been forwarded and to select one for this man's place. I immediately sent for the men and asked them where they were employed and what experience they had had, and took in their general physical appearance. One had never been an engineer but had passed the examination; another run a light dynamo at Long Island, and did not seem to me competent to start an engine; the other run one of the engines on a dock where they hoist coal. I did not want to reject the men because there were places which they could fill all right. I returned them with the information that, in my judgment, none of them could fill the position. The man we had employed temporarily was held up 2 or 3 months without any pay. I called in Washington on the chief of the Appointment Division shortly afterward and explained the situation we were in; that we wanted this man for 4 months, and that I would like to continue him until the end of the term. He wanted to know if the same conditions would not arise next fall. I told him I could not tell that, and after a long time they finally concluded to let this man remain the 4 months, and after the 4 months he was dropped. In that particular case, where the recommendation came from the head of the Department, it ought to be sufficient. Afterwards, when I wanted an extra man, a laborer, I employed the same man because he was a valuable man, and I have him down there now as a laborer or as assistant, to assist the engineer, make repairs, etc., knowing he has the qualifications. This man I never saw until he was appointed, but I had heard from competent engineers as to his caliber.

Q. Do you think the evil is greater by reason of their recommending incompetent men than it would be under the old system of political appointments?—A. That I would not want to say, but I will say that one of the men whom our chief engineer rejected as unfit for a position, headed the very next list that came down. The man that was rejected by the practical man was placed first on the list by the Civil Service Commission in Washington.

Q. I understand your position is that when the appointing power is competent and honest he will make better selections than the Civil Service Commission can make for him?—A. Yes.

Q. When he is not competent and is strongly partisan, is it not better that competent employees should be protected by law?—A. It is, providing they are not strangers to the place. For instance, a man is sent here to New York from Ohio or Pennsylvania or West Virginia. He has passed the civil-service examination. What does he know about our work? I always have been a partisan. I am probably as radical a partisan when national questions come up as any man living, but that would not interfere with my keeping a competent man. As I said, there is not influence enough in any party to make me displace a competent man.

Q. (By Mr. SMYTH.) Would not that feeling cause you to appoint a man from your party?—A. They would be competent men.

Q. But all from one party?—A. Not necessarily.

Q. (By Mr. CLARKE.) You have had considerable experience and observation in politics?—A. I have.

Q. And in the public service?—A. More out than in it.

Q. Is it not your observation and experience that in a great many cases competent men have been removed to make place for mere party workers?—A. That I have noticed in both the State and city, and my experience since I have been in the Federal service is, as a rule, that nearly all in the service have been in the customs and post-office. Men have been there for 25 years. There have not been

very many changes in the national service in New York and Brooklyn until this last order came out. In the Internal Revenue Department there have been some changes, but most of the men placed had been in the service previously.

Q. The changes have been much less frequent than before the civil-service law was enacted?—A. It has been in force a good while, but has not been made applicable to as many positions until two or three years ago. I hold wherever it was made applicable there should have been an examination, because there are in the public service hundreds of men who never passed an examination.

Q. Do you mean to tell the commission that you seriously recommend the repeal of the civil-service law, so far as it applies to the Immigration Bureau?—A. No; I say there are clerical positions which the civil service was intended to cover that ought to be protected; but as to immigration inspectors I do not see why or how an examination can produce one man for a position in the Immigration Bureau better than any other man that the Commissioner-General or the Secretary might select.

Q. Can you suggest some amendment to the law by which there may be a more efficient examination of men for these places requiring expert knowledge?—A. The expert knowledge that the man requires is his honesty; a dishonest man in the Immigration Bureau is a dangerous man.

Q. (By Mr. FARQUHAR.) What do you consider the most pressing reform now necessary in the immigration service, so far as the port of New York is concerned?—A. I believe that the law should be so amended as to more clearly define the powers of the commissioners at the various ports. As it now stands, the commissioner of immigration is the responsible officer—holding the President's commission—and is held accountable for everything that happens at his port. He can, under the present laws, control it in a measure, but the work would be much simplified if it were legally defined. For instance, the evolution of the law of immigration has vested a number of men who were originally appointed as interpreters, and for that purpose only, with powers of admission and, if they are members of the board of special inquiry, exclusion of immigrants applying to be landed. To those who are excluded the avenues of appeal are open, but the other side of the question—the admission of undesirable immigrants—is absolutely under the control of the inspection officer without any right of appeal from his decision. The law says that the inspection officer “shall hold for special inquiry those who are not clearly and beyond doubt entitled to admission.” It thus becomes a matter of conscience with the inspection officer. If there is no doubt in his mind, he admits the party regardless of the facts in the case, and the commissioner has no definite right in law to reverse this decision pending further investigation or appeal. So also with the boards of special inquiry chosen from subordinate officers. They are sometimes without very much legal or judicial qualification, but they are placed in the position where they are, for the time being, judges. If their decision should be ever so wrong, it is final after the immigrant is admitted. I believe that, as the commissioner of immigration represents the President and the Secretary of the Treasury directly, and is the responsible party, he should be given the right to veto any act of his subordinate officers, subject to proper report and appeal to the Commissioner-General of Immigration and the Treasury Department. I believe this is absolutely necessary to a proper and wise execution of the laws.

Q. Is section 7 of the act of 1893, in regard to admitting immigrants under bond, taken advantage of frequently?—A. The bonding of immigrants is growing less and less each year, but, in my opinion, the whole question of bonds needs to be carefully revised.

Q. Will you state your opinion of this matter?—A. As I understand the matter, the provision admitting the taking of bonds was inserted as the equity part of the law, and should be continued; but, as a matter of practice, the taking of bonds is not in any measure accomplishing the object intended. I have examined the records and find that a few years ago large numbers of bonds were accepted. I also find, on examination, that it has been decided by one of the law officers of the Government, that, under certain conditions, even members of the excluded classes, such as idiots, diseased persons, etc., can be admitted upon bond. I do not believe that the law contemplated this. Again, as at present executed, the giving of a bond to the Government does not constitute a lien on the property of the parties giving the guaranty, and I am morally certain that there are people who have been bonded not to become a public charge now in public institutions at the public expense. In one case on record in this office a blind girl arrived, going to her parents in New York. The parents were poor but apparently worthy people, and stated that they had sent for their child and intended to support her as a member of their family. Owing to her condition it was decided that the Government

should be fortified with a bond before she was landed, which action was taken. About a year after, it was discovered that within a fortnight after her admission she had assumed a false name, and, claiming a man who had been in the United States for more than a year as her parent, secured admission to one of the institutions for the blind in the city of New York. She had then been an inmate for nearly a year and her real identity was discovered only by accident. In this case the bondsmen were sought out and compelled to indemnify the city for the amount of her maintenance while in the institution. This is the usual method of evading the bond—taking the names of persons who have been in the country more than a year, so that when verification is sought here our records will show that the parties are no longer immigrants within the meaning of the law, and the hospitals, asylums, and institution of New York are full of such people, although not all of them have been admitted upon bonds. I would recommend strongly that every bond taken should be made a matter of record and that one of the conditions of the bond should be that a semiannual or annual report be made of the case and the immigrant produced here for inspection. It is due to the department to say that, as I stated before, the accepting of bonds, except in cases involving the separation of families, has become more and more rare.

NEW YORK, N. Y., July 24, 1899.

TESTIMONY OF MR. EDWARD F. McSWEENEY,

Assistant Commissioner of Immigration at the Port of New York.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City July 24, 1899, Chairman Smyth presiding, Mr. Edward F. McSweeney appeared at 2.45 p. m., and, being duly sworn, testified upon the subject of immigration as follows:

Q. (By Mr. SMYTH.) What is your residence?—A. New York City.

Q. What position do you hold?—A. Assistant Commissioner of Immigration under Mr. Fitchie.

Q. And executive officer?—A. Yes.

Q. We will ask you to make a general statement of the workings of your office and any suggestions you have as to remedial laws or changes in the existing laws.—A. On last Thursday Mr. Fitchie requested me, as executive officer and assistant, having been in the Immigration Bureau since July 1, 1893, and having a fair knowledge of the subjects, to prepare hurriedly for the commission a statement of the difficulties that we encounter in the practical enforcement of the law, and such remedies as might be suggested in that connection; and to that end I have prepared a few points to submit to you.

Q. (By Mr. FARQUHAR.) At what time did the supervision of immigration at this port pass to the United States Government?—A. Under Secretary Windom, in 1890.

Q. Before that time the State of New York had control of it, did it not?—A. It was under the control of a set of commissioners appointed by the governor, with the presidents of the Irish and German societies acting ex officio. They controlled all matters of immigration at Castle Garden. Secretary Windom, after an investigation of certain complaints made to him, took advantage of that provision of the law which gives the States the right to manage the immigration laws, subject at any time to be abrogated by the Secretary of the Treasury. He decided it should be brought under Federal control, and that was done in 1890. Col. John B. Weber was appointed commissioner and in January, 1892, the Ellis Island station was occupied.

Q. The Commissioner-General of Immigration at that time was Mr. Owen?—A. He was then Superintendent of Immigration. The title was changed to Commissioner-General of Immigration in 1895.

Q. Then the authority of the State of New York over immigration ceased?—A. They had some subsequent dealings with Ward's Island, but all practical matters of examination were passed into the hands of Secretary Windom.

Q. Please give us a general statement of the methods of handling immigration at this port under the present laws, beginning at quarantine here.—A. It must be understood, first, that the law of 1891, which was passed after Colonel Weber came into power, practically represented the new idea of Federal inspection or immigration. However, the law under which we are now working and the law under which the administrative features were outlined, is the act of 1893, which was in

many respects an administrative act and changed in many particulars the methods of executing the laws. The law of 1891 did not make many changes, except as to defining the excluded classes and the methods of exclusion. The law of 1893 definitely placed the responsibility on the steamship companies. It changed the methods of manifesting the emigrants to groups of 30. It took from the collectors of customs the authority to exclude immigrants, and vested that power in the hands of a board of special inquiry, which was to be appointed by the Secretary of the Treasury or the then Superintendent of Immigration, now the Commissioner-General, and put it in their power to exclude or admit absolutely, subject only to appeals through the commissioner at each port. It must not be forgotten that this was a great change in the methods which pertained to immigration, because prior to that time the commissioner had this power. With the law of 1893 the number of immigrants excluded became very much greater. It was estimated and stated before a committee of Congress that as a result of that law 50,000 persons were refused the sale of a ticket within the year after the law of 1893 was passed. Before an emigrant can get a ticket to come to the United States he must apply to the nearest agent of the steamship company, and if that agent sells an unfit emigrant a ticket all the expense of his return comes on the steamship company and in some cases on the agent. The emigrant on buying his ticket answers a list of questions which are identical with those on the manifest list—19 questions—how much money he has, where he comes from, where he is going to, and all that sort of thing. When the emigrant finally gets his ticket this list is forwarded to the captain at the port of embarkation, and the names are made up in the lists of 30. Each list of 30 being practically complete, each emigrant is provided with his card for identification. These lists are sworn to by the captain and attested by the consul. After the emigrant reaches quarantine he is examined first under the authority of the State of New York by Dr. Doty; if there is no quarantinable disease he is allowed to pass through, and comes to the immigration station, being removed from the ship on barges, the law expressly stipulating that the immigrant is constructively on the vessel all the time during the pendency of the examination.

Q. Until passed on or landed under the direction of the Government?—A. Yes.

The law on immigration has been the result of separate statutes which have been enacted from time to time. The law has not been uniform, and the courts have found it very perplexing when called upon to decide questions.

The first law was rather to regulate immigration than to restrict it. That was in 1882, and it is the one which provided for a head tax, which was specially intended as an immigration fund to defray the expenses of regulating immigration under this act, and for the care and relief of immigrants who fell into distress, and for the general expenses of carrying this act into effect. This law provided for the examination "into the different conditions of passengers arriving at this port" and authorized the exclusion of, first: "Any convict, lunatic, idiot, or any person unable to take care of himself or herself without becoming a public charge." The law then authorized such exclusion by simply enacting that such person "shall not be permitted to land." It does not provide for anything further, except for convicts, concerning whom it says that "all foreign convicts * * * shall be sent back to the nations to which they belong and from whence they came." Courts have found it difficult to enforce this law, as has also the executive office of the Immigration Bureau, as cases have arisen where the convicts belonging to one nation have come from the port of another. This law is not repealed, but another law, that of 1891, has been added to it.

In the interval between 1882 and 1891 Congress restricted immigration as to contract laborers. The statute is known as the contract-labor law of February 26, 1885. The working of this law has not been satisfactory from the point of view intended by Congress. The spirit of the law was that it should be made unlawful to import persons under contract. It provides for a fine of not more than \$1,000 to be imposed upon the importer. The courts have strictly construed this law, holding closely to its letter, and consequently not many fines have been imposed in the many cases of flagrant violation of the law, for the simple reason that the contract referred to by the law must be fully proved to be such as, but for the law declaring it unlawful, would entitle the contracting parties to enforce it. The courts have also held that, inasmuch as the act consists in the "importation or migration of any alien into the United States on the contract made previous to the importation," the fine can not be imposed except after the alien has landed, so that such landing would constitute the importation and migration.

Here, again, a difficulty arises in the executive department; if these contract laborers are to be deported and not allowed to land, no importation or migration takes place and the fine can not be imposed.

Again, in order to prove the contract, the testimony of the alien is necessary. If he is deported, the suit must begin at once before his deportation and his testimony taken in the suit; for if not taken then we could not very well trace him abroad in order to get his testimony on interrogatories by commission later on. If, on the contrary, the alien is allowed to land, then it is to be presumed that he goes straight to work for the person importing him, whom he is not likely to betray, and the result is that he is no help to the Government to prove the contract.

So far the power to deport the contract laborer has been supposed to exist, but no line of this law justifies such a power except the title to the act, which is—"To prohibit the importation and immigration of foreigners and aliens under contract or agreement to perform labor in the United States, its Territories, and the District of Columbia." This act was amended February 23, 1887, but even in this amendment no power is given to deport a contract laborer, unless perhaps it is found in sections 6 and 8. By section 6 immigrant inspectors are authorized to examine passengers and if "any person included in the prohibition in this act" shall be found among them, such persons shall not be permitted to land.

Section 8 provided that all persons "included in the prohibition in this act" shall be sent back to the nations to which they belong and whence they came. Who are the persons included in the prohibition? Again the answer is to be found only in the title. Neither the original act nor the amended act says who are the persons included in the act. The prohibition of the act is to enter into a contract with an alien to import him, and a fine is imposed on the importer of such contract laborer or alien. There is no other prohibition in the act. The amendment of 1891 was virtually a recapitulation of previous laws. By it the aliens are "excluded from admission" if found to belong to the following classes, to wit: "All idiots, insane persons, paupers, or persons likely to become a public charge, persons suffering from a loathsome or a dangerous contagious disease, persons who have been convicted of a felony or other infamous crime or misdemeanor involving moral turpitude, polygamists, and also any persons whose ticket or passage is paid for with the money of another, or who is assisted by others to come, unless it is affirmatively and satisfactorily shown in special inquiry that such person does not belong to one of the foregoing excluded classes, or to the class of contract laborers excluded by the act of February 26, 1885." The law is peremptory as to these classes. These questions have arisen: Who is an idiot? Who is an insane person? Is there a middle distinction between the two? Where should the line be drawn? Cases have arisen of a child, a member of a family, coming here, brought by its parents. Such a child, whether an idiot or an insane person, must be "excluded from admission," the law being peremptory. No power is given to the commissioner to take into consideration that the parents are coming here to establish a home with their children, among whom is this unfortunate creature. The parents and the rest of the family are qualified for admission. What is the commissioner's duty, since he can not fathom the dictates of humanity? Is it to allow the parents and the other children to land and to send back the idiot or insane child, or to send the family back?

The same considerations are to be had for such persons as may be found suffering from a loathsome or a dangerous contagious disease, inasmuch as many cases have occurred where children suffering from a loathsome contagious disease had to be sent back while their parents had a right to land. The Treasury Department by circular of October, 1897, made a regulation that in case a minor child is suffering from a loathsome contagious disease and comes here accompanied by its parents "one parent should be returned." This rule was made for humane considerations.

I recall a case where, acting upon such a rule, a child suffering from a loathsome contagious disease was ordered deported, and the mother, although qualified to land, was ordered returned with the child. The mother sued out a writ of habeas corpus, claiming that she was entitled to land, and the judge before whom the habeas corpus came stated that the Government had no power to make such a regulation; that if the parents did not have sufficient humane regard for their afflicted children to go back voluntarily with them, the law was not supposed to be more humane than the parents.

Public opinion does not tend to sustain the present law as applied to individual cases. Strong appeals for relaxation of the present law can be and are made on the ground of sympathy and humanity in every case of insanity, loathsome or chronic contagious disease, idiocy, or the young physically so crippled that they are sure to be always dependent on someone for support. In case of insanity, idiocy, and loathsome and dangerous contagious diseases the law is peremptory, but even in these cases deportation is often effected with difficulty. Where the

breaking of family ties is concerned the contention of "likely to become public charges" often fails to hold, and miserable degenerates, crippled children, and the physically unfit to live are released sooner or later to become burdens upon the community. The giving of bonds, even strictly as it is regulated at present, is inefficient.

The next class to be considered is that of persons who have been "convicted of a felony, or other infamous crime or misdemeanor involving moral turpitude." Experience has taught us that other undesirable persons could be included in that class. I recall an instance of a man charged with murder in the first degree, who was a fugitive from justice, and who was confronted at the Barge Office with the witnesses to the murder. The Government of the nation to which he belonged was notified of the case, but did not take any action. Why should not such a person, whose nation does not care to recall him back for punishment, but are glad to be rid of him by his self-imposed exile, be excluded from admission? Yet if he comes with sufficient money, so that it would be against the consciences of the inspectors to declare him to be likely to become a public charge, they can do nothing but admit him. We had another case, of a person charged with fraud, embezzlement, with a felony. His extradition was demanded and the United States Commissioner decided that there were good grounds for believing that the charge made against him was true; but a technical question arose as to whether the felony was committed in the country which asked for his extradition, or in another country which did not ask it, and because of the doubt the Secretary of State withheld the warrant for his extradition. Why should such a man, declared by one of our tribunals likely to become a convict, be admitted?

The next class is that of polygamists. Several cases have occurred of runaway love affairs, say, between a married man and woman. The fact is known and admitted by the parties on examination. They are not polygamists, because they do not profess polygamy, nor have they married each other, because one or both of them is already married. But why is not his case of greater turpitude than that of a man who openly professes polygamy according to his convictions?

Again, we have had cases of women not the wives of persons with whom they came in company. Are they to be admitted, and polygamists not, or should they not be included in this class?

Again, a girl runs away with a man, or, vice versa, a young boy under age runs away with a woman who may have enticed him. A recent case was that of a prostitute coming here with a boy of 18 years. The parents from the other side cabled of the occurrence and asked protection. Of course no protection, as such, ought to be given in such a case; but why should not the Immigration Bureau have power to exclude such persons from admission?

The next class referred to by this law is that of persons who come here assisted with the money of others. The law makes this assistance a cause for exclusion, unless the alien proves affirmatively that he does not belong to one of the excluded classes already enumerated, or does not belong to the class of contract laborers.

A careful revision of the contract-labor law should be made in the light of the experience had since the first law was enacted.

To exclude aliens coming here under contract to perform labor is a matter of easy conception, but it is very difficult to put into execution, as it is difficult to prove contracts made abroad. It can only be proven in three ways: First, by parties present to the contract, and inasmuch as the contract must be made outside of the United States, necessarily, in most cases, the witnesses are outside of the United States and the difficulty is to bring them in to prove the contract; second, by the confession of the alien asking for admission; he knows that by confessing it his punishment is deportation, and the threat of deportation makes it difficult to get out of him the fact that the contract exists; third, by the party importing the alien, who by law is threatened with a fine, so he certainly will not prove the contract.

Experience has shown us that very few convictions have been had. Deportations have been very many. Certainly the number of deportations is out of all proportion to the number of convictions for the fines imposed; but no criticism can be made of such glaring discrepancy. The fact is that those who decide for the deportation of the aliens are executive officers who value the evidence before them differently from the way a judge would, and are not fettered by any restrictions as to the legal import of testimony, and are guided solely by their consciences and impressions which arise during the examination, and in this way reach their conclusions. On the other hand, when the fine is to be imposed, regular pleadings before a judge are brought and the judge has first to decide whether from the allegations in the pleading a contract can be spelled out, and being by law compelled to stand on legal rules obviously weighs these allegations by a legal

criterion. Invariably the judges have decided on demurrer to the pleadings without leaving the question to the jury.

The law should not be such that strict proof of a contract should be required. An inducement to come here to perform labor, an allurement of aliens to come and perform labor, should be sufficient to make any importer of such aliens liable for the fine. What amounts to inducements or allurement the jury might find out after due instruction from the judge.

Another class of laborers is also taken into consideration as not desirable under any circumstances. Many aliens come here during the laboring season and go back during the winter to their homes. As a matter of fact, millions of dollars go out of the country to enrich other countries in this way. In other words, millions of dollars are made to circulate outside of the United States, which ought to remain for circulation in this country. How to prevent the landing of such birds of passage may be very difficult, but the board of special inquiry ought to be given discretion to exclude this class of aliens when known to be such, when the circumstances show them to be birds of passage. That they are undesirable there is no question. They do not make good citizens, because they are not even residents. They earn money for the purpose of accumulating it, and spend their sayings abroad. They work for less wages, thus impairing the local wage scales. They come here for half the season and then disappear and others replace them, and they necessarily take the place of laborers in the United States.

The alien contract labor laws were passed at the demand of labor organizations, and they should be fully informed of the difficulties attending their enforcement, so that they will not expect impossibilities from the immigration officials. If the courts construe the laws so as to thwart the intention and spirit of the men who urged their passage, I think it wise to show them wherein the law has failed to reach the evils aimed at and assist them to supply the defect by remedial legislation.

The spirit of the present immigration laws, as well as the theory upon which they are most all founded, is sound; the only difficulty being in omitting to clearly and accurately define remedies for the evils existing in undesirable immigration.

The courts are honest and conscientious in their enforcement of the laws, but are fettered by the faulty construction of the statutes. I believe the immigration officials are faithful and fearless in the discharge of their duties. These facts being found to exist, it ought to be easy to supply such remedies as will make the protection sought for almost complete if not entirely so.

Give the commissioners of immigration at the various ports plenary powers to act according to their discretion in all cases where it is found difficult to enact a precise remedy by law, subject to appeal and review by the Department.

Make false swearing a misdemeanor and prescribe a punishment, not too severe (so as to render it difficult to convict), but so elastic as to fit the crime.

While the terms "pauper" and "public charge" are sufficiently broad to reach most all undesirable immigrants, there is yet a class whom it does not reach. There is a class of immoral persons, not convicted as such, but in the eyes of any unbiased person they would be considered unfit for good citizenship. They usually come with a good supply of money in their possession, and the likelihood of their actually falling into distress and becoming a public charge is too remote oftentimes for a verdict of exclusion to sit lightly upon the consciences of the inspectors acting on boards of special inquiry. Criminal persons, not convicted according to the terms of the existing laws, generally come well supplied with money, and here is no way to reach them except under the class of persons likely to become a public charge. Surely the law does not intend to consider a person who has been convicted of a felony or other crime involving moral turpitude as any more undesirable for citizenship in this country than one who, though equally guilty, has escaped from the scene of his crime and comes here a fugitive from justice. I hold that all such cases should be left to the wise discretion of competent persons sitting as a board of special inquiry, subject to the concurrence of the Commissioner of Immigration, and with the usual right of appeal lying to the Department at Washington. These would constitute sufficient safeguards for the protection of the immigrant as well as the country.

I do not believe in the plan of trying to reach every little evil in immigration by a precise enactment, for this would oftentimes so bind the executive officials as to compel them to be unnecessarily severe in all cases, whereas their acts should in each particular case before them be tempered with justice and mercy, as the exigencies of the case require. This difficulty could be effectually obviated in many cases by making the board of special inquiry approach as nearly as possible to a jury, guided by instructions and regulations.

My experience has taught me that where an unbiased body of sworn officials, after a careful examination, believe an immigrant should be rejected, he is gen-

erally a bad immigrant and would not make a desirable citizen. On the other hand, I have seen cases where an immigrant would fall within the letter of the law and still in the opinion of the inspectors be a desirable immigrant. For instance, if an alien, through no fault of his own, should not be manifested according to law, the punishment under the present law does not fall upon the steamship company, where it rightfully belongs, but falls upon the immigrant. The fine must be paid, or what occurs? Not a punishment of the steamship company, but the immigrant must be deported as any other excluded person; this, too, in the face of the fact that the immigrant so improperly manifested must first be adjudged qualified to land before the fine can be assessed.

The status of an alien who has acquired a residence here and returns to his native land should be clearly determined in some manner, so that we will know in what light to consider him when he returns to the United States.

Finally, I believe the time has arrived when all the laws touching immigration should be carefully revised and an entirely new law enacted, embodying all that has been found by experience to be beneficial in the old laws and such new enactments as wisdom shall dictate.

Q. (By Mr. FARQUHAR.) How are you advised here at your office of the sailing of criminals from the other side?—A. We are not advised at all, unless occasionally the governments from which they are fleeing advise the State Department, and the State Department sends the Department notice.

Q. In case of escaping criminals from Great Britain, have the Scotland Yard detectives anything to do with the Bureau of Immigration?—A. Very frequently they send word direct to the police department in New York, and they notify us.

Q. What have you to say as to the closeness with which you keep count of the immigrants that come here?—A. It is absolute.

Q. No possibility of a small percentage passing without being accounted for?—A. They do pass occasionally, but we always know it. With all the precautions we take an immigrant sometimes escapes, and we notify the company; and in a majority of cases the immigrants are returned, or it is proven that the escape has been of such a character that no one has been to blame. But as to any wholesale escapes, that would be utterly out of the question. I think there is a chance for the entry people coming in here, over whom we have no jurisdiction. They come as sailors to the United States with sailing ships, and even with transatlantic vessels. There is some leak there, but we have no control over that, although our attorney has been looking the matter up and we have gone into it with the foreign governments. As to the statement that there is an incorrect count of immigrants coming to New York, it is utterly preposterous.

Q. What jurisdiction, if any, have you over the first and second class passengers on these steamers?—A. As to aliens, equal jurisdiction with the steerage passengers.

Q. Does the head money attach to the aliens?—A. Every person who comes in the first or second cabin, not a citizen of the United States, pays a head tax.

Q. Have you ever discovered any discrepancy between the names carried on the manifest and the actual count of the immigrants on board? Do you find more or less at any time?—A. We find less sometimes, and occasionally more.

Q. How do you account for that?—A. There are 30 names on each manifest. These 30 names have been sent in from the general office to the ship, are made up on the ship, and at the last moment before the ship goes out are signed by the master and certified to by the consul, and it is quite possible that of the 600 or 700 or 1,000 people that come over in the ship a man or woman, or a number, may back out at the last moment. The consul always certifies that a certain number are booked. If the consul knows that such a party is not on the ship's manifest, he will say "No. 17 omitted; not on board." Or it is quite possible they might not be on board and he not know it, as they might walk off at the last moment. So the steward or purser would draw a line through that name. But we get so very few in that way that when the line is drawn through, Commissioner Fitchie collects the fine just the same and makes them go through the regular legal process of having the fine remitted through the Department at Washington. On the other hand, parties run on board at the last moment. You will find hundreds of people on board 5 minutes before the ship leaves. If they should come over they might be perfectly proper immigrants, but if we were unable to find them on the manifest they would have to pay a fine of \$10 each, and they would have to go back unless the fines were paid. That is according to section 4 of the act of 1893.

Q. Do you receive these manifests at quarantine?—A. They are received by our officer from the purser at quarantine.

Q. What process is gone through to verify the manifests?—A. Every immigrant is examined.

Q. How many inspectors have you in the examination?—A. Seven to ten registry clerks in the direct examination of the groups of 80.

Q. Suppose you have 500 immigrants?—A. We have 7 or 8 lines working, each line containing 80. Thirty would be coming through at one time. Mr. Fitchie has examined in his time over 4,000 in a day during the past spring.

Q. So the verification of these manifests, to your mind, is sure almost?—A. I think I can state so positively.

Q. What reliability can be placed on statistics that you annually put forth from this port through the Commissioner of Immigration?—A. Prior to the beginning of the fiscal year 1899 I think very little reliability could be placed on their value.

Q. Wherein lay the faults of the old figures?—A. They did not give what they purported to give.

Q. Did your bureau follow out pretty much the system of the New York commissioners?—A. Constant changes were being made in statistical methods, but the changes were in the way of correcting manifest errors rather than making a complete change in the system.

Q. Where were the manifest errors in bringing these statistics out?—A. I think the failures in the old way were caused by lack of knowledge of the peoples coming to the country. There was no intentional falsifying of statistics. As we have gone on we have come to know more of the peoples, more of whence they come, and what their characteristics are.

Q. In accounting for immigrants by nationalities how accurate are your figures?—A. They are only true in regard to political divisions from which the immigrants come.

Q. Nativity?—A. No. Their race is not true.

Q. Are a good many of the manifests merely from the ports independent of the nationality?—A. I think not. They are manifested from the political divisions from which they come. That would be no criterion as to their race or industrial possibilities here.

Q. So that in the reports furnished by the Government every year the designation or the nationality is no real criterion at all of the immigrant himself?—A. Very little. The present Commissioner-General, Mr. Powderly, has gotten together a new system of statistics which I think will meet any objection which might be urged against our past statistics.

Q. Does the same fault apply to the reports of the occupations of the immigrants?—A. The occupations of the immigrants are absolutely of no value even now.

Q. In what way?—A. The average immigrant from Europe coming here has followed in Europe that occupation given him. He was merely a land workman, not a farmer. Usually they are laborers on farms, and when they come here they are ready to go into anything that offers. They are ready to go into mining or anything that comes their way, and the probabilities are nine-tenths follow a different occupation from that they followed in the old country. Of course, if a man is a carpenter he perhaps remains a carpenter, but if he is an unskilled laborer he becomes that which chance gives him here.

Q. Have you a classification of skilled labor?—A. Yes.

Q. Does it cover nearly all trades?—A. I think our present classification is fairly comprehensive.

Q. So that, taking the old statistics, this commission or anybody that intended to find in general immigration the skilled or unskilled, or the nationalities of European immigrants, would be at an entire loss if they took the official tables as furnished by the Government?—A. I think so.

Q. (By Mr. SMYTH.) Can any reliance be placed on the destination as given by the immigrant and his friend, and as shown by your statistics?—A. Only partially.

Q. Can you give any incidents where you have been misled in that way?—A. Of all the immigrants that land at New York it is estimated that 45 per cent stop temporarily in New York to get their bearings. We confine our statistical divisions to the State. Between the years 1880 and 1890, in round numbers, five and a half to six millions of immigrants were landed at the port of New York. On the basis of 45 per cent coming to New York, there would have been at least, say, 2,000,000 giving their destination as New York. The census of 1890 showed the population of New York had increased during that period less than a million, some 900,000.

Q. In your Government reports you state a great many Russians have been received in this country. Is that true?—A. No, very few have ever come to this country.

Q. How many did you report last year?—A. I should say that of about 40,000 reported as coming from the political division of Russia last year, as an estimate probably 200 might be Russians.

Q. Are there many variations of that kind, Germany and France, for instance?—A. Not in Germany and France; but there are from the political divisions of Austria-Hungary and Russia. Austria-Hungary now comprises a tremendous factor in our immigration, yet we can hardly say there is such a thing as an Austrian. In our new statistics he would be classed as a German. The immigrants coming from Austria-Hungary are Slovaks, Slavonians, and Croatians, etc.

Q. Are there many Hungarians?—A. If Magyars are meant, very few. Many come from Hungary, but they are not Magyars.

Q. What are they?—A. Poles, Slovaks, Croatians, Dalmatians—all those people that comprise the Hungarian Kingdom.

Q. Do you think that the statistics of the Russian Jews are correct?—A. We have no statistics as to the Russian Jews. They were not classed as to races previous to the last fiscal year.

Q. Instead of the general statement made as to the Huns having displaced the American and Irish miners in Pennsylvania, you would substitute the Slovaks, Lithuanians, Poles, and Croatians?—A. Yes.

Q. Is it a fact in their own homes the Slovaks are nearly all miners?—A. They do some mining there.

Q. The general term Hun, you take it, is not a proper title to give to that class of immigrants?—A. I do not think it would be fair to the Magyar race, who are the real Hungarians.

Q. How do you classify Polish and Russian Jews?—A. That is one of the things in which the falsity of the old system was manifest. When Poland was divided between Austria, Russia, and Germany each part became part of the political entity to which it was given. The Poles not having given up their national characteristics, the Russian Pole is practically as much a Pole now as before the division of Poland; whether he comes from Russia or Austria he is of the same race. The Pole that comes from Germany may be better educated on account of the compulsory laws, but he is a Pole and would be of the same industrial possibilities.

Q. Do not a good many Jews come in from the interior of Turkey?—A. A good many have come from that political division.

Q. In your eastern Asiatic immigration what nation predominates?—A. The Syrian, Armenian, and Greek predominate.

Q. What are their callings or professions?—A. Usually merchants and laborers. The Armenians have gone into Massachusetts particularly, having colonized certain sections. You will also find a good many Greeks in the textile business in Lowell and Lawrence. You will find them also to a certain extent in New Bedford and Fall River, etc. We get a great number of people at our port who are going to Lowell and Lawrence and have acquaintances there. The Armenians have also a large colony in Worcester. The Washburn-Moen Company started a factory in Illinois somewhere, and a great many of that people are out there. The Syrians, on the other hand—if they have gone into producing pursuits, I have not known of it—are mostly peddlers. They have certain distributing agencies all over the country. They are peddlers and go around the country under the control, as I understand it, of certain people interested in notions.

Q. Have you any knowledge that in the case of Armenians and Greeks there is something of the old padrone system?—A. Yes. We are morally sure it exists. When the immigrants of that class come all provided with American gold and having about an equal amount of money, there must be something more than chance accountable for it.

Q. Have you formulated any amendments to the present immigration laws or the alien contract labor law?—A. I had the honor of being a member of the commission appointed by Secretary Carlisle. That commission recommended some 29 changes in the present law covering immigration, which were reported in a printed book. They are all administrative except one or two, and such as the commissioner at the port of New York would find to his benefit every day in the year. I have taken the liberty of putting these down in the form of laws, with the assistance of Dr. Uilo, in a memorandum I will submit later. It points out many defects in the law, which everybody is agreed should be changed.

Q. Practically you have had no amendments to the law since 1893?—A. The only amendments made were those changing the title of the Commissioner-General of Immigration, making the decision of the commissioner at the ports final, and increasing the head tax from 50 cents to a dollar. That was put in the law as a rider on some of the emergency bills in 1894.

Q. Do the circulars from the Treasury, issued as instructions, modify the laws in any way, or are they more in the nature of amplifications of the law?—I should say so.

Q. Have you any opinion to give as to doubling the head tax?—A. I should think it would be a very good thing.

Q. What are your reasons?—A. So that at no time the immigration service would be liable to be crippled for funds as it was in 1892. Since the fire at Ellis Island they have taken away from us several hundred thousand dollars, which our fund will have to pay, and if it should happen that immigration should be reduced we would be bankrupt as we were in 1892.

Q. In rebuilding Ellis Island is there not an appropriation by Congress?—A. There is some provision for reimbursement from the immigration fund.

Q. Do you think the guaranty of one year on the part of the steamship companies is sufficient to cover the immigrants who lapse into the undesirable classes?—A. No; I believe that it should be extended to at least 2 years.

Q. Do you think it would meet a good deal of opposition on the part of the steamship companies?—A. I do not think so.

Q. Have you ever heard them express a willingness to make it 2 years?—A. No.

Q. Have you heard any expression of willingness to extend it?—A. No; but have no idea the responsible steamship companies would oppose such an enactment.

Q. Is it your understanding that the head tax is paid by the steamship companies?—A. Yes.

Q. That is added to the cost of the ticket from the other side?—A. I presume so.

Q. (By Mr. CLARKE.) Where is your office?—A. The Barge Office in New York.

Q. Why is it called the Barge Office?—A. I do not know. When the building was built it was intended to receive all the cabin passengers. It was built some time about 1878 or 1879. The idea was that all the cabin passengers would land on the docks as they do now, but would be brought to the Barge Office after they landed and their baggage examined.

Q. Where is this building located?—A. At the end of Whitehall street, at Battery Park.

Q. Do the trans-Atlantic liners land there?—A. No. They land from Cortlandt street, to about Twenty-third or Twenty-fifth street, and in Hoboken.

Q. How are the immigrants taken from these steamers to what you call the Barge Office?—A. By barge.

Q. Is that probably why it is called the Barge Office?—A. Perhaps so.

Q. How is that building arranged inside for the inspection of these immigrants?

A. We have had to take the rooms as they were constructed originally, and make the best of them, but we have arranged them as nearly to a reproduction of the arrangement at Ellis Island as we could. We have a large central inclosure for the chief registry clerk; have on each side four aisles capable of holding 30 immigrants passing in review before the registry clerk, sitting at the end of the line. We have in addition to that the balance of that main floor subdivided by iron railings, so the groups of 30 in the aisle, waiting for examination, can be placed in there and arranged according to their groups.

Q. Are these registry clerks skilled in more than one language?—Yes; they have to be.

Q. What languages do they speak?—A. Almost all speak German, Italian, or Yiddish, and we have others who speak the Slavonic languages and dialects; and we have another clerk who speaks the oriental languages. We have had three until lately.

Q. Does the registry clerk converse with every immigrant?—A. Yes.

Q. What does he hand to the registry clerk when he approaches?—A. He hands him generally his inspection card, his doctor's card, a card he receives on the other side, which is supposed to be punched every day by an officer of the ship. It also contains the immigrant's name, the ship on which he came, in some cases his country, his age, his group, and list number.

Q. Does the registry clerk examine them and compare them with the ship manifest so as to see whether they agree or not?—A. The manifest is before the registry clerk, and that is the basis on which he examines each applicant. He marks any discrepancy, and if there is any doubt at any time that he is the immigrant on the sheet he marks him for special inquiry.

Q. After these immigrants have passed these registry clerks what official do they next come in contact with?—A. That would depend on the class they came in. If they are going to a Western point they are immediately passed down to where the railroad companies have their offices, and are ticketed and sent forth under the protection of the railroad company and auspices of the Government. If they are

held for further inquiry, such as a wife coming to her husband and it is desired the husband should come for her, or girls coming to relatives, or for any reason their story needs verification, they are held in the New York detention pen in the building, and the information office afterwards verifies the statements of the applying friends with the statements of the immigrants, and if everything coincides and the subsequent examination verifies that of the registry clerk the immigrant is admitted. If there is any discrepancy he is held for special inquiry. If the clerk does not deem him beyond doubt entitled to land, he goes to the "S. I." detention room where he comes in due course before the board of special inquiry.

Q. Is there any medical inspection in that building?—A. The medical examination is the first that is held.

Q. Held in that building?—A. On the same floor. All those who are considered suspicious by the doctors as the line passes in review before them are placed to one side and taken to the doctors' apartments, where they are especially examined, and if alling a certificate of rejection is made.

Q. Are there many instances of immigrants being tampered with by any class of persons hanging about the Barge Office?—A. There has always been a class of persons, whose representatives have been hanging outside to get immigrants under their control, but of late years that has been reduced to a minimum. The minute any extortion or wrong doing is known the commissioner immediately prosecutes, and there are a number of people in the States prison for such offenses now.

Q. You think that protection is more efficient under the United States administration than under the State administration?—A. I think it is absolutely and unqualifiedly so. The best testimony to that fact is the unanimous testimony of every missionary organization connected with the institution.

Q. Will you not explain briefly what missionary associations are represented there and what attention they give to the immigrants?—A. There are altogether upward of 15 missionaries there. A number of well-known and responsible societies that immediately come to my mind. The united Hebrew societies, representing all the Hebrew organizations of New York, have a representative at the Barge Office for the special care and protection of Jewish immigrants. This society has an agent and assistant at the Barge Office. The poor of its faith that come in are visited and receive assistance if necessary. Those that are detained are visited by this agent, and if they need money to telegraph, or clothes, or any material assistance it is given them, and in that way this society is helpful in administering the laws, and has worked for the benefit of the immigration laws. And I think the next largest is the society of Our Lady of the Rosary, for the protection of Irish girls. All Irish girls that come to this port can be sure that they will be met at the immigration station, and after they are examined and adjudged fit to land they go to the mission, where they receive a pleasant home, and the moral responsibility for their being placed in safe hands is assumed by that institution.

Q. Is that near the Barge Office?—A. Right across the street. We have the German society and the Irish society. The Irish society was formed as a branch of the Irish immigrant board, and is ready at all times to assist detained Irish of any faith. The Women's Home Mission of the Methodist Episcopal Church have an excellent place at No. 9 State street, where the immigrants of that faith are received and kindly and courteously cared for. These societies that I have mentioned are all supported by outside contributions, and their assistance given to the immigrant without cost. The New York Bible Society, under Mr. Jackson, has been in immigration service for something like 25 years. He gives Bibles and tracts to those who desire them. The Protestant Episcopal Church, under Bishop Potter, has a representative, and a number of others that at the present moment I could not mention. I think I can safely say the societies I have enumerated are great aids to the executive office in the enforcement of the law in many ways besides their legitimate functions.

Q. (By Mr. FARQUHAR.) Is there an Italian society?—A. One called the St. Raphael Society, which has been in existence for a short time under its present management. It came in about 3 or 4 months after Mr. Fitchie came into office. It had formerly been there, but had gone out. Personally I do not know of any hurt it has done; but I do not know of any good it has done either.

Q. These societies exercise more religious functions than anything else?—A. They have no religious functions: it is pure charity.

Q. Do they make provision with money and otherwise for the comfort and assistance of the immigrants?—A. Some of them do.

Q. (By Mr. SMYTH.) They look after lonely women and protect girls?—A. Yes.

Q. (By Mr. CLARKE.) Before the immigrants pass out of the building, and while detained, is there any provision for feeding them?—A. Yes.

Q. At whose cost?—A. At the cost of the steamship companies.

Q. What is the cost?—A. Fifty cents a day. Under the new contract, which went into effect the 1st day of July, 1899, it is 35 cents a day.

Q. What kind of food and in what quantities?—A. As much as they can eat. In the morning coffee, bread, etc. They can eat all they want; we have never received a complaint. They eat 3 times a day; at noon they receive a meal of soup, meat, bread, and potatoes; at night, coffee, bread, and prunes.

Q. (By Mr. SMYTH.) This is furnished by the immigration department?—A. Under their supervision, but not by them; there is a contractor; it is given under competitive bids.

Q. Is it open to inspection?—A. Yes.

Q. What kind of meat, and how is it cooked?—A. All sorts, lamb, beef, boiled beef. I can supply the commission with the menu which Mr. Fitchie has.

Q. Is it in the power of the commissioner to supervise the character of this supply of food?—A. Entirely so.

Q. So that it must be satisfactory to him?—A. Yes.

Q. He makes out the menu?—A. Yes.

Q. (By Mr. FARQUHAR.) Is there any arrangement by the consular agents here of European nations, or their ministers in Washington, in respect to the supervision over their immigrants that come here?—A. There are by two Governments, the Italian and the Austro-Hungarian.

Q. How long has the Italian Government had any supervision?—A. Since June, 1894.

Q. What privileges have they had, and who granted them?—A. The then ambassador to Rome, the Hon. Wayne MacVeigh, forwarded a copy of an Italian paper which went with some elaboration into the wrongs done the Italians in the United States; which said that nowhere in the world were the colonies of the Kingdom of Italy so rich and so powerful as they were in America; that the Italians in America were *Italian colonists*, and subject to their Italian Government. The article went on to say that those Italians that went into the United States with the intention of remaining and becoming citizens were loved and respected here. It was not expected that such a feeling could be entertained for those who only came to the United States with the intention of acquiring riches and returning to Italy. It went on to say that the minister of foreign affairs had interested himself in this problem and would immediately bring it to a successful conclusion. Shortly after, Baron Fava visited Dr. Senner at Ellis Island, and negotiations were entered into between Secretary Carlisle and Baron Fava whereby Baron Fava was to have the right to appoint an agent of the Italian Government to be stationed at the immigration office at the port of New York, for the purpose of protecting the Italian immigrants against the evils of the padrone and, if necessary, when he fell into the clutches of the padrone, to rescue him. After a great deal of correspondence, which is on record, it was finally agreed by the Secretary of the Treasury that such an office could be established at the immigration station for the purpose stated, it being distinctly agreed that this establishment was an experimental one. The office was established, with a gentleman named Professor Oldrini in charge. That office went into existence in July or August of 1894. There was considerable space on the floor of Ellis Island at the time, and a space very much removed from our immigration processes, a large room 100 feet removed from the last inspector, was set apart so that the immigrants could go through and get into this floor, and it was supposed that in this office the immigrants would be advised that it was not necessary for them to go to the padrone to secure employment; that they could secure employment themselves; and it was thought that this Italian office would simply break up the padrone, because after it was established no padrone would ever come there. All the immigrants coming into New York were sent to them, and they made their examination, and examined all their passports, etc. Shortly after that there was a colony of Italians, which was a part of the colonization scheme of the late Austin Corbin, started in Sunnyside, Ark., and Professor Oldrini resigned and went to this colony, and a representative of the San Raphael mission resigned and went also. In his stead was appointed Dr. Egisto Rossi. Dr. Rossi had written a book on the agricultural resources of the United States. He is a very learned and accomplished gentleman. Shortly after the establishment of the bureau the contention was made by Professor Oldrini that the Italians who were going to the railroad points were not allowed to go into this bureau, and the matter was referred to Washington, and the authorities decided that as those who were going to the railroad points were presumably going to points which they had themselves selected, and were in no danger of getting into the clutches of the New York padrone, there was no need of their being directed to the bureau, and so they were not given that privilege. The matter has gone on until now we have an Italian bureau, which I do not believe is in accord with the spirit of the immigration service.

Q. Has it been maintained there since its first establishment?—A. Yes.

Q. And Austria also has the same?—A. The Austria-Hungarian Government has quite a different institution. The Austria-Hungarian consul at New York, then Baron Stockinger, and Baron Hengelmüller, the Austrian ambassador at Washington, organized the Austria-Hungarian society here in New York, the object of which is to furnish the protection of home to the Austrians of all classes, Austria having made a subvention of some special amount of money which is given for a protection and home for Austrians of all classes in this country. The subvention from the Government provides that a certain number of days lodging—it runs up to several thousand—is provided each year free, on application, to the needy people who apply. They have in connection with it a free labor bureau, which is paid for out of the subvention. Austria-Hungarians can go to this place and find a home. There is an agent of the Austria-Hungarian office at the Barge Office, and occasionally a representative of the consul comes down and looks around to see if there is anything he can do for his countrymen; but he has no office there and his visits are only semioccasional.

Q. Have you any idea that there could be, through admitting these foreign representatives, opportunities to cover up a great deal of assisted immigration and found a padrone system; do you not think it is dangerous?—A. Yes, absolutely.

Q. Absolutely dangerous?—A. Yes.

Q. Have you any particular statement to make about the workings of it, so far as you have seen it?—A. I desire to preface any statement I might make with reference to the Italian bureau with the statement that I consider Dr. Rossi, who represents the Italian Government at the Barge Office, as a thoroughly honest and careful and conscientious gentleman. He is performing a difficult task in the best way that he can, and whatever I say—and saying this I simply embody the opinions and feelings of my chief—is with no malice toward him, because he has done nothing personally to cause us to lose our great regard for him, but we find that while the Italian Government continues the quasi official supervision over its immigrants there, the United States Government's inspection must be necessarily offset to some degree; that the establishment of such a bureau there in a measure tends to encourage the undesirable Italians to come here, because they feel that they might be protected when coming here. We further believe that the objects for which the Italian bureau was created have not been in any measure achieved; that the padrone system has not been broken up, and that criminals from Italy have not been stopped from coming here.

Q. (By Mr. SMYTH.) Do you still think there is to some extent assisted immigration to this country?—A. I do.

Q. From more than one country?—A. Yes.

Q. Would you say what countries you think that immigration comes from?—A. I think from many countries, but think it generally comes here from England by way of Canada.

Q. Not so much from the continental or Mediterranean sections?—A. No; the Commissioner of Immigration at the port of New York has established the line so that the steamship companies now do not dare to bring them.

Q. Can you suggest any way to check that immigration coming by way of Canada?—A. It is a pretty difficult problem.

Q. (By Mr. FARQUHAR.) Is that the English system of sending out farmers, mechanics, servant girls, and even schoolboys to Canada?—A. That is quite a different system. Coming into Portland and Quebec there is always a number of ships of these boys, picked up and sent to Canada for the purpose of putting them out to farm. I have seen a shipload of these boys myself whose only fault was that they were born poor, and if Canada wishes to encourage it and the boys are willing to grow up with the country, there should be no objection here. I refer to that class of real paupers sent here to get rid of them. It is that kind of people we are getting here as assisted immigrants.

Q. (By Mr. CLARKE.) By whom are they assisted generally?—A. As a member of a special commission I went to England in 1896, and I found out that the wholesale giving of assistance to criminals and paupers and sending them to America was supposed to be, and I believe really has been, broken up. There always has been an effort to move the pauper on, from outside of London into the heart of London, and from London to somewhere else. Finally he gets to Liverpool, and his passage is paid to Quebec, and finally to New York. The United Hebrew Charities of New York, while Mr. Roseneau was manager, had a large number of such cases of their own people that they had to take care of after being shipped from the other side, and it was a matter of almost daily happening for them to send to us persons who had come into the country by way of Canada, and who could not have been landed at any port in the United States. These things are well known by everybody in the office.

Q. Have you any reason to believe that governments, either national or municipal, assist these immigrants through charities?—A. I think that has been broken up. It has not existed to any considerable degree since Colonel Weber's trip to Europe.

Q. (By Mr. FARQUHAR.) Do not the British authorities usually deny that there is any of that assisted immigration now?—A. Officially, I believe that is true; but in Liverpool I was told by officers of the Cunard and White Star lines that it was a common boast, with reference to the inefficiency of our immigration laws of the United States, that they were valueless, and that immigrants who would not try to get in at New York could find their way in by the back door.

(The subcommittee adjourned until 10 a. m., July 25, 1899, at which time the examination of Mr. McSweeney was resumed.)

Q. (By Mr. SMYTH.) What is the present status of the padrone; is he still in existence?—A. I think the padrone still exists in this country. They have, as the result of the growth of Italian immigration, changed their character, but if by the padrone we understand that Italians are still controlled after they come here, are sent to work under contractors, that the commissariat is regulated by the man who sends them there, that their wages are controlled by these men, that their wages are sent back to Italy by these same bankers or padrones—if this is what is considered the padrone system, it still exists. The system which was represented to have obtained years ago, whereby these bankers or padrones induced the immigrants to come here, I do not think exists any longer, because there is no need of it. The immigrants now come here of their own accord. When they come to this country, or before they come, they know that if they will go to a certain banker, that that banker is from their particular province, and that they will find employment and all those things through him; and so he does not now need to send them over money. They come and report to him and stay with him. Some few of them break off and become American citizens, but the rest remain under his control or return to Italy when they have satisfied themselves as to the amount of money they have acquired.

Q. We have all through the South colonies of—we call them “dagos” down there, or peddlers—who live together and seem to be under the leadership of one man, and they travel all over the country for 50 miles around. Are they Italians?—A. I think they are Orientals.

Q. A different race, but it seems to be the same system?—A. It is the same system, only on a different basis. We have been unable to get very definite information as to the methods of bringing the Orientals to this country on account of our inability to know their language, to converse with them. As I said, it is very suspicious that large numbers of this class arrive here with a stated amount of American gold, and I think it is established beyond doubt that these people are controlled by a centralized body of notion peddlers, with general headquarters here in New York, and with branches all over the United States, and that these people are representatives of some branch of this padrone traffic.

Q. You think, then, coming back to the Italian padrone, that they still bring in immigrants in violation of law?—A. I do not think they do to any considerable extent.

Q. Do you find the Italian immigrant wants to be released?—A. My personal impression is that the Italian immigrant would prefer to be under the control of the padrone.

Q. He looks to him as a sort of protection?—A. He looks to him for protection. The Italian immigrant, as far as my experience goes, would rather deposit his money with an Italian banker who has no standing outside of his little community than to deposit it in the regular national or State bank.

Q. He knows about one and does not know about the other?—A. I do not know whether it is dislike or distrust.

Q. What other races are held in industrial bondage besides these Italians and Orientals?—A. There has been a species of selling labor going on in New York for a long while, but I believe under Dr. Senner and Commissioner Fitchie that has been broken up—the system of getting girls from the Austrian-Hungarian empire and, not exactly selling them into bondage, but getting them into families and keeping them there for years at just mere nominal wages. I believe that the rigid enforcement of the rules and regulations of the Barge Office have succeeded to a great extent in breaking that up.

Q. Are these girls brought here for immoral purposes?—A. They have not been brought here for immoral purposes, but the gradation to immoral life is very easy, and it has been stated that a large number of these girls are leading that sort of life in New York. This was stated by the police.

Q. Does the Italian bureau or the San Raphael Society give any material assist-

ance to these immigrants?—A. I never knew of them giving any material assistance to immigrants in distress.

Q. Do you think the Italian Government encourages immigration?—A. Commissioner-General Stump went to Europe in 1895, and when he returned he said in his report that one traveling through Italy could tell those provinces from which immigrants were coming to the United States by reason of the thrifty and home-like and well kept appearance of the little houses; that this thrifty condition was due to the money of the emigrant who had emigrated to the United States. Mr. Stump further said that a large amount of the taxes and other burdens were borne by reason of this money coming to them; that in parts of Italy from which emigrants were coming to the United States there was a marked difference in the character of the farms and homesteads.

Q. The money of the immigrant was sent back and used in building up Italy?—A. I was told on last Friday by a gentleman who is engaged in the railroad business here in New York, that on the evening before sailing days almost all the bankers and dealers in Italian money are kept busy until 11, 12, and 1 o'clock at night.

Q. How did the Italian bureau here act during the late war with Spain?—A. I remember a circular that was given to Commissioner Fitchie by Dr. Rossi, in which the cabinet officers or ministers in Italy had sent out a notification that owing to the number of immigrants that were being returned from the United States to Italy as coming in contravention of the local laws of immigration, and because of the great suspension in industry and labor *due to the war with Spain*, the prefects of the kingdom were instructed to discourage emigration to the United States, and were asked to curtail the giving of passports to the greatest possible extent.

Q. When was this warning of Dr. Rossi's sent?—A. I think it was dated on the 21st of April, *four days before war was declared*.

Q. Did he furnish the commissioner with a copy of these circulars of the Italian Government?—A. I think so, in May. It is only a memory.

Q. Did that have any effect in curtailing the emigration from Italy during the summer and fall of 1898?—A. Immigration was rather low during that year.

Q. Especially from Italy?—A. Not particularly. The Italian immigration rather kept up.

Q. After the war was over, did the Italian Government take any steps to encourage emigration to the United States?—A. In October or November of last year Commissioner-General Powderly forwarded a letter, or copies of a letter, received from the embassy at Rome, wherein he reported on the subject of assisted emigration, and stated that in October the Government had reduced the railway fare to the seaboard for all emigrants 50 per cent. I think the name of the official is Lewis M. Iddings, who is connected with the American embassy at Rome.

Q. Does the Italian bureau here have any right to influence the admission of immigrants who have been detained?—A. Absolutely none.

Q. Have they ever tried to exercise such right?—A. Yes.

Q. Can you give some information on that? When, and what was done? Was there any protest made?—A. When we were at Ellis Island, the Italian bureau was removed from all our governmental processes by reason of being in the end of the building away, removed from the inspection floor, and immigrants were directed through the railroad floor, going 75 feet before they got to their control, and any interference with governmental processes would be immediately noticed. When we came to the Barge Office, as they were a part of our institution, and we had to give them room in our cramped quarters, which necessarily brought them right in with us. Their quarters are right adjoining the detention department. While Dr. Rossi has never to my knowledge tried to exercise that right, his assistant did to such an extent that the board of special inquiry had to make a written protest to the Commissioner. Since the suspension of the bureau in April of last year, which was supposed to have gone into effect on the 15th of April, and which was afterwards rescinded, there has been little interference of the Italian bureau with our administrative processes; they have kept their proper function; and whenever Dr. Rossi or his assistant has asked for interference in behalf of a detained immigrant, he has done so as any common citizen would do, and has been treated with all the courtesy that Dr. Rossi's personality and the standing of his Government would warrant. He has been given exactly the same rights and treatment that any citizen would get who was coming in to ask about the case of an immigrant detained for any reason.

Q. (By Mr. CLARKE.) What department of your bureau do you consider the most important?—A. All the departments are equally important, but to my mind

the department upon which most depends from the standpoint of the citizen is the registry department; and what applies to that is also true of the contract-labor bureau in its special field. The registry clerk is the first examining officer that comes in contact with the immigrant, and if in his judgment he thinks the immigrant is a qualified person he can allow him to land. So he acts as an absolute judge of the immigrant's eligibility. If he decides the immigrant shall land, there is absolutely no one who can say no unless some other inspector might be there and protest and hold him for special inquiry; so I believe the most important function in our process is that of the registry clerk. The board of special inquiry is also important, but their importance is somewhat qualified when it is realized that they can only act on those persons whom the registry clerk sends to them.

Q. I assume, then, a good deal of care was shown in the selection of these registry clerks, as to their fitness for their positions?—A. Most all of the registry clerks have been connected with the department for years.

Q. They are protected by the civil service?—A. Yes.

Q. What proportion of immigrants are admitted by the registry clerks?—A. From 35 to 87 per cent of all that pass before them.

Q. Of the something like 13 per cent remaining, how many are excluded and deported by the board of special inquiry?—A. The 13 per cent, or in round numbers—say, the 13 to 15 per cent—last year amounted to 25,000 people, who went before the board of special inquiry; and of that number 10 per cent were finally excluded, or less than 2 per cent of the total arrivals.

Q. Are any polygamists admitted?—A. We have not intentionally admitted polygamists, but there has been a constant stream of Mormon converts coming to this country in the second cabin of certain ships for many years—from 30 to 75 Mormon converts, weekly recruited in Sweden and Scotland and other European countries—going to Salt Lake City. They all deny that they are polygamists, and claim to be Mormon converts. About 8 years ago one of the inspectors held up over 50 of them, and the leaders or elders who had been over there converting them stood on their rights as American citizens and defied the efforts to prove they were polygamists, and as there was no way to bar them they had to be admitted. We have received some complaints as to these girls afterwards that they were badly treated, but we have not been able to verify them.

Q. What proportion as to sex?—A. The female sex predominated. I am informed that 80 to 95 per cent are women.

Q. Do these women seem to be accompanied by some man who has charge of a certain number?—A. As I understand it, these Mormon elders at a certain period have to give up their business and go into the field and make converts, go to Europe at their own expense, and bring back their converts with them.

Q. What was the total number of this class that came in last year?—A. I could not tell you. While our new statistics will give you absolutely the religions of all arriving immigrants in the steerage, Mr. Powderly's circular in relation to the cabin inspection has not progressed far enough to enable us to obtain the statistics we want as to first and second class passengers.

Q. From a personal observation of these people by yourself and the registry clerks and the board of special inquiry, is it your opinion that this large preponderance of women suggests that they are polygamists or come to practice polygamy?—A. I could not say. It is rather peculiar that there should be so many females. We have been unable to get any knowledge.

Q. (By Mr. FARQUHAR.) In your examination of these persons in charge of parties of these Mormon people, do they claim that they are members of the Church of Latter-Day Saints and not polygamists?—A. Yes.

Q. Have they ever said that they intended to live under United States laws abolishing polygamy in Utah?—A. They all make the claim with a great deal of force and feeling that they are citizens and, therefore, not amenable to our immigration laws and restrictions. "I am a United States citizen and you have no right over me." They are absolutely within their legal rights.

Q. So their claim as United States citizens safeguards the parties that are under their control or brought over?—A. It does not safeguard the parties, because they are under our control; but the elders are the leaders and controlling element and influence in the party, and the rest say, "I am going out to Utah; I am a convert to Mormonism; I am going to seek employment;" and as they are healthy and have money we have no alternative but to admit them.

Q. Is it not a fact that the females are more susceptible to be proselyted into the Mormon Church than males?—A. I know nothing about that.

Q. Have you any knowledge that in Europe the proportion is three-fourths of females and one-fourth of males, members of the Church of the Latter-Day Saints; that the faith is more captivating to the women than to the men generally?—A. I have seen that stated in the newspapers, but know nothing of it.

Q. (By Mr. CLARKE.) What have you to say as to their giving false destinations in the manifests?—A. I believe there is a great deal of falsifying on the manifests, and my statement before will bear that out, that a large proportion of people who come giving their destination as the city of New York do not remain in New York City. While the majority of these people are honest in their desire to come to New York City, which is the distributing point, there is a considerable amount of falsification done wilfully, and I would suggest that a law which would punish the steamship companies or the immigrants for the wilful falsification of destination would be very grateful to the immigration authorities and serve a good purpose.

Q. Could you furnish proof so the law could be executed?—A. I think in many cases presumptive evidence would be enough to convict. For instance, if a party of 50 arrives to-day and they say they are going to relatives in New York and they have ample money, say \$50, \$60, or \$70, which would be sure to admit these people after all our registry and contract-labor examinations were gone through with; if these immigrants had \$70 apiece that would be one of the most potent reasons for their admission; if they go to New York and on the afternoon of the same day they sail away on the steamship to New Orleans or go on the train to San Francisco, there is no doubt their destination has been falsified; and they have not only succeeded in falsifying as to our statistics, but they have been admitted by reason of having money which is immediately taken away from them, and they land in San Francisco without a cent. If an immigrant comes without a cent going to San Francisco, we demand he shall prove to us his ability to care for himself in San Francisco. We do not recognize his landing in San Francisco without a cent as any different from landing in New York under the same circumstances. It does not only falsify statistics, but allows undesirable immigrants to land who are liable to get into distress at their final destination.

Q. Have you any idea what proportion of immigrants are sent for by their friends already in this country?—A. I think that the steamship companies will be able to answer that accurately. Our information is that of all the immigrants coming to this country 65 per cent come on tickets that have been bought and paid for in this country.

Q. (By Mr. FARQUHAR.) I see by the issue of the morning paper here the claim made by an American Hebrew that your classification does not do the Hebrews justice, and also a claim that the Hebrew is the only religion that is distinctively and particularly brought out in the last annual report. What have you to answer to that?—A. May I see that clipping? (After reading clipping.) This is absolutely founded on a wrong assumption, and the gentleman, whoever he was, that wrote this, does not know what he is talking about. I am glad to have an opportunity to answer this. I have here the report for the fiscal year just ended the 1st of this month, which shows from what quarter of the earth these 27,086 Hebrews came. For instance, we will take Austria-Hungary; as I said before, Austria-Hungary under the old classification would be put down as Bohemian, Galician; under our new classification we will find that there were 1,795 Bohemians, 6,818 Croats and Slavonians, 367 Dalmatians, 2 French, 3,292 Germans, 9,921 Hebrews, 1,044 Italians from the North, 3 southern Italians, 3 Lithuanians, 4,503 Magyars, 9,740 Poles, 10 Roumanians, 1,344 Rusniaks, 6 Servians, 13,545 Slovaks, 2 Transylvanians, making a total of 52,365 from Austria-Hungary. I simply give you this classification as emphasizing my statement that the former classifications are not at all accurate. I think this will demonstrate it. You will notice further in this that we have differentiated as between the Italians of the North and the South. We have not done this because we wished to make any invidious distinction or throw any aspersions on any race, but simply in order to get at these races industrially as they come to this country. In some cases their mother tongue might give us an idea of the races, but sometimes the tongue would not do that and then we had to ask what their religion was. For instance, there is a great difference between the Arab who is a Mohammedan and the one who is a Christian. It is the Christian Arab which we get in this country. This statement is absolutely false, as a reference to our report of their religions will prove. During the past fiscal year, out of the grand total of 291,814 immigrants arriving at New York, there were 46,196 Protestants, 160,633 Roman Catholics, 12,591 Greek Catholics, 27,145 Israelites, 9 Brahmins, 107 Mohammedans, 144 miscellaneous.

Q. How long since this classification was adopted?—A. Since the 1st of July, 1898. This will absolutely and once for all answer the criticism which has been made by persons who either do not know or wish to misrepresent that these new statistics are intended as a slap at any faith. I wish to repeat, these statistics have been approved by some of the most diligent students of the immigration question in this country, and they are intended simply to classify industrially the people who are coming into this country, so we may know who they are better

than we did before, and our asking the religion is simply a means to this end, and as it is asked of all peoples there can be no ground of complaint.

Q. In the old system of statistics, then, the Russian Jew embarking at Hamburg might often be recorded as a German, simply on account of the port of embarkation point?—A. He might if he had lived a few months in Germany, and the shipping agent had said, "Where do you come from?" "I come from Freiburg." He would put him down as a German, and we would classify him as a German.

Q. Suppose 8 or 10 Jews from Poland proper come to Hamburg and place their names on the manifest as Germans, or as citizens of any other nation; are there any means at the port of embarkation of verifying or correcting any such statement that they make?—A. No.

Q. So that the foreign manifest is entirely dependent on either the honesty or caprice of the emigrant?—A. Quite so.

Q. Neither the captain of the ship, the inspecting surgeon, nor the consul have any means at hand to verify the statement as to its truth?—A. If the emigrant makes a false statement?

Q. Yes; in case of their attempt to escape the martial laws of the country, from service in the Russian army, for instance, would it be easy for the emigrants to take a German title or name and pass under the German name?—A. He would find it difficult to get out of Russia unless he got out clandestinely.

Q. But is there an opportunity through this manifest to so register themselves as to even escape from justice?—A. Yes; the only bar to that is the acuteness of our officials. Of course, under our new system of statistics we do not depend on the manifest given us by the steamship companies, but besides the manifests supplied we have an additional manifest which contains the statistical information called for by this new method of statistics.

Q. Do you know whether tickets sold by steamship agents in the various countries of Europe would give an intelligent statement of where the ticket was sold, to whom, and other information that would lead to the identification of the emigrant?—A. It might and it might not, because we have numerous cases where tickets are sold and then transferred. It would in a generality of cases.

Q. Now, is it not a fact that Great Britain is credited with a good deal of immigration that is really continental, simply because they ship from Liverpool?—A. I can furnish to your committee the monthly report of the labor bureau connected with the English board of trade, that will give for any period you might name the immigration to and emigration out of the United Kingdom, and telling whether that immigration was from the Continent or the Orient. Mr. Burnett, who is the chief labor correspondent of the board of trade, has a monthly compilation in the Labor Gazette on this feature, so it is easily obtainable; in fact, I have it for you if you desire it.

Q. Do you think under your new statistical arrangement that your reports will become more intelligible both for Congress, political economists, and the people at large in finding the true nationality of immigration and also the religious divisions?—A. And their industrial possibilities, which is the main thing.

Q. From what source was this matter urged to make this new classification?—A. It was suggested to Commissioner-General Powderly and by him put in effect. He appointed a commission to go into the matter, and, accepting the commission's report, he put it into effect.

Q. What are the predominant races that are coming here now?—A. I have a chart that will show that. This chart is based on the old classification, but I think it will convey the idea better than any words. It is a chart which was originally gotten up by Dr. Safford, of our medical office. Our statistical office can bring that chart up and make the comparison with our last year. It would have to be made on the old basis, but as far as the immigration from the countries is concerned, it would probably be interesting to embody it in the report. (Said chart follows.)

Q. What proportion have you of Canadian immigration?—A. Canadian immigration proper or European immigration by way of Canada?

Q. Both ways, coming into the United States from Canada to labor, and foreign immigrants shipping to Canada and ultimately crossing the border.—A. There are a large number of Canadians proper who come yearly into the United States and work here, and then return. That problem is very much more pressing at Boston than here. In connection with my work on the commission appointed by Secretary Carlisle, it was estimated at that time that from 50,000 to 70,000 Canadians came into the United States every year, working during the busy season, and then returning. They go as far as New Orleans, working and returning again, and the matter has been brought up in the Canadian parliament many times. If you will allow me, I would like to read an extract from a speech in the Canadian parlia

ment, delivered by Mr. Charlton, February 10, 1890. It is pertinent to the conditions now:

"We have to scrutinize the immigration returns to see if we can not arrive at some clew that will enable us to form an opinion as to the loss of immigrants coming into this country from the Old World and leaving this country for the United States. We had in Canada, according to our own census in 1871, 582,668 persons of foreign birth; we had in Canada 10 years later, in 1881, 599,388. The increase in the foreign element in our population in ten years has been barely 15,720 souls. Mark that fact, 15,720 souls was the increase according to the census returns in the foreign-born population from 1871 to 1881, but during that period we had received from the Old World 342,675 immigrants.

"Now, what has become of all these 342,675 received, and only 16,000, in round numbers, more in the country in 1881 than there were in 1871? Where have they gone? They have left us. When we come to make a calculation, and do so properly, we must take the death rate and strike the balance year by year. We should take the number of people in Canada, foreigners, which in 1871 was 582,668; we should add to that the immigration each year; we should take the death rate and see what the loss by death was in each year; we should add to that number the immigration in the following year, and so on, carrying the calculation through for the ten years. There should have been in Canada in 1881, as the result of this calculation, 783,208 persons of foreign birth, and there were in Canada 599,388, showing that with a death rate of 20 to the 1,000 we have lost 184,820 immigrants in the decade from 1871 to 1881, who at the end of that period were living in the United States.

"Now, the immigration from 1881 to 1890 has been 653,510, estimating the immigration for the present year at 34,000. Six hundred and fifty-three thousand was the immigration into this country from 1881 to the 1st of January, 1890. Now, we lost of that number that came between 1871 and 1881, according to the calculation I have made, based upon the census returns and the death rate of 20 to the 1,000 per annum, 53 per cent of that acquisition of our population from immigration, who have left us and gone to the United States and were in that country alive in 1881. And if we take the same proportion of immigrants from 1881 to 1890 as having emigrated to the United States, we have remaining in that country at the commencement of the year 53 per cent of the entire number, or 346,000 souls.

"For the entire period from 1871 to 1889 the total immigration to Canada was 996,185, and to the United States 7,607,039, showing a per capita excess in Canada of 54 per cent; yet in view of these facts we have fallen behind in the race, and our proportion of increase of population is 11 per cent less than that of the United States. This in the face of the fact that the per cent of natural increase in Canada is greater than in the United States, and that the per capita increase by immigration was 46 per cent greater between 1870 and 1880, or 54 per cent for the entire period of 20 years between 1870 and 1890."

I do not believe there has been any objection, especially in Massachusetts, to the Canadian who comes to remain there, but there is a constantly growing feeling against the Canadian immigrants from the provinces who come into the building trade in Boston and all that region around there, coming to work during the busy season, reducing the rate of wages, and returning. The port of Boston receives as many immigrants from Canada as it does across the Atlantic, and without any head tax.

Q. What is your system of inspection at Quebec, or is that more under the control of the general office at Washington?—A. We have nothing to do with it. I only know incidentally of the system of inspection at Boston.

Q. Why does Canada feel sorry to see laborers come here and the United States feel sorry to see them come?—A. I do not think it is beneficial to either country. I think the Canadian Government would rather have these people stay there and work all the time and develop the resources of the country. When they do go back with their savings they harbor them so that they are not of great benefit. On this side they come here and earn money and take most of it back, their living expenses being quite small. Canada loses by not having the benefit of their labor to develop its industries. We do not lose in a real sense because they have been giving value for the money they earn, but we lose in their not spending the money in this country, and more important than all, because they work for less wages than the United States citizens with whom they come in competition, thus lowering the rate of wages.

Q. Is it a fact that many of these workers in New England, the French Canadians, have small holdings in Canada, and in the fall they return there, and come back every spring and summer to work in the United States?—A. That is the complaint; but, particularly in Massachusetts, that thing has been growing less and

less each year as far as it refers to the French Canadians. They have been remaining and getting little holdings in the factory towns where they are located.

Q. The French Canadian is generally an industrious man, and makes a good citizen when he once makes his anchorage in the United States?—A. I think so; yes.

Q. What is the effect on the labor market here of these immigrants settling in New York?—A. It has had a great effect on the labor market. Of course, it has driven out of certain trades the former occupants of those trades. For instance, in the clothing trade, in all those trades that are known as the Jewish, the sweating trades, the Russian Jews have driven all other nationalities out. In 1885, practically, the sweating trade began; from 1880 to 1890 we received one-third of all the immigrants that had ever landed in the United States. I know of my own investigation that the Italians have gone into competition with the Jews in the sweating trade and are taking the sweating trade away from them; and Mr. Jacob Riis told me a short time ago that the Greeks had now begun to take it from the Italians. It has moved east across the Bowery to the Italian district, and is now going to the lower West Side to the Oriental quarter.

Q. (By Mr. SMYTH.) Do you consider that the sweating business has increased in New York in the last few years?—A. I do not think so. A peculiar thing about the sweating trade is, as I understand it, that whenever they have gone on a strike for wages they have never lost. There are 75,000 engaged in these industries in New York.

Q. (By Mr. FARQUHAR.) Are these people organized?—A. When necessity compels their organization. I have been told by the managers of these organizations that sometimes, at certain periods, the organizations would dwindle down to 500 to 1,000 paying members, and then in a week there would be 25,000 paying members. They get crowded down to a point where they can not stand it, then all band together.

Q. So that the organization is somewhat of a fast and loose matter, owing to the state of the trade?—A. I think they never lose their allegiance to the organization, though they may lose interest in it when times are good.

Q. Do the Jews generally go in these organizations?—A. I think so. I think the Hebrews in the sweating trade finally wind up in the labor organizations.

Q. What is the physical condition of the Jew compared with the general immigration from Europe?—A. The Russian Jew physically is not of as large stature, but our doctors say he has very much less tubercular disease than the other nationalities. The tubercular disease of the lungs, although they have it of the joints, is very rare comparatively.

Q. Is there a society here that takes care of the Jews?—A. The United Hebrew Society.

Q. Is it a charitable organization?—A. It is a society representing all the Jewish societies and maintained by the wealthy Hebrews of New York.

Q. Is it helpful in caring for the social condition of the Jew?—A. It is exceedingly so. The problem of the sweat shop was old in England before it was known here, and, as a report published in England in 1893 stated, a peculiar thing about the Jew was that these poor immigrants who to-day were receiving assistance in 5 years from now would be contributing to the various charitable organizations. In other words, they do not get pauperized by this assistance.

Q. Could you state where in New York and Brooklyn the centers of the colonization of these various peoples are?—A. Of course the Jews are in that section which I suppose would center at the Essex Market. The Italians have one colony centering on Mulberry street and another on the east side, about One hundred and sixteenth street. Greenwich street is about the center of the district devoted to immigrants from the Orient—the Arabs, Syrians, and those people. The Bohemians are on the east side; they have a strong colony about the Seventies on the east side. The Poles have no colony that I know of. They have a church here and there and are scattered about. Of course, there may be isolated colonies, but those named are the large communities. The Chinese are on Mott street.

Q. Is there a large Jewish colony at Brownsville?—A. Yes; practically all Jews.

Q. Could you give us your views and testimony as to the protection against shipwreck and accident at sea, so far as immigrants are concerned?—A. That does not come as a branch of immigration; it is not under the control of the immigration service, but I think it should be. I do not think there is an adequate provision during the busy season for immigrants at sea. I think if there should be a shipwreck and anybody suffered from inadequate supply of life-preservers, etc., it would be the immigrants. The Commissioner-General at Washington should have some supervision over the matter of protection of life of immigrants at sea.

Q. Have you heard any complaints made about the air space allowed on ship-board?—A. The immigrants rarely complain about anything.

Q. Was there not an enlargement secured of the amount of air space that immigrants should be allowed on steamships to save overcrowding?—A. I understand so; yes.

Q. You heard the testimony of Mr. Schwab this morning about prepaid passage, etc.? Have you any knowledge of the ticket brokerage with respect to these steamship companies?—A. Yes.

Q. We would like to hear from you on that matter.—A. Mr. Schwab and the other gentlemen said the prepaid ticket business amounted to about 40 to 55 per cent, while I state that 65 per cent would be the prepaid business. My estimate comprehended that which was really prepaid, except that instead of buying a ticket here the friends on this side sent the money over and they purchased the ticket there themselves; that would make up the difference. I would like to recommend a remedy by law against a certain method of selling prepaid tickets. The majority of prepaid tickets, those that are sent from a brother, father, or direct relative, where they come and put down the money, that is a very little danger, and I believe brings a good class of immigrants; but there is a class of peddlers who go around peddling wood and what not, who combine with the peddling business the selling of prepaid tickets. The peddler goes into a family to sell a picture, or whatever article he has, and finds out from that family that there is another member of the family in Europe, and he says, "Now, I want to sell you that ticket." They say, "I haven't any money." He says, "I will arrange that for you. You pay me \$1 a week, and when you have paid half of the price of the ticket I will furnish the ticket." So when the half of the \$30 is paid a ticket is bought by this peddler, turned over to the purchaser, and sent to the other side, and by the time the ticket gets from this side to the other side and returns enough time has elapsed to enable him to collect the balance of the money. They have become so bold that on one or two occasions these peddlers have come and asked us to assist them in collecting the balance remaining unpaid, the immigrant having refused to pay any more; they come to us and ask us to send the man back.

Q. In that way it has come to your positive knowledge?—A. Yes.

Q. (By Mr. CLARKE.) Do you think most of these tickets which are prepaid on the installment plan are sent to the immigrants who are undesirable?—A. Not necessarily, but the chances are that they are more undesirable than if they had come in the regular way; and I have suggested a law providing that no ticket shall be sold except by the regular authorized agents of the steamship companies. Then we can hold the steamship companies responsible.

Q. (By Mr. FARQUHAR.) Do you think there has been much done in this class of ticket brokerage?—A. I think so; yes.

Q. Do you think it is growing?—A. I fear so, but the reputable companies discourage it. They would work to have such a law passed.

Q. Do you know how much they charge for the tickets?—A. They can charge anything they want, anything they can get. They have to charge more because the man they buy it from is necessarily limited to his legitimate discount or commission.

Q. (By Mr. CLARKE.) In regard to the charges for feeding detained immigrants, will not the per capita amount paid by the steamship companies be an indication of the quality of immigrants brought by each?—A. Absolutely.

Q. Then the amounts vary with the different companies?—A. Yes; greatly.

Q. What are they?—A. They vary from 2 to about 50 cents per capita on the whole number of immigrants carried.

Q. What steamship companies pay the higher prices?—A. The companies bringing the southern Italians, Galatians, and Poles, and those immigrants from the north of Austria-Hungary and the south of Russia.

Q. Will you name these companies?—A. I can only name them in a general way; such a line as the Cunard line, bringing Irish and Swedish immigrants here, will probably pay about 3 or 4 cents for their immigrants' maintenance; the White Star about the same; the lines running direct to Swedish ports less; the North German-Lloyd and the Hamburg line, in their German service, which also bring some of these Galicians, would run up to 9, 10, 11, or 12 cents; and the Prince line, running to Italy, newly organized, or the Fabre line, would run up to 40 cents.

Q. That shows their greater poverty—the more the companies have to pay?—A. It shows that the inspection processes are longer and more of them detained. I remember one ship of the North-German Lloyd that came in only a few months ago. It brought in here about 700 Russian Mennonites. They are an exceedingly

desirable people. Of the 700 who came here, 550 were going to points west of the Missouri and had railroad tickets there. The whole ship had an average, including babes in arms, old people and everything, of \$55 per capita. Now, of that ship, probably 3 or 4 were detained temporarily and probably not one was returned. Some ships bringing immigrants from Sicily and other provinces will come in there with, say, 500, of which number perhaps 300 will be held for the various processes of inspection and 200 passed out. Some of the others would be held by the contract-labor bureau, and 150 to 200 would go to the board of special inquiry, and when it came to be finished up 10 per cent would go back. One ship of 300 of these undesirable people will keep our whole force busy 3 days, as long as a ship carrying 1,000 of the kind I first mentioned. If a White Star line ship comes in here loaded down with Irish girls, they pass right through, and Father Henry takes them over to his mission, and when the ship is through we are through. But when the poorer ships come in our work begins, and it goes on for days and days; and sometimes we have had as many as 4 and perhaps 5 boards of special inquiry sitting, trying to decide as to the eligibility of these people.

Q. Is a good deal of the delay caused by a lack of the English language?—

A. No. With the exception of the Oriental tongues we are prepared to handle expeditiously all other people.

Q. It is more the character of the immigrants than anything else?—A. Yes.

Q. What have you to say as to the present market for unskilled labor of immigrants?—A. We have no means of officially determining the labor market, but at the present time representatives are coming to us from large employing interests, people who believe that the immigration authorities control and can give out the labor of the immigrants coming in. They are continually applying in person. Yesterday morning 3 such persons came in and said that in points in Iowa, Pennsylvania, and another in Massachusetts they wanted certain numbers of men to do certain unskilled work. I am stating it low when I say since the 1st of July I have heard through the Labor Bureau, which has a quasi connection with us, and from requests of Mr. Fitchie and myself, of places where at least 10,000 such unskilled immigrant laborers could be employed, and they could not find them anywhere.

Q. Who make these applications?—A. Yesterday a gentleman came down representing a railroad, and said he had a union mine, at which there was no strike, and he would like 200 miners to come in there. That was in Illinois. It is a common thing since business revived in the spring.

Q. Do you think it is due largely to the revival of business?—A. I am sure it is. A man came from Pittsburg a short time ago and asked the same thing. Of course, we have no means of knowing the conditions except from what they say. We say to them when they make such requests that we have no power to help them in any way.

Q. (By Mr. FARQUHAR.) In your opinion this indicates the country needs immigration?—A. I should think immigration of the right sort was not hurting it particularly at the present time.

Q. Have you also a notion that if immigration was properly distributed it would not hurt the country?—A. We have gone on record to that effect.

Q. You spoke of the investigations made by a commission; that commission consisted of Dr. Senner, Mr. Stump, and yourself?—A. Yes.

Q. Did that investigation ever result in any legislation? Did the Secretary of the Treasury take any action on it?—A. Nothing further than the simple printing of the report, and I believe its submission to Congress by the then Secretary of the Treasury. Further than that I do not know of any action. I do not know of any legislation. I have here the report of that commission complete, which I submit for your information, and such action as you desire to take; and I desire to say this report is the work of Dr. Senner, Colonel Stump, and myself. I have no direct authorship in it except in conjunction with these gentlemen.

Q. Have you thought of any other modifications since these findings were published?—A. The recommendations I made in the first part of my testimony are in addition to those contained in that report.

Q. What became of the recommendation to set aside for the benefit of the various States an exhibition hall on Ellis Island for the products of the States, showing the desirability of the different localities for immigrants?—A. Nothing.

Q. What is your opinion about the recommendation?—A. As a member of the commission I signed my name to the report; but I am somewhat skeptical, in view of my subsequent investigations, as to whether it would be a mistake or not. I think it would be an experiment, at best.

Q. Do you see anything practical in this scheme?—A. The scheme is plausible in theory, but I think it would be difficult to work out in practice.

Q. Do you desire now to present those amendments?—A. Yes. It would take a long while to read them, and they will speak for themselves in the printed report.

Q. You might read them, making a running commentary on the matter as you proceed, so that the reader of the testimony will understand the reasons for whatever change or amendment may be suggested to the present laws.—A. The first suggestion was: "That in addition to conforming to all present requirements of law, all transportation companies engaged in transporting aliens to and from the United States shall be required to furnish to the Commissioner of Immigration, at the port of embarkation from the United States, lists or manifests, which shall, in answer to questions at the top of said lists or manifests, state as to each outgoing alien or passenger, the full name, age, sex, nationality, calling or occupation, whether he has ever declared his intention to become a citizen of the United States and whether he intends to ever return to the United States. That in the case of the failure of any transportation company to furnish to the Commissioner of Immigration, at the port from which such outgoing alien passengers embark from the United States, such lists or manifests containing the information above described, the said transportation company shall pay a fine of \$10 to the collector of customs of said port, and the vessel of said transportation company shall be refused clearance from any port of the United States while said fine is unpaid."

The second is a suggestion which Colonel Clarke made as to prohibiting the sale of peddlers' tickets, "That the sale of prepaid ocean tickets or ticket orders or the soliciting of orders for tickets or ticket orders is hereby prohibited by any other than the duly authorized agents of the steamship lines, who shall have their authority as such agents posted in their offices, and the steamship lines shall furnish to the Commissioner of Immigration at the nearest port a list of such duly authorized agents; that the sale of any but regular tickets or ticket orders is also prohibited, and any person, company, or corporation who shall be guilty of violation of any of the provisions of this section shall, upon conviction, be fined not less than \$100 and not exceeding \$1,000, and shall stand committed until the said fine is paid."

Third, "That section 1 of the act approved March 3, 1891, be, and hereby is, amended by adding after the words 'contagious disease,' in the seventh line, the following words: 'Persons imported into the United States for the purposes of prostitution.'"

Fourth, "That section 11 of the act approved March 3, 1891, be, and hereby is, amended so as to read as follows: 'That any alien who shall come into the United States in violation of law may within 2 years thereafter, upon application of the Commissioner of Immigration at the port of arrival of such alien to the Secretary of the Treasury, be arrested upon a warrant from the Secretary of the Treasury and brought before the Commissioner of Immigration at the port of arrival, and given a hearing in accordance with the provisions of section 5 of the act approved March 3, 1891; and if the said alien shall be found to belong to the excluded classes he shall be deported to the country from which he came at the expense of the person or persons, transportation company or corporation bringing such alien into the United States, or if that can not be done, the said alien shall be deported at the expense of the United States. And any alien who becomes a public charge within 1 year after his arrival in the United States from causes existing prior to his landing therein shall be deemed to have come in violation of law, and shall be returned as aforesaid, and all the fines and penalties against the person or persons, transportation company or corporation bringing such alien to the United States shall apply as in other cases.'"

The fifth is to add a little more stringency to the contract-labor laws: "That section 1 of the act approved February 26, 1885, be, and hereby is, amended by adding thereto, after the words 'into the United States, its Territories, or the District of Columbia,' in the seventh line, the words, 'by any undertaking or promise of employment upon arrival in the United States.'"

The sixth is to give the right to immigration officials to administer oaths in taking testimony: "That the Commissioner-General of Immigration, commissioners, and assistant commissioners of immigration, immigrant inspectors, registry clerks and officials sitting as members of boards of special inquiry are hereby empowered to administer oaths and to take testimony orally or by depositions touching all matters and questions growing out of the proper administration of the United States immigration and alien contract-labor laws and their supplements."

Seventh, "That all aliens who may unlawfully come into the United States shall if practicable be immediately sent back on the vessel by which they were brought in, or by a vessel belonging to or controlled by the same line, company, or owners upon the final disposition of their cases. Should, however, there be no such vessel sailing within a reasonable time, then they shall be returned by a

vessel belonging to some other line, company, or owners. The cost of their maintenance while on land as well as the expense of return of such aliens shall be borne by the line, company, consignees, or owners of the vessel on which said aliens came, and if any master or officer in charge of said vessel belonging to said line, company, consignees, or owners refuse to receive back on board one of these vessels such alien, and give to the immigration official in charge of such alien a receipt for such alien, together with an undertaking to comply with the terms of this section, or shall neglect to retain them thereon, or shall refuse or neglect to return them to the country whence they came, or to pay the cost of their deportation to the country whence they came by a vessel other than that belonging to the line, company, or owners which brought them, they shall be fined not less than the sum of \$300 for each and every offense, and any vessel belonging to said line, company, or owners shall be refused clearance from any port of the United States while said fine is unpaid."

All privilege moneys now received from the restaurant and other things go into the general fund of the Treasury Department, and it is proposed: "That all moneys received from privileges and benefits, all fines and penalties, and all moneys collected from any source whatsoever growing out of the administration and enforcement of the immigration laws shall be paid into the immigration fund, created by the act entitled 'An act to regulate immigration,' approved August 3, 1892."

Dr. Senner, while commissioner, made the discovery that some of the immigrants were counted as many as 10 times, and that in a total of 17,000,000 or 18,000,000 of immigrants there are thousands and thousands that are counted as many as 5 times possibly; so that we ask in this law: "That all transportation companies engaged in transporting aliens to and from the United States shall require every alien who desires to take passage to the United States to fill in a blank form containing all the questions to be answered in the lists or manifests as hereinbefore prescribed by law and the following additional questions: 'Has the intending immigrant been in the United States before? If so, how many times? How much money did he bring each time? How much money did he carry back each time? Does his family accompany him? If not, has he a family in Europe, and how many constitute this family? Does he intend to send for his family later? Is any member of his family likely to be excluded by the immigration laws of the United States? If so, why? Has he any property in Europe? If so, what is its value?' That the said immigrant shall bind himself to the truth of all his statements and take an oath thereto, attested by his signature, if requested to do so by an immigrant inspector, and shall further state that he knows that he will be returned if his answers are found to be false in any substantial particular. That the said forms when filled in shall be delivered to the steamship company, whose duty it shall be to deliver the same to the Commissioner of Immigration at the port of landing. Provided that this statement made by the immigrant shall in nowise relieve the transportation company from any responsibility for bringing undesirable immigrants to the United States. And for each and every violation of any of the provisions of this act the transportation company so violating shall be fined the sum of \$100, and any vessel belonging to the said transportation company shall be refused clearance from any port of the United States while said fine remains unpaid."

Tenth. We suggest that the words "if \$30 or less" in the original law shall be stricken out, and that we be empowered to ask how much money they have. We can not legally ask how much more than \$30 they have. A man says he has more than \$30, but we can not ask how much more. We put down \$30 and he may have \$1,000, and we lose that statistical information. We suggest "that section 1 of the act approved March 3, 1893, be, and hereby is, amended as follows: Add in line 12, after the words 'or Government' the following words 'and if so, by whom;' strike out in the 12th and 13th lines the following words, 'whether upward of \$30, and how much if \$30 or less,' and substitute the following words, 'how much.'"

Eleventh. "That so much of section 1 of the act approved August 3, 1892, as reads as follows: 'Provided that no greater sum shall be expended for the purposes hereinbefore mentioned at any port than shall have been collected at such port be and hereby is repealed.'"

Twelfth. "That the lists or manifests of incoming vessels shall contain the exact number of passengers on board, and if after all the names of the passengers have been properly entered thereon there shall remain any unfilled spaces for names, the same shall be crossed out with lines, and after all the lists or manifests are so prepared they shall be verified by the signatures and oaths of the master and surgeon of the said vessel, and thereafter it shall be unlawful for any alteration or

erasure or other defacement to be made thereon, and for every violation of this section the person, or persons, company, or corporation owning the said vessel shall be fined the sum of \$100, and the said vessel shall not be granted clearance from any port of the United States while said fine is unpaid."

Thirteenth. "That debarred immigrants shall be returned to the country from whence they came; provided, however, that those who come in transit to contiguous territory shall be returned to the country in which they were last resident."

Fourteenth. We have found that when we send back immigrants suffering from diseases, or as likely to become a public charge, or as paupers, or as contract laborers, if the steamship company finds that they have money and can get control of that money, they will take enough to reimburse themselves for their passage back, although the theory of the law is that the steamship company shall be responsible for the passage back; so we have provided that it shall be unlawful to take any return money for their back passage. We suggest: "That it shall be unlawful for any transportation line, person, company or corporation engaged in the transportation of aliens to and from the United States, to collect directly or indirectly from any debarred immigrant the expense of returning him or his belongings, and for each and every violation of this section shall pay a fine of \$100, and no vessel of the line committing such violation shall be granted clearance from any port of the United States while said fine remains unpaid."

Fifteenth. "That section 4 of the act approved March 3, 1893, be, and hereby is, amended so as to read as follows: 'That in the case of the failure of said master or commanding officer of any vessel to deliver to the said inspector of immigration lists or manifests, verified as aforesaid, containing the information above required as to all alien immigrants on board, the person, company, or corporation owning the vessel shall pay to the collector of the port of arrival the sum of \$10 for each person concerning whom the above information is not contained in any list or manifest as aforesaid, without prejudice to the standing of the immigrant, and any vessel belonging to the said person, company, or corporation shall be refused clearance from any port in the United States while said fine is unpaid. Provided, that the commissioner of immigration at the port of arrival may in his discretion remit said fine if it should appear to him that the error was committed without the knowledge or consent of the steamship company, or was unavoidable and not due to neglect or intent to deceive.'

Sixteenth. The next is the most important of all, and provides that false testimony before the board of special inquiry can be punished as perjury. In our practice now there is no hindrance to any immigrant or any witness making any sort of a statement, and doing it with safety and impunity, and we believe that if a law be given us which will make that perjury within reasonable bounds so that we can punish them, it will put the immigration laws on a better footing. We suggest: "That false testimony given under oath before the board of special inquiry in behalf of detained immigrants, made willfully and for the purpose of inducing the admission of a detained immigrant, shall constitute perjury; and if any person or persons shall knowingly or wilfully procure such perjury to be committed every person so offending shall be deemed guilty of subornation or perjury, and shall, on conviction, be fined not exceeding \$100, or be imprisoned not exceeding five years, or both, according to the aggravation of the facts. That if any person or persons shall wilfully and knowingly make a false affidavit as to his financial responsibility as a surety upon a bond or undertaking given for the purpose of inducing the admission of an immigrant he shall be deemed guilty of perjury, and shall be, on conviction, punished by a fine not exceeding \$1,000, or by imprisonment not exceeding five years, or both, according to the aggravation of the facts."

Seventeenth. As I said before, the registry clerk has the right to admit, and does admit over 85 out of every 100. The commissioner has no right in law to stop that. If the board of special inquiry should decide to allow an immigrant to come in there is no power with the commissioner to say no. It is proposed to give the commissioner that power, subject to review by the Secretary of the Treasury. We suggest: "That the commissioners of immigration be, and hereby are, empowered to temporarily suspend execution of decision of boards of special inquiry, subject to the final decision of the Secretary of the Treasury."

Eighteenth. "That any person or persons found to be guilty of 'coaching' or assisting immigrants to evade or falsely answer inquiries made of them upon inspection shall be deemed guilty of a misdemeanor, and shall be fined \$100 and stand committed until the said fine is paid."

Nineteenth. "That in addition to the excluded classes already established by law, boards of special inquiry are hereby empowered to exclude from admission such aliens as appear to them to be suspicious or disreputable characters, suspected

convicts, anarchists, or persons unfit to be admitted to the United States, unless the said person or persons shall establish for themselves, or through their friends, a good reputation."

Q. (By Mr. FARQUHAR.) The intention of that is to make the immigrant give the proof?—A. To throw the burden of proof on him. Now we can not send him back unless we can prove he is likely to become a public charge. Under such an amendment we could say to a suspicious or disreputable person: "You must prove your reputation; otherwise you will be debarred."

Twentieth. "That it shall be lawful to take the testimony in a summary manner of an immigrant ordered to be deported, after giving a short but reasonable notice to the party charged with inducing him to migrate in violation of the alien contract laws; and the parties so charged shall have the right to appear in person or by counsel and cross-examine a witness; the testimony thus taken may be used as evidence in any action instituted, or to be instituted, to punish the person so charged, and to have the same effect as if the witness had so testified in open court."

Twenty-first. "That boards of special inquiry, by and with the sanction of the commissioner of immigration at the port of arrival, may in their discretion admit conditionally into the United States such persons as intend to settle here and later on to bring their families here; and within one year thereafter, upon the arrival of their families, it shall be the duty of the board of special inquiry to reopen the case of such immigrant conditionally landed and take into consideration the admission of the whole family in the same manner as if all of them had arrived at the same time, and to admit or deport any or all of them, including the 1 conditionally landed, according to the immigration laws governing excluded classes."

I presume a good many of these things will fail to receive the sanction of Congress, but they will do away with difficulties that we have. A man, as I have said, comes in and says, "I am all right, but my family and six children are on the other side." The immigration authorities should have the right to say, "Are they all right; is there anything the matter with them?" "No; they are all well." "You appear to be responsible and eligible. Are you willing in case we admit you, and your family comes in and is found to be, one an idiot and another consumptive, to go back with them?" That is the point we wish to bring to your consideration.

Q. What are your suggestions in respect to a recodification of the immigration laws?—A. I believe that we are in the same position exactly that the United States was before the Revised Statutes were put into effect, and if we could codify all the laws and add to them only so far as to make the present theory of the law effective, we could go into the courts and do what the general public supposes we can do. The general public supposes the Contract Labor Bureau has absolute power to restrict contract labor and go into the courts to punish the contractors. I believe in such codification of the laws as practical experience has found necessary.

Q. (By Mr. CLARKE.) Do you understand that a person who brings another here under contract to perform labor for him can not be punished in our courts under the present law?—A. We find it exceedingly difficult. Dr. Ullo has found great difficulties in court.

Q. Have you made any investigation with reference to immigration and crime?—A. Somewhat, yes.

Q. Have you reported it to the Commissioner of Immigration?—A. Mr. Fitchie has, yes. I have made that investigation, and have been assisted by Dr. Safford, of our medical division.

Q. Do you know whether that will be embraced in his next annual report?—A. I do not.

Q. If not, can you furnish it to this commission?—A. I should think Mr. Powderly could. It is within his province now.

Q. I would like to ask you whether the census of 1890 investigated, in regard to criminals, those who were children of foreign-born parents?—A. It did. Professor Wines has a special report on that subject.

Q. In your opinion, has that investigation been carried far enough to fairly indicate the relation of criminality to immigration?—A. I think the special question of immigration and crime would merit the fullest investigation, which it has not received.

Q. (By Mr. FARQUHAR.) As you have examined that question, what have you to say with reference to the testimony here this morning that the more intelligent immigrants are most apt to form the criminal classes in this country?—A. Certain classes, yes; but there are special crimes which I think are positively established

as the result of the introduction of foreign peoples into our country; certain classes of crimes which are now becoming prevalent.

Q. Do you think immigrants from the more intelligent nations of the Old World are more apt to commit crimes than those from the south of Europe?—A. I think they commit different classes of crimes. There is always the fear, in making that comparison of immigrants of confusing with the good immigrants those who are forced out of their own country because of their criminal habits, and they come in force here and increase the average, and we must, in making any fair comparison, take that into account. But the matter is one that it seems to me is vitally important in this connection, that the moral dangers from immigration are equally, if not much more pressing than the economic dangers.

(At this point the examination of Mr. McSweeney was suspended, and was resumed at 10 a. m., July 26, 1899.)

Q. (By Mr. SMYTH.) Are all the questions on the ships' manifests uniformly answered in full, so far as you know?—A. They are answered in full, but the last 4 questions are answered generally—all in the same tenor. The immigrant's health is generally reported good, and there seems to be very little attention paid to it. The last 4 or 5 questions are always answered pro forma.

Q. Are these manifests common to all the shipping lines?—A. Yes.

Q. Mediterranean, continental, and British?—A. Yes. In this connection I suggest that the character of the paper and the character of the writing material now used will make these manifests absolutely valueless in less than 10 years; and these are among the most important records the country has. I think some legal requirement ought to be made as to the quality of the paper and ink. In many of our ships the paper falls to pieces before it is handled by our officers, and the ink is of all sorts. There should be some legal requirement to protect these very valuable statistics.

Q. How many interpreters have you at the Barge Office?—A. About 20 all together; men who are conversant with all sorts of languages.

Q. How many languages are spoken?—A. We speak every language that comes in with the exception of 1 or 2 of the Slavish dialects. We have not a good interpreter in Lithuanian, for instance, but we can always get one, because in the railroad department or in some of the other departments there are always men who can fill these breaches.

Q. How about the Arabian?—A. We had up to a month ago 3 Oriental interpreters, but 1 was discharged about 2 weeks ago, and I understand the discharge of another is pending, so it leaves us 1. We have 1 Oriental at present.

Q. You think you have ample provision; immigrants can communicate their ideas to a competent party who can communicate with you?—A. As to the races which come in, the German, Yiddish, and Italian languages are spoken in the bureau, and we all have a smattering of all of them, so we are pretty well provided; but there are expert interpreters in almost every language with which we have to deal.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF MR. GUSTAV H. SCHWAB,

Agent, North German Lloyd Steamship Company, New York City.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City, July 25, 1899, Chairman Smyth presiding, Gustav H. Schwab appeared at 11.15 a. m., and, being duly sworn, testified concerning immigration as follows:

Q. (By Mr. SMYTH.) What is your place of residence?—A. 31 West Forty-seventh street, New York City; place of business, 5 Broadway.

Q. What is your business?—A. Member of the firm of Oelrichs & Co., agents of the North German Lloyd Steamship Company.

Q. How long have you been in that business?—A. Twenty-three years.

Q. If you can give us any information or have any statements you would care to make with reference to the immigration law and its rulings we would be glad to hear from you, and after that we will ask you questions.—A. I would like to preface what I have to say by saying the representatives of the foreign steamship lines are nearly all citizens of the United States and reputable merchants, and whatever opinions they have they believe they represent as citizens. What I shall have to say will be from the standpoint of an American citizen. We

do not wish to disassociate these two. The foreign steamship lines on the other side are managed by directors who are the foremost business men of their respective cities, and also desire to comply with the laws of this country and forward the interests of this country, because they take a high view of things and do not wish to send their steamers here for the purpose of throwing upon this country a mass of immigrants that can not be assimilated and should not properly come. We believe, the steamship companies, that the immigration laws as they exist at present are certainly carried out most efficiently at this port and at the other ports equally well. As to the laws themselves, while I suppose they could be amended and improved in some particulars, I believe they represent the right principle, and that is this: As far as the steamship lines are concerned, they are held responsible for the passenger. For instance, if a passenger on landing here is found in any way not to conform to the requirements of the law, that passenger is returned by the same steamship line. If the line has made a mistake, it is ready to take him back. Through their agents on the other side they exercise a careful scrutiny of every passenger who comes to them for passage. They have instructed their agents and given them a full statement of the laws as they exist in this country and the various objections that are made to immigrants, and they require these laws to be complied with. They give to the Secretary of the Treasury, as required by law, a statement showing that their agents are informed. It is given every 6 months, I believe. That I hold to be the right principle; to hold the steamship companies responsible for the people they bring, and oblige them to investigate the passengers, and if they make a mistake to send them back. I believe that such an investigation is far more valuable than any consular inspection such as has been proposed. I hold that to be absolutely impracticable, and I believe the investigation through the steamship lines is more thorough. We have only a few consuls in the countries the immigrants come from. I believe in Hungary we have only one consul, a country from which as high as 30,000 immigrants have come in one year. Manifestly it is impossible for that consul to investigate the antecedents of the immigrant properly. The agent of the steamship company, who is resident in the country, is the man to hold. The steamship companies not only have their instructions to their agents to carefully examine any passenger in the light of the law, but they also hold the agents responsible; at least our company does. If the passenger is returned, it is at the expense of the agent who booked him. Now, where a man's pocket is affected you can probably have more control over him than in any other way. I believe that this control, through the steamship companies, of their agents in booking passengers is the most reliable one. It is more satisfactory, it seems to me, to the immigration authorities than any other investigation on the other side could possibly be. Aside from this fact, it is problematical whether the investigation of passengers on the other side would be permitted by the foreign government, if carried out by the United States Government, whereas now the investigation is carried out by private persons.

In suggesting any changes in the present law, I would like to state that I hardly have had an opportunity to carefully consider the present law as to the features in which it might be improved. It has always seemed to me that the contract-labor law could be improved in this particular, that it now does not hold the employer in this country who sends for the contract laborer, but it visits the whole wrath of the law on the unfortunate laborer who comes here absolutely ignorant of the United States law, and does not hold the employer himself, who is the man to be held by right. I suggest that an improvement ought to be made in that way.

Then, I have learned of some suggestions as to the extension of the time during which a man should be here, from 1 to 2 years or even longer; also an increase in the head money. I would say, as far as that is concerned—I do not attempt to speak for all the steamship companies—that in whatever is deemed wise and reasonable and proper for the protection of this country, I think you will find the steamship lines will acquiesce. Of course, I believe it would be a mistake to raise the head money to an inordinately high figure, say \$5 to \$10; it would be prohibitory. In other words, you prohibit all immigration except of those who can afford to pay the \$5 or \$10. As I take it the principle to be followed in the matter of immigration is the question of whether a man is capable and willing to work, is honest, and will make a good citizen. Now, whether he is going to bring in here \$30, \$50, or \$100 is of minor importance compared to whether he will develop into a good citizen for the country; that is entirely left out of sight if the plan of a high head tax is introduced or a high money qualification.

As to the question of illiteracy—educational test: That strikes one quite favorably on first contemplation, but there, also, you must remember that you not only prohibit the admission of a large number of people who are absolutely necessary in this country for the development of the natural resources of the country, but

you commit an injustice by adopting such a measure as that. I do not know that you have had an opportunity of investigating the prison returns in the various cities, but it is certainly a most startling fact that those countries whose immigrants into this country are most literate show the largest percentage of prison commitments and jail commitments for vagrancy, drunkenness, etc. I refer to such States as New York, Pennsylvania, New Jersey, and Illinois, where you have a large number of immigrants coming from countries such as Italy, Austria, Hungary, Russia—those which are said to send us the worst immigrants. I would earnestly commend a study of these statistics. You will find them most startling. It is shown that illiteracy has nothing to do, as far as these statistics would seem to show, with crime.

There is another thing that has been quite surprising to me, and that is the statements that were made by a number of gentlemen—I believe one gave testimony before you in Washington—with reference to the reduction in wages. Now, if you will investigate the matter, I believe you will find that within the last 25 years, during which a large immigration has come into this country, wages have actually risen. There is not a single occupation in which wages have not risen in the last 25 years, and that, taken together with the enormous decrease in the cost of living in the last 25 years, which was obtained by the large immigration enabling us to produce things and create more cheaply, seems to me to show that labor has rather gained than suffered by the large immigration to this country.

I believe that the present laws are ample to protect this country. Whatever further improvements are deemed wise and seem to be agreed upon by all—the general consensus of opinion—the steamship lines will cheerfully acquiesce in anything that promotes the welfare of the country. They believe the immigrant that comes into this country now is absolutely needed. Construction work on highways, sewers, etc., is done by the Irish, Hungarians, and Italians as the Americans advance in intelligence and better their condition. We could not get them to work on these more or less brutal tasks, which are attended to by these lower classes that come in. I do not think it would be best to go back to the old conditions. It is merely a question of modern improvement.

Q. We have had testimony in Washington that the steamship lines issued circulars to their agents with reference to inducing immigrants to come to this country. Have you some circulars that your company has issued in the past you could give us?—A. I could only say in regard to that, that no steamship line that I am familiar with would be guilty of doing such a thing, nor would any country from which these lines come, and in which they are domiciled, permit such a thing to be done. The countries of Germany, Italy, Austria, France, and, I believe, also of England and Scandinavia, all have very stringent laws prohibiting the inciting to emigration from those countries, for the reason that these countries are all dependent on the young emigrants for their armies. That also is sufficient inducement for them to exercise a more stringent inspection of emigrants leaving their countries. They go so far as to permit only certain licensed agents to exercise the trade of emigration agent, and these licenses are paid for with a very high fee and subject to revocation at any time. We have had any number of agents in former years who have tried to send out circulars to people they thought would emigrate, and who have had their licenses revoked without any mercy. It is absolutely impossible, in my opinion, for the steamship companies and agents to incite to emigration on the other side. It can not be done; not even to invite.

Q. The statement that agents have in foreign countries employed subagents to induce emigration is a mistake?—A. Entirely wrong. Of course, they have subagents to sell tickets in various cities, but they are all subject to the laws of the country, which are carried out very stringently.

Q. Is the carrying of immigrants a very lucrative part of your business?—A. It was in former years. I consider that the cabin business has assumed greater proportions and more importance with a number of the lines. The cabin business has increased in much greater proportion than the steerage business. We calculate the increase in cabin about 10 per cent a year on the average.

Q. How does the steerage rate compare with the rate of, say, 10 years ago?—A. The steerage rate at present is very much higher than it was 10 years ago. That is due to an agreement of the lines among themselves.

Q. Which is being carried out in good faith?—A. Yes.

Q. What percentage of increase since 1880?—A. I do not remember what the rate was.

Q. Can you give it in figures?—A. I should say the rate is now probably fully 50 per cent higher than in 1880. That is a rough guess.

Q. What is the rate to-day?—A. We have two classes of steamers. One is the

the so-called express steamer, and the rate is \$38.50 in steerage from Europe. The rate of the slower steamers is \$36.50 to New York from Bremen. That is about 50 per cent higher than in 1880 at a rough guess.

Q. Have you had many of your immigrants rejected at the port of New York and returned on account of having contagious or loathsome diseases?—A. There has been a certain number rejected. I do not think we have had a large number rejected.

Q. Do you know of any case in which such rejected immigrant has been returned on a subsequent or the same ship of the company?—A. I know of no case on our line.

Q. Your board of directors on the other side has never considered that such a passenger should be admitted and sent him back?—A. They would never think of such a thing. Speaking of the circulars sent out by the lines on the other side, I would like to hand you here a circular to agents issued in this country, on which you will find instructions to agents giving the classes that are prohibited and not to be booked. You are probably not familiar with the fact that so-called prepaid tickets are a feature in the business of the steamship companies of great importance. By prepaid tickets is understood a ticket bought in this country for passage from the other side; that is, a ticket that takes the place of money, as it were. It is a ticket bought in this country by a man who has come over here, worked here, and accumulated a fund, and to bring his folks from the other side, sends them a ticket for the passage. This is a very large business, and it is to that business that must be ascribed either the increase or decrease in immigration. Of the whole immigration into this country about 60 per cent is due either directly to prepaid business or such business as is brought in with the prepaid passenger.

Q. That is, assisted immigration?—A. That is assisted immigration of the right kind. The prepaid ticket is sent to John Smith in some village of Germany, and the whole village knows he has a ticket from his brother to come over; that he is working on a farm, not subject to military duty, paying very little taxes, and generally thinks he is in a pretty good country and would like his brother to come. His brother tells all his friends and neighbors, and he brings with him 2, 3, or 4 men coming over to this country they have heard of. So this prepaid business is of immense importance, and that is the barometer, as it were, of business. For instance, if we have bad times in this country, prepaid business falls off; where 100 are usually sold in a day only 25 or 30 will be sold. If the immigrant is poor the immigration falls off. Immigration is induced by the condition of things in this country, the condition of the labor market, agriculture, and business generally; upon that depends immigration absolutely and entirely. Nothing else in the last 10 or 15 years has induced immigration from the other side.

Q. In such periods of depression as you speak of, there is really a return of immigrants to the other country?—A. Yes; that is a fact. The list of persons who return from this side increases. Our steerage list shows very much larger numbers in times of depression than in times when everything is prosperous and business doing well.

Q. Have you any way of telling whether immigrants come over for a brief season and then return—birds of passage?—A. Hardly to the north. I do not know but that may apply—to some extent to the Italian.

Q. (By Mr. CLARKE.) I suppose you are aware that formerly large landowners in this country, whether individual or corporate, exerted themselves in Europe to induce immigration?—A. Yes.

Q. Is that practice kept up now?—A. As far as I am informed that has entirely disappeared. In former years the railroads did a very large work in that direction, especially the land-grant railroads, and corporations also; but I have not heard of anything of that kind being done in the last 10 or 15 years.

Q. The class of people in this country who send over there for their friends is generally in favor of immigration, and would be opposed to restricting immigration?—A. I suppose so; undoubtedly.

Q. So that if Congress should undertake to prohibit immigration entirely for a period of time it would probably incur the opposition of this class of people?—A. Oh, yes; undoubtedly; and cause a great deal of hardship also.

Q. And therefore your agents abroad, while being careful to have our laws complied with, notwithstanding work chiefly in the interests of the steamship company—I mean to say you go as near the limits of the law as you safely can so as to bring an immigrant?—A. I think I will have to correct that. The companies on the other side, I believe, judging from our experience, are apt to err. They wish always to leave a safe margin. We have frequently had cables inquiring whether it would be wise to take a certain family that has applied, and has, we will say, a child or a person that might possibly come under the prohibitory

classes. As Mr. McSweeney will confirm, we frequently apply to him as to whether we can safely carry such persons, and our company usually decides not to bring them.

Q. Your interest, you think, is in favor of rather excessive caution than the other way?—A. I think so. That is the way the system works.

Q. How would it do to have some United States Government immigration agents to make a careful inquiry in cooperation with your steamship agents?—A. I think that would involve such an enormous expense that it would practically not be feasible. You would have to have practically an agent of the United States, an immigration agent, by the side of everyone of our agents.

Q. The steamship companies would not object to it, I suppose?—A. I think they would probably welcome it, for they would have someone on whom the responsibility could be placed and have the matter settled there; but I doubt very much if that would be feasible.

Q. In reference to head money, that is exacted from only the first and second class passengers?—A. No; from all alien passengers, whether they come in steerage or cabin. Of course, we are obliged to depend on the statements of cabin passengers as to whether they are aliens or United States citizens.

Q. Do you not think it would be an advantage to increase that, even for the sake of revenue?—A. I do not like to express an opinion on that. I do not know if it would be necessary. Probably the immigration officials are more capable of expressing an opinion as to whether it is needed. If it is absolutely necessary, the steamship lines would acquiesce in anything reasonable.

Q. Is this head money paid by the steamship company?—A. Yes.

Q. And added to the fare of the passenger?—A. It is in a certain way. It is not added directly. The steamship companies of course fix their rates, including all expenses they have to pay. I presume the rate of fare would be increased by that much if the head money was increased, so it would ultimately fall on the passenger. It is one of the items of cost.

Q. Do you not think a moderate increase of that head tax would tend to improve the quality of the immigrants?—A. No; I do not think so.

Q. If there is any assisted immigration, I suppose it would not help that, as the people would put up more money if necessary?—A. I have not heard of any assisted immigration for a number of years.

Q. (By Mr. SMYTH.) Except in the way of prepaid tickets?—A. That we do not call assisted immigration; that is regularly prepaid business.

Q. It is assisted?—A. It is a ticket presented to a relative on the other side, yes. I have recently observed a statement of the enormous revenues to the steamship lines from the passenger business, and also as to the cost of transporting business. This morning I ran over the reports of the North German Lloyd for the last 20 years, and I find the average dividend paid in the last 20 years was 5 per cent, and the shares are now quoted at 119 and 120. That does not show that it is such an enormously lucrative business.

Q. Of course there is a great depreciation in the steamers?—A. Yes; certainly.

Q. (By Mr. FARQUHAR.) Are you practically acquainted with the manner of inspection on the other side, medical inspection?—A. I am to a certain extent.

Q. Have you been present while the inspection was made?—A. I know that our company has a doctor, who is detailed and paid for the purpose of examining all emigrants before they embark, and if there are any cases coming from suspected districts, such as the south of Russia, where there is a great deal of smallpox, they are kept in control stations. Our company has at present 7 control stations which have been established and maintained with its own means, together with those of the Hamburg-American, and, I believe, the Red Star Line. They are located near the frontier between Prussia and Russia. They are established for the purpose of passing through them all emigrants intended for this country, coming from south Russia. I will read this: (Reading.)

"The North German Lloyd Steamship Company now offer to immigrants from Russia the use of its control stations established on the Russo-German frontier at Bajohrem, Eydtkuhen, Prostken, Illowo, Ottlotschin, Tilsit, and Insterburg."

The other steamship companies contribute to their maintenance, though they are practically owned by the North German Lloyd. (Continuing to read.)

"These control stations, built and owned by the North German Lloyd, are completely equipped for the comfort and convenience of its passengers. Each of them is under the supervision of a competent manager, and is provided with the necessary sleeping and living rooms, with bathrooms, steam-heating arrangements, and restaurants. A practicing physician and a force of male and female attendants are attached to each of them, and they are under the continual control of the Imperial German Government and have received official approval."

"In these control stations emigrants from Russia, intending to take passage in the steamers of the North German Lloyd Company are examined as to their compliance with the requirements of the United States immigration laws, bathed, and their baggage disinfected for the sum of 2 marks (50 cents) each person, after which they receive a certificate that entitles them to continue their journey to the port of departure."

These stations are in some cases 24 hours by rail east of Bremen, and they have to continue their journey 24 hours to reach the port of departure. I believe the Rotterdam line is interested in these control stations, besides the 3 I have mentioned.

It is well known that most of these contagious diseases come from the south of Russia, and countries where cleanliness is not very great.

Q. You have also local inspection at the port of embarkation?—A. There is a local medical inspection at the port of departure.

Q. On board ship?—A. No; on land. The port of Bremen is an inland port, situated 30 miles up the river Weser, and the river Weser is not navigable by the large steamers. Therefore, all emigrants, before they embark in Bremerhaven, are sent by train from Bremen to Bremerhaven and there put on board steamer. Before they leave Bremen, in the railway station there is a special station arranged for these emigrants, where they are ticketed, have their baggage attended to, and are examined by the physicians. I think there are 2, at least 1, paid by our line for the purpose of examining and disinfecting passengers. If there are any persons who are at all suspicious, they are quarantined in Bremen and kept there until developments show whether they prove to be harmless.

Q. Is there any medical inspection made on board the steamers before starting?—A. On our large steamers we have 2 doctors; on the small steamers 1. The medical inspection is carried out at least once a day.

Q. To comply with the United States regulations?—A. No; with our company's own regulations.

Q. In compliance with the law?—A. I do not recollect that the United States regulations call for any.

Q. Suppose you have 1,000 steerage passengers, how long does it take the medical inspector to pass on that 1,000 aboard ship at the gang plank?—A. If the weather is fine they are brought on deck and passed in that way, but very often, and probably generally in the fall and winter, that inspection has to be done below deck, and the doctor goes down and examines every passenger and sometimes in his bunk.

Q. Complaint has been made as to the insufficiency of that medical inspection on board ship on the part of the steamship's doctors. First of all, that it is hurriedly done; that there is not sufficient time given for anything like the proper inspection; and secondly, that the medical inspectors are not experienced surgeons and physicians, but mostly young graduates of medical colleges?—A. In relation to that I would say the inspection can take place through the whole day. The doctor has 24 hours, and at least 12 hours of daylight in which to make the inspection. To my knowledge the inspection has taken at least 2 or 3 hours, and it can, if desired, be made more minute. In most of our large steamers we have 2 doctors.

Q. (By Mr. SMYTH.) Does he inspect every immigrant, or only those who are sick?—A. They all pass.

Q. Every day?—A. Yes; it is his duty and prescribed by the company. Of course, you will understand in very stormy weather it is almost impossible at times to carry out an inspection of that kind. With reference to the character of the physician or surgeon, I will say it is true there are some physicians who are young, but the greater number of surgeons on board the transatlantic liners are men who have been in the service for a number of years. I recollect on the largest steamer on our line a doctor who has been in our service at least 15 if not 20 years as ship surgeon, and I remember one man who was in our service 30 years as surgeon. Of course, it is not possible to secure the services of physicians of a great deal of experience; a man who has a large practice on shore would never think of taking a position as ship surgeon. They are required to be physicians of experience, and those on our line must have passed the German medical examination, and that is a very rigid examination. We have applications daily from doctors in this country for positions as surgeons, but I am obliged to inform them that they can not be passed unless they have seen experience and have passed the German examination.

Q. (By Mr. FARQUHAR.) Is the examination of passengers on board ship in the character of the sick call of the army?—A. No; I do not think it can be compared with that, because it is to the interest of every steamship company and every captain to have his ship examined every day carefully to ascertain if there are

contagious diseases on board. If we arrive here and have a case of smallpox on board, not detected by the physician as soon as it broke out, that ship is held in quarantine. The passengers are taken to Hoffman Island, and kept there at our expense at a cost of many thousands per day if the number is large. That is the interest that appeals to the steamship company's pocket, and they do not wish to incur anything of that kind. The strict injunction is given to examine every passenger every day to see if there are any possible signs of smallpox, cholera, or any contagious disease. Do not misunderstand me. We will only be too glad to introduce any improvements that can be introduced.

Q. Do you not think it would be an advantage to all the steamship companies and a great help here to the inspection service on this side of the Atlantic to make your examination at your ports of embarkation more rigid than they are at present?—A. I do, personally, yes; and I can give you the assurance that whatever I can do on my part will be exerted to comply with your wishes.

Q. (By Mr. CLARKE.) Who sell these prepaid tickets on this side?—A. The steamship companies and their agents.

Q. Are they in the hands of the railroad companies?—A. No. In some cases railroad companies are at the same time steamship companies; but in my experience in comparatively few cases.

Q. Are they sold by the railroad and steamship ticket brokers also?—A. Yes, in some few cases; generally by steamship agents who at the same time sell bills of exchange and money orders and do a general money business, but I think in very few cases by railroad agents. That applies to our own lines; possibly the other lines may have some other experience.

Q. You have no instructions to your agents as to the solicitation of this class of trade?—A. Nothing further than is contained in the circulars we have issued to them. That is hardly a business that could be solicited. For instance, an agent is in a small village in Wisconsin, and a farmer drives in from the country and buys a ticket. Among the farmers around there a man could not do a large soliciting business, it would not pay.

Q. The commission on the sale of these tickets is not very large?—A. I think it is \$2 now.

Q. (By Mr. FARQUHAR.) Will you state the aims of this North Atlantic conference?—A. There are 3 conferences, North Atlantic, Mediterranean and Continental. They are solely for the purposes of trade and discussion of matters of general interest concerning all the lines.

Q. Do they discuss rates?—A. That is fixed by the various lines on the other side.

Q. (By Mr. CLARKE.) It is not in the nature of a trust?—A. No; it is not a trust.

Q. In the testimony given before us in Washington a statement was made that the steamship lines employed a very powerful and extensive lobby in Washington?—A. That is an absolute and unmitigated untruth; there is absolutely nothing in that. The steamship lines have maintained no lobby of any kind in Washington. The late Dr. Glavis was in Washington as a representative of the steamship lines, but he was never engaged as a lobbyist, and since his death the steamship lines are not represented in Washington, except by agents for the transaction of passenger business.

Q. (By Mr. FARQUHAR.) The general assertion was made some time ago in respect to a pool formed by all of the steamship companies between the United States and Europe. Was or is there such a pool or pooling arrangement with respect to steorage rates, or in your conference was such an arrangement considered?—A. Not in this country. There is an agreement on the other side with reference to rates and the general conduct of business.

Q. Has there been a division of European territory made to suit or accommodate the lines and ports the steamships enter?—A. You refer to the Continental conference. I have never heard of any; I do not think there is any. The ports are all open, except that the Continental conference does not book passengers in Italy, but leaves that to the Mediterranean conference.

Q. Is the French line in that conference?—A. It is not exactly a member. It accommodates itself and generally agrees to what is adopted.

Q. Whatever arrangements are made with respect to rates are made on the other side?—A. Yes.

Q. And the arrangements are merely business arrangements, not in the character of a trust or pool or syndicate or anything of that kind?—A. Oh, no.

Q. No control put into any board of officers?—A. The lines retain their individual control and management absolutely.

Q. So it is simply give and take, free trade, as is often done between parties in the same business?—A. They do control the rates. They agree on certain rates.

Q. Could you give us a reason why steorage rates have risen within the last 15 or 20 years, or have been increased 35 to 50 per cent?—A. It is probably due to the fact that wars have been avoided among the steamship lines, and there has been this agreement on the other side with respect to rates.

Q. On the other side they found that the competition was destructive of profits and expensive to carry through?—A. Yes.

Q. So it was for the restriction of competition, the competition in the matter of agencies, and at the same time to get a proper return in the steorage rate for the lessened immigration that occurred?—A. There is no combination of agents. Each line retains its own agents and all its outfit. It is simply an agreement with reference to rates, introduced to avoid competition, the same as railroads have had to enter into agreements with reference to rates. Otherwise they would cut each others' throats.

Q. With respect to section 11 of the act of March 3, 1891, which requires the guaranty on the part of the transportation companies to care for the immigrant for the space of 12 months, and provides that the immigrant may be deported by the same line, have you anything to say why that length of time should not be extended more than 12 months?—A. No; I have no opinion to express. The immigration officials, I think, would be more competent to express an opinion. I do not know how many we have taken back that have been here more than 6 months. However, if it is decided that it is wise to extend it to 2 years—

Q. (By Mr. SMYTH.) (Interrupting.) You would not consider it a hardship?—A. We would consider it a hardship, but would agree to it.

Q. Would it lead to a rise in steorage rates?—A. I doubt that.

Q. (By Mr. FARQUHAR.) Do you know what the system is in the Australian colonies—the length of time of guaranty?—A. No; I am not familiar with that.

Q. Suppose it was for 5 years, and that a bond should be entered into in the sum of \$2,500?—A. I think that would be a very long period of time—5 years. A great deal can happen in that time. Surely 2 years might be sufficient.

Q. Are there not a great many immigrants who neglect or refuse to become American citizens?—A. Really I am not familiar with that; I would not express an opinion on that.

Q. Provided that such a thing does occur, do you not think that it would be a matter of injustice to the United States to be compelled to take care of men and women who are in fact the subjects of a foreign nation and not American citizens?—A. I do not know that I am competent to express an opinion on that. As long as they are benefiting the country by their labor, it seems to me they have a certain amount of right to apply for the protection a government can give even if they are not citizens. That is my private opinion. I think if I had the control I should raise the time necessary to naturalization in this country. That seems to me to be of more importance than the restriction of immigration.

Q. If you raise the time of naturalization you debar these men from becoming citizens?—A. I should not permit it unless they knew the language and could read and could understand the Constitution of the United States. But I draw an absolute distinction between admitting these people to the country and admitting them to the franchise. A very great distinction should be drawn between the two.

Q. Do you not think it is quite a disadvantage to have foreign immigrants entering and maintaining their allegiance to the foreign country, and after being here 4, 5, 6 or 7 years, leaving to go back home and remain there?—A. I should say not, if they produce and contribute toward the welfare and advance of the country, which they undoubtedly do. I declare I should just as soon have them come in as to have cattle come in or brute labor force that we need in this country for the development of the country.

Q. They are largely in the lower grades of labor?—A. Yes. I should not admit them to citizenship unless they understood the English language. I do not believe we could have built the Pacific railroads if it had not been for the Chinese labor. If we had prohibited that labor, we would not have had any transcontinental railroads whatever. The Americans would not have built them.

Q. But on the question of guaranty you are free to say the steamship companies would cooperate even to the extension of another year?—A. I am speaking personally. I am not competent to bind the steamship lines. If it is considered wise and necessary to raise the time by the immigration officials, we should certainly not raise any objections.

Q. How about doubling the head money, temporarily at least, to meet the expense of rebuilding the depot, etc.?—A. We would rather not see the head tax advanced, but if it appears impossible to carry on the work of the immigration bureau here and at other ports without advancing the head tax, of course we would be obliged to submit.

Q. You think it fair that all expense attending immigration should be borne by the immigrant or the transportation company?—A. That is a question. As it is, we are accustomed to it; the fact is there, and I do not wish to raise the question.

Q. (By Mr. CLARKE.) Since the steerage rates of the different lines have been fixed by conference on the other side at what you call a reasonable figure, what restrained the conference from fixing them at a higher figure?—A. Well, no doubt the fact that if the prices advance too high it simply acts in a prohibitive way, or induces competition, one of the two. In the same way, for instance, that the rates are fixed for first and second cabin travel. Certain rates are fixed beyond which it is not considered judicious to go.

Q. This conference constituted a sort of temporary monopoly, but the monopoly was restrained by prudential considerations from abusing its power?—A. Yes; it would undoubtedly have called in competition if rates had been advanced too high.

LETTER AND INCLOSURES APPENDED TO MR. SCHWAB'S TESTIMONY.

NORTH GERMAN LLOYD STEAMSHIP COMPANY,
OELRICHS & Co., AGENTS,
New York, September 8, 1899.

WILLIAM E. SACKETT, Esq.,
Secretary Industrial Commission, Washington, D. C.

DEAR SIR: Pursuant to the request of the chairman of the subcommission of the Industrial Commission that heard testimony in this city some weeks ago on the subject of immigration, I take pleasure in sending you under separate cover a large number of circulars and letters of instruction addressed to agents and passengers and containing instructions with regard to the booking of emigrant passengers to this country.

These documents are in use by our company for their northern lines from Bremen to New York, Baltimore and Galveston, and for their Mediterranean service from Genoa and Naples to New York.

The documents that I send you are the following:

1. Circular to agents and passengers, containing on the reverse a reference to the United States immigration laws as to passengers who are not permitted to land in this country in use for the service from Genoa.

2. Circular of the same nature in use for the service from Naples.

3. Circular containing instructions with regard to the interdiction of cases of conjunctivitis, trachoma, etc., in use for the service from Naples.

The following letters of instruction, circulars, and tickets are in use for our company's service from Boston to New York, Baltimore, and Galveston.

4. Circular to agents containing the questions to be addressed to alien passengers.

5. Instructions addressed to agents with regard to the manifesting of cabin passengers.

6. Question blanks to be answered by cabin passengers.

7. Circular to agents with regard to exposing the United States laws with reference to immigration in such position that all persons can read them.

8. Circular to agents with regard to favus.

9. Circular to agents with regard to trachoma and conjunctivitis.

10. Circular to agents with regard to bringing to the attention of passengers the provisions of the United States laws on immigration.

11. Printed letters addressed to steerage passengers containing full reference to the excluded classes under the United States immigration laws.

12. Circular intended for passengers also containing reference to the excluded classes under the United States immigration laws.

13. Samples of tickets issued by the North German Lloyd containing on the face of the tickets in large type a reference to the classes excluded under the United States immigration laws.

14. Circulars to agents and passengers with regard to the examination of passengers before embarking on the steamers of the North German Lloyd for the United States.

15. Circular addressed by the agent of the North German Lloyd in Berlin, who has charge of the seven North German Lloyd control stations at which all immigrants from Russia and Austria are held for examination before being sent on to Bremen for embarkation. In this circular reference is again made to the classes excluded under the United States immigration laws.

16. Copies of the translation of the immigration laws of the United States into the various languages in use by the passengers of the North German Lloyd, namely, German, Polish, Hungarian, Bohemian, Slavonian, Italian, Dutch.

These documents are all of the latest editions, as you will observe. We have attached to those that do not explain themselves the translation of the particular passages referring to the United States immigration laws.

I have requested our friends in Italy to send me copies of the Italian emigration laws and expect to be able to send you a copy of these laws in a few weeks. The steerage passengers before embarkation in Genoa and Naples, but especially at Naples, where the largest number of Italian emigrants embark, are subject to an examination by a physician representing the Royal Italian Emigration Commission, by another physician engaged by our company, and whose specialty is the examination for favus and trachoma, by the United States medical inspector who is appointed for the examination of steerage passengers embarking at Naples, and by the steamship surgeon.

Trusting that the documents and the information given may be of some service to the commission, I am, my dear sir,

Yours, very truly,

GUSTAV H. SCHWAB.

1. *Extract from circular to agents and third-class passengers, service from Genoa. Dated July 1, 1899.*

The law of February 26, 1891, prohibits the entrance into the United States of America—

1. Blind persons, lame persons, humpbacks, deaf-mutes, mutilated or deformed persons.

2. Women with infants who can not prove that they have been called there by relatives.

3. Unmarried woman, pregnant or with offspring.

4. Those afflicted with nauseous or contagious diseases.

5. Persons condemned for infamous acts or transgressions which imply moral turpitude, polygamists, persons under contract to labor, be the contract in writing, verbal, or self-understood.

N. B.—In case a passenger in a condition above enumerated would elude the authorities and embark, and upon his arrival at destination be debarred from landing, the agent or subagent who booked the passenger will be held for the return fare of £.155 in gold in addition to the loss of the passage money.

2. *Extract from circular to agents and third-class passengers, service from Naples. Dated August 1, 1899.*

The Government of the United States prohibits the landing at New York of idiots, insane persons, blind persons, cripples, deaf-mutes, persons afflicted with contagious diseases, persons condemned for infamous acts, polygamists, contract laborers, and persons unable to support themselves.

3. *Circular to agents, service from Naples, concerning contagious diseases. Dated October, 1898.*

To Subagents:

To our regret we observe that recently several emigrants bound for New York, in the act of embarking, have been prohibited to travel by the sanitary commission on account of contagious diseases with which they were afflicted.

This creates considerable loss to the passengers, who are then compelled to return at their own expense, or, the means to do so failing them, the expense falls upon us.

To eliminate such serious inconveniences we earnestly request your attention that before sending passengers here you will assure yourself of the perfect state of their physical condition, and, above all, that they are not afflicted with contagious diseases, such as favus and diseases of the eye, conjunctivitis, trachoma, etc.

We therefore request you strictly to observe our instructions and not to forward passengers afflicted with such diseases; otherwise, to our regret, we will hold you responsible for the consequences. In doubtful cases it is necessary that the passenger be provided with a certificate from the health board affirming that his disease is not contagious.

Also take note that all persons over 60 years of age must be furnished with an affidavit upon their arrival at New York, by which the relatives residing there guarantee to provide for and maintain the passengers at their own expense.

Respectfully,

THE EMIGRANT AGENT.

4. *Circular to agents, Bremen service, containing question blanks. Dated June, 1898.*

To our Agents:

The regulations of the new German emigration law and those for filling out the new receipts approved by the imperial chancellor to be used from now on do not imply a discontinuance of the American requirements as to the use of the question blanks.

With every steerage receipt a question blank must be filled out and attached to such question blank, in order that we may take the question blank so filled out from the passenger here for the preparation of the American lists.

5. *Question blank.*

Name in full

Age { years
 } months

Sex

Married or single

Calling or occupation

Able to { read
 } write

Nationality

Last residence

Seaport for landing in the United States

Final destination in the United States (State, city, or town)

Whether having a ticket to such final destination

By whom was passage paid

Whether in possession of money; if so, whether more than \$30, and how much if \$30 or less

Whether ever before in the United States; and, if so, when and where

Whether going to join a relative; and, if so, what relative, their name and address

Ever in prison or almshouse or supported by charity; if yes, state which

Whether a polygamist

Whether under contract, express or implied, to labor in the United States

Condition of health, mental and physical

Deformed or crippled, nature and cause

6. *Instructions to agents, Bremen service, as to manifestation of cabin passengers. Dated January, 1899.*

The United States Government in Washington has ordered that, in accordance with the law of March 3, 1893, all cabin passengers (I and II cabin) must answer the prescribed twenty questions, in the same way as steerage passengers. These answers are to be obtained by the agents when making out the passage orders, and to be entered on the forms intended for that purpose. This form and the passage order must be delivered by the passengers to us in Bremen.

The following cabin passengers need not be manifested:

1. Citizens of the United States.

2. Tourists (those who return to Europe after a short sojourn).

3. Transit passengers (those traveling through to Canada, Mexico, and Central America).

All such exceptions must be plainly noted on the passage orders as "U. S. citizen," "Tourist," or "Transit passenger."

Holders of American return tickets not American citizens (those who only have the so-called "first citizen's paper" are not citizens) must also answer the twenty questions.

Forms for the manifestation of cabin passengers are supplied upon demand.

7. *Circular to agents, Bremen service, as to displaying United States laws. Dated June 30, 1899.*

Referring to our circular of April 28, 1898, with which we sent you copies of the immigration act of the United States, and particularly to the section stating that "all agents must display a copy of this law, printed in large, legible type, in the language of their country, in their office, and must draw the attention of all intending passengers to this law before their departing," we request you to observe these laws strictly according to their provisions. Where necessary the above law must be translated into the local language.

Should the copies in your possession require replacing, kindly advise us and we will supply you with additional ones.

8. *Circular to agents, Bremen service, as to famus, etc. Dated August 5, 1899.*

We desire to call your attention to a recent decision of the Treasury Department of the United States of North America, according to which any steamer bringing passengers afflicted with contagious or loathsome diseases, such as favus, etc., will be prosecuted, and we urge you not to permit any passenger to embark who does not in every way satisfy the requirements of the United States Government in the above respect.

We request you to be guided by this circular and most carefully to see that no passenger is accepted who comes under the above heading, as we shall hold you responsible for any consequences that may arise.

9. *Circular to agents, Bremen service, regarding trachoma and conjunctivitis. Dated May 16, 1899.*

As it has recently repeatedly happened that the American immigration officers have returned steerage passengers on account of trachoma, whose cases have here been diagnosed as conjunctivitis, I would request you, at the desire of the North German Lloyd, to take particular pains that a thoroughly careful examination of all passengers be made. Persons afflicted with trachoma or any other dangerous disease of the eyes must under all circumstances be refused transportation, whereas in the case of slight diseases of the eyes which may be cured before the departure of the passenger from here, such passengers as are able to bear the expense of curing their maladies, which amounts to 20 marks, may be accepted for transportation. The North German Lloyd holds you responsible for the strict enforcement of this order.

Kindly acknowledge receipt of this circular.

12. *Notice appended to printed letter sent to applicants for steerage passage, Bremen service. (Form printed 1898.) Same also inserted in advertising circular. Dated July, 1899.*

TAKE NOTICE: According to the immigration act of the United States only those immigrants are permitted to land who are able to support themselves. Feeble-minded persons, idiots, cripples, lame persons, blind persons, deaf mutes, persons afflicted with contagious or incurable diseases, unmarried females when pregnant, unmarried females without means with their children, and criminals and convicts are not permitted to land. The American immigration authorities as a general rule demand health, sturdiness, ability and desirability to work, and respectable attire before giving permission to land to immigrants.

Attention is especially drawn to the fact that all persons who have, before embarkation, entered into a definite labor contract, or have otherwise tacitly obligated themselves to labor in the United States, will be unconditionally returned.

While the permission to land in America is not dependent upon the possession of any certain amount of money, the passengers are nevertheless advised to provide themselves with such funds aside from passage money. The immigration commissioners demand that cash money be produced by the immigrants.

13. Samples of tickets from Berlin to Baltimore and New York, containing on their face identically the above notice, and on the reverse side the question blank above quoted.

14. *Circular to agents and passengers, Bremen service, as to excluded persons. Dated January 1, 1899.*

A law of the United States of America prohibits the immigration of the following persons:

1. Persons without means.
2. Persons afflicted with incurable disease.
3. Persons afflicted with contagious or loathsome diseases.
4. Cripples.
5. Aged, feeble persons.
6. Prostitutes.
7. Criminals.

All immigrants are most carefully examined on landing in the United States. All immigrants to whom the above applies, as also those who within a space of even two years after their landing may be found objectionable, are returned to their homes. It is, therefore, in the interest of the immigrants that they undergo a medical examination before embarking.

This medical examination takes place every evening, excepting Sundays, at the railway station of the North German Lloyd. Women, girls, and children are to appear at this station at 5.30 p. m., and men at 6.30 p. m., on the day of their arrival in Bremen. Every immigrant who has been examined medically is furnished with a certificate and no emigrant will be permitted to board the steamer without this certificate. Emigrants arriving in Bremen late on the evening preceding the day of departure of the steamer on which they are to be forwarded must appear one and one-half hours before the departure of the special train at the depot to receive their certificate. Emigrants who become ill on their way to Bremen, or after their arrival in Bremen, must await their cure before they can be forwarded to America.

15. *Circular to agents of the seven North German Lloyd central stations as to medical examinations there. Dated April 23, 1897.*

In a like manner as the German Government to protect the sanitary condition of Germany has given orders permitting only such foreign emigrants to pass through Germany as are perfectly healthy, have the steamship companies the greatest interest in preventing the embarkation of passengers who may be afflicted with contagious diseases. In view of the many hundred passengers who daily come in contact with each other on board the vessel it is necessary that even greater care be exercised for the ocean voyage than for the journey on land. The American Government conforms to these provisions of the German Government and of the steamship companies, but besides it considers whether the means of the immigrant to gain a livelihood are in any way impaired by physical infirmities. The examination of immigrants when landing in the United States is therefore a very thorough one. Aside from those who have become ill during the voyage every passenger who, on account of pimples, boils, or other skin eruptions, makes an unfavorable impression upon the immigration authorities is objected to and sent to a hospital for detention. Especially persons who are found to be afflicted with hair diseases, for example, existing or healed favus, regularly meet this fate, and are then later on generally returned to Europe as suffering with a loathsome disease.

The following persons are regarded as unsuitable for transportation:

1. Cripples.
2. Lame persons.
3. Blind persons.
4. Idiots.
5. Aged feeble persons.
6. Persons unable to support themselves.
7. Unmarried pregnant females.
8. Persons afflicted with contagious or loathsome diseases.
9. Persons afflicted with diseases of the head, hair, or eyes, whether such disease be curable or not.

Persons enumerated under the headings 1 to 7 may, however, embark if they can produce a certificate signed by the American immigration authorities, permitting their landing in America.

As for the remainder, however, the American immigration authorities exercise their own judgment as to whether the immigrant is to be regarded as admissible to the United States, and permit no one to land who, in their opinion, is afflicted with a loathsome disease or unable to support himself.

It is therefore the duty of our doctors, agents, and employees to see that such passengers as are not permitted to land in the United States are not accepted for transportation, especially at the control stations established by the German steamship companies for this purpose on the frontier between Germany and Russia and at Ruhlleben.

The doctors at the control stations are therefore instructed not to give a certificate to anyone who according to the above list is not permitted to land in the United States, and the agents of the companies are requested not to sell tickets to such persons at all. In doubtful cases inquire of the respective steamship company, but under no circumstances must the passenger in question be permitted to depart before an answer is received from the steamship company. The principle is rather to refuse one passenger too many than forward a doubtful one.

16. *The translations of the American immigration laws of 1891 and 1893 into German, Polish, Hungarian, Bohemian, Slavonian, Italian, and Dutch give their provisions in full.*

17. *Summary of Italian emigration law of December 30, 1888.*

ARTICLE 1. Emigration is free aside from the obligations imposed upon citizens by the laws. Those subject to military service, whether in the permanent army or in the militia, can not emigrate unless they have obtained a permit from the minister of war.

ART. 2. No one can solicit emigrants or sell tickets without having received a certificate as agent from the ministry or a license as subagent from the prefect.

ART. 4. The grant of the certificate as agent is obtained upon a deposit or a guaranty of 3,000 to 5,000 lire.

ART. 5. The certificate is withdrawn whenever an agent has knowingly procured the departure or the emigration of criminals or of those who have escaped from prison or from penal colonies, or of minors destined to occupation included in the terms of the law of December 21, 1873.

ART. 6-69. Subagents are similarly responsible for violations of the law and agents are responsible for the acts of their subagents.

Article 13 of the ministerial regulations for the execution of the above law provides that the agent is prohibited from procuring the departure or the emigration of persons who are not permitted immigration into the States to which they are destined. It provides that the agent is bound to conform to the prescriptions which the minister may give for the protection of our emigrants in accordance with the provisions adopted by the Government of the States to which the emigrants are directed.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF MR. JACOB TER KUILE,

Passenger Agent of Fabre Steamship Line, New York City.

At a meeting of the Subcommittee on Manufactures and General Business held in New York, July 25, 1899, Chairman Smyth presiding, Jacob Ter Kuile appeared at 12 o'clock, and, being duly sworn, testified on the subject of immigration, as follows:

Q. (By Mr. SMYTH.) What is your residence?—A. I reside in Mont Vale, N. J.

Q. Your business?—A. Steamship passenger agent of the Fabre Line.

Q. If you have any suggestions or statements to make in the matter of immigration, we would be glad to hear from you, and then we will ask you some questions.—A. I think Mr. Schwab has made such a full statement, that as to general suggestions I can not add any.

Q. (By Mr. FARQUHAR.) Between what ports is your line?—A. Between Naples and New York.

Q. Have you copies of any circulars that you place in the hands of your foreign agents?—A. I have not.

Q. There are such circulars?—A. Yes, I will be glad to procure them and send to you.

Q. Do you know of any case on your line where an immigrant has been rejected at this or any port, for any cause, and then subsequently returned by your line?—A. No.

Q. How often do your steamers run?—A. We have a steamer about every fortnight.

Q. How many immigrants did you bring in last year?—A. The exact number was 12,110.

Q. Do you remember how many were rejected at this port?—A. I do not.

Q. (By Mr. CLARKE.) Are all of your immigrants aliens?—A. Nearly all of them.

Q. Are the agents whom you employ at Naples aliens?—A. Yes.

Q. Do you have any agents in other cities or towns of Italy?—A. Yes.

Q. What is the fare of the immigrant from Naples to New York?—A. Twenty-eight dollars.

Q. What was it in 1880?—A. We only commenced running in 1881. I think it was about \$25 then.

Q. Have you any knowledge as to the percentage of prepaid tickets from this side?—A. We ticketed 6,700 last year.

Q. Nearly one-half of all you had?—A. Not quite that. I should think, on an average, from one-third to two-fifths.

Q. Is there considerable return of these immigrants on your line?—A. Quite a number are going back, but it seems to me it is diminishing from year to year. They used to flock back almost to the extent of one-half every fall, but I doubt if the proportion now exceeds one-quarter, if it is that.

Q. How do you account for that?—A. I presume they are getting more used to the country, and prefer to settle here. Eighteen years ago they came here perfect strangers, but now they know somewhat of the country through friends and relatives.

Q. (By Mr. FARQUHAR.) Of those returning to Italy, do they usually permanently settle in Italy, or are they what we generally call birds of passage?—A. I think they are apt to go back and come again, perhaps to settle. They are mostly young men who have tried to make some money and then go back to see the old folks; and then we very often see them come back in a subsequent year.

Q. Have you noticed any improvement in the class of immigrants from Italy during the last 5 or 6 years?—A. It has decidedly improved.

Q. Is the immigration drawn from about the same sections of Italy as it was 10 years ago?—A. Yes; it is drawn mostly from the agricultural districts. There are none coming, so to speak, from Naples and the large cities.

Q. Do you know anything of a medical inspection of your immigrants at Naples?—A. There is a very rigid one.

Q. Please state to the commission what length of time it takes, and the means employed, to make the inspection.—A. I do not think I could give you the details. I only know in a general way that it is a very rigid examination.

Q. Are you aware that a few years ago the American commission in Europe reported that it was the most inefficient examination held in Europe?—A. I think it was improved in consequence of that report. I believe the American consul exercises a general supervision.

Q. Does the Italian Government aid the companies in making rules and regulations in respect to inspection?—A. It does. In the first place, it does in the rejection of immigrants that might be rejected in this country.

Q. How do the people of Italy generally know of the immigration laws of the United States?—A. I have a proclamation here from the Italian Government, dated in November, 1886. It says finally: "Hence arises the obligation on the part of the prefects to refuse passports to the United States of those who are included in the prohibited classes, under the amendments of the immigration law." It further states: "I beg the proper officers to make known to the public, either through print or through the syndaci (mayors or authorities), the foregoing rules, and to acknowledge in the meantime the receipt of these presents."

Q. (By Mr. SMYTH.) Has your line any connection whatever with the Italian bureau here in New York?—A. We are somewhat subject to their authority.

Q. That is, by authority of the Italian Government?—A. By authority of the Italian Government.

Q. Do you think immigrants are still brought from Italy in defiance of the law?—A. There are some, but the number is reducing constantly.

Q. Do you know anything about the existence of the padrone here in New York?—A. It used to exist, but it does not now, to my knowledge.

Q. You do not think it exists at all now?—A. I doubt it.

Q. Does the Italian immigrant want to be released from the padrone, or does he prefer that system of service?—A. Years ago he preferred it. He was unfamiliar with the language, was not educated, and the padrone was, as it were, the most educated among them, and protected them. Nowadays he does not need so much the assistance of the padrone.

Q. You think the system was rather a help to the immigrant in former days?—
A. At that time; yes.

Q. Did it become a great evil?—A. It did, years ago.

Q. You think now its evil effects have been entirely wiped out?—A. To my knowledge, entirely; but that, of course, I will not vouch for.

Q. Does not the Italian immigrant, as a rule, deposit his savings with rather irresponsible bankers of his own race?—A. Some are responsible and some are not. There is now one Italian savings bank in New York established under the laws of the State of New York.

Q. Does the San Raphael Society do much to help the ignorant Italian immigrant on his arrival in New York?—A. It does a great deal.

Q. Does that society render material assistance if necessary?—A. I believe it does.

Q. And take care of his money and deposits?—A. I do not believe that; not to my knowledge.

Q. In what form does it render material assistance to these immigrants?—A. It will assist them in finding their relations, and gives them a good deal of help in the Barge Office.

Q. Does it give them charity?—A. Not to my knowledge.

Q. You say with reference to the padrone that, as far as you know, it has been entirely done away with. Do you think you have a full knowledge on that subject?—A. I have not; only from what I hear.

Q. Is that the opinion here, you think, of this Italian bureau—of Dr. Rossi, for instance?—A. I could not say. I have not spoken to him on the subject. I do not meet him myself. It is my landing clerk that meets him.

Q. Has the Italian bureau any right to influence the admission of immigrants detained, when the officers here object to their being received either on account of contagious or loathsome diseases or on account of being criminals?—A. If they are objectionable, they certainly should not use influence; but if they are not, I should judge that their influence is not objectionable.

Q. Will you tell us exactly what is meant by the padrone system?—A. It originated from the sense of helplessness on the part of the majority of the Italian immigrants. They looked to the padrone for protection, especially in receiving the wages that were due them, and in procuring them quarters. They had to go out in the fields and work on the railways, and the padrone would see to it that they were fairly well settled.

Q. Of course, he secured them employment?—A. He would do that.

Q. He would take contracts and they would go to him and work?—A. Exactly.

Q. I suppose one of the evils came from his deducting large portions of their pay?—A. It was simply the abuse of the system that brought the evil; robbing the poor immigrant.

Q. Was that system in effect here in New York City as well as in the country?—A. I believe mostly in the country.

Q. In town, with reference to municipal work?—A. I am not familiar with that. If you will allow me, I will lay before you the law of the Italian Government, which makes the subagent in Italy responsible for his agency and his transactions with the passengers. In the first place, they have to give security to the amount of from 3,000 to 5,000 lire; then it states the penalties, and makes further regulations. Article 12 of said regulations reads: "It is, further, forbidden to procure the departure or embarkation of persons whose immigration is not permitted to the countries to which they are directed."

Q. Does the Italian Government encourage emigration to this country?—A. I think the Italian Government is like most governments in Europe—they discourage emigration. They need the intended emigrants for their armies.

Q. (By Mr. FARQUHAR.) That is one of the greatest industries of Europe, keeping up armies?—A. It would seem so.

Q. (By Mr. SMYTH.) How did this Italian bureau act during the recent war between Spain and the United States; did it discourage emigration?—A. I think it did; took steps in the very beginning of the war, pointing out the danger, in the first place.

Q. Was it in the shape of a warning sent by that bureau to the Italian people?—A. I would not be sure whether it was the Italian Government. I think the Government advised the people not to go for the time being. Whether they kept it up during the whole war I do not remember.

Q. Since the war, has the Italian Government taken steps to encourage emigration or prevent it?—A. It certainly tries to prevent emigration, and regulates it in a very stringent way.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF MR. ROBERT FLOYD,

Chief Clerk of the Cunard Steamship Line, New York City.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City, July 25, 1899, Chairman Smyth presiding, Robert Floyd appeared at 12.15 p. m., and, being duly sworn, testified concerning immigration, as follows:

Q. (By Mr. SMYTH.) What is your address?—A. 7 Fifth avenue, New York City.

Q. What is your business?—A. Chief clerk Cunard Line, New York.

Q. How long have you been connected with the Cunard Line?—A. Eleven years.

Q. We would be glad to have any statement from you in reference to the working of the immigration law, and any suggestions which you have to make.—A. Mr. Schwab has spoken so fully on the subject, and his views agree so well with those of the company I represent, that I think there is nothing for me to do except to answer such questions as you may put. I fully agree with all he said on the general subjects.

Q. The Cunard Line, I believe, runs to England?—A. Yes.

Q. Therefore you have not very much of the continental steerage business?—A. Our steerage passengers are mostly Irish and Scandinavians.

Q. What is your rate of steerage passage?—A. \$25 to some and \$27.50 to others.

Q. How does that compare with the rate in 1880?—A. It is higher.

Q. How much?—A. I can not answer.

Q. Do you think it is as much as 50 per cent?—A. I think fully. If I remember rightly, I think in 1880, in consequence of competition, rates ruled unusually low.

Q. Has the increase of rate tended to discourage immigration?—A. I think not. I can not speak correctly of the days when this heavy competition was on. No doubt at that time the extremely low rate induced them to come when they would not have otherwise.

Q. But the higher rates now you do not think tend to retard immigration?—A. I think the rates at present are reasonable ones and immigrants so consider them.

Q. Do you know of any case where the immigrant on your line has been rejected and returned by the immigrant officers in the port of New York, and subsequently brought back on your line to the United States?—A. I know of no case, and I am sure our company would prevent any immigrant who had been deported coming back by our line if the matter came under their observation. They would not run the risk of having to repeat the same experience with the same individual.

Q. Have you a copy of your instructions issued to your agents?—A. I have not.

Q. You have issued such circulars?—A. Our circulars on the other side are merely circulars giving information as to rates of passage and sailing dates, so far as I am informed.

Q. Can you procure for the use of the commission copies of these circulars and have them sent to us at Washington?—A. I will send you anything our steerage department issues regarding the business.

Q. (By Mr. CLARKE.) Have you any system of detention and inspection in the interior of the country from which your passengers come?—A. No, except in Scandinavia. All our British and Irish passengers come but a short distance. They are all examined prior to embarking at the port of embarkation.

Q. Is there any examination except the medical examination?—A. The intended passengers are all questioned on the subjects referred to in the list, under these several headings [referring to manifest].

Q. Is there any other evidence sought except their own in regard to these subjects?—A. Not to my knowledge.

Q. Would there be in case you had suspicions that the man was really prohibited by law from coming?—A. There certainly would.

Q. Do you ever extend these inquiries back to the homes and ask people there what they know about these immigrants?—A. I think the booking agent, before booking the passenger, is very careful to inquire of them particularly on all these points, for the reason that if he books a passenger who upon landing here is found to come within the prohibited classes and is returned, he is disciplined at once; so that the inquiry starts with the agent who books the passenger. We hold them to a strict account for every passenger returned in consequence of booking them illegally according to the United States law.

Q. How long have you been connected with the Cunard Line?—A. Eleven years. I have been in the steamship business 31 years.

Q. Have you noticed any improvement in the character of the immigrants since the enactment of our present immigration laws?—A. They never come under my observation.

Q. What officer could tell most about that?—A. Probably the heads of our steorage department. I seldom ever have occasion to see the passengers when they arrive here.

Q. (By Mr. FARQUHAR.) Does your line take part in the consultations of the North Atlantic conference?—A. Yes.

Q. Have you ever attended any of their meetings as a member yourself?—A. Occasionally.

Q. What is the character of the consultation usually had by them?—A. Generally the general methods of conducting business, regulations adopting agencies, and sometimes discussion as to rates of fare.

Q. Purely a voluntary business arrangement?—A. Yes.

Q. (By Mr. SMYTH.) Has it anything to do with the passage of the steamers—the course they take?—A. No; that is regulated by the principals at home, on the other side.

Q. Simply the commercial side of it?—A. Simply the commercial side of it.

Q. Have you any suggestions to give this commission as to remedial legislation with respect to immigration?—A. I have no suggestions to make. I think the present law seems to be adequate.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF MR. ARTHUR LEDERER,

Passenger Manager of the American and Red Star Steamship Lines, New York City.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City, July 25, 1899, Chairman Smyth presiding, Mr. Arthur Lederer appeared at 12.30 p. m., and, being duly sworn, testified concerning immigration, as follows:

Q. (By Mr. SMYTH.) What is your residence?—A. 211 East Sixty-first street.

Q. What is your business address?—A. 73 Broadway.

Q. What is your occupation?—A. Passenger manager of the American and Red Star Lines.

Q. How long have you been in that position?—A. The last 11 years.

Q. How long have you been in the steamship business?—A. Twenty-six years.

Q. You have heard the testimony of Messrs. Floyd and Schwab. Have you any statement you would like to make in addition to their testimony?—A. I do not think I could very well improve on the same; but I have a few documents with me which, perhaps, will be useful to your committee.

Q. We will be glad to have any circulars that you give to your agents in other countries with reference to immigration.—A. Mr. Schwab has presented me as representing the American Line. Unfortunately, I have only in the last moment before being invited to come before you been able to pick out from my documents a copy of a circular issued for the use of agents of the Red Star Line on the European Continent, dated April 20, 1893, and giving the law of March 3, 1891, verbatim, and on the third page an extract of the law. It also gives instructions to subagents, and incloses, with the instructions in that circular for German-speaking agents, a translation of the immigration law of the United States into German, also of the law of March 3, 1891, as well as the supplemental laws or amendments of March 3, 1893, with instructions to exhibit it in prominent locations in their offices. There are also translations in other languages for the use of agents in other countries.

Q. What ports does your line ply between?—A. Antwerp and New York, and Antwerp and Philadelphia. I will be very glad to supply you with translations in other languages. The one I here hand you is in German.

Q. How many immigrants did you bring in last year?—A. Probably 25,000; it generally runs between 25,000 and 30,000.

Q. Have you any idea how many of these were on prepaid tickets?—A. I am inclined to think the sales of prepaid tickets with our lines run about 40 per cent, maybe 45. It depends entirely on the condition of this country. When we have prosperous times the prepaid sales are greater.

Q. Do you recollect any instance of any immigrant on your line being rejected at the Philadelphia or New York port by the Immigration Bureau and returned to the other side, and then subsequently returned in one of your steamers?—A. I do not know of such a case and do not think that such a thing is quite possible, because the penalty would be at our expense, and I think taking an immigrant back once is sufficient.

Q. What is the steerage passage between Antwerp and New York or Philadelphia?—A. \$39.50 for either port.

Q. How does that compare with 1880?—A. I am not prepared to say accurately, but I would guess about 50 per cent higher than it was.

Q. How has that increase in passage money affected the immigration? Has it caused much decline?—A. Not a particle. I am under the impression that the rise and decline of immigration depends entirely on the conditions prevailing in this country. If the farmer has made money to send for his family, the number is increased; if he gets little for his crop or for his work, he waits another year or two; and that probably explains the ups and downs in immigration. I would like to leave with you, also, another document which goes with those I have mentioned. It is the inquiry sheet which is submitted by each of the agents to passengers applying for passage in Europe, and which is sworn to by the immigrant. The documents which are the basis for the sheet of 30, manifest of 30, is also printed in the different languages, so that the booking agents in Europe, as well as the immigrants, may be in a position to properly explain it and read it.

Q. Do you agree with all you heard Mr. Schwab say and the suggestions he made?—A. I do.

Q. Your line works in harmony with the United States laws?—A. We have particularly impressed on the representatives on the other side that they must comply with the rules and regulations.

Q. Have you any suggestions to make as to changes?—A. I think they are entirely adequate. This circular also says, Immigrants must be at the port of embarkation 48 hours, or 2 days, prior to departure. This is for the purpose of medical and other inspection. It also says that the law of March 3, 1891, prohibits any agents directly or indirectly issuing any printed matter or verbally encouraging or inviting immigration, and that only the ordinary business means, such as circulars, published announcements, and statements as to the sailing of vessels, prices of passage, and advantages of ships can be explained. In any case where there is any question as to the admission of the immigrant, it is absolutely necessary that the company must have all of the particulars of the case, for which one of the inquiry sheets is to be used. We do not cater to that class of business which we are likely to have to return. I also wish to leave with you 2 circulars issued in this country to subagents, with instructions which, among other things, repeat the extract of the immigration law, showing just exactly what classes are prevented from landing in this country, so they may have no excuse for making a mistake in that regard.

Q. (By Mr. FARQUHAR.) These are all of recent date?—A. One was issued only 2 days ago, and the other issued March 30, 1899; one by the American Line and the other by the Red Star Line.

Q. The statement has been made before us that the immigration business of the steamships was exceedingly remunerative, and they were making large profits. Would you mind telling what dividends your lines have paid within the last few years?—A. I am not familiar with the financial parts of our companies, but so far as I have been advised they have never paid a dividend. They have coupons on the bonds, but no dividends on the stocks.

Q. (By Mr. CLARKE.) Does your company have any agents who keep up an acquaintance with immigrants after they have settled in this country, to any extent?—A. We have agents in this country—storekeepers, merchants, and banks—who sell these prepaid tickets. They are the only kind of agents that we maintain.

Q. Do these agents solicit the fellow-countrymen of possible immigrants to invite them to come over?—A. No; I do not think that has ever been tried, or if tried would be successful. You can not encourage a man to lay down his money to bring somebody over. When he has the money and has use for his brother or family, he finds the man who will sell him a ticket. If he does not write to the company's office in New York or Chicago, he will apply to the postmaster, or the cashier of the bank, and they will secure him the steamship ticket. If he is not the agent, he applies to the steamship company and they furnish him the ticket.

Q. You mean to have us understand your company does not solicit immigration either in the countries from which immigrants come or through their friends in this country?—A. Exactly. It is even prohibited on the other side.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF MR. JOHN J. QUINLAN,*Supervising Inspector of the Contract Labor Bureau, Port of New York.*

At a meeting of the Subcommittee on Manufactures and General Business held in New York City, July 25, 1899, Chairman Smyth presiding, Mr. John J. Quinlan appeared at 2 p. m., and, being duly sworn, testified on the subject of immigration as follows:

Q. (By Mr. SMYTH.) What is your name?—A. John J. Quinlan.

Q. Occupation?—A. Supervising inspector of the contract labor bureau, port of New York, for a little over 6 years.

Q. Is there more than one inspector in the bureau?—A. Yes; in the contract labor bureau of the Barge Office there are about 30 employees all told. Of these about 15 are full-fledged inspectors and receive \$5 a day, and 6 I think are assistant inspectors, and the remainder are interpreters.

Q. Are you chief of the bureau?—A. Yes.

Q. Will you please explain the operations of your bureau, and also the law, so far as you know it, that governs your inspection?—A. I may state, briefly, that the Contract Labor Bureau is divided into 3 sections: The section which may be called, for the sake of convenience, the quarantine division, consists of 2 inspectors, who board and carefully examine the passengers of ships coming from South America and all other vessels other than regular liners; the boarding division consists of 3 inspectors usually, who are interchangeable, and 6 assistant inspectors, who go down the bay in one of the revenue cutters, board the incoming steamers at quarantine, and make an examination of the cabin passengers between quarantine and the dock. The purpose of this examination is to ferret out any suspicious case of infringement of the contract labor law or violation of the immigration laws in general. The third and most important division is the Contract Labor Bureau proper of the Barge Office, of which I am the chief or supervising inspector. Our main business is to detect violations of the contract labor law wherever such exist, and work them up in shape for presentation to the Board of Special Inquiry and, when warrantable, for prosecution and recovery of the fine as prescribed by section 3 of the act of 1885. The method is to have the inspectors of my bureau stand beside the registry clerks and interpreters at the end of each inspection aisle on the "main floor" of the Barge Office station, and if, as the immigrants pass through during the formal inspection process, any case attracts attention, the suspect is taken to one side, where an examination is made, with the assistance of a suitable interpreter. Such action is taken in pursuance of the provisions of section 5 of the act approved March 3, 1893, which requires that "it shall be the duty of every inspector of arriving alien immigrants to detain for a special inquiry * * * every person who may not appear to him to be clearly and beyond doubt entitled to admission," etc. If, in the opinion of the inspection officer, the suspected immigrant is coming here in violation of law, he is handed a card and taken into the detention compartment, and after the immigrants pass through he is then taken into the examination room and there put through a thorough examination touching his right to land, suitable notes of his testimony being taken for future reference.

For the information of the commission it may be stated that the original act governing the exclusion of aliens brought to this country under contract to work here was approved February 26, 1885, and amended in the act approved February 23, 1887. Further acts, approved March 3, 1891, and March 3, 1893, respectively, relate also to the importation of alien contract labor.

Q. Have you any means of obtaining information in this investigation independent of your own observation?—A. Yes. Sometimes we are notified that such and such a man is coming here for the purpose of taking somebody else's position. In that case usually the Commissioner, or myself, issues a notice requesting that a thorough examination be made, and if that man is found, to bring him to the Barge Office for the purpose of further inquiry as to his eligibility.

Q. Do you receive any information so as to identify these contract laborers through organized labor associations of this country?—A. Strange to say, we receive very little assistance from organized labor. I might, however, give a case where they were of great service during the last 10 days: Six stevedores left St. Johns, New Brunswick, last Saturday, arrived in Boston the following day, and came through by the Fall River Line to New York, arriving here on Monday morning, and reported to the contractor. They were taken down to what is called Black Tom, a place in Jersey City, and went to work—I think it was on Monday afternoon. The same day they went to work a gentleman identified with organized

labor called and showed me a letter that he had, and the letter simply said these people were going to a "boss" stevedore of a certain name in Long Island, but did not give his address. I sent one of my inspectors for the Brooklyn city directory, and there we found this man as a stevedore. We also learned that this man had an office on West street, and we found later all these 6 men loading ships for 40 cents an hour. We took their affidavits in the usual way, and also an affidavit from the alleged contractor, in which he partly corroborated the 6 stevedores, and they made themselves out contract laborers. The inspectors brought that news back on Tuesday afternoon, and that night, through the Commissioner of Immigration, we asked for warrants for the arrest of these men. The warrants came from the Secretary of the Treasury on Thursday, we arrested the men, and on Saturday they were sent to Boston, and yesterday they were deported from Boston on the same steamer on which they came back to St. Johns. In connection with that case I might state that, feeling that it was a good cause to prosecute for the penalty, I sent for Dr. Ullo, the Government counsel, and after reading over the affidavits of the immigrants and the alleged contractor he told me, "Quinlan, that is the same old case. The immigrants have convinced you, they have convinced me, they would convince a jury, that they came here in violation of the contract labor law, but unfortunately we can not convince the judge, because the inducement to come here was a letter to one of these men with a request to bring as many as he could, and it was only an offer. Therefore, I do not think we can sue adversely for the penalty." I then said, "Dr. Ullo, I would like to have you talk to the immigrants (then in the Barge Office), and if you can strengthen the case in any way, get any additional evidence, I would like to have you do it so we can bring an action for the penalty." He said, "If I come to the office I think I will only make the case worse." He did come, however, and when he appeared again he said, "It is just as I told you. The case is in no better, and, if anything, is in worse, shape than when I went there." That is the characteristic of pretty nearly every case we have where we attempt to recover the penalty. We have tried all sorts of things. I remember now two cigarmakers coming from Havana prior to the war. They had a written contract—that is, a letter from this country—stating, "If you come over here you can go to work in my factory on Murray street at \$20 per week." After a conference with the attorney—I think Mr. Corcoran was then the attorney—he said, "Mr. Quinlan, that looks like a clear case of a violation of the contract labor law, and I think we can recover the penalty; but to strengthen the case I would advise you to let the immigrants go to work; let them leave here, follow them, after they are at work ask for warrants for their arrest, and then I think that will strengthen the case." We did that; we found them at work and took them out on warrants of the Secretary of the Treasury, brought them to Ellis Island, took them before the United States officials—district attorney, I think—where their depositions were taken, and all agreed that was a case where we would recover the penalty; but Judge Benedict charged the jury that as the contract was not made in foreign lands it was no case for the jury. I simply state these cases that are fresh in my mind; there are hundreds of such cases which might be cited.

Q. What do you regard as the main defects in the law?—A. That is the main defect. It must be proven that the contract was made in the foreign country; the judges require the contract must be made there. Of course if we could convict the importer on the promise or the inducement held out to the immigrant it would not be very long until we would be able to stop the importation of foreign labor.

There is one thing that has always seemed to me a great obstacle in the way of convicting the alleged contractor; that is, that the law makes it imperative that the district attorney should bring the action. I think if the law were amended so that any attorney, who was admitted to practice in the United States courts, could bring the action, or bring the evidence before the district attorney, and if he refused to prosecute on that evidence, then be permitted to do it himself, and in the event of his recovering the penalty, be allowed, say, one-half of it, and the witnesses assisting him the other half, it would go a great ways toward breaking up the importation of contract labor. Of course, there is always an objection to that; it has been said by people that that would amount to blackmail, but it seems to me it would make every labor organization, and every man identified with organized labor, more or less of a labor inspector.

Q. Does your law cover the persuasion as well as the inducement?—A. No. It seems to me the law itself is strict enough provided we could convict the importer on the inducement or the request, whatever it might be. If we could do that we could make the connection readily enough. The only case that I have in mind now, that came up before the judge and the jury, was the case involving John Wanamaker. I think it was the head of his dress-goods department, who advertised in a London

paper that he could give employment to dress-goods salesmen at £3 per week. A man who had been an employee of a store there in London replied, and was engaged to come to Philadelphia, and his passage was prepaid. He arrived here on Saturday or Sunday, and the following Monday he went to work in Wanamaker's, replacing a man who had been dismissed on Saturday night. That case was tried, and, as I say, the judge allowed the case to go to the jury. Mr. Wanamaker was convicted, fined \$1,000 and cost, and paid into the Treasury of the United States about \$1,180. There have been many convictions, but that was probably the best case, or rather the best conviction, we have had under the law. Most of our cases have been compromised. They come to a point where the district attorney is undecided, and the other side offers to compromise, and it is usually accepted with the consent, of course, of the Solicitor of the Treasury.

Q. Have you any suggestions as to the amendment of the law?—A. Only in that respect. I struck off hurriedly this morning an idea of mine (reading): "The alien contract-labor law should be amended so that there will be no possible loopholes of escape, as at present, either for the alien or for the person contracting with him or inducing him to come to this country. I would suggest an amendment, in the first place, to the effect that any alien coming to this country under any inducement, request, or suggestion that work or labor can or may be secured here, although there be no contract or agreement of any kind, shall be excluded, and that all persons offering or holding out any such inducement, request, or suggestion, even though there be no proof of any contract or agreement, shall be subject to the penalties already provided for contractors; also, that the same penalties be visited upon contractors and offerers of inducements, requests, or suggestions, whether the contracts, inducements, requests, or suggestions be made in this country or elsewhere." The last suggestion is made in view of my understanding that the courts have held that to secure a conviction under the present law it must be proven that the contract was made in the foreign country.

And I struck off another little idea here (reading): "Another suggestion to facilitate prosecutions, which are commonly subject to long delays: At present only a United States district attorney can, as I understand it, prosecute contractors for violations of the law. I would suggest that the law be so amended that any attorney admitted in the United States courts, who states that he has evidence, may go before the United States district attorney and lay his case before him, and if the district attorney does not see fit to take up the case, any such attorney may himself prosecute the alleged offenders, and, upon conviction, be awarded by the court one-half of the penalty, and that the court have power to award to informing witness or witnesses the other half of the penalty so secured."

There is one other thing that occurs to me now. I remember the day that Senator Hill's senatorial committee on immigration came to Ellis Island. I told Senator Hill that I had examined a group of 30 Italians that day; 15 of them had been in the United States before, each one carrying back all the way from \$200 to \$1,000. The 15, on returning, had an average of about \$15 apiece. When I asked them what they did with the money they carried over, I think about two-thirds told me they had bought a little place in Italy, a little house and a plot of ground; that they had paid a certain sum; that there was a mortgage on it; that they were returning to this country for the purpose of making enough money to pay that mortgage off, and as soon as they had accumulated sufficient they would return and spend the balance of their days in Italy. At that time this struck me as one thing that was very wrong, and there ought to be some way of righting it. I have never changed my mind on that, after 6 years. I have personally investigated at least 1,000 such cases. I have found that they consume nothing but what they eat. They bring with them all that they will require in the way of clothes, and everything else sufficient to do them while they are here, and while they are in this country they will not purchase a thing probably except what they eat, drink, and smoke. I have heard it said that these so-called birds of passage take out of this country about \$20,000,000 every year. I do not know what that statement is founded on, but it has been observed that through the fall of the year we will find the North German Lloyd ships and other lines going back with every available inch of space taken in the steerage by these people returning to Italy. I speak of the Italians because they probably practice that more than any other nationality. Of the others, there is one class that comes here in the spring from the north of Ireland, Scotland, and England. They are carpenters, stonecutters, bricklayers, and skilled mechanics, who thoroughly understand the immigration laws. They come here in March or April, remain until November, and then go back carrying with them the proceeds of their labor. They also bring with them all they require in the way of clothes while here. Now, I do think it would be one of the very best amendments to the law that could be passed if there were some way of stopping the migration of these people. We have found no way on Ellis Island or at the Barge Office to stop them, except where we find them

with very little money, and then we adjudge them public charges and deport them under the law. Where we find the birds of passage with as little as \$15, no matter what their condition is, we endeavor to return them to the other side.

Q. How do you identify these birds of passage?—A. Simply by examining them. We ask them their object in coming here. They tell us they were here before; that they are carpenters, for instance, and worked for so and so, on such a street, in such a city, and that they are going back to that city; and if you ask them such questions as "Are you going to work for your former employer?" they answer, "I do not know." "Had any letters from him?" "No." "How often have you been in this country?" "Two, 3, or 4 times." "How long did you stay?" "Five months or 7 months." They come in the steerage and go back, finding it is cheaper to live with their families during the winter months than to remain here.

Q. Of course, in many of these cases these skilled workmen are holding international union cards?—A. Not as a rule, but some of them do.

Q. In a case of that kind you could not prove a contract?—A. I speak of those who are not members of organized labor.

Q. Take the Amalgamated Carpenters' Union.—A. We do not have trouble with those people.

Q. What is your best judgment as to what would be the best amendment of the law?—A. In the original law, after the words "District of Columbia," on the seventh line, I would suggest the insertion of the words "under any inducement, request, or suggestion that work or labor can or may be secured in this country, or under any contract or agreement," etc. It seems to me—I am not a lawyer—that with such an amendment we could successfully prosecute the contractor.

I am also convinced that I could do very much better work if we had a larger force of men. I think that the contract-labor law is so important to organized labor and the men of this country that we ought to have a larger appropriation than \$100,000 from Congress. I think we ought to have at least 10 more inspectors and interpreters than we have now at the Barge Office. If we can not get a larger appropriation from Congress, I would be in favor of increasing the head tax from \$1 to say \$2, and using that for the purpose of increasing our force as well as for other immigration matters.

Q. Has your commissioner here made any recommendations to the Secretary of the Treasury with respect to an increase of force?—A. I can not say. I have written him several urgent letters, and I have tried to point out to him how important it was that our force should be increased. Some 2 years ago they dropped from the force at one time some 5 or 6 inspectors. Since that time, by resignation and death, we have lost 4 or 5 more, and they have not been replaced. During the 6 years that I have been chief of the contract labor bureau we have deported from this port about 4,000 contract laborers, with very few convictions of the alleged contractor.

Q. All the punishment has been on the immigrant?—A. Yes.

Q. Do you know anything about the case of contract laborers who went to Rathbun, Iowa?—A. Yes. About 1 month ago, or just prior to 1 month ago, we received from the Commissioner-General a request to thoroughly investigate all Croats coming through our station. Some few days after that a group of 15 were discovered, and after a thorough examination we ascertained, according to their story, that they were farmers principally; that they were going to Rathbun, Iowa; and they had prepaid tickets there; they had no friends there, and had not any relatives, and could not give a satisfactory excuse for their going there. I inquired about Rathbun and found that in the past some French and Italian miners had passed through and gone to Rathbun, but these were the first Croats that we knew of. I reported the matter to the Commissioner and requested that he forward my findings to the Department in Washington, and that it be looked into, and I believe an inspector from Chicago was detailed on the case, and found that these people had gone to work the following day after their arrival in Rathbun in a coal mine about half a mile from the village. He reported his findings to Mr. Powderly, and warrants were issued, and the immigrants are now on Ellis Island, and will be deported this week.

Q. Can you give the names of the owners of the mine at Rathbun?—A. No; but I can get them for you.

Q. We would like to have them. Has any action been taken by the Department at Washington with respect to the prosecution of the mine owners?—A. I have not heard of any, but I do not think they have connected the owners. You know that thing is done, not through the owners of the mine, but relatives and friends of these men. The foreman of the mine will say, "How do you like your job here?" "Pretty well." "Have you not a brother or cousin or some friends in your home that you would like to bring out?" "Yes." "If they come here

we think we can put them to work." It seems to me we would have great difficulty in convicting the mine owners under the present law.

Q. Do you know of any strike at the mines in Rathbun?—A. No.

Q. The only reason of the owner or superintendent in sending for these people was to get cheap labor?—A. That was the idea, I suppose. In every case I have investigated I found that to have been the object; to replace the American or more intelligent workman by a man who is usually willing to work for less money.

Q. (By Mr. CLARKE.) You say you regard the alien contract-labor law as of great importance to organized labor; is it not of equal importance to unorganized labor?—A. Yes; to every man who works for a living.

Q. In regard to the recommendation to amend the law so as to attach a penalty to an inducement to come to this country, can you think how that could be framed so that it would not prevent a brother who lives here from writing to his brother abroad what a fine country this is for a workingman?—A. I want to say this, a brother coming to a brother is never interfered with at the Barge Office, if he is going to work for his brother. We have had cases where one brother found employment for another, and we convicted him as coming in violation of law and returned him. But where a brother is coming to work for a brother—there is no case that I know of where such a man has been deported as coming in violation of the law.

Q. Suppose the relationship is a little more remote?—A. Then I think we would enforce the law against him.

Q. Then as a matter of fact it would be unsafe for anybody in this country to write to a friend abroad, unless he is a brother, what a fine country this is for a workingman or woman?—A. If he wrote him to come to a farm in the West, if a farm laborer, he would not be interfered with; but if a tailor, shoemaker, or in any skilled trade, and he wrote to his first cousin that this is a fine country, and "if you come over here I can get you a job," not even saying "I can give you one," I think such a man ought to be sent back.

Q. Suppose the farm laborers in the West were organized and objected to the bringing over of men under any inducement whatever to compete with them, you would then enforce it in regard to farm labor?—A. I think the conditions of the country might control me. I would cross that bridge when I came to it. So far we have had no farm laborers. There is such a thing as making this law ridiculous; I do not propose to do that if I can help it. What I want to do is to protect the laboring man in established industries against the foreigner who is willing to come here and work for less money; but I believe we want more farmers and farm hands, and we have not interfered with that class.

Q. Is it ever possible that we need more help in some lines than is now here?—A. Mr. McSweeney spoke of a condition that to him was peculiar—of the great demand for unskilled labor during the last month. That has been my observation during the last 4 or 5 months. I was talking to a gentleman yesterday, and he told me that he wanted men to work on a railroad and in a mine; that he would rent a little house at \$5 a month (that was in Illinois), where they would have a good well and all that kind of thing, and that they could make \$1.50 to \$1.75 a day. I asked him why he did not get his help in Chicago, and he told me he had tried and could not get a man unoccupied or out of work in Chicago who was able or willing to work in the mines or on the railroad. He is one of many who have applied to me for assistance, to find out how they could procure unskilled labor, principally to work in the mines. The coke mines through Pennsylvania want men very much. I assume that the great boom in the iron industry is responsible for this demand.

Q. You do not think, then, it is the desire of these men to displace other men, but that they need them on account of extending their business?—A. These particular men I speak of want them to extend their business—these few men I have met with in the last 3 or 4 months—but that is a new condition. Prior to that, for 3 or 4 years, I did not have one request. We sent back probably 2,000 or 3,000 people who were coming here for no other purpose than to take the places of our own people and work for less money. In pretty nearly every case we investigated we found this was the case.

Q. What proportion do the deportations bear to the total number of immigrants on account of their being contract laborers?—A. In the fiscal year ending June 30 291,000 immigrants landed at this port, of which 3,500 were deported for all causes—18 insane persons, 2,381 paupers or likely to become paupers, 328 loathsome or dangerous contagious diseases, 3 convicts, and 635 contract as laborers.

Q. Do you think you would have been able to deport a good many more alien contract laborers if you had had a larger inspecting force?—A. Yes.

Q. You think that a good many alien contract laborers have gotten in in spite of your vigilance?—A. Yes. These groups of 5, 7, 11, and 15 could have been followed up if we had had more inspectors, but we have not the force to do that now.

Q. What reason have you for thinking these men that escaped were alien contract laborers?—A. They are just like the case of the Croatians going to Rathbun, Iowa; they looked suspicious, and in the bustle, owing to the shortness of inspectors, we think that many of them have slipped through that we might have prevented had we had a larger force.

Q. In what respect do they look suspicious?—A. The fact that they are going to, say, some place in Pennsylvania, a group of seven, each man having, say, \$12 or \$15. One man was here for some time before. This is his second trip. He is in charge of the others, and they are going out there, but they can not tell you the reason why, and hence the case looks suspicious.

Q. Now if you had a larger force how would you follow up these men?—A. By sending a man after them. We might send a man with them.

Q. Every case that looks suspicious you investigate here as fully as you can?—A. Yes; in New York or close by we give it a more thorough investigation, and where it looks very suspicious I report it to the Commissioner and he in turn to the Commissioner-General, who investigates it from Washington, as in the Rathbun case.

Q. Have you considered the difficulty of getting these very stringent provisions enacted by Congress?—A. Yes, I realize how difficult that is. I have conferred with several United States district attorneys, and they always tell me the difficulty of making a conviction. I may be pardoned for suggesting to the commission that it might be well to call these gentlemen, and also our counsel, Dr. Ullo, as they can tell you more fully just the reason the judges give for not permitting these cases to go to the jury, or, when they do, charging the jury in such a way that we do not secure convictions. Mr. McFarland, who was formerly district attorney here, is very familiar with all these cases, and he has expressed to me personally what he called the contempt the United States judges had for the contract labor law.

Q. How does the size of the force of inspectors in your department compare with that in the other departments of the inspection bureau here?—A. As I say, we have lost altogether about 10 men through dismissals, resignation, and death. I think there are other branches short, but not nearly so short as the contract-labor force. We came from Ellis Island 2 years ago with 10 men more than we have now.

Q. Do you know why they have not been replaced?—A. No: I could not say. I have recommended to Mr. Fitchie at different times that the contract-labor bureau ought to have more inspectors and interpreters, and I assume that he has said as much to Mr. Powderly, although I do not know.

Q. You do not know the number of inspectors in the other departments, do you?—A. The inspectors are the registry clerks; I consider them very efficient.

Q. They assist you, do they not?—A. Yes; at times we work together and assist one another. At times you will find some of our contract-labor inspectors or interpreters registering or helping out the other bureau.

Q. Do not the other bureaus have any inspectors except the registry clerks?—A. Not that I know of. They had the boarding officers, but they are in the contract-labor bureau. Mr. McSweeney speaks of some people who were transferred to the contract-labor bureau. They are known as assistant inspectors.

Q. They are not in addition, then, to the force you have named, the 28 or 30?—A. No; they are included in that.

Q. How many of these registry clerks are there who assist you?—A. They do not assist us unless we call upon them to act as interpreters or something of that kind. The so-called contract-labor inspector stands at the end of the line during the process of inspection. He listens to both what the immigrant says to the registry clerk, who is an inspector, but not in the contract-labor bureau, and after he passes this man, if the contract-labor inspector is suspicious of anything, my inspector takes him to one side, as I said, and interviews him at length.

Q. Does the registry clerk ask questions that bear on the contract-labor subject?—A. Not as a rule; sometimes they do and call our attention to it; it is where the man volunteers, or they discover something suspicious, and they simply invite our attention to the fact.

Q. They have this subject in mind as they have other disqualifications of the immigrant?—A. Yes. I have always found them very willing and very able to assist us in any way.

Q. (By Mr. FARQUHAR.) Do you ever come in contact with the so-called Italian bureau in your business?—A. No; very seldom.

Q. You have had very little to do with that?—A. Very little. They deal more with the other branch of the service.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF DR. LOUIS L. WILLIAMS,

Surgeon, Marine-Hospital Service, detailed to inspect immigrants at the port of New York.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City July 25, 1899, Mr. Farquhar presiding, Dr. Louis L. Williams appeared at 4 p. m., and, being duly sworn, testified concerning immigration, as follows:

Q. (By Mr. FARQUHAR.) What is your residence?—A. No. 35 Madison avenue, New Brighton, Staten Island.

Q. What is your official position?—A. Surgeon, Marine-Hospital Service, at present detailed to inspect immigrants at this station.

Q. I wish you would explain to the commission your official connection with the immigration service at the port of New York, and also your general duties with respect to immigrants.—A. According to the immigration law of 1893, the medical inspection must, when practicable, be made by a medical officer of the Marine-Hospital Service, and one is detailed from time to time for that purpose; and in addition to that work it has been found convenient by the commissioner to have the medical inspector take charge of the immigrants detained in the hospital and have supervision of the hospital work, which is under the control of the commissioner directly.

Q. Do you have to report to the commissioner here, or to Washington?—A. To the commissioner, and incidentally to make certain reports to the Marine-Hospital Bureau in the way of information or anything directly connected with my duties here.

Q. What other medical inspection is there here of incoming ships?—A. The inspection at quarantine.

Q. Is that under Dr. Doty?—A. Yes. Some of our inspectors board all ships at quarantine for the purpose of examining the first and second class passengers. The steerage are examined in the Barge Office. The medical inspection is the first inspection made.

Q. How many are engaged in this medical examination at the Barge Office?—A. In the Barge Office, besides myself, there are 1 acting assistant surgeon and the chemist, who acts as bookkeeper and, in a certain sense, as executive officer and assists in the inspection. That is the force, with the exception of the clerk and 1 attendant. The three assistant surgeons who inspect the cabin passengers also assist in the steerage inspection when practicable.

Q. So that practically the whole medical inspection here at the port of New York is in your hands?—A. Practically.

Q. Do you find your force sufficient to perform all your duties?—A. Just sufficient. At the present time it keeps the force all employed. It would not be sufficient had I not found here a very competent set of assistants. I found the office exceedingly well organized.

Q. You would say that your means of inspection and the time of your inspection are sufficient?—A. Quite sufficient.

Q. Do you know anything at all about the inspection on the other side?—A. A little only as regards the inspection at Liverpool. I inspected the immigrants there under a special detail in 1893, the cholera year, so I became somewhat familiar with their methods at that port.

Q. What is your opinion as to its thoroughness?—A. It is fairly good, in a way. The inspection by the ship's surgeon I know very little about. I know they made an inspection, sometimes on shore, and sometimes necessarily on board, for the reason that many of their passengers would come from Hull; passengers coming from Rotterdam or Hamburg or Bremen would be railroaded across from Hull and sometimes arrived only in time to be put aboard. In that case I do not see how the ship's surgeon could make an inspection before they went aboard, though he might have inspected them en route. In addition to that the British board of trade has 2 medical inspectors who examine all the steerage and second-cabin passengers. That examination is made on board and, I believe, is fairly good. I knew the inspectors at that time personally, and I believed them to be competent, though the inspection, so far as they were concerned, did not practically concern the work of the immigration office here, because the idea was merely to exclude passengers who were likely to become ill on the voyage or persons afflicted with a contagious disease.

Q. Some contagious diseases, of course, develop on the voyage?—A. That cannot be avoided, of course.

Q. What is your experience as to the efficiency of the inspection on the other side; take it from any port?—A. You mean from the standpoint of the office here? I do not think it is very efficient. It can not be, else we would not have discovered so many cases on this side. I believe, however—in fact I know—that we get less, for instance, from Liverpool than from any other port. The majority of the cases we get from some of the French and Italian ships, and some of the Hamburg liners bringing Italians and Syrians.

Q. Have you discovered here many diseases common to the Asiatic countries?—A. There is one disease especially common. We have among the Syrians a very large proportion affected with trachoma, granular lids, a disease of the eye.

Q. What do you regard as the greater deterrent, the detention of the immigrant here at the expense of the steamship company or the dread of deportation?—A. I believe the detention here would be the greater, for the reason mentioned by Mr. Schwab, that it would be an appeal to the pocket of the steamship company. The diseases in question, as far as trachoma or favus are concerned, are so obstinate, and the period of treatment so long, that it would involve them in very great expense to pay for the treatment on this side, and I believe they would be extremely careful in bringing them over if that was to be the outcome. As it is now, if they do not make money they at least may not lose if the case is deported.

Q. How many have you had to deport since you have been the official here?—A. I have brought some data as to that [reading]:

Number of hospital cases for past year.....	1,862
Number of landed cases applying for relief for past year	235
Number of arriving immigrants certified to during past year	1,244
Number of cases certified loathsome or dangerous contagious diseases:	
Favus	48
Trachoma	312
Number of contagious cases deported:	
Trachoma	298
Favus	36
Number of cases contagious diseases certified to during month of June, 1899:	
Trachoma	123
Favus	3
Number of contagious cases deported:	
Trachoma	116
Favus	1
Total number of immigrants rejected during month of June	261

That would give the idea of the proportion, trachoma being the largest factor in the cases rejected medically.

Q. In case of deportation, to what port are they sent usually?—A. They are returned on the ship that brings them.

Q. Where is the usual shipping point?—A. Ordinarily Havre. They collect for the most part at Marseilles, and take ship at Havre. Some occasionally come on other lines. Some come on the Holland line; but the other is the most common route.

Q. (By Mr. CLARKE.) Do you think the inspection on the other side is less rigid in case of these French and Italian lines than the other lines?—A. I would not be prepared to say that. The possibility is that they have the opportunity to bring more of these people for the reason I have mentioned. I could not of my own knowledge say it was less efficient.

Q. Do you think it would be advisable for the United States to employ medical examiners at the ports of departure of these immigrants?—A. It might possibly be of advantage, but it would appear to me that it might be reached otherwise, by making it undesirable for the companies to bring them, and at less expense to the Government.

Q. How do you think the law can be improved so as to make it more difficult or more undesirable for them to bring them?—A. Only in the manner I have indicated—to leave it to the discretion of the commissioner whether such a case should be immediately deported or kept in hospital. Apart from the deterring effect there comes in the question of humanity. It is a rather difficult thing for the commissioner to deport a case of that sort, leaving portions of the family in this country. If it was kept in hospital that difficulty would not obtain to the same extent. There could be no reasonable objection to the case remaining in the hospital under treatment if it was to be a source of trouble to the community. In other words, it would be treated as any other case would be treated.

Q. Has any complaint come from any part of the country that your medical examination here is not strict enough and that dangerous diseases escape your vigilance?—A. The only thing that I have seen was a statement to the effect that

certain cases of leprosy came from Finland. What truth there is in that I can not say. Certainly the inspection is reasonably rigid here, and I believe few, if any, such cases have occurred. I have seen none during the period I have been on duty here; while it is possible for incipient cases of leprosy to pass the line, certainly not an aggravated case. There are some cases of leprosy that would exist in the community for many months undiscovered even by those in close contact; that is quite possible.

Q. How much time do you and your assistants give to the medical examination of any immigrant?—A. That depends very much on the immigrant. There are some shiploads that are so obviously in good condition that a very casual inspection is all that is necessary, and they are passed with reasonable rapidity; others require more careful looking after. I refer particularly to the Syrians. Such a large proportion of them have trachoma that it is customary to stop all and examine their lids. That, of course, takes a good deal of time. The Scandinavian immigrant is usually in good condition. There are so few physically defective that they are passed quite rapidly. Of course a more careful examination is subsequently made of the suspects, all the time being given to it that is necessary.

Q. Is it your policy to exclude every person afflicted with a contagious and loathsome disease of any character?—A. That is the ruling. At least, that is the law on the subject; and the Department has ruled, for instance, that trachoma and favus shall be excluded as contagious diseases. Practically these are the diseases that there can be any question about, for the reason that the more severe diseases, such as smallpox are stopped at quarantine. The mild diseases, like scarlet fever and measles, would be allowed to pass quarantine, but would be taken up here and put into the isolation hospital. They are cases which develop en route, and it would not do to return them.

Q. Do you know of any instance of a person deported for having a loathsome and dangerous contagious disease returning again to this country?—A. Several instances.

Q. (By Mr. FARQUHAR.) Can you relate any of the instances?—A. I have put down 4 instances from the records of the office: The first is the case of Maria Laham, 29, Syria, arrived April 11, 1899, per steamship *Alesia* (Fabre Line); deported for trachoma. Returned to the United States July 5, 1899, per steamship *Spaarndam* (Holland Line), under name of Martha Jousef Simon, and again deported for trachoma. In this case I understand the party admitted the fact of her identity. Second: Maria Hatzopoulos, 22, Greek, arrived June 4, 1899, per steamship *La Champagne* (steerage); deported for trachoma by same ship June 10, and returned to the United States in cabin of same ship July 2. She was again deported. Third: Mrs. Moses and 2 children arrived November 5, 1897, per steamship *Oledam*, and deported on account of favus (children). Returned to the United States January 22, 1898, per steamship *Amsterdam* (steerage); held in hospital 44 months, and finally landed. They were held thus by order of the Department until regarded as cured. Fourth: Jacobus Van Hoorn, 7, Holland (accompanied by mother); case of favus; arrived May 8, 1898, and deported; returned to the United States June 9, 1898; held in hospital for 4 months and 10 days, and finally landed.

In addition to these I can recall a case that occurred recently—a case of trachoma coming on one of the Liverpool ships, and deported on account of this disease, and a short time after that coming into the port of Philadelphia. The inspecting officer wrote to know if he had not been here. He was evidently suspected from some circumstance, and I presume he was deported from that port. These are simply instances; there are others.

Q. (By Mr. CLARKE.) Suppose you give the English of favus?—A. The ordinary name is scaldhead; that is the common term.

Q. Are the agents of the steamship companies informed of all these cases of deportation as soon as they occur?—A. They are informed before deportation.

Q. All the cases?—A. Yes; they are invariably informed.

Q. So that by that notice they are put on their guard against bringing back these persons?—A. Precisely.

Q. How many appeals are made against deportation?—A. That is a question which comes before the commissioner, usually. I would only hear of it incidentally. In the medical division we only deal with the question of fact, properly.

Q. (By Mr. FARQUHAR.) On the basis of your report the commissioner makes his decision?—A. The cases rejected medically are certified, and that certificate passes through the hands of the registry division to the board of special inquiry. If the case calling for special inquiry has been certified to be a case of trachoma or favus or any disease which has been determined to be a loathsome and dangerous disease it is equivalent to a decision of deportation. As I understand it, the board of special inquiry has no further jurisdiction except to formally give an order for

deportation. In the case of those certified for physical defect simply, it is optional with the board whether it shall admit the immigrant or not.

Q. (By Mr. CLARKE.) Have you any means of knowing whether the ships' surgeons discover these loathsome diseases in any case on the passage over?—A. I have no means of knowing. Officially they do not know of any such thing on board. I believe in one or two cases they have discovered trachoma or favus, but it is rare.

Q. What is their practice with reference to cases of dangerous diseases when they do discover them?—A. Each ship is required by law to have a hospital, which is usually a very small compartment, in which these cases are placed—cases like scarlet fever or smallpox. There is no isolation of trachoma or favus; they do not recognize them as a rule.

Q. Do you not think the law should be amended so as to require the isolation of such cases?—A. It would be of advantage if they ever admitted the fact that such a thing was on board the ship, but practically, with rare exceptions, they deny the existence or claim they have not recognized any disease aboard. Therefore the question of isolation would not come up at all.

Q. Have you any means of knowing whether their medical examiners on the other side have rejected any cases of trachoma or favus?—A. I have been told by some of the agents of the lines and some of the ships' surgeons that a number of cases have been eliminated, and I believe, to a certain extent, that is the case. I have recently received a private letter from one of my colleagues, formerly associated with me in the medical division of the Barge Office who has recently been ordered to Naples to carry out the quarantine law of 1893—that is, inspection of passengers from that port to prevent the introduction of contagious diseases—and incidentally he has advised against bringing certain cases likely to be barred under the immigration law, and he informs me the steamship companies have very readily taken his advice, and he believes they have eliminated some cases of trachoma. There are certain diseases of the eyes which attract much more attention than a very bad case of trachoma would. Many cases of this disease, to the casual observer, would present nothing until the lids were everted.

Q. By whom is the medical examiner here appointed?—A. He is examined by a board of medical officers of the Marine-Hospital Service, and is then commissioned by the President.

Q. On whose recommendation?—A. The recommendation of the Secretary of the Treasury, after the examination required by law.

Q. To whom do you make your reports of inspections?—A. The report of the year's work is made to the commissioner.

Q. You do not make any reports direct to Washington?—A. None at all, except incidentally and by request of the Marine-Hospital bureau, so as to give that bureau certain information in regard to the number of cases, rejected cases, etc.; matters of purely medical information.

Q. Are all immigrants thoroughly bathed and their clothing disinfected before they are allowed to come on board at the foreign ports?—A. Officially there is nothing of the sort done except in those cases where it has been required by the quarantine law of 1893, which law empowers the President to detail any medical officer of the Government to proceed to any foreign port for duty in the office of the consul, for the purpose of making inspections of all passengers and of giving bills of health, the hold upon the ship company being the bill of health.

Q. Do you not think it would be a good plan if the law required such bathing and disinfection?—A. It unquestionably would be a good hygienic measure in any case. They are certainly anything but clean, the majority of them.

Q. (By Mr. FARQUHAR.) Would it not be inexpensive as a preventive?—A. Some of the lines carry it out. I am told they had it in Rotterdam, or used to. I should think it would be a very good thing.

Q. (By Mr. CLARKE.) It might tend also to awaken a wholesome respect in the mind of the immigrant for the country to which he is coming?—A. It would be a good plan, but it might present some practical difficulties, and it might be opposed by the steamship companies on the score of expense—not so much the soap and water, but they would be compelled to detain the immigrant on the other side for a certain length of time to carry that out. I meet with that opposition in carrying out all quarantine laws. While on duty at Liverpool, whenever I came across an immigrant whose place of departure was an infected port of Europe, I kept him over a trip and required him to be washed and his baggage steamed. They were very reluctant to do that. That would be the only practical difficulty.

Q. Do you know of any institution, charitable or penal, in our country to which persons are admitted without being required to be bathed thoroughly and their clothing disinfected?—A. As far as the disinfection is concerned, I do not think

that is uniformly carried out except in cases of persons suspected of having a contagious disease, but certainly they are in the better class of institutions required to be bathed.

Q. There is as much reason why they should be required to go through that process in going on shipboard?—A. There is more reason, because they are necessarily crowded on shipboard. It would be practically impossible to give a passenger all the air space that he should have in a hospital or even in his house. Theoretically, he should have a very large air space, but practically on shipboard he can not get it. The conditions are such that he could not get more than a certain amount of space, and he is therefore crowded, particularly in bad weather, and certain contagious diseases are more likely to show themselves under the filthy conditions that exist in the average steerage.

Q. (By Mr. FARQUHAR.) Have there been any formal complaints made as to the inadequency of the air space?—A. No; and in the ships I am mostly familiar with the air space, I believe, is practically sufficient; that is to say, not sufficient to live in indefinitely, but sufficient for ordinary sustenance for a passenger to cross the Atlantic. There were a few of the old ships which had inadequate conditions, but in all of the newer ones which I have seen—the English lines—the conditions are very fair indeed.

Q. Is the sanitary condition of the ships that arrive here good?—A. Fairly good. It is scarcely just to judge the ship by the condition you see the steerage in on arrival, because they carry some very filthy people, who make a great litter in the steerage. We see the same thing here in our detention pens and the detention boat on Ellis Island. Immigrants have to be followed very closely in order to secure cleanliness, and it is therefore very hard to judge by conditions seen on arrival.

Q. You would not think it was dangerously dirty?—A. Most dirt is not dangerous, but it is repulsive. You may have a very bad state of affairs with a practically clean steerage if infected people are put in it.

Q. Have you anything to suggest in the way of amendment to your inspection or the breadth of your jurisdiction, or as to a separate staff, entirely outside of the Marine Service, to be brought into the immigration bureau?—A. No; I can not say that I have any suggestions to make, for the reasons mentioned. I found the medical inspection service in an exceedingly good condition. I have been in charge for barely more than 3 months. I think it would be very unwise to make any slipshod amendment that had not been very carefully thought over. At present I see no necessity for it.

Q. Who preceded you?—A. Dr. Joseph H. White.

Q. Is he still in the Marine Service?—A. He is on duty in Washington at present in the Marine-Hospital Bureau.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF DR. M. VICTOR SAFFORD,

Surgeon, United States Immigration Service, Port of New York.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City July 25, 1899, Mr. Farquhar presiding, Dr. M. Victor Safford appeared at 4.30 p. m., and, being duly sworn, testified concerning immigration as follows:

Q. (By Mr. FARQUHAR.) What is your address and official position in the bureau?—A. Address, 121 West Eleventh street; surgeon, United States Immigration Service.

Q. How long have you held your present position?—A. Since October, 1895.

Q. What are your special duties?—A. To pass upon the landing of immigrants, in connection with a Marine Hospital officer and other assistants. We pick the suspicious ones out and after the remaining passengers have passed the line, these are examined as thoroughly as necessary. Those in need of hospital treatment are sent to the hospital; those who have diseases which are prohibited by law, such as loathsome and dangerous contagious diseases, are certified to by the surgeon in charge. Those who have physical defects like partial paralysis, incipient blindness, consumption, and heart disease, are also certified to and are sent before the board of special inquiry for a decision as to whether or not they are likely to become public charges. We also relieve usually those who have already been landed and come back to the immigration bureau for relief, either of their own

volition or by direction of the department of charities of the State. These cases already landed usually come to us first and our reports accompany them to the commissioner. We state, for instance, whether the man is likely to be permanently incapacitated, and if so our certificate is really final in disposing of the case. The commissioner requests his deportation on the medical certificate alone, and in other cases, where there is only temporary trouble, the immigrant may be sent to the hospital; or where his condition does not warrant medical treatment it is so stated, and he is sent with that statement to the commissioner to be dealt with as is deemed advisable.

Q. In case an immigrant comes here, and you make no special record of him; he is landed, and a few months afterwards a disease develops which had been contracted previous to his landing here, so that you have no record in your first inspection. Do you take the voluntary affidavit of this man if he wants to go back to Europe or elsewhere?—A. Perhaps, to a certain extent, we do depend upon his statement, but that is rarely wholly necessary, because usually a diseased condition will speak for itself. We can form something of an idea whether the disease existed and escaped detection at the time he landed or not.

Q. In your records are you quite careful in giving the indications of diseases, even if the board of inquiry would ultimately pass him? Do you make a report sufficiently explicit so as to trace the man within 12 months?—A. Without question; and not only that, but we also keep a record of minor defects in cases which we do not send before the board of special inquiry at all, but which we detain, examine, and send before the registry clerk. These defects being recorded on the ship's card, the registry clerk takes them into consideration as a factor; for instance, a man a little below the standard in physique, or the loss of an eye, or the loss of a finger, or a man who is rather deficient in stature, in which case there is some doubt about his securing employment—these cases are not made special inquiry cases by us. For the month of May we rejected 178 cases; that is, those cases were either of the prohibited classes or else were of sufficient importance that we thought their conditions warranted deportation; but in addition to that there are 1,224 minor-defect cases, where we made comment on the card for the information of the registry clerks, out of a total of 44,754 examined during the month of May.

Q. Can you explain how you are able to trace these cases that you report and pass on, once they are landed?—A. Those cases which apply for assistance or come to the attention of the bureau are sent to the statistical office to obtain a verification of landing; in other words, a statement showing name of ship, date of arrival, etc., and then they usually come to our office. We have in our records a copy of every certificate made during the year—in fact, since the bureau has been established; at least ever since the fire. We also have a record of every minor defect which we have recorded, and having the name of the ship the man came on, we can easily see whether we have made at the time he landed any comment as to his physical condition.

Q. What do you know of any rejected persons being brought back here?—A. I remember those cases of which Dr. Williams has spoken. This spring an Italian came to the Barge Office to get some members of his family out who had arrived that day on the ship, and he was identified as an Italian who had been deported several months previously for trachoma. His own statement was that he came back to this country on the same ship, as a cabin passenger, directly the ship got on the other side. That occurred before the medical inspection of cabin passengers was made. Such inspection has only been in existence since the 1st of November, 1898. I remember one instance, though it was not a medical case, where a number of Ruthenians came here on a ship from an Italian port and were deported, and subsequently came by a ship of another line from Italy and were deported a second time. I think there are other instances, of which we have no official record, but I do not at this moment recall any more.

Q. What had you to do with the change to the new statistical classification of nationalities, vocations, etc.?—A. I served with Mr. McSweeney, and Mr. Campbell, of Washington, and Mr. Rogers, of Philadelphia, the committee which had the revision of statistics in charge. I was secretary of that committee.

Q. To whom was that report made?—A. To the Commissioner-General. Its recommendations were adopted immediately.

Q. How long has the new plan been in operation?—A. Since the 1st of July, 1898. That plan could be best stated as, substituting for the territorial classification of the people who come here the language or race classification. In other words, people that speak the same language and that have the same religious ties and that are bound to ally themselves together in this country and, whether they want to or not, be forced into the same occupations, were classified together. That was the main change. The old political division is still retained. For instance,

we can tell now how many come from the political divisions of Austria-Hungary, and from Russia, and the statistics of their occupations and destinations.

Q. What have you to say as to the accuracy of the old statistical methods of this office?—A. In regard to the number of people coming from political divisions it was, I think, accurate within very close limits, but where, for instance, in the case of Austria-Hungary, the country was divided up into territorial subdivisions, each of these subdivisions did not, in fact, in every instance, get the number of immigrants that should be credited to it. But it should be understood that we have now more information on which to base our statistics than previous to July, 1898. This new system included the obtaining of new information not available prior to July 1, 1898.

Q. Do you know of any way you can take the old statistics and conform them to the new methods so as to make them more intelligent and more correct?—A. That would be very difficult, and could not be done with any degree of accuracy. Of course the man's name, to one familiar with the country, will give a clew to the race to which he belongs. For instance, in 9 cases out of 10 you could separate in that way the Jews from Poland from the Poles themselves. In some such way as that it might be partially done, but I do not think the result would be of much value.

Q. You know there are 1 or 2 treatises on immigration, written in this country, which, together with the conclusions of political economists, are based on the figures furnished to the old New York Board. What have you to say as to the correctness of any of those conclusions?—A. I do not think those conclusions are impaired. I think, in the past, the number of people from Russia, as a political division, was correct within close limits, and in the same way from Austria-Hungary. It was only as regards the subdivisions that there might be a question, and I do not think that the element of subdivisions enters to any extent into economic deductions from these old figures.

Q. (By Mr. CLARKE.) Are there some loathsome and contagious diseases that are so obscure that they are not readily detected on a cursory examination of the person?—A. Yes, that may be so. Perhaps in that connection I might explain, in detail, our form of inspection. The first inspector stops the immigrant, looks at his hands, head, and eyes carefully. Skin diseases will usually show themselves in one of these 3 localities. For instance, in leprosy the first indication would be in the appearance of the hands. Then he is passed along probably 30 feet and brought to a second and perhaps a third inspector. The second inspector disregards, as a rule, the head and hands, but looks for anything else which attracts his attention, and checks the first inspector on the eyes. Then, if there be a third inspector there, he tries to check the other two, and in that way it is really more than a cursory examination, because the men who are working on each are men who have had the opportunity and training to make them experts, and they pick out things which would pass a man with any ordinary training of that sort. Anything which attracts suspicion in any way is turned to one side and later gone over as carefully as may be necessary.

Q. Do you sometimes require an immigrant to remove his clothing?—A. Certainly, or send him to the hospital for observation; that is frequently done.

Q. Have you any knowledge of contagious diseases developing which pass you?—A. I do not recollect any instance at present, but I think that is possible.

Q. Do you think there would be enough such cases that the danger would be very great?—A. No; I do not think so. They have not been brought to our attention, or I would certainly recollect such cases. I do not recollect any.

Q. You agree with Dr. Williams as to the desirability of bathing and disinfecting at the port of departure?—A. Yes; though I presume that is of greater value as a quarantine measure than for the purpose of immigration strictly.

Q. (By Mr. FARQUHAR.) Is there any matter you can suggest that has been omitted in the examination; anything to which you desire to call the attention of the commission?—A. There was one thing in regard to favus; the commission asked the common name for that, and Dr. Williams responded "scaldhead;" that should not be confused with eczema, sometimes also known as scaldhead. It is a parasitic disease of the scalp, and was practically unknown in this country until the Russian Jews and Italians began to come here. Then, in regard to trachoma, our attitude in ruling that as a dangerous, contagious disease is due to the order from the Department placing it in this category, which order was issued at the instigation of a convention of oculists in this country, who said the disease would probably die out in this country if it were not for fresh accretions from Europe.

NEW YORK, N. Y., July 25, 1899.

TESTIMONY OF MR. CHARLES G. EICHLER,

Chief of Statistical and Record Division, Bureau of Immigration, New York City.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City July 25, 1899, Mr. Farquhar presiding, Mr. Charles G. Eichler appeared at 5 p. m., and, being duly sworn, testified concerning immigration, as follows:

Q. (By M. FARQUHAR.) What is your name?—A. Charles G. Eichler.

Q. What is your position?—A. Chief of statistical and record division, Immigration Bureau, port of New York.

Q. Where do you live?—A. 249 West One hundred and twenty-sixth street; office at 45 Pearl street, New York.

Q. How long have you held that position?—A. Since April 19, 1890, under the United States Government, and 10 years previous under the State government.

Q. What are the duties of your office?—A. I make up statistics for the Commissioner of Immigration, who transmits them to the Commissioner-General.

Q. Did you have in charge all the statistics at the time the fire happened at Ellis Island?—A. Yes.

Q. Did you lose everything at that time?—A. Very nearly everything. We had old records there from the old State board of immigration for the past 50 years, since 1847, and I guess they were very nearly all destroyed.

Q. Have you ever examined to find if duplicates of any of these records were in Albany?—A. There are no duplicates. The only duplicates are in the United States customs-house at this port.

Q. Were there any copies furnished to the municipality of the city of New York?—A. No.

Q. Do you regard these documents of great value?—A. I do.

Q. What have you to say as to the real value of the statistics other than simply numbering the people that come in?—A. At the present time they are very good.

Q. What was it 2 years ago?—A. Not so good.

Q. Did the Government keep the old State form when the United States came in to take jurisdiction?—A. No; an act of the legislature turned it over from the State to the United States.

Q. As to manner of collecting statistics, when the United States Government took charge was the same system carried out as was carried out by the old State board?—A. Yes; same form. We started first to register the passengers the same as the old State board.

Q. As for the number of immigrants that have arrived, there is sufficient data in the papers of that time and other reports to have a comparative view of the old immigration, the present immigration, and the changes that have occurred in the immigrants, nationalities, and all?—A. Yes.

Q. Did your old statistics of the State board go beyond 1846 and 1847?—A. May 10, 1847.

Q. Do you know what dependence can be placed on statistics from 1824 to 1847?—A. I could not tell.

Q. Do you know how it is the political economists usually adopt 1824 as a basis of their comparisons with respect to American immigration?—A. I do not.

Q. You have no knowledge of handling any figures prior to 1847 on the old board?—A. No.

Q. Is there now in the possession of the United States statistics from 1847 to the present time that this commission can reach?—A. You might get it through the Bureau of Statistics, Washington, Treasury Department.

Q. Records made through collectors of the ports?—A. Customs districts.

Q. Can you suggest any amendments in reference to the statistical matter?—A. No; I think they are very good now. As Mr. McSweeney said, after a while we will get into the cabin business, and that will make it final.

Q. Have you in your possession here any body of comparative statistics that would be of value to this commission in making its report to Congress?—A. We could make up some illuminated tables or something like that.

Q. Have not bodies advocating restriction of immigration obtained considerable statistics from you?—A. Yes, several, through the Commissioner of Immigration.

Q. We take it from your testimony the new arrangement is of great advantage over the old one?—A. Yes; and we will still do better when we get the cabin business in shape. The Commissioner and I are working at it now.

we can tell now how many come from the political divisions of Austria-Hungary, and from Russia, and the statistics of their occupations and destinations.

Q. What have you to say as to the accuracy of the old statistical methods of this office?—A. In regard to the number of people coming from political divisions it was, I think, accurate within very close limits, but where, for instance, in the case of Austria-Hungary, the country was divided up into territorial subdivisions, each of these subdivisions did not, in fact, in every instance, get the number of immigrants that should be credited to it. But it should be understood that we have now more information on which to base our statistics than previous to July, 1898. This new system included the obtaining of new information not available prior to July 1, 1898.

Q. Do you know of any way you can take the old statistics and conform them to the new methods so as to make them more intelligent and more correct?—A. That would be very difficult, and could not be done with any degree of accuracy. Of course the man's name, to one familiar with the country, will give a clew to the race to which he belongs. For instance, in 9 cases out of 10 you could separate in that way the Jews from Poland from the Poles themselves. In some such way as that it might be partially done, but I do not think the result would be of much value.

Q. You know there are 1 or 2 treatises on immigration, written in this country, which, together with the conclusions of political economists, are based on the figures furnished to the old New York Board. What have you to say as to the correctness of any of those conclusions?—A. I do not think those conclusions are impaired. I think, in the past, the number of people from Russia, as a political division, was correct within close limits, and in the same way from Austria-Hungary. It was only as regards the subdivisions that there might be a question, and I do not think that the element of subdivisions enters to any extent into economic deductions from these old figures.

Q. (By Mr. CLARKE.) Are there some loathsome and contagious diseases that are so obscure that they are not readily detected on a cursory examination of the person?—A. Yes, that may be so. Perhaps in that connection I might explain, in detail, our form of inspection. The first inspector stops the immigrant, looks at his hands, head, and eyes carefully. Skin diseases will usually show themselves in one of these 3 localities. For instance, in leprosy the first indication would be in the appearance of the hands. Then he is passed along probably 30 feet and brought to a second and perhaps a third inspector. The second inspector disregards, as a rule, the head and hands, but looks for anything else which attracts his attention, and checks the first inspector on the eyes. Then, if there be a third inspector there, he tries to check the other two, and in that way it is really more than a cursory examination, because the men who are working on each are men who have had the opportunity and training to make them experts, and they pick out things which would pass a man with any ordinary training of that sort. Anything which attracts suspicion in any way is turned to one side and later gone over as carefully as may be necessary.

Q. Do you sometimes require an immigrant to remove his clothing?—A. Certainly, or send him to the hospital for observation; that is frequently done.

Q. Have you any knowledge of contagious diseases developing which pass you?—A. I do not recollect any instance at present, but I think that is possible.

Q. Do you think there would be enough such cases that the danger would be very great?—A. No; I do not think so. They have not been brought to our attention, or I would certainly recollect such cases. I do not recollect any.

Q. You agree with Dr. Williams as to the desirability of bathing and disinfecting at the port of departure?—A. Yes; though I presume that is of greater value as a quarantine measure than for the purpose of immigration strictly.

Q. (By Mr. FARQUHAR.) Is there any matter you can suggest that has been omitted in the examination; anything to which you desire to call the attention of the commission?—A. There was one thing in regard to favus; the commission asked the common name for that, and Dr. Williams responded "scaldhead;" that should not be confused with eczema, sometimes also known as scaldhead. It is a parasitic disease of the scalp, and was practically unknown in this country until the Russian Jews and Italians began to come here. Then, in regard to trachoma, our attitude in ruling that as a dangerous, contagious disease is due to the order from the Department placing it in this category, which order was issued at the instigation of a convention of oculists in this country, who said the disease would probably die out in this country if it were not for fresh accretions from Europe.

Q. Have you anything to do particularly with this Italian bureau?—A. I do not know of any reason why we should have any relationship with them beyond what we might with private citizens. I do not recognize any right—the board has never recognized their right to take any part in our proceedings. They are there, of course, and have been there for a number of years, and it is generally understood that they have been interested in the relief of their countrymen.

Q. Do you find it in any way an interference with the proper execution of your duties?—A. At the present time it does not interfere in any way that I know of with the duties of the board of special inquiry, but at one time it did, and so seriously that I felt it my duty to communicate with the Commissioner of Immigration in regard to it, and told him such facts as had come to my knowledge in regard to the Italian bureau. However, I have never known of any obnoxious actions on the part of Dr. Rossi himself. He is the head of the bureau.

Q. Did you ever see any necessity for any nation having a bureau of that kind so immediate to United States officials?—A. No.

Q. Do you know of any practical use for it now?—A. I do not.

Q. Is there any reason you know of why they should be in such immediate contact with the immigrant as a benefit to the immigrant or their own Government?—A. I do not know of any possible benefit.

Q. Have you ever had a talk with Dr. Rossi to learn the reasons why they seek closer contact with the immigrant than other nations?—A. The only conversation I had in which Dr. Rossi took part was a little consultation that took place after the communication I wrote to the Commissioner. Dr. Rossi was called down to the commissioner's office and quite a conversation was had, and the Doctor disclaimed any knowledge of the practices that I had spoken of in the communication, and was told by the commissioner of immigration that the bureau should not interfere with immigrants until after they were landed. That was about the only conversation I have had in reference to the matter.

Q. (By Mr. CLARKE.) To what class of detention cases does the board of special inquiry give the most time?—A. It usually takes more time to try a contract-labor case than a public charge case, for this reason: When a contract-labor case is discovered by the inspector he makes an examination, and if convinced that he is here in violation of the alien contract labor law he reduces that examination to an affidavit which he has read over to the immigrant and duly signed. Then he appears before us with the immigrant and submits this affidavit and the immigrant to the board of special inquiry for further examination. We have the affidavit read over to him by the interpreter, and if he verifies it and says it is true, that he comes here in violation of the alien contract labor law, and in pursuance to an agreement to perform service, he is excluded. So far, that is nothing but an *ex parte* hearing. In a few days the man that he says he has the work with appears and we must hear him. So you may say we are sure of 2 hearings on that contract-labor case, and they usually have means to employ lawyers and create activity generally in their behalf. I should say they take up more time as individual cases than others, but there are not so many of them as public charge cases.

Q. Does your board afford the fullest possible opportunities to the contract-labor inspectors to present their cases to you?—A. Yes, they usually have the call on the situation. For instance, we will have a room full of people, and if the contract-labor inspector comes in with a case we usually give it prompt attention, because in that sort of case it will not do to wait very long, for you have to depend for the making of that case on the confession of the immigrant. If that immigrant finds out he is going to be deported, he may change his mind and say he is not under contract, so we give it prompt attention. We do not try to hurry the matter, in fact, we warn him usually that it is not necessary for him to say that he has work in this country in order to land, but must simply tell the plain truth. Some of them, perhaps, might have the idea that if they did not have work here we would send them back as a public charge, and unwillingly trap themselves, but in order to prevent that we warn them, and tell them we want them to tell the truth.

Q. While you aim to be fair to the immigrant you cooperate, so far as you can, with the inspectors who bring the case before you?—A. I would not use the word cooperate, because it would seem to my mind to convey the impression we were paying attention more particularly to one part of the special inquiry cases than another. We try to examine every case that comes before us with absolute fairness and thoroughness, and in doing that we give the contract-labor bureau every service we can.

Q. There is never any antagonism between you and them?—A. Oh, no.

Q. (By Mr. FARQUHAR.) Does anything suggest itself to your mind that would be valuable to the commission, any suggestions?—A. I would like to say that

I have been associated with Mr. McSweeney for many years and am familiar with his views, and the recommendations he has made I thoroughly agree with. I believe in preserving the spirit of the laws as they now exist. I believe we should preserve them, and try to amend such defects as may be found to exist in them without taking chances with experimental things. We have got established by law now pretty near all of the people that I can think of that ought to be excluded from this country—contract laborers, idiots, public charges, paupers, and all those enumerated in the act of 1891. That seems to me to cover the ground. and the only difficulty that remains is to render more effective the means of detecting them and sending them back. I am very much in favor of anything that will tend to reach these excluded classes more effectively, if it is possible to do so; but, on the other hand, I do not believe that it is a wise policy to try to reach every little evil that may exist by some precise act of legislation. I would prefer to see the commissioner of immigration and the board of special inquiry given such power of discretion as would enable them to do justice in every case that arose. It is hard to depend on a specific enactment for a remedy in every matter. Unless there was some discretion it would sometimes be hardship. I have seen some very heartrending things we have had to do in the line of duty, and sometimes have been brought face to face with the unnecessary hardships that will exist when you depend on the letter of the law.

Q. (By Mr. CLARKE.) Do you think an educational test would be of any value for protecting American labor?—A. I doubt it very seriously.

Q. Do you think, from your observation of immigrants, that it would improve the quality of the immigrant and help us to a better class of citizens, industrially and morally?—A. I am in favor of anything that will increase education among the immigrants or anybody else we have to make citizens out of, but I do not believe it is an absolute sure test of the persons that come here. I have seen some persons come here that were well educated that I would rather keep out than persons, young, able-bodied, and not so well educated. It is not a safe test at all. An educational test might sometimes hit some sections right that furnish undesirable classes of citizens; otherwise I do not like the principle of it, and I do not think it is an absolute safe test of the desirability of the immigrant.

Q. You state it would apply to certain classes who are undesirable for other reasons, as I understood you. Now, is not that about the only test that can be applied beyond our present laws toward the exclusion of undesirable immigrants?—A. That might be, and still it does not come up to my idea of how these questions ought to be met. If an undesirable person happens to come within the prohibition established by this educational test, would you be barring him on account of the real ground of his undesirability? Q. It would be incidental?—A. I would rather stand up and give the reason why we did not want him.

Q. Is it not true that a larger proportion of the immigrants from the British Islands and the north of Europe would pass the educational test than those from the south of Europe and the east?—A. Yes.

Q. You think the educational test would be of some value toward the exclusion of classes that are thought to be less desirable than other classes?—A. Yes; there are some undesirable sections that would be prohibited by the educational test.

Q. (By Mr. FARQUHAR.) In this educational test, do you take the view of the immigrant as an ultimate citizen of the United States or simply as a worker and developer of material resources?—A. I look on that in this way: As I look at the immigration question generally, it is from the standpoint of the immigration official dealing with his eligibility to land when he reaches here, and I think the question of his citizenship is a separate and distinct one. If I thought that man coming here and applying for admission in an ignorant condition was going to remain in that ignorant condition, I would not want him to land here. We can deal with his citizenship after he has shown his character and physical ability and willingness to work. When admitted he is supposed to go on and become an intelligent and useful citizen. He is supposed to take up from that time the study of the problem of good citizenship and learn it by residence here and complying with our laws, and then when the time comes to naturalize him that can be determined by the proper functions. I think it would be a very difficult matter to say that every person who comes here uneducated would not make a good citizen; on the other hand, I would not like to say that every man who comes here educated would make a good citizen. If the man impresses the inspector that he is fit to land he is not apt to become a bad citizen. I would not naturalize anybody that could not read and write. I believe in preserving our naturalization on as high a plane as possible.

Q. (By Mr. CLARKE.) Would it be safe to leave the application of the educational test to the discretion of this board of special inquiry?—A. Yes. I think the board of special inquiry ought to have sufficient discretion to be able to take all these

things into consideration. If a man can not read and write that is a factor. He certainly will not be as well equipped to go out and make a living as if he were educated, and that is unwittingly taken account of, in our general opinion, as to whether he is equipped to land. But not being educated, and having the ability in other ways, ought not to constitute sufficient reason for sending him back if he is otherwise desirable. It is merely a factor that should be taken into consideration, but it ought not to be the decisive point.

Q. You mean it ought not to be a reason for exclusion?—A. I do; not the sole reason.

Q. You think it is going too far?—A. Yes.

Q. And when you establish an educational test you place up the bars at once, and that ends it; the question of desirability does not enter into it at all?—A. Yes. You see, we have the excluded classes established by law—idiots, public charges, and all that. When this man is examined we ought to ask him, and nearly always do, if he can read and write. That has to be taken into consideration in making up our verdict, but it ought not to be decisive. Take a young man 18 or 19 years of age; he has not been blest with the opportunities of getting an education, but otherwise may be bright. He comes here as a laborer, coming into a field where his labor can be employed; in every respect is admissible except he may not be able to read and write. Surely he can overcome that difficulty, and if he has the elements of a good citizen he will overcome it.

Q. If the law provided the educational test to be applied in the discretion of the board of special inquiry, how many—what proportion—of the immigrants who are now admitted would properly be rejected by the board?—A. Among the Italians it would be quite large, and I should say, taking it as a whole, it would make quite a difference. We have figures which show the relative percentage of illiteracy in the different countries and figures to show the excluded classes from the different countries. I am not prepared to say what the figures would be. It would make a large difference in some sections where I do not believe we want to restrict immigration at all. Suppose it should send back the virtuous and industrious Irish girls that come here; on what grounds of humanity and broad lines of thought could we justify that to the world—excluding persons who come here speaking our own language and who perhaps, by no fault of their own, had been unable to enjoy the opportunities of learning to read and write?

Q. If this were left to the discretion of your board, would there be any danger of some races being unfairly discriminated against?—A. No. My idea about the board is that it ought to be made to approach as nearly as possible to a jury. It ought to be built somewhat on that plan, so that when they look a man over and give him a careful and conscientious investigation and then believe he ought to go back, he ought to go back. The chances are that such a man would not make a good citizen. Sometimes we find after an examination of an alien that he is not desirable, and yet he does not come within the excluded classes, and we can not force him into one of these excluded classes, and have to vote to admit him. If the law is changed at all so as to reach any more people, I believe in making it elastic along these lines, so as to give discretionary power. If the board of special inquiry had the power to send a person back solely because he could not read and write, it might be sometimes that a person might come here that we could use that to advantage against. Anything that will tend to make the man who makes the contract for labor suffer a little more would also be a good thing. The alien is not going to make a contract unless he has somebody to give the inducement.

Q. Have you thought of any new way to reach him?—A. I must confess it is an extremely difficult matter, and I am not prepared to give any solution of it.

NEW YORK, N. Y., July 26, 1899.

TESTIMONY OF DR. LORENZO ULLO,

Legal counsel, Immigration Bureau, Port of New York.

At a meeting of the Subcommission on Manufactures and General Business, held in New York July 26, 1899, Chairman Smyth presiding, Dr. Lorenzo Ullo appeared at 10 a. m., and, being duly sworn, testified concerning immigration as follows:

Q. (By Mr. SMYTH.) State your name.—A. Lorenzo Ullo.

Q. Residence?—A. City of New York, Borough of Brooklyn.

Q. Are you connected with the Immigration Bureau; and, if so, in what capacity?—A. Practically, I am the legal adviser of the Immigration Bureau.

I have been associated with Mr. McSweeney for many years and am familiar with his views, and the recommendations he has made I thoroughly agree with. I believe in preserving the spirit of the laws as they now exist. I believe we should preserve them, and try to amend such defects as may be found to exist in them without taking chances with experimental things. We have got established by law now pretty near all of the people that I can think of that ought to be excluded from this country—contract laborers, idiots, public charges, paupers, and all those enumerated in the act of 1891. That seems to me to cover the ground. and the only difficulty that remains is to render more effective the means of detecting them and sending them back. I am very much in favor of anything that will tend to reach these excluded classes more effectively, if it is possible to do so; but, on the other hand, I do not believe that it is a wise policy to try to reach every little evil that may exist by some precise act of legislation. I would prefer to see the commissioner of immigration and the board of special inquiry given such power of discretion as would enable them to do justice in every case that arose. It is hard to depend on a specific enactment for a remedy in every matter. Unless there was some discretion it would sometimes be hardship. I have seen some very heartrending things we have had to do in the line of duty, and sometimes have been brought face to face with the unnecessary hardships that will exist when you depend on the letter of the law.

Q. (By Mr. CLARKE.) Do you think an educational test would be of any value for protecting American labor?—A. I doubt it very seriously.

Q. Do you think, from your observation of immigrants, that it would improve the quality of the immigrant and help us to a better class of citizens, industrially and morally?—A. I am in favor of anything that will increase education among the immigrants or anybody else we have to make citizens out of, but I do not believe it is an absolute sure test of the persons that come here. I have seen some persons come here that were well educated that I would rather keep out than persons, young, able-bodied, and not so well educated. It is not a safe test at all. An educational test might sometimes hit some sections right that furnish undesirable classes of citizens; otherwise I do not like the principle of it, and I do not think it is an absolute safe test of the desirability of the immigrant.

Q. You state it would apply to certain classes who are undesirable for other reasons, as I understood you. Now, is not that about the only test that can be applied beyond our present laws toward the exclusion of undesirable immigrants?—A. That might be, and still it does not come up to my idea of how these questions ought to be met. If an undesirable person happens to come within the prohibition established by this educational test, would you be barring him on account of the real ground of his undesirability? Q. It would be incidental?—A. I would rather stand up and give the reason why we did not want him.

Q. Is it not true that a larger proportion of the immigrants from the British Islands and the north of Europe would pass the educational test than those from the south of Europe and the east?—A. Yes.

Q. You think the educational test would be of some value toward the exclusion of classes that are thought to be less desirable than other classes?—A. Yes; there are some undesirable sections that would be prohibited by the educational test.

Q. (By Mr. FARQUHAR.) In this educational test, do you take the view of the immigrant as an ultimate citizen of the United States or simply as a worker and developer of material resources?—A. I look on that in this way: As I look at the immigration question generally, it is from the standpoint of the immigration official dealing with his eligibility to land when he reaches here, and I think the question of his citizenship is a separate and distinct one. If I thought that man coming here and applying for admission in an ignorant condition was going to remain in that ignorant condition, I would not want him to land here. We can deal with his citizenship after he has shown his character and physical ability and willingness to work. When admitted he is supposed to go on and become an intelligent and useful citizen. He is supposed to take up from that time the study of the problem of good citizenship and learn it by residence here and complying with our laws, and then when the time comes to naturalize him that can be determined by the proper functions. I think it would be a very difficult matter to say that every person who comes here uneducated would not make a good citizen; on the other hand, I would not like to say that every man who comes here educated would make a good citizen. If the man impresses the inspector that he is fit to land he is not apt to become a bad citizen. I would not naturalize anybody that could not read and write. I believe in preserving our naturalization on as high a plane as possible.

Q. (By Mr. CLARKE.) Would it be safe to leave the application of the educational test to the discretion of this board of special inquiry?—A. Yes. I think the board of special inquiry ought to have sufficient discretion to be able to take all these

right of the Commissioner to order the steamship companies to deport them. Under the law the examination of every passenger is supposed to take place on board; but, for the convenience of the Government and its officials, the law allows the immigrants to be temporarily removed, but provides that "such a removal shall not be construed a landing." As soon as a person is considered undesirable and is to be deported, we order him sent back, as if he had always been on board the steamer; order him to be taken back out of our jurisdiction. If it happens that the port whence he came is the port of his nationality, so much the better for the man. If it does not happen to be so, we can not execute that part of the law.

Q. In case of detention of this immigrant, pending his examination here, or an appeal to Washington, the cost of his care and maintenance is charged to the steamship company?—A. I understand it to be so.

Q. Have the steamship companies at any time made any complaint as to the execution of the law, with respect to the care, maintenance, and detention of immigrants?—A. I understand they have made a great many, but I do not know that they have ever objected to the order of deportation.

Q. Do they object to the kind of inspection that you have here over immigrants?—A. I do not think there has been any complaint on that line. I can say as much since 1893, since which time I have been there, and I have had experience even beyond 1893. Before I was connected with the office in my present position I was connected with benevolent societies, and my experience runs from the time when it was under State laws, and I must say there has been a most decided improvement in the workings of the department. It is now organized. It has its regular organization. There was a time when it was merely chaotic. Under the present law there are two kinds of examinations, which now put the inspection in very good order; there is a preliminary examination on board or at the Barge Office; there is then a second examination, which is an examination by special inquiry. When the officers who make preliminary examinations, called the boarding officers, have, in the words of the law, reasonable doubt that the person is not a person entitled to be landed, their powers are limited to sending him before the board of special inquiry. It is the board of special inquiry that finally excludes a person under the law. The steamship companies do not complain much as to the judgment passed upon the immigrants; they do complain mostly of the fact that these immigrants take appeals to the Secretary of the Treasury in Washington and prolong their appeal, which prolongs their detention and increases the expense. I understand, and it must be known generally, that these steamship companies take some precaution in cases of persons which they consider of doubtful admission. They compel such persons to make a good deposit before accepting them for transportation to this country. So the company is guaranteed against the expenses of their stay here and deportation. So far as the steamship lines are concerned, there is not much complaint as to the law as executed now. I think there were complaints in the first year of its execution. Of course, it was a new law.

Q. Cases of infraction of the alien contract-labor law—have you had many of these cases in the courts?—A. I have had charge of nearly all these cases on the Atlantic side, preparing them for the courts. Under the law the district attorney is designated to sue, but frequently I have had the preparation of testimony, and have even drawn the pleadings in some cases. There has been the greatest difficulty. It has reached a point under the decisions where, I will say, not one case in a thousand can be brought to a satisfactory result or conviction. In fact, in my experience of 5 years, I think only one case has been successful.

Q. Are you speaking of the contract-labor law?—A. The contract-labor law alone. In the others we are mostly successful. The original contract-labor law was passed in 1885. It was amended or rather extended in 1887. It was in some way made, without amending or abrogating these two acts, a part of the act of 1891. Then, in 1893, the law has not been revised, but patched on. Under this law any legal mind can not but find the difficulties which have been encountered. The law of 1885 declares in so many words in the third line: "It shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation, or in any way assist or encourage the importation or migration of any alien or aliens, any foreigner or foreigners, into the United States, its Territories, or the District of Columbia, under contract or agreement, parol or special, express or implied, made previous to the importation or migration of such alien or aliens, foreigner or foreigners, to perform labor or service of any kind in the United States, its Territories, or the District of Columbia."

The law says it shall be unlawful to import into the United States a man under contract made previous to his importation. That contract must be made *previous*

I have been associated with Mr. McSweeney for many years and am familiar with his views, and the recommendations he has made I thoroughly agree with. I believe in preserving the spirit of the laws as they now exist. I believe we should preserve them, and try to amend such defects as may be found to exist in them without taking chances with experimental things. We have got established by law now pretty near all of the people that I can think of that ought to be excluded from this country—contract laborers, idiots, public charges, paupers, and all those enumerated in the act of 1891. That seems to me to cover the ground. and the only difficulty that remains is to render more effective the means of detecting them and sending them back. I am very much in favor of anything that will tend to reach these excluded classes more effectively, if it is possible to do so; but, on the other hand, I do not believe that it is a wise policy to try to reach every little evil that may exist by some precise act of legislation. I would prefer to see the commissioner of immigration and the board of special inquiry given such power of discretion as would enable them to do justice in every case that arose. It is hard to depend on a specific enactment for a remedy in every matter. Unless there was some discretion it would sometimes be hardship. I have seen some very heartrending things we have had to do in the line of duty, and sometimes have been brought face to face with the unnecessary hardships that will exist when you depend on the letter of the law.

Q. (By Mr. CLARKE.) Do you think an educational test would be of any value for protecting American labor?—A. I doubt it very seriously.

Q. Do you think, from your observation of immigrants, that it would improve the quality of the immigrant and help us to a better class of citizens, industrially and morally?—A. I am in favor of anything that will increase education among the immigrants or anybody else we have to make citizens out of, but I do not believe it is an absolute sure test of the persons that come here. I have seen some persons come here that were well educated that I would rather keep out than persons, young, able-bodied, and not so well educated. It is not a safe test at all. An educational test might sometimes hit some sections right that furnish undesirable classes of citizens; otherwise I do not like the principle of it, and I do not think it is an absolute safe test of the desirability of the immigrant.

Q. You state it would apply to certain classes who are undesirable for other reasons, as I understood you. Now, is not that about the only test that can be applied beyond our present laws toward the exclusion of undesirable immigrants?—A. That might be, and still it does not come up to my idea of how these questions ought to be met. If an undesirable person happens to come within the prohibition established by this educational test, would you be barring him on account of the real ground of his undesirability? Q. It would be incidental?—A. I would rather stand up and give the reason why we did not want him.

Q. Is it not true that a larger proportion of the immigrants from the British Islands and the north of Europe would pass the educational test than those from the south of Europe and the east?—A. Yes.

Q. You think the educational test would be of some value toward the exclusion of classes that are thought to be less desirable than other classes?—A. Yes; there are some undesirable sections that would be prohibited by the educational test.

Q. (By Mr. FARQUHAR.) In this educational test, do you take the view of the immigrant as an ultimate citizen of the United States or simply as a worker and developer of material resources?—A. I look on that in this way: As I look at the immigration question generally, it is from the standpoint of the immigration official dealing with his eligibility to land when he reaches here, and I think the question of his citizenship is a separate and distinct one. If I thought that man coming here and applying for admission in an ignorant condition was going to remain in that ignorant condition, I would not want him to land here. We can deal with his citizenship after he has shown his character and physical ability and willingness to work. When admitted he is supposed to go on and become an intelligent and useful citizen. He is supposed to take up from that time the study of the problem of good citizenship and learn it by residence here and complying with our laws, and then when the time comes to naturalize him that can be determined by the proper functions. I think it would be a very difficult matter to say that every person who comes here uneducated would not make a good citizen; on the other hand, I would not like to say that every man who comes here educated would make a good citizen. If the man impresses the inspector that he is fit to land he is not apt to become a bad citizen. I would not naturalize anybody that could not read and write. I believe in preserving our naturalization on as high a plane as possible.

Q. (By Mr. CLARKE.) Would it be safe to leave the application of the educational test to the discretion of this board of special inquiry?—A. Yes. I think the board of special inquiry ought to have sufficient discretion to be able to take all these

in this act, upon arrival, shall be sent back to the nations to which they belong and from whence they came." That clearly means that the contract laborers must be sent back, because the other party is supposed to be within the United States. So we have to gather our authority to deport merely from the spirit of the law and not from the letter of it.

Q. Do you find any sections in these laws conflicting since the adoption of the later amendments to the previous law?—A. There are cases of patching, at least adding one without amending the other. They are all laws. They are the law of 1875 and the law of 1882, 1887, 1891, and 1893.

Q. Do you find amendments there where the amended section has not been repealed at all? Do you find two bodies of law bearing on one feature?—A. Yes; and the law of 1882 is not amended at all, and when the classes of undesirable persons are mentioned in the law of 1891, which law is somewhat expansive of the classes mentioned in the law of 1882, the law does not expressly abolish the law of 1882.

Q. What remedial legislation would you propose in this matter?—A. A general revision. It has been working since 1890 under the United States control. Since then we have had a great deal of experience, and the thing has in some way crystallized. There is enough experience to make a recodification of the law, without even adding to what is known to be the spirit of the law.

Q. Have you formulated at any time a recodification of these laws?—A. I did during Dr. Senner's time, I think about 4 years ago.

Q. Was that matter presented to the Treasury in Washington, or did it go beyond Dr. Senner?—A. I can not tell. I know Dr. Senner had gone to Washington and I sent it to him there, but how far it reached I can not tell. It was only suggestions for recodification, and that is merely more or less what I am mentioning here.

There is one other point with which we have found great difficulty; in fact, a case involving it is still pending and may go to the United States Supreme Court. The law uses the word "aliens" and sometimes uses the words "alien immigrants." This has produced some difference of opinion among the judges. The judges in this circuit, Judge Lacombe, especially, have decided that the law only is applicable to alien immigrants and not to aliens generally. After the first decision we found that all were taught to say they came here to see the country or to see their father or sister or brother, and were not coming as immigrants but as tourists. We tried to avoid that the best we could afterwards. A great many so-called birds of passage come here for the summer and go back in the winter. The judges held that they are immigrants the first time they land, and after the first landing they are no longer immigrants and are beyond the jurisdiction of the Bureau of Immigration. This went on until 1894, when in the appropriation for the enforcement of the Chinese exclusion act, after allowing an appropriation, the statute went on to say that the examination of all aliens shall be final unless an appeal be taken to the Secretary of the Treasury, and his decision will be final. The Supreme Court of the United States in the case of a Chinese decided that that law, although found in an appropriation statute, makes it final and takes away the jurisdiction from the courts in all examinations of immigrants, "at least for Chinese immigration." The inferior courts, Judge Lacombe and Judge Brown, since then have followed the decision in the cases of aliens, whether Chinese or not Chinese; but there is at this moment pending an appeal from a habeas corpus where an Italian contends that that law does not apply to all aliens, but is restricted to Chinese alone. The question may come up before the United States Supreme Court in October or November, when that appeal may be reached. We have now reached a point with the inferior courts where this is no longer a difficulty, because they have recognized that all aliens are within the jurisdiction of the Immigration Bureau.

Q. Under the statute, in your prosecutions do you not find considerable difficulty in the definition of "criminals?"—A. Yes, a great deal. We have "convicts." Who is a convict? In the law of 1882 the word convict was generic, was not qualified at all. In the law of 1891 it is qualified by the words "has been convicted of a felony or other infamous crime or misdemeanor involving moral turpitude." We have also had this experience: a man comes charged with murder, and is confronted with the person who charges him and who was a witness to the murder. We try to hold the man for further instructions, and notify the Government to which he belongs, and ask whether they desire to take any action. They do not. What can we do? We have no power to deport him, if he is otherwise qualified to come in. Under this law we have no other alternative than to allow him to come in. We had a case of a man charged with felony. His Government asked for his extradition. We turned him over to the judicial authorities

I have been associated with Mr. McSweeney for many years and am familiar with his views, and the recommendations he has made I thoroughly agree with. I believe in preserving the spirit of the laws as they now exist. I believe we should preserve them, and try to amend such defects as may be found to exist in them without taking chances with experimental things. We have got established by law now pretty near all of the people that I can think of that ought to be excluded from this country—contract laborers, idiots, public charges, paupers, and all those enumerated in the act of 1891. That seems to me to cover the ground. and the only difficulty that remains is to render more effective the means of detecting them and sending them back. I am very much in favor of anything that will tend to reach these excluded classes more effectively, if it is possible to do so; but, on the other hand, I do not believe that it is a wise policy to try to reach every little evil that may exist by some precise act of legislation. I would prefer to see the commissioner of immigration and the board of special inquiry given such power of discretion as would enable them to do justice in every case that arose. It is hard to depend on a specific enactment for a remedy in every matter. Unless there was some discretion it would sometimes be hardship. I have seen some very heartrending things we have had to do in the line of duty, and sometimes have been brought face to face with the unnecessary hardships that will exist when you depend on the letter of the law.

Q. (By Mr. CLARKE.) Do you think an educational test would be of any value for protecting American labor?—A. I doubt it very seriously.

Q. Do you think, from your observation of immigrants, that it would improve the quality of the immigrant and help us to a better class of citizens, industrially and morally?—A. I am in favor of anything that will increase education among the immigrants or anybody else we have to make citizens out of, but I do not believe it is an absolute sure test of the persons that come here. I have seen some persons come here that were well educated that I would rather keep out than persons, young, able-bodied, and not so well educated. It is not a safe test at all. An educational test might sometimes hit some sections right that furnish undesirable classes of citizens; otherwise I do not like the principle of it, and I do not think it is an absolute safe test of the desirability of the immigrant.

Q. You state it would apply to certain classes who are undesirable for other reasons, as I understood you. Now, is not that about the only test that can be applied beyond our present laws toward the exclusion of undesirable immigrants?—A. That might be, and still it does not come up to my idea of how these questions ought to be met. If an undesirable person happens to come within the prohibition established by this educational test, would you be barring him on account of the real ground of his undesirability? Q. It would be incidental?—A. I would rather stand up and give the reason why we did not want him.

Q. Is it not true that a larger proportion of the immigrants from the British Islands and the north of Europe would pass the educational test than those from the south of Europe and the east?—A. Yes.

Q. You think the educational test would be of some value toward the exclusion of classes that are thought to be less desirable than other classes?—A. Yes; there are some undesirable sections that would be prohibited by the educational test.

Q. (By Mr. FARQUHAR.) In this educational test, do you take the view of the immigrant as an ultimate citizen of the United States or simply as a worker and developer of material resources?—A. I look on that in this way: As I look at the immigration question generally, it is from the standpoint of the immigration official dealing with his eligibility to land when he reaches here, and I think the question of his citizenship is a separate and distinct one. If I thought that man coming here and applying for admission in an ignorant condition was going to remain in that ignorant condition, I would not want him to land here. We can deal with his citizenship after he has shown his character and physical ability and willingness to work. When admitted he is supposed to go on and become an intelligent and useful citizen. He is supposed to take up from that time the study of the problem of good citizenship and learn it by residence here and complying with our laws, and then when the time comes to naturalize him that can be determined by the proper functions. I think it would be a very difficult matter to say that every person who comes here uneducated would not make a good citizen; on the other hand, I would not like to say that every man who comes here educated would make a good citizen. If the man impresses the inspector that he is fit to land he is not apt to become a bad citizen. I would not naturalize anybody that could not read and write. I believe in preserving our naturalization on as high a plane as possible.

Q. (By Mr. CLARKE.) Would it be safe to leave the application of the educational test to the discretion of this board of special inquiry?—A. Yes. I think the board of special inquiry ought to have sufficient discretion to be able to take all these

penalty as an inducement?—A. I am fully in favor of allowing a private party to sue, and that the fine should go to the contract laborer. The contract laborer is frequently an innocent man. He is not presumed to know the law of this country. He is a foreigner. A man comes to him or he is written to, "If you come to the United States I will give you \$15 or \$20 a week." He knows nothing of our laws and no law presumes that he ought to know our law. He auctions, perhaps, his property, whatever he has, his furniture, perhaps, and breaks up his home; he has a wife and children; and he comes here, taking it from a practical sense, thinking he has done a prudent act by securing a way of livelihood for his family on this side. He is sent back and he has to build up a home again on the other side. He gets nothing for it, and there is \$1,000 penalty for that here. Should he not have the most part of that for damages from the man who lures him? Our law presumes that the man who is here, the American who contracts with him, does know the law; and he does all this damage to this man. Why should not the penalty go to this man? It would work much better for us, and the spirit of our law would be much more satisfied. If we leave it to private action the employers who violate the law will be very much more careful.

Q. Would you extend that power of private prosecution to other cases that are prohibited under the law, or would you confine it to contract-labor cases?—A. I would even give the passengers the right of prosecution against the steamers when the steamers have induced them to come over. We have had cases, for example, of a family—father and mother coming with one child, an idiot; that idiot can not come in; the company knew it. In that way you could force the companies to be more careful. The companies are more afraid of a private action than they are of a Government action, and the spirit of the law is much more satisfied if you leave it to private action.

Q. You say you would have the law amended so as to prohibit the inducements to the people to come, which would extend it beyond a contract?—A. Something which is not strictly a contract.

Q. Do you not anticipate there would be a good many difficulties in the enforcement of that law, in getting proof and a legal determination as to what was an inducement?—A. But the difficulty would be more on the side of the importer to get out of the broad significance of the word "inducements," and an intelligent jury can decide what is an inducement after instruction from the court.

Q. Do you not think there would be a great difficulty in getting Congress to enact such a law?—A. That is a practical question.

Q. As a matter of fact, is it not common for the people residing in this country to write to their friends abroad that they have secured an opportunity for them here and thus induce them to come?—A. Yes; but that would not be an inducement perhaps—merely saying that. The matter must be defined; there must be a definition given.

Q. Suppose you were running a coal mine and hiring men, in Pennsylvania, and wanted some help; you had a good many from abroad and persuaded them to write to their friends on the other side to come over, and tell them they can have employment?—A. That would not be an inducement. I think the line of demarcation would be this: When a man comes here relying upon his own efforts and resources to find employment he ought to be admitted.

Q. Is it not a common practice within our own country for young men, going from the country to the city, to make sure of employment in the city before leaving home, through their friends?—A. No question about it.

Q. The same rule would apply to people coming from abroad, would it not?—A. I am talking from a legal point of view, irrespective as to whether the restriction of foreign contract labor is advisable. If it is advisable to restrict contract labor, the law as it stands does not restrict it.

Q. Do you think it would be advisable to enact a prohibition of the efforts of friends to help their friends get positions?—A. No; the law makes a special distinction for that, where it says that nothing in this act shall be construed to prevent an individual in the United States from sending for a relative or friend who is not of the excluded classes to emigrate for the purpose of settlement here. And then again in the law of 1891, this exception has been kept up by saying they can be assisted by brothers and friends, and the burden of proof is on them to prove that they are not paupers or of the excluded classes or contract laborers.

Q. Do you think you could sufficiently define "inducement" so that you could make it effective to prevent the importation of persons who are really contract laborers in disguise?—A. In the criminal law we have the inducement or inciting to crime as itself a crime. We can go as far as the criminal law goes in defining the inciting or inducing, and therefore we have some rules of law to reach the point.

I have been associated with Mr. McSweeney for many years and am familiar with his views, and the recommendations he has made I thoroughly agree with. I believe in preserving the spirit of the laws as they now exist. I believe we should preserve them, and try to amend such defects as may be found to exist in them without taking chances with experimental things. We have got established by law now pretty near all of the people that I can think of that ought to be excluded from this country—contract laborers, idiots, public charges, paupers, and all those enumerated in the act of 1891. That seems to me to cover the ground. and the only difficulty that remains is to render more effective the means of detecting them and sending them back. I am very much in favor of anything that will tend to reach these excluded classes more effectively, if it is possible to do so; but, on the other hand, I do not believe that it is a wise policy to try to reach every little evil that may exist by some precise act of legislation. I would prefer to see the commissioner of immigration and the board of special inquiry given such power of discretion as would enable them to do justice in every case that arose. It is hard to depend on a specific enactment for a remedy in every matter. Unless there was some discretion it would sometimes be hardship. I have seen some very heartrending things we have had to do in the line of duty, and sometimes have been brought face to face with the unnecessary hardships that will exist when you depend on the letter of the law.

Q. (By Mr. CLARKE.) Do you think an educational test would be of any value for protecting American labor?—A. I doubt it very seriously.

Q. Do you think, from your observation of immigrants, that it would improve the quality of the immigrant and help us to a better class of citizens, industrially and morally?—A. I am in favor of anything that will increase education among the immigrants or anybody else we have to make citizens out of, but I do not believe it is an absolute sure test of the persons that come here. I have seen some persons come here that were well educated that I would rather keep out than persons, young, able-bodied, and not so well educated. It is not a safe test at all. An educational test might sometimes hit some sections right that furnish undesirable classes of citizens; otherwise I do not like the principle of it, and I do not think it is an absolute safe test of the desirability of the immigrant.

Q. You state it would apply to certain classes who are undesirable for other reasons, as I understood you. Now, is not that about the only test that can be applied beyond our present laws toward the exclusion of undesirable immigrants?—A. That might be, and still it does not come up to my idea of how these questions ought to be met. If an undesirable person happens to come within the prohibition established by this educational test, would you be barring him on account of the real ground of his undesirability? Q. It would be incidental?—A. I would rather stand up and give the reason why we did not want him.

Q. Is it not true that a larger proportion of the immigrants from the British Islands and the north of Europe would pass the educational test than those from the south of Europe and the east?—A. Yes.

Q. You think the educational test would be of some value toward the exclusion of classes that are thought to be less desirable than other classes?—A. Yes; there are some undesirable sections that would be prohibited by the educational test.

Q. (By Mr. FARQUHAR.) In this educational test, do you take the view of the immigrant as an ultimate citizen of the United States or simply as a worker and developer of material resources?—A. I look on that in this way: As I look at the immigration question generally, it is from the standpoint of the immigration official dealing with his eligibility to land when he reaches here, and I think the question of his citizenship is a separate and distinct one. If I thought that man coming here and applying for admission in an ignorant condition was going to remain in that ignorant condition, I would not want him to land here. We can deal with his citizenship after he has shown his character and physical ability and willingness to work. When admitted he is supposed to go on and become an intelligent and useful citizen. He is supposed to take up from that time the study of the problem of good citizenship and learn it by residence here and complying with our laws, and then when the time comes to naturalize him that can be determined by the proper functions. I think it would be a very difficult matter to say that every person who comes here uneducated would not make a good citizen; on the other hand, I would not like to say that every man who comes here educated would make a good citizen. If the man impresses the inspector that he is fit to land he is not apt to become a bad citizen. I would not naturalize anybody that could not read and write. I believe in preserving our naturalization on as high a plane as possible.

Q. (By Mr. CLARKE.) Would it be safe to leave the application of the educational test to the discretion of this board of special inquiry?—A. Yes. I think the board of special inquiry ought to have sufficient discretion to be able to take all these

included. Now, the law of 1891 added, "nor to ministers of any religious denomination, nor persons belonging to any recognized profession, nor professors for colleges and seminaries." The exception proves the rule again; therefore, a manager of a great business is not included in the exception, nor clerks of a higher order.

Q. Nor newspaper men?—A. Nor newspaper men. They can not come in. The courts may hold the words "recognized profession" have a very restricted sense. Under the old style they only included "divinity, law, and medicine," but we have a decision of the Supreme Court that a chemist is of the recognized professions, and they allowed a chemist to come in. This law was amended prior to the decision of the Supreme Court in the Trinity case, but no reference is made to that amendment in the decision.

Q. (By Mr. FARQUHAR.) About these propositions that you made through Dr. Senner—do you know if there are any copies in existence?—A. I have made drafts. There were amendments proposed, and there was a conference held; my recollection is that there was a report subsequent to that. It was a work that was done for an investigating commission which was then composed of Mr. Stump, Dr. Senner, and Mr. McSweeney, and whatever was given in those suggestions may be found in their reports.

Q. You spoke of an amendment to the law with respect to the inducement. Do you not think the province of the law itself has been to suppress this cheap labor from coming into the country?—A. That is the spirit of the law.

Q. Is it not the law desired by the people of the United States?—A. It seems to me so.

Q. Is it not the intention to keep the hirer of labor from acquiring in a foreign market that which he can acquire here?—A. That is the intention.

Q. I am speaking generally of this cheap labor that comes in—working in mines, railroad building, etc.—A. No question about that.

NEW YORK, N. Y., July 26, 1899.

TESTIMONY OF MRS. REGINA STUCKLEN,

Matron, Immigration Bureau, Port of New York.

At a meeting of the Subcommittee on Manufactures and General Business, held at New York July 26, 1899, Chairman Smyth presiding, Mrs. Regina Stucklen appeared at 11 a. m., and, being duly sworn, testified concerning immigration as follows:

Q. (By Mr. SMYTH.) What is your name?—A. Regina Stucklen.

Q. Where do you live?—A. Brooklyn.

Q. You are connected with the bureau of immigration?—A. I have held the position of matron under the Government since 1890, and before that under the State continuously from 1885.

Q. Will you explain to the commission the work of your department?—A. When the immigrants come in from the steamer, the first work of the matron is to stand on the line of inspection, the same as the doctors, and inspect all females as they come through as to whether or not they are in a delicate condition, simply from their appearance. The matrons have not studied medicine; it is only experience that teaches them the way of detecting a woman in that state. Sometimes it is very difficult and sometimes it is quite easy. These women are placed to one side for later examination after all the passengers are in. If it is found by the second examination that they have husbands with them, or are going to their husbands, and have a legal right to be in that condition, and otherwise are eligible to land, have money, transportation, and we see they can get along in this country all right, we allow them to pass through the same as the registry clerk would. In that capacity the matron takes the place of the inspector. That is one of my titles—inspector of immigration.

Q. How many assistants have you?—A. I have one in that work, and one who simply cares for the women and children when they are detained.

Q. Is that a sufficient number?—A. If we had more we could do the work better than we do now. The matron's department is not the easiest worked department there now. If the gentlemen will come down and see the work we do in one day, you will see for yourselves that the matron's work is very heavy. If we find in

that second examination that the woman we have detained is an unmarried person and she is going to her intended husband, we try to get this intended husband to the Barge Office and try to make him see it is his place to marry this girl. Quite often we succeed. We have an average of 1 marriage a day during the year, perhaps a little more.

Q. Under these circumstances?—A. Largely under these circumstances. Sometimes they have been living together, and while there is no pregnancy, yet they should be married; probably have children, or have been cohabiting, and ought to be married. Then, sometimes we find the girl's intended husband is on the other side, and in such case she is generally returned. She is sent by the matron's department to the board of special inquiry with the information the matron has. She there again states the same thing. She may change her story, but most likely she will tell the same story and be returned to Europe. We try to induce such that come together to marry; we can not make them marry; we have no right to do that. In some cases the relatives of the girl appeal to the Government and have the girl landed. During the last fiscal year we have detained in all 1,441 pregnant cases, which will speak itself for the work done in the matron's department. Of these there were 53 deported, all single girls. Thirty-three were married out of that 1,441. The rest of the marriages were between such as had been cohabiting. Twenty-four of these 1,441 were admitted to the relatives, either on bond or by appeal to the Government. Bonds are not very often accepted in any case. The Government does not try to have these people landed, but tries to prevent it if possible. The rest were all legally in that condition, and were allowed to land. We have had probably 50 cases during the year of women who had been unfaithful to their husbands, and come to their husbands in that condition, and with the exception of 3, who returned, the husbands all forgave them and took them, and we believe are providing for them the same as if nothing had happened. Then a number of women and children are detained by the registry clerks awaiting the arrival of relatives; also, young girls are placed in the detention department, and are under the care of the matron until called for or returned. We give them all the comforts we can under the circumstances.

Q. Do any of the detained immigrants ever die at the Barge Office?—A. If any are sick we place them immediately in the hospital. That is out of the hands of the matron. They have medical nurses there. The medical department makes an inspection twice a day of the detained passengers, and if there are any signs of sickness at any time the matron calls the attention of the medical department to it.

Q. Children traveling alone come under the care of the matron?—A. Sometimes we have them as young as 2 and 3 years old sent here by the relatives on the other side to the relatives in this country. Sometimes they are orphans, and sometimes their parents came before them. These children generally have their transportation all the way through, or the agent has it for them. They generally have a ticket on them with the name and address or destination of the child, and we give it into the hands of the railroad official, and he will see that the child is placed in the car properly in the charge of the conductor. We telegraph to the relatives at what time and on what train the child will leave this port and when it is due there. Where it is going to the vicinity of New York, where it can be called for, we keep it in our care until they call for it.

Q. (By Mr. CLARKE.) Do you think of any respect in which the law can be amended to promote the efficiency of the work in your department?—A. Yes; I think the law ought to include the immoral women that come to this country. There is nothing in the law as it stands under which we can send a girl back if she comes for that purpose. We can only bar her as an undesirable immigrant or likely to become a public charge.

Q. Could you get proof to establish such cases?—A. I think I could by looking over the minutes of the board of special inquiry.

Q. Do they find out whether a person is of that character or not?—A. In cases where the matron learned that girls came over here for anything else than a good purpose and sent them before the board they have found out that they have been immoral women on the other side and came here for that purpose. There have been some deportations on that line. In fact, I remember one case before the board where a girl came with a man. They came as man and wife. The examination showed they were not man and wife, but had only been cohabiting. The couple were returned to Europe, and 2 months afterwards they came back in the cabin. They were found out by one of the agents of the immigration service when the house that the girl was in was raided. The girl was arrested and held as a witness against the man who had imported her. The court held the man under bail and he skipped his bail. What became of the girl I do not know. That is out of my line. We have a girl there now with her young man. They came over in the

cabin and were sent to the Barge Office because they did not have a cent of money. We found on the examination that she had been living with this man for a year and intends to do so in this country if landed. She had no thought of marriage at all until she found she was detained. She at present is quite willing to be married, but they are both excluded as likely to become public charges, as they have no friends and no money. She is one of the lower class of actresses, singing and playing on the violin in concert halls, and the man is a designer for millinery. His mother, he says, is the first lady in Worth's establishment in Paris, and sent him over to America to get rid of this girl. She gave him a little more money than he needed for his passage, and he quietly took the girl along. His mother does not know he brought the girl along. If they had had money they would have passed as cabin passengers and landed on the streets of New York, and the end of that girl would be the same as on the other side, and we would have one more unfortunate in this city.

Q. Does the board recognize the common-law marriage where it is claimed by the parties?—A. They have in one case, but in all the other cases they try to convince the parties that they ought to get married. They are held until the matron can have a talk with them and call in a missionary, perhaps, to help her out, and succeed finally in having them marry legally.

NEW YORK, N. Y., July 26, 1899.

TESTIMONY OF MR. ROMAN DOBLER,

Inspector, Immigration Bureau, Port of New York.

At a meeting of the subcommission on Manufactures and General Business, held in New York City, July 26, 1899, Chairman Smyth presiding, Mr. Roman Dobler appeared at 12 m., and being duly sworn, testified concerning immigration as follows:

Q. (By Mr. SMYTH.) What is your residence?—A. New York.

Q. What is your official position?—A. Immigrant inspector.

Q. How long have you held that position?—A. Six years. I was stationed for 3 years as border inspector at Cleveland, Ohio, and have been stationed at the Barge Office and Ellis Island for the last 3 years.

Q. The commission would be pleased to hear from you any suggestions you have to make with reference to the working of the law as it comes under your inspection.—A. I think for the information of the gentlemen I had better give a full detail of my duties and that probably will bring out such questions as you may desire to ask. I have charge of the boarding inspectors, who board the incoming passenger steamers. I have 3 contract-labor inspectors under my charge and 6 assistant inspectors. Our duties are to go on board of ships and get the manifest or passenger list from the pursers, and then go into the first and second cabins, and there make such an examination as will determine the eligibility of the passengers to land under the immigration laws. The authorities have seen fit to designate four classes in the cabin, American citizens, tourists, transient passengers, and alien immigrants, those who express a desire to come here and remain in the United States. We examine these passengers as to whether they are likely to become a public charge and whether they are physically disabled in any way, and whether they have any engagements to perform labor in the United States. There are a great many unprotected females coming in the cabin who are going to relatives, and when they land here they have no way of getting to their destination, and by direction of the immigration authorities we generally bring them to the Barge Office. There are a large number of that class traveling in the second cabin. There are a great number who, in my opinion, would likely become public charges, who belong to some of the clerical professions in Europe—clerks, book-keepers, and that class. They come here with very little money, \$30 or \$40, and my experience leads me to believe that they are among the first to become public charges after landing. After we have made an examination of the cabin passengers and passed them or held them, as the case may be, we bring the steerage passengers to the Barge Office for an examination there. On shipboard we act as registry clerks and inspectors and pass on the right of the passengers to land at the dock. That admits them into the United States. Of course, if we find any cases that might be coming under contract we bring them to the Barge Office for special examination, and make out an examination affidavit from their statements or any other

circumstances we may have cognizance of and present it to the board. If not on that duty, we do duty at the Barge Office the same as other inspectors. We often go on the line and pass on steerage passengers, or we write up affidavits for alleged violations of the alien contract-labor law or any other duties which may devolve on us. I have a list here of the different steamers of the different lines arriving within the last 30 days, showing the comparative number of cabin and steerage passengers coming here (reading):

Steamship line.	Steamship.	First cabin.	Second cabin.	Steerage.
Hamberg American Line.	Fürst Bismarck.....	172	192	270
	Palatia.....		117	300
Cunard.....	Lucania.....	263	182	447
American.....	Friesland.....	12	59	479
	St. Paul.....	305	129	300
North German Lloyd.....	Prinz Reg. Luisold.....	61	92	732
	Kaiser Wilhelm der Grosse.....	315	158	658
Anchor.....	Furnessia.....	34	104	112
French.....	La Bretagne.....	31	61	207
	La Gascogne.....	32	91	251
Holland.....	Statendam.....	71	65	487
White Star.....	Majestic.....	215	169	344
Danish.....	Thingvalla.....	3	14	82

I have here also a similar list of 6 of the Mediterranean ships that come here, belonging to the different lines, which bring the Italian immigrants:

Steamship company.	Steamship.	First cabin.	Second cabin.	Steerage.
North German Lloyd.....	Ems.....	20	22	933
Anchor.....	Bolivia.....			300
Prince.....	Tartar Prince.....	11		1,077
Italian Navigation Company.....	Sempione.....			087
Falbre.....	Chateau Yquem.....	3		226
Portuguese Navigation Company.....	Peninsular.....	21		190

Q. Compared with the other 12 months of the year, do you regard July as a rather slack month on immigration?—A. Yes, it is one of the lightest summer months we have.

Q. What is the capacity under law of the Fürst Bismarck in bringing steerage?—A. I have no figures to show that, but I presume they would have room for 1,200 or 1,500 steerage.

Q. Do you board at quarantine?—A. Yes.

Q. How thorough is your inspection from quarantine until these immigrants are turned over here to the commissioner of immigration?—A. I would state here that with the force we have we make as thorough inspection as we can, but in my opinion the inspection is not thorough enough. We have not sufficient force at the Barge Office. To give you an understanding of the force required for a thorough examination, I will say that the registry clerk is confronted by 30 immigrants; he has a group list of 30; they have a card giving their name and their number and letter on the manifest, which they present to the registry clerk, and that designates to him the exact location of the immigrant on the list. He then scans the list and sees what questions have been answered, and verifies that list from the statement of the immigrant. In the cabin we have generally 2 men, and in rare cases 3, because we can not spare more. We are confronted usually by 100 or 150 in the second cabin. There is no order or system, because they are not in line. They can not be grouped, and we have to take them as they come to us. We take the statements and hold or pass them, as the case may be. The inspection is not as thorough as it would be at the Barge Office, but it could be made so by sending a sufficient force.

Q. How many are with you on one steamer at the quarantine?—A. Usually 2; in rare cases, as when the *Kaiser Wilhelm der Grosse* comes in, we send 3.

Q. It depends on the number of steerage passengers as to the number of inspectors you send?—A. We do not examine the steerage passengers on the ship; simply see that they are all brought to the Barge Office.

Q. Is it possible for any of them to escape before coming to the Barge Office?—A. It is possible, but rarely happens. The steamship companies are very diligent and careful, because they are responsible for every immigrant on the manifest.

Q. It is not possible for half the immigrants to pass without examination—the

steerage or the second cabin?—A. The steerage passengers are all examined; they can not escape the examination.

Q. (By Mr. FARQUHAR.) How do you verify the count of the manifest?—A. We lay the manifest down before us and as the first passenger comes along and is examined, we check his name off. When we get through we compare our lists and we see whether we have checked off all the passengers on the list.

Q. Do you see or come in contact with each cabin passenger as the name is read?—A. We attempt to do that, but sometimes from the lack of forces we have no means of holding these passengers, especially the first-cabin passengers, and it is not the practice of the board to hamper or distress the passengers or detain them.

Q. You make no inspection, really, of the steerage passengers?—A. No.

Q. Your attention is called more especially to the first and second cabin?—A. We only have usually from an hour to an hour and a half, and sometimes we find when we get to the dock we have not had time to examine all the passengers, and in that case we usually issue an order to the captain and order them detained on shipboard until they are all examined, which detains them that long.

Q. Your inspection, then, covers the first and second cabin?—A. Yes.

Q. It is in connection with the cabins that you take the place of the various boards found at the Barge Office, and you have the same latitude with respect to contract labor, diseases, and everything of that kind?—A. Yes. A doctor of the Marine-Hospital Service goes on board and passes the cabin passengers medically.

Q. Your inspection takes in nearly all the phases of the inspection of the Barge Office proper, as far as the first and second cabin passengers are concerned?—A. Yes.

Q. Have you found contract-labor people in the first or second cabin?—A. In recent years a great many who desire to escape the rigid examination at the Barge Office that they would now have to undergo if they came in the steerage, pay the difference and come in cabin, expecting to escape that examination. In my opinion a great many contract laborers come through the cabin. Of course we find some, and some we do not find. We can only take their statements and have to land them, having no other evidence. A great many of the Mediterranean ships bring in cabin people who are practically destitute, but will spend the difference in the price between steerage and cabin to come that way, expecting to be landed. We bring them to the Barge Office and hold them up. We have brought a number that way and they have been sent back.

Q. When you board at quarantine are there any but the medical officers and yourselves?—A. The customs officers and the medical staff.

Q. Is it permissible for any officers of foreign countries to appear at quarantine and board the vessel and go to the dock—I mean anyone not the consul-general or the minister of foreign nations?—A. Yes; they get a permit.

Q. For what purpose?—A. I could not say for what purpose. A number of persons come on the revenue cutter and board the ships at quarantine by permission of the collector of customs. He issues a permit for that purpose. Sometimes members of the embassies at Washington have permits issued by the Secretary of the Treasury to board ships at quarantine.

Q. They have free access to all passengers on board the ship?—A. Yes; after they get on shipboard.

Q. What is the time between quarantine and dock?—A. Generally we calculate about an hour and a half from quarantine until the ship is docked. It depends on the speed of the vessel.

Q. Can any of these parties accompany the vessel to the Barge Office?—A. With the steerage passengers; no.

Q. They then leave with the first and second class?—A. They land with the cabin passengers. No one is allowed to mingle with the steerage passengers. Sometimes, as a matter of humanity, if a father or husband wants to see his child or wife, we accompany him to the person, but it is always in our presence.

Q. There is no possible tampering with the steerage passengers between quarantine and the Barge Office?—A. No; there are cases where railroad agents and others attempt to communicate with the steerage passengers, but it is always detected and prohibited. Another duty we have is to discharge the American citizens who may be coming in steerage. As soon as they present evidence that they are American citizens they are immediately discharged.

Q. But after they reach the Barge Office they are subject to the inspection and the care and surveillance of the barge officers proper?—A. Yes.

Q. Are there any societies or bureaus of the foreign governments that have privileges there at the Barge Office in respect to communicating with immigrants?—A. Yes; I understand the Italian society is located at the Barge Office, and I suppose they communicate more or less with the passengers, as they are

right there in the building. I myself, as an officer, do not approve of any communication whatever with the passenger until he has been examined and passed by the Government inspectors. I do not think they should be communicated with at all.

Q. In the case of detention, until your boards pass on the case of a passenger or immigrant, are outsiders allowed to communicate quite freely with them, in calling on and caring for them, and furnishing them with money, or anything of that kind?—A. I believe not. I suppose the steamship agent or a near relative, in the presence of the inspector, has a right to communicate with the passenger and give him means or whatever information is necessary, not detrimental to his examination.

Q. These communications between the immigrants and the outsider are always in the presence of an officer of the Barge Office?—A. Yes; so far as I know.

Q. They would not have the permission unless through the commissioner of immigration?—A. He gives them permission; or, if it is a contract-labor case, Mr. Quinlan gives the permission and sends an inspector with the person.

Q. (By Mr. CLARKE.) To what class of cases do you give the most attention on shipboard?—A. Well, we aim to examine the passengers in the first place as to their occupations, to ascertain whether they are coming here under contract. Then we examine them as to their intentions in coming here, their business and their means, and whether they have an address or any place to go to where they will be taken care of; and if we find a man has no trade or occupation, or is not a laborer, and has very little means, we bring him to the Barge Office and let the board of special inquiry pass on his case. If it is a case of an old person, a female going to her son or some relative, we try to verify their statements by communicating with the relatives. If it is a young girl traveling in cabin unprotected—frequently there are persons traveling in the cabin who make the acquaintance of female passengers—we consider it would not be safe to allow them to go through without examination and without anyone to take an interest in them, and the authorities at the Barge Office see them through to their destination.

Q. If, for instance, you have a reasonable suspicion that the immigrant comes in violation of the alien-contract-labor law, you send that immigrant to the Barge Office?—A. Yes. When I am examining the passengers, to facilitate the examination, I usually place him to one side and reexamine him when I get through with the passengers, and question him closely, and state to him that it is not necessary for him to have employment. I think a great many of the passengers are coached and instructed. They have been told to say certain things in order to be landed. I have had cases in which men state positively that they are going to some employment on an agreement made at a certain stated price, and afterwards they admitted they were told to say that in order to be landed. So I always caution them that it is not necessary to have employment in order to be landed, but if he insists on his statement being true, I bring him to the Barge Office and before the board.

Q. (By Mr. FARQUHAR.) Have you matrons as inspectors of women on shipboard?—A. No; at the Barge Office we have two.

NEW YORK, N. Y., July 26, 1899.

TESTIMONY OF MR. WILLIAM WEIHE,

Inspector, Immigration Bureau, port of New York.

At a meeting of the Subcommission on Manufactures and General Business, held in New York July 26, 1899, Chairman Smyth presiding, Mr. William Weihe appeared at 12.45 p. m., and, being duly sworn, testified on the subject of immigration as follows:

Q. (By Mr. SMYTH.) What is your name?—A. William Weihe.

Q. Is your residence here?—A. New York City.

Q. In what capacity are you connected with the Bureau of Immigration?—A. Immigrant inspector.

Q. How long have you held that position?—A. Over 3 years.

Q. Does that cover your full service?—A. Yes.

Q. Will you explain to the commission the working of the department with which you are connected?—A. I have been most of the time on the board of special inquiry, where the immigrants are examined after they leave the registering department, and where there is a doubt we get them there. Sometimes I suppose we get from 75 to 100 or 125 a day, according to the number of immigrants that arrive.

We get the card that is signed by the inspector on the line, and it states simply what the cause of the detention is, and on the line of that we examine the immigrant. If there are families we take the names of the father, mother, and children, ask them their destination, who pays their passage, and where they obtained their money. If they prove to have relatives here, or have means on which the board believes they are able to get along, they are admitted. If it is thought by the members of the board that they should be held until it is learned whether the parties to whom they are going are able to take care of them, they are so held. Cases come there in which we find out many things not discovered on the line when being registered, and in case we think they ought to be further investigated we hold them on what is called the deferred system. They have to produce evidence, or get their friends to write or come, in order to show that what they have previously stated is correct and that their friends are willing to take care of them. We examine them as to whether they have ever been guilty of crime, and also as to whether they are coming in under contract, notwithstanding that such has previously been gone into by the contract-labor bureau. Sometimes the immigrants deny it. Often it appears from their statements that there are conditions which constitute violations of the alien-contract-labor law. We have held cases for 2 or 3 days before they would develop, and finally they would give us the full information, where they were going and how they happen to be going there. If we can not make a case directly we refer it to the bureau of contract labor, or commissioner, to make a further investigation, after they have left for the place they intend to go to, and thus get direct information.

Q. (By Mr. FARQUHAR.) What is the longest period of detention that you know of?—A. Sometimes 3 weeks, sometimes 4 weeks. I know of a case where they were held for 4 weeks. Some 5 Italians came in last summer; the board had doubts, and all were held 4 weeks.

Q. (By Mr. CLARKE.) Under what circumstances?—A. Believing they had come under contract with some parties in Pennsylvania, but had not a good direction.

Q. (By Mr. FARQUHAR.) The address was not clear?—A. They would not give it as clear as we thought they should. We finally learned that they wanted to go to Wampum, Pa. Each claimed to have a cousin, but neither of the cousins knew they were coming. Their cousins only had been there some 6 months or a year, as they claimed.

Q. (By Mr. SMYTH.) They all told the same story?—A. Each had a separate cousin, but all told the same story. We finally found a letter for each of the immigrants written by one man. He had signed different names, but the handwriting was the same. After being held that long they received from friends, I think, in the neighborhood of \$50 or \$80, and of course we could not hold them any longer. We could not directly prove a contract and they were not a public charge. They had addresses to a certain destination—Newport. At first we thought it was Newport, Ky., but being from the western part of Pennsylvania, I found it was near Wampum, Pa., a little town opposite, where the Pennsylvania road makes connection with the Pittsburg and Erie.

Q. (By Mr. FARQUHAR.) Were they going to the coal mines?—A. They did not state, just going to these cousins. I went out there a month afterwards, and made some inquiries near there, and found they had gone to work in the limestone quarries.

Q. Do you not find a great deal of difficulty in preventing infractions of this alien-contract-labor law by these immigrants and the parties who were instrumental in bringing them in?—A. Oh, yes; it is very difficult to get direct information.

Q. Do you discover more of these infractions of law through the confessions of the immigrants under detention than in any other way?—A. That is the only means we have to get it.

Q. And in every case they acknowledge it, it is deportation?—A. Not always.

Q. Do you take an equity view of the thing?—A. Yes. Supposing a man comes and claims he has work; he is held. We generally take his affidavit, and then the immigrant or the steamship agent writes to the contractor that such and such an immigrant is held for certain purposes, and then they come or send an affidavit. In most cases they deny it. We have had parties come and acknowledge that they had made arrangements—had spoken to a boss and secured work; but that is not often the case. Very often we believe that they avoid the questions, even though they have made the arrangement; that they have secured work for the immigrant, but make an affidavit that they invited them to come and sent passage money merely as friends. The board generally considers that for what it may be worth.

Q. Has the execution of the contract-labor law on the part of the Government

broken up this gang system, importing laborers in groups of 5, 10, 15, 50, or 100?—A. They come in that way yet in a number of cases.

Q. From what countries?—A. Generally from Italy, Austria-Hungary, Poland, and Russia. I will cite a few late cases. There are 15 now at the Barge Office that came through here on the 17th of June, 1899; they are Dalmatians or Croatians. They arrived here and passed through. There were 19 or 20. They could not give directly any information as to where they were going to work, but were going to Rathbun, Iowa. We let them go and notified the Department at Washington, which instructed the inspector at Chicago, who traced them as far as Rathbun, Iowa. He went there and found they were working in the coal mines of the Star Coal Company at that place.

Q. Do you know who are the owners of the mine?—A. No. This inspector reported to the authorities at Washington, and on the strength of that the Secretary of the Treasury issued a warrant for the arrest of these 19 men. The inspectors went there from New York and Baltimore and found them at the mines working, arrested them, and brought them here to New York.

Q. Was there any appeal taken to the Secretary of the Treasury?—A. There was a stay taken after they got here; I could not say through whom. They are still here. They got back a week ago.

Q. Who pays the maintenance of these 19 Croatians at the present time?—A. I think the steamship company. That is the way the warrant reads; they were to be deported at the expense of the vessel on which they arrived.

Q. And the judgment of your board was that it was contract labor?—A. They did not appear before the board; they would not say they had a contract. I was there at Rathbun myself as one of the inspectors. We were informed that the next day after they arrived at Rathbun they were given caps and lamps and put to work with other miners in the mines. I understood that some of their relatives or friends there had secured this work for them, and on the strength of that they had come here and started to work, but they all claimed they had no work when they arrived at the Barge Office.

Q. Your board did not pass on the case?—A. No; it was done by the Commissioner-General. After they landed the Secretary of the Treasury issued the warrant, and on the strength of that they were arrested and will be deported.

Q. That was done through the action of the Commissioner-General in Washington?—A. Yes.

Q. Do you know of any of that contract labor going into Pennsylvania, in the coke or mining regions?—A. Yes. I think the Polacks, Slovaks, Hungarians, and Russian Poles—over 50 per cent of that labor goes into Pennsylvania; not only in the coal mines, but in other industrial lines, such as iron and steel mills and blast furnaces.

Q. Have you a knowledge of many cases where you discovered contract labor going into the mining regions there last year?—A. While we have not discovered it, we have every reason to believe that it is done. It is very hard to prove it. I take it that they are coached on the other side, and on the way over, to avoid the law. Very often they arrived one day and started to work the next. I could cite another instance which happened over a year ago, where a half dozen or more arrived and were going to Steelton, Pa. One party who came with them had been in this country before, and it was supposed he had brought them over. An investigation was made and that man was found at work, but we could not prove a contract. The manager or some one in authority employs one of their countrymen as foreman of the gang, and in that way they are put to work. They understand the language and are apt to work at jobs around the plant. In the last 10 or 15 years machinery has done away with a great deal of skilled labor, and I have heard of cases where skilled labor was willing to work, but foreigners had the preference because the work was not as skillful.

Q. Can you give the names of the firms?—A. I do not want to be personal.

Q. You know that of your own knowledge?—A. Yes.

Q. I do not think it would do any harm to mention any of these cases.—A. The reason I say that is because of my former connection with the organizations and the manufacturers. I will state one particular case; the La Lanc Gros Jean Company at Harrisburg, through its manager, wrote on for a roll turner and an annealer, promising the roll turner \$30 per week and the annealer \$25. We had the letters written by the manager on the letterhead of the company. The whole thing was investigated. These men came here and worked. We could not prove directly that the president of the company had authorized the manager to hire these people, and, it being under the criminal law, we were told we could not prosecute the company on account of the acts of the manager, who was a hired man; and we had to let the case drop. Everything was proven—that the money

was sent, and even that the passage money was retained out of their salaries; but we could not prove that the president of the company authorized it. This happened, I think, in 1897.

Q. Were they Welsh immigrants?—A. Yes, these two came from Wales.

Q. They are now in this country, so far as you know?—A. No, these two men left again. The organization held them here for a while, but it took too long to let the case before the courts, and they went back. They were willing to go on the stand, but under the present law the district attorney said they could not be prosecuted for some time, and the case had to go by default, as it were.

Q. (By Mr. CLARKE.) Were you formerly president of the Amalgamated Association of Iron and Steel Workers?—A. Yes.

Q. Is your time as inspector and member of the board of special inquiry principally devoted to these contract-labor cases?—A. No, it is general. As a member of the board of inquiry, we take up all cases.

Q. But you are all the while on the watch for such cases as that?—A. I more particularly interest myself in that part.

Q. Can you think how the law can be made more effectual in preventing the importation of such people?—A. By placing more restrictions on the steamship company, I think, and having an inspection on the other side the same as in this country.

Q. You would have the United States employ agents on the other side?—A. I would make that general. I am speaking generally, not alone on the contract-labor part. For instance, a man is coming with his family, he may have 3, 4, or 5 children. He arrives here with little money; his whole aim has been throughout his life to bring his children to this country; he has practically nothing to start out with. It is very hard to decide to send a family of that kind back after spending all their money on the voyage. I think if a case of that kind was investigated on the other side, and it was shown they did not have means, they would be held back.

Q. You do not think the steamship companies could be depended on to exclude that kind of people?—A. I think if they can only get the passage money they will take them.

Q. Take the case of these men retained here, the Rathbun people; on what evidence are these men detained for deportation?—A. On the examination of the inspector at Chicago, made at Rathbun through parties who informed him when they had arrived there, and were immediately put to work.

Q. He has given that evidence under oath?—A. He has at Washington, I suppose.

Q. So far as you know that is the only evidence against these men?—A. Yes.

Q. They are under accusation of violating a penal statute, I suppose?—A. Yes.

Q. And are held here without opportunity for defense on the affidavit of one man: is that the situation?—A. I can not say whether on the affidavit of one man or not. All I know is the warrant was issued to arrest them.

Q. Do you know whether they displaced American labor there or whether the works were so full that the employers found room for them in addition to all the labor they employed before?—A. I could not say they displaced American labor; but I was informed that other mines in that locality were only working half time, and this one was working steady.

Q. Do you know the reason of that?—A. No. I will say this: The majority of the men employed in that mine were Croats.

Q. If there is an abundance of work in this country for all the people now here who desire work, and the development of industries requires labor, you have no objection to that labor coming, if it comes without previous contract?—A. If they come voluntarily, and take their chances the same as any other person who arrives here, like they did formerly.

Q. You understand that to be the attitude of labor organizations generally toward immigration.—A. If they come in the proper way they have no objections.

Q. (By Mr. FARQUHAR.) You have foreign societies and bureaus here that somewhat come in contact with the Barge Office and its administration. Do you think that it is good judgment to allow any societies to have direct communication with immigrants until they are landed legally?—A. No, I do not think it is proper for any foreign Government to have an office there, or at any landing port, to look after immigrants.

Q. You think that if they desire to take care of them, or direct them to their destination, or give any help through local societies, it would be proper after the United States had passed on the immigrant, rather than having, in any way, contact with these immigrants while in the hands of the United States?—A. If a man with a family arrives, or a man and wife only, and they are healthy and can land,

I would not object to the society taking charge of them and putting them in the industrial centers or agricultural sections.

Q. That it should not be a matter of foreign interference; that is what I mean.—
A. I would be opposed to having societies of that kind.

Q. Do you know whether there is anything of that sort here at Ellis Island or the Barge Office?—A. There are a number of such societies that make inquiries.

Q. Has any society any special privilege?—A. The Italian Government has.

Q. Do you know who is at the head of it?—A. Dr. Rossi.

Q. (By Mr. SMYTH.) You think if the law were amended so that the contractor in this country should pay a fine instead of the immigrant himself, it would be better?—A. I understand the intent of the law was to prosecute the contractor who brought them. It was not understood at the time that the immigrant should be deported in the way they are doing it. The organization with which I was connected helped to draw up that law. That was the intention at the time, but such has not been done. It is impossible to convict such people. There are ways to avoid the law. There are always one or more foreigners in a community somewhat more intelligent than their native countrymen, and through them the immigrants are induced to come, at the suggestion of others, and thereby the parties that ought to be punished escape; and yet the immigrants come here and take the places of our workmen in the face of the present law, under which it takes so long to reach the courts for trial, even when a contract is made.

NEW YORK, N. Y., July 26, 1899.

TESTIMONY OF DR. EGISTO ROSSI,

Chief of Italian Bureau, Port of New York.

At a meeting of the Subcommittee on Manufactures and General Business, held in New York City July 26, 1899, Chairman Smyth presiding, Dr. Egisto Rossi appeared at 1.30 p. m., and, being first duly sworn, testified concerning immigration as follows:

Q. (By Mr. SMYTH.) What is your name?—A. Egisto Rossi.

Q. Your residence?—A. Mount Vernon; 159 North Fulton avenue; near New York.

Q. What is your business?—A. Chief of Italian bureau.

Q. You hold an official position in that bureau?—A. Yes.

Q. By whose appointment?—A. By the Italian Government.

Q. An official bureau established here by the Government of which you are a representative?—A. Yes.

Q. How long?—A. Since September, 1895.

Q. Was the bureau in existence prior to 1895?—A. It had been in existence only one year.

Q. Does your Government encourage emigration to this country?—A. Not at all.

Q. What was the object of your Government in establishing the bureau?—A. The principal object was to keep the people well informed of the existence of the padrone system and its evils, and to warn them against the same.

Q. To keep your people in Italy informed?—A. Yes. And on their arrival here to have a bureau so well posted as to be able to give them all necessary information; so one of our first duties is, as soon as they are discharged and come into the bureau, to ask where they come from, where they are going to, if they have a relative or friend to care for them, what they intend to do in this country, and to try and help them as far as we can.

Q. What special privileges does your bureau enjoy at the Barge Office?—A. No privilege at all. We have only the right to mingle with the immigrants as soon as they are discharged from the board of special inquiry or from the examination of the registry clerks. As soon as the people are discharged, they come into my bureau, and they are questioned, as already stated, and put on their guard about the dangers to which they are exposed by going to live in New York.

Q. Only Italian immigrants come to your bureau?—A. Only Italians.

Q. You have no access to these immigrants before they pass the special inquiry?—A. No access whatever; and I must also call your attention to this point especially. It would not be easy for the men of the Italian bureau to have access to the Italian immigrants when they are under the control of the Federal authori-

ties. Probably you know that from the moment the immigrants arrive on the steamer and leave the steamer and go on the barge which has been sent by the Federal Government to take them to the Barge Office for proper examination there is such a close watch by the Federal employees that I think I could assure you that it is absolutely impossible that anybody could come in contact with the immigrants, not only a clerk of the Italian bureau, but anybody else. They are closely watched from the moment they arrive at the dock to the landing point. They pass also through a kind of escort of Federal employees, who watch every movement of the immigrants. If, by chance, somebody should try to approach the immigrant it would be immediately detected and he would be invited to appear before the commissioner. Then I do not know how anyone may say that the Italian bureau tried to interfere with the Italian immigrants, or to instruct them before they come into contact with the proper authorities. I should like to have these charges substantiated by proofs, facts, data, names of the immigrants, and also of the clerks who had approached these people.

Q. (By Mr. FARQUHAR.) Have you at any time since the foundation of your bureau, before the immigrant was officially and legally landed in this country, while in and under the jurisdiction of the Barge Office here—have you or any of your agents employed, in any way, prohibited means to reach any immigrants from Italy?—A. None.

Q. You positively swear you never did?—A. Positively. There is, as you know, a detention pen where immigrants are temporarily detained. The reasons are very simple—because they have stated they are going to their relatives, as for instance a wife is going to join her husband, or a son a father, or vice versa. They are not liable to be under the jurisdiction of the board of special inquiry. They are detained simply because the relative to whom they are directed has not come. My clerks have sometimes approached them in order to ask the address of their relatives, as is constantly done also by the representatives of all steamship companies, benevolent societies, missionary ladies, etc. And when the relatives are found out we telegraph them to come down, or the son or husband is sent for if in the city. Often times I have allowed myself to do this kind of work, which has not been in violation of the law, or considered bad practice, since my attention has never been called to it by the commissioner, otherwise I would have discontinued it at once. But I have never allowed myself or my clerk to approach any immigrant who has not been regularly examined, never.

Q. Can you tell us something about the condition of the padrone system when your bureau was first established?—A. When the bureau was first established the conditions of the padrone were very bad, and especially to the department of our immigration. The padrone system has two parties, one here, the other in our country; the padrone here is in correspondence with the agent of the immigration on the other side of the ocean. So one of the practices used by this padrone was to write to the agents in Italy that every immigrant coming to this country should arrive with a letter of introduction to some banker or some boss or contractor. So a great many of these immigrants on arriving had some letter of introduction of this kind. Now, I think it is a fact that this was a great deal of trouble and constituted one of the greatest inconveniences for our immigrants. Now much of that has been stopped through the assistance of the Italian bureau. You must know that every immigrant coming to my bureau, who is directed to some hotel keeper or contractor or banker, has to say to the bureau what reason he has for going there, especially when he is destined to points distant from New York. One of the special duties of the bureau is to inquire, "Where are you going?" "I am going to Pittsburg, but I have to go first to New York." "What business have you to go to New York?" "I have a letter and I have to go to a banker to get it cashed." "You have no need to go; your banker has to come here." And so, in many of the cases, the Italians directed to distant points from New York are prevented from coming into the hands of the middleman and speculator, and we aid them to start at once for their destinations; and so, in many cases, we advise the family, the uncle, or the father or the son, to meet such and such a train: "Your relative will arrive on such a train, so please take proper care of him." In this way, I think, we have done much to reduce the evils of the padrone system. It is too great a problem to be solved entirely by a bureau like ours, of a little force; but certainly we have done a great deal toward preventing our immigrants from coming into contact with the padrone.

Q. They were sending to Italy for immigrants to come to this country so that they might control their labor?—A. Yes. But now every Italian who has come here in violation of any law, and is deported by order of the Federal authorities, has to receive from the Italian bureau a printed card, in which is clearly stated the reason why he is deported. Now, you must know there is an article in our emigration

law which says every man who has been deported from the United States by order of Federal authority, on receiving the card of the Italian bureau, is entitled to prosecute the agent who has sold him his ticket. This thing, which seems very small, has done a great deal to remove the abuses of the padrone system in Italy, because now the agents of emigration, before listing an emigrant, knowing that the emigrant, if he is sent back, has a right to prosecute them, are very careful. They are also very careful since the Government, on our complaint, has condemned or imprisoned some of these agents.

Q. What is the condition of the padrone now here in New York?—A. As I have already implied, the system is much weakened for the reasons just given, also the recent failures of some of the smaller Italian banks, which were great gainers under the boss system, would be an additional proof of what I have said. The problem is still too huge a one to solve in so short a time, since the existence of the bureau, but it has been modified a good deal.

Q. Is the Italian labor in this country now controlled by padrones?—A. To some extent.

Q. Directly or indirectly?—A. Both directly and indirectly. Now, however, every case of padrone abuse which is brought to the attention of the Italian bureau is put under the attention of our Italian consul.

Q. The immigrant in this country, if still the slave of the padrone, has some claim on your bureau?—A. Certainly. I can always send a complaint, no matter how long he has been here.

Q. He can look to you for help?—A. Yes, and in many cases we have succeeded in having the wrong redressed.

Q. How many cases have you had in the past year?—A. Twenty-five or thirty; maybe more.

Q. Do they still send to Italy for immigrants?—A. They still do, but in smaller proportion.

Q. Is it not a fact that the labor of these newly arrived Italian immigrants is still controlled by padrones?—A. To some extent.

Q. Does the average Italian immigrant, coming to this country, have anything to do with securing his own employment? Does he not have to go to the padrone?—A. Some come with this idea, certainly, of needing the help of the padrone to find work.

Q. After a man goes to the padrone and gets work, does not this padrone still control his wages?—A. Yes, somewhat; but if he has come in contact with our bureau it will give him such information as to prevent many going to the padrone.

Q. Where does the average Italian immigrant deposit his money?—A. Formerly he used to deposit it with Italian bankers, but now, on account of many failures, there has been so much discredit cast upon the Italian bankers that many of our immigrants prefer to keep their savings in their houses and in their pockets. Still we have among our bankers some who are very honest and straightforward, who do their business with the same honesty and punctuality as the American banker of the first class, and these are well known also to the commissioner. We have some above reproach.

Q. How much money do you suppose is sent back to Italy by Italian immigrants?—A. I do not think we could give the data, because the money is sent sometimes through the post-office, sometimes through the bankers by draft, sometimes it is sent in a registered letter, the cash itself; so I can not dare to give any amount.

Q. It amounts to millions, does it not?—A. I could not say.

Q. Do you regard all Italian immigrants in the United States as colonists of Italy, as still being under the protection of the Italian Government?—A. If they have naturalization papers I do not consider them as subjects of the Italian Kingdom.

Q. But the general run of the Italian immigrants you consider as colonists?—A. We consider them as colonists unless they have taken naturalization papers and, if subject to military service, have written to the foreign department in Italy informing the Government that they have taken naturalization papers, and, therefore, are willing to renounce their allegiance to King Humbert; then, in that case, he is not considered a colonist.

Q. Unless the immigrant does so write to your Government, the Italian Government does still consider him as a colonist?—A. Yes, if subject to military service.

Q. How many reports has your bureau made to the Bureau of Immigration in this country as to the padrone system in this country?—A. Of the cases that come under our knowledge we have taken notes in our books, and call it to the attention of the Italian consul, being cases which were outside of the jurisdiction of

the commissioner. However, I have called to the attention of the commissioner many cases of Italian hotel keepers who have tried to get hold of the Italian immigrants in order to speculate upon them; because, you see, many keepers of our lodging houses here are a set of speculators on our own people by engaging them for some kind of work in which the padrone system is exercised.

Q. Why does not the Italian Government itself, by its authority over these immigrants, place them in the hands of their consular agent here? Can you explain that?—A. And the bureau do the work outside of the Barge Office?

Q. We do not see why you have any right to do any business in the Barge Office.—A. I have considered the matter myself and I would be very glad in some way to be outside, but how can you give me the means of approaching these people before they come in contact with the great many people waiting for them outside the Barge Office?

Q. Simply as I have proposed to you, that your Government, which seeks so much the welfare of the Italian immigrant, should make arrangements at home that the Italian immigrant would know where to go and would escape these agencies. It is apparently the fault of the Government at home, is it not?—A. I do not think so; I want to call your attention to one fact. Whenever an Italian steamer arrives there are hundreds of people outside of the Barge Office waiting for them. When the immigrants are discharged from the registry clerk or the board of special inquiry, and when they have left the Barge Office, these people waiting for them are anxious to get possession of them. I could not get hold of the immigrant at all. I have thought a great deal of this. We have no desire to be in the Barge Office, no other purpose except to protect the immigrants in the way I have told you. It is immaterial to me whether I am inside or outside. Our work could be done by the consul, but how could the consul get hold of our people after they are carried off by their friends and relatives? How could the consul prevent their falling a prey to the padrone? You say provided I can do the same work; but this does not seem to me possible outside of the Barge Office.

Q. If the Italian consul and his officers could not do that, how can you with one or two clerks do it?—A. I can—

Q. (Interrupting.) The futility of your bureau then is manifest by your testimony, is it not?—A. No, I say I can do that because the emigrants are obliged to come in my bureau directly; there is no egress between the immigrant and the railway. The immigrant, as soon as he is discharged, is sent through my bureau. There is no need of force, because he has not left the Barge Office.

Q. (By Mr. SMYTH.) Is it not true that your one official will pass through the same number that it has taken perhaps a half dozen men in the immigration bureau to attend to?—A. Yes, but the questions are not so many as in the first examination; after giving the usual information, if there are not suspicious cases, we allow them to go; if they come to friends or relatives, we call the friend or relative inside to get the immigrant into their hands and say, "This immigrant is intrusted to you and you will have to take care of him." In case this man should complain, he will call it again to the attention of the bureau.

Q. How can your one man attend to this work that it takes a half dozen men to attend to in the other room?—A. I am not alone. I have three clerks, who have their special business, and as soon as the people enter my bureau we take their names, ask where they are going to, and what kind of relatives they have.

Q. Do you think it possible for your small force to attend to that work?—A. Yes. Most of the cases are so simple that they do not require much further examination, but there are some who look suspicious; so we hold them for more extended investigation.

Q. Do you think the work is done very thoroughly by your bureau?—A. As much as we can. If we could have more help the work would be more successful.

Q. What caused the establishment of this Italian bureau in New York?—A. I have already said it was organized especially in order to break up the padrone system.

Q. What privileges do you have from the United States Government?—A. None except to occupy a room in the Barge Office to receive the immigrants as soon as they are discharged.

Q. Your immigrants are sent to you instead of being sent outside?—A. Yes.

Q. No other nation has it?—A. No other nation has it, but no other nation has an immigration of our kind. I mean, for instance, the German and Irish, who, when they arrive here, are at home. The English and the Irish speak English. On the contrary, our immigrants arrive here devoid of even elementary knowledge of the customs and language.

Q. Is there not another reason—that you have the padrone system—that does not exist as to other nations? Is that one reason?—A. The padrone system has its

principal origin here. Our immigrants, being strange to the language of the country, ignorant of the conditions of this country, are in some way naturally attracted by those who have some experience, and these offer themselves to help them. The padrone system has originated in this way. It is the capturing of the ignorant by those who have been here some years, who know the language and know the customs of these people who have just arrived and do not know anything. So by keeping them informed we prevent somewhat the contact of those newly arrived with the old residents.

Q. Did your Government agree to give penal certificates to all emigrants going to the United States?—A. That was agreed to.

Q. Why have not they done so?—A. In cases where the emigrant has never had to do with the police they do not give any certificate.

Q. Is it not true that less than 10 per cent come in with these certificates?—A. That may be explained by the fact already stated, viz: that having looked over the books of the police and finding that this man never has been convicted of crime, no certificate is given; but in any case where the immigrant has been imprisoned they give a penal certificate in which is given the reason and how long he has been imprisoned.

Q. Do you know of any criminals bearing passports, but no certificates, that have come to this country?—A. There was a case.

Q. Has not there been more than one?—A. To my knowledge only one. That was the case of a man who was convicted in Genoa, and he was condemned to twenty years of imprisonment; but this man received his passport by mistake. He was ticketed by the official in Genoa. It was brought to my attention, and as soon as I knew it I wrote to Italy asking why this convict was given a passport to this country. This man had a wife and children in the United States who were American citizens, and the officer thought that in spite of his having been a convict the American law could not bar him from his family, so he would have to be admitted anyhow, and in his ignorance he gave him a passport. I know of many other criminals who have come to this country, but from other foreign ports—Antwerp, Hamburg, Marseilles, Havre—and, as you know, the Italian Government can have no control of that.

Q. Your system of registration is considered very perfect?—A. Yes; the same as in France.

Q. Is it true, as stated in the New York papers, that your Government will not seek to extradite criminals after they have secured entrance into the United States?—A. I know nothing about it.

Q. Is it true that you issued a circular letter last spring advising your Government that owing to the war with Spain labor and industry had ceased in this country, and directed the cessation of Italian immigration?—A. I am certain that the person who gave you this information did not understand my Italian circular, because my circular was general and occasioned by these facts; it was about a year ago in April—

Q. Was it the 21st of April?—A. I do not remember exactly. It was during the Spring of last year when we had had many Italian immigrants who arrived here without proper address of relatives and without sufficient money to be landed as the American law requires; so I invited the Government to urge that the mayors and prefects should pay attention to this fact; that unless the emigrant had the conditions required to be admitted to this country, not to give any passport, and extend his instructions to the agent of emigration; and I added, so much more is it to be recommended to the prefects not to send to this country people in no condition to land, since the country is engaged in the war with Spain, and of course, as a natural result of the war, many enterprises will be reducing their work and will have less demand for labor.

Q. Did not your letter rather anticipate the war? Was not that in April, before war was declared?—A. I can not remember exactly.

Q. When the war was over did Italy again seek to increase emigration to this country?—A. Emigration to this country naturally increased afterwards.

Q. Is an effort being made on the part of your Government to induce emigration?—A. No, as I have already stated.

Q. (By Mr. FARQUHAR.) Have you a copy of that circular?—A. I think I have.

Q. Would you present it to this commission?—A. Certainly.

Q. How long have you lived in the United States?—A. Consecutively, I might say four years.

Q. How long have you been in this country?—A. In 1882, 1883, 1886, and from 1895 to 1899.

Q. Have you any knowledge practically of the New York padrone system and the so-called Italian banking system here? Have you ever been engaged in it?

Have you had friends in it? Have you examined as to its workings?—A. No, I have been engaged in no business whatever except this of the bureau.

Q. Are we to understand you take common report very much for the matters you have given here in evidence; that you have not come practically in contact with them yourself?—A. Only, as I say, in redressing a wrong.

Q. Have you had any dealings with these Italian banks?—A. Except to make them bring money to the immigrants when I have drafts to cash in a padrone bank.

Q. Do you know that the Italian labor in Greater New York is entirely controlled by the padrones?—A. There are still some contractors who try to get hold of the immigrants as soon as they arrive, but the proportion is a good deal less than it was before. I could not state exactly how many are still victimized by the padrone system.

Q. Because there is not so much demand for them; not so much necessity for the padrones or banks?—A. And above all because they are frightened at the idea of our bureau punishing the agents who in any way try to abuse the immigrants; giving the immigrants to the padrone. We are also in communication with the agents in Italy. When we know that one has been abused by a padrone, we make inquiries, and if it is a padrone in connection with the agent in Italy, then if the agent is found to be in communication with the padrone his license is withdrawn.

Q. In constructing our sewers here, in making our roadways, in private and municipal improvements that are going on, do you or not know that the Italian help on these works is practically padrone—controlled labor? This, practically, not theoretically, of your own knowledge, and with all the experience you have had in this bureau; do you know that practically nearly all your Italian labor is in slavery?—A. It is in slavery to a certain extent, but it is not as it was before.

Q. Because there is not so much employment for it; is that one reason?—A. You must allow me to believe also it is due to the amount of information they receive as they come through my bureau, and the penalty inflicted upon the agents in Italy who have had to do with the padrone in the United States.

Q. It was officially stated that in the late enlargement of the Erie Canal there were employed 10,500 Italians, and a little over 2,000 Americans and people of all other nations. These Italians worked for less than the American wage; they were operated in shifts, provided for by padrones, boarded in shanties, controlled by their bosses, and their whole money and financial matters conducted by these bosses.—A. That may be.

Q. When you take such an American improvement as that, where \$9,000,000 of the money of the State of New York was expended, unless there is a perfect system of padronism how is it possible that these contractors could be furnished with 10,500 of these people for over two years in doing that work?—A. I wish, before giving my answer, I could know the details of those facts. I do not deny the possibility that there may be in the United States still, as I told you, many cases of the padrone system existing, but while you give Italian examples I could give many examples of American contractors who, in despair of finding Italian padrones, because, as I say, they are frightened by the presence of this bureau, have employed for the same purpose American foremen exercising the same prerogatives as Italian padrones. As I told you, the padrone system is not possible to destroy with the means the bureau has at its disposal now, but you must not forget that in founding this bureau the Italian and American Governments had two objects in view; first, to try to remove the contact of the Italian immigrant with the padrone through the information given him by the bureau, and the second object was to find employment directly for our people and to scatter them through the States, especially in the agricultural districts. That part of the programme has not yet been carried out, for the reason that when the bureau was started circulars were sent to all the agricultural State boards asking them to give information as to the lands to be colonized and as to the conditions they were ready to make with the Italians, and so on. When we received good offers asking us to send there 200 or 300 people, I thought it was necessary to send a man on the spot to examine the conditions. After consulting with my Government I replied and said: "With the means at my disposition I can not do the task; there is too much responsibility. On the simple information you have given me I can not send people to you unless I know what conditions you make." Therefore, the Government recognized the necessity of establishing an Italian labor bureau, in order that the Italian immigration could find employment in agricultural districts, because most of our immigrants come from rural districts and their only natural occupation would be in the Western States, and the Government has acknowledged that in order to carry out the second part of our programme it would have to organize an Italian labor bureau; and as this would require a good deal of expenditure there are in view measures to modify the present law of immigration. After many complaints

made by our bureau in Italy, we have been able to show to the Government that there are many deficiencies in the present law, so the Government has just now presented to Parliament a bill, which I hope will be approved, and which has some new provisions which will be of greater benefit to our immigration in breaking up the padrone system.

Q. (By Mr. CLARKE.) I would like to ask if your Government receives any benefit from these immigrants in any way?—A. No, at least no direct benefit.

Q. Do they send home large sums of money to their friends, which is used for the purchase and improvement of real estate?—A. Yes, it may be.

Q. And the payment of taxes?—A. It may be—taxes on their houses.

Q. You think that probable?—A. I am certain of that.

Q. For that reason the Government indirectly receives a great benefit from the emigration of these people and their profitable employment here?—A. No profit besides the payment of the regular tax in Italy. Everybody who is the owner of a house has to pay taxes, whether in Italy or abroad.

Q. The Government is in that way indirectly benefited by the presence of these people here more than it would be by their presence at home?—A. I do not see any special benefit from that any more than in any other nation.

Q. In spite of the safeguards that you speak of, and your preparation to send your men who are said to be farmers, and never were farmers, to the far West, is it not a fact that your people have congested in the large cities here and are subject to the padrone system or employed in gangs?—A. Although the congestion of Italians here is still existent, that is due also to the fact that immigration has substantially increased in the last three years. It is not due to the mere fact that they want to stay in New York, but there is a great increase over previous years. This year we will have about 78,000, against 59,000 last year, and when the bureau was founded we had only 30,000.

Q. Could you tell us what good your bureau has accomplished?—A. As I have already said, we do a great deal of good to the immigrants as soon as they are discharged, in the way of informing them, and asking them for information as to where they are going, and taking the addresses of relatives and friends, and, if possible, correspond with the relatives, and if the relatives are in New York we send for them and try to give the immigrant into their hands. Or, for instance, if the immigrant has no ticket to go to his destination we telegraph to relatives to send money for the journey, so the immigrant is sent direct. If there are women or children along, we take special care of them. If children go to points near to New York, we try to accompany them by a clerk of the bureau. If they are going to New York and have no friends there, we advise them to go to proper places where they can not be robbed. If they have relatives there we call them and talk with them, and give them special directions where to go in order to escape the speculation of the owners of the lodging houses and other speculators. Where, for instance, an immigrant complains of having been robbed, we make special inquiry. If they have lost baggage or if the baggage has gone astray we make a special effort to find it. Many of these immigrants do not know anything about salaries, what is paid, and we give all kinds of information, and advise them not to receive less than a certain salary, because it is the common salary that is paid.

I must call your attention also to the so-called "birds of passage." You seem to reproach the Italians who come here in the spring and go back in the winter. Now, you must consider that most of these men who come here in the spring and go back in the winter or fall are glad to be here while they find work to do, but as soon as winter comes many of these constructions are suspended, and, therefore, they have to return to Italy. You consider these "birds of passage" as being to blame, and they are held by the board of special inquiry, because they have simply stated before the registry clerk that they have been here two or three times. I do not find anything to blame them with, because if they could find work during the whole year they would be glad to remain. I could give you statistics of men who come back here in the spring and bring their families, showing that our immigration is becoming more and more permanent and losing the character of "birds of passage."

I have just received the following communication from an American gentleman here present, which says: "Tell them that many Americans, including John Jacob Astor, take annually to Europe and spend millions of dollars which they have taken from American people in rents, so why object to a few poor Italians taking back a few hard-earned dollars to Italy?" I submit the same to your consideration.

STATEMENT OF MR. W. H. ALLEN,*On Restriction of Immigration.*348 REID AVENUE, BROOKLYN, N. Y., *October 20, 1899.***WILLIAM E. SACKETT,***Secretary Industrial Commission, Washington, D. C.*

DEAR SIR: I subjoin a brief statement of the argument I made before the commission in favor of immigration restriction, together with authorities for every statement made.

The main points I advance in support of this policy are:

First. That a large proportion of the immigrants of later years only come here to hoard up money.

Second. There are nearly 500,000 of this class of aliens in the country (including Asiatics), and the amount of their hoardings reaches the enormous sum of \$118,000,000 yearly.

Third. This steady absorption of gold is a serious menace to our financial stability.

I represent the Advance Labor Club of Brooklyn, N. Y., an organization that has always taken an active interest in the subject of immigration. About 10 years ago we adopted resolutions in favor of immigration restriction, and a committee, consisting of James McKay, T. J. Meany, and myself, were appointed to agitate the question in other labor bodies. This committee visited about 150 labor unions, of which number all but 5 or 6 approved of our resolutions. In 1896 we had resolutions in favor of the Lodge Corliss bill indorsed by the 2 Central Labor unions and the 5 district assemblies of the Knights of Labor of New York and vicinity. We also had them approved by the United Brotherhood of Carpenters at their national convention, and the General Assembly of the Knights of Labor in the fall of 1896.

In view of the efforts that have been made to prove that this agitation is a nativist movement I desire to say that such is not fact. It is an economic, not a Know-Nothing movement.

We advocate restriction because a large portion of the immigrants of later years do not intend to become citizens. They are only here to hoard a small fortune, and as soon as that object is effected they return home.

The last Congress saw fit to reject the Corliss amendment, which provided for the exclusion of these migratory immigrants, and in so doing I think it acted unwisely, for while my organization heartily supported the Lodge bill, we yet believe that the immigrant who does not intend to stay here is worse than the uneducated immigrant. He is worse because the loss of the money he absorbs is a serious menace to our financial stability. This is a phase of the immigration question that has been entirely overlooked; but when the American people properly understand it, when they realize how much these aliens absorb, and the financial and economic effect of such absorptions, they will demand the enactment of more drastic legislation than any that has yet been proposed.

At one time it was supposed the Chinese were the only class of aliens who came here just to hoard up money; but about 1863 it transpired that the Canadians were nearly as bad; and still later, owing to reduced passage rates, it was seen that large numbers of the same class were coming from Europe. In the last 12 or 15 years the proportion of migratory immigrants has been steadily increasing, so that at the present time there is good reason to believe they constitute three-fourths of the whole number.

According to the reports of our Immigration Bureau the number of aliens landing here during the decade ending June 30, 1891, was 5,246,613; but these reports are incomplete, as they do not include the immigrants arriving here from Canada and Mexico since 1885. In his report for 1893 our Chief of the Bureau of Statistics cites Canadian official reports to show that 418,000 immigrants arrived at Canadian ports from European countries en route for the United States, between the years 1885 and 1890. In addition to these, there are the native Canadians who come and go every year. In 1891 Congressman Chipman, of Michigan, put their number at 250,000, while the Immigration Investigating Commission of 1895 estimates the number at 100,000, "not including those who come daily into Buffalo and Detroit and other border towns and cities, or the seamen on the Great Lakes," so that it is safe to put the whole number of immigrants coming from Canada, or through there from Europe, between 1885 and 1890, at 950,000. Add to these the number reported by the Immigration Bureau and it makes a total of 6,196,613

aliens that landed here between 1880 and 1890. And yet, according to the census reports, there were only 2,569,604 more foreign-born persons here in 1890 than in 1880.

If all these immigrants remained here the usual allowance for deaths in 10 years would be 20 per cent; but as most of them only remain here from 1 to 3 years, 10 per cent is a fair allowance. Now then, if we deduct this 10 per cent (619,661), it appears that 3,007,348 of these aliens must have returned home in those 10 years; that is, an average of 300,734 yearly.

Along with this number must be added the immigrants from China, Japan, and Mexico. The census of 1890 makes no mention of Chinese immigrants; it assumes that after the restriction act was passed none came in except those who were here before, while the testimony of United States officials before the Stump committee in 1891, and numerous newspaper reports, show that they have been stealing their way in ever since the act went into force. According to the report of the House Committee on Immigration (1892) the Chinese were being smuggled in at the rate of 20,000 a year. The census of 1890 puts the Chinese population at 107,475, but Wong Chin Foo, secretary of the Chinese Equal Rights League, in his petition against the Geary law, claimed that there were 150,000 Chinese in that organization in this country; and he ought to know better than the census officials, because the Chinese are stowed away in their dwellings in such manner that no correct count can be made of their numbers. As to the number of Japanese and Mexican immigrants here, from the testimony of witnesses before the Stump committee in 1891 it appears that there must be not less than 25,000 of both nationalities in the United States. This would make the whole number of these migratory immigrants here about the year 1891 about 475,000.

Now, as to the amount of money taken away by these aliens: In 1892 the New York Herald investigated this matter, and, from the testimony of padrones, labor contractors, and steamship agents, it reached the conclusion that the average amount taken by the Italians was \$250 each, while the English and Scotch immigrants took on an average \$300 each. These estimates may be fair for the unskilled laborers who stay here only 2 years; but it is too low for the skilled laborers who earn from \$3 to \$4 a day, and who can save from \$350 to \$550 in one season, working 8 months in the year. It is also too low for the Chinese and others who stay here from 3 to 10 years, and who take away an average of \$400 each. Besides these, there are a number of these aliens who are in business for themselves: they own fruit stands, boarding houses, rum shops, laundries, barber shops, and they act as padrones, bankers, labor contractors, and steamship agents, and their hoardings run up into the thousands.

However, even if we take the lowest estimate as a basis, and assume that these aliens take on an average only \$250 each, the total amount absorbed by the whole number reaches the enormous sum of \$118,000,000 yearly. This does not include the passage rates both ways that is paid out of the wages earned here, and if added up would more than offset all the money that is brought by those who come here to stay.

In reply to those who may think I have exaggerated the amount taken by these aliens, I beg to refer to F. L. Dingley on "European immigration" (p. 249), Special Consular Reports, 1890, wherein he estimates that in the 2 previous years alien laborers and American tourists took from us upward of \$500,000,000. As the latter item—tourists' expenses—is usually estimated at \$100,000,000 yearly, it leaves \$150,000,000 as the amount that alien laborers take away each year, which is \$32,000,000 a year more than my estimate.

Now, in order to realize the true significance of the facts here set forth it is necessary to remember that the export movement of gold, which began in 1889 and continued up to 1893, when it precipitated the worst panic we had had in 50 years, averaged only \$54,000,000 for each of those years. That is less than the amount which the immigrants from Europe alone had been absorbing about that time, and less than half of what the whole number took away. Hence I was convinced that the gold which we had exported in these 4 years largely represented the hoardings of these aliens.

Our financial leaders, however, had another theory of the cause of the gold exports. Their theory was that the exports of gold were to pay for stocks that had been returned by foreign investors who had become alarmed about our silver policy. Hence it was claimed that if the Sherman law was repealed the confidence of foreign investors would be restored and they would cease to return their stocks; then the export of gold would cease, and prosperity would return.

This theory became popular enough to force the repeal of the Sherman law; but as the export of gold continued, and as prosperity did not return after that

law had been wiped off the statute books, it became evident that this theory was false, and that our financial leaders were on the wrong scent.

Now, the reasons which convinced me that the absorptions of these aliens had more to do with the outflow of gold than the Sherman law were as follows: In the first place, this outflow began in 1889, a year before the Sherman law was enacted. In the second place, while it was claimed that foreigners were losing faith in our stocks, it was an undeniable fact that they were making investments right along. At the time of the panic, when the prices of all stocks were lowest, foreign capitalists were the heaviest purchasers. In the 12 months preceding this panic the financial reports certainly show that foreigners bought more of our stocks, bonds, industrial plants, and mining properties than they sold. In the third place, if it were true that this gold was being sent abroad in payment for returned stocks, then the most of it certainly ought to have gone to those countries where the largest portion of our stocks are held. But such was not the fact. England, as is well known, holds more of our stocks than any other country, but she did not get the most of this gold that was exported between 1889 and 1893. Most of the gold we shipped abroad in these 4 years went to the south of Europe. According to the Mint report of 1892, out of \$55,000,000 exported at New York from July 1, 1891, to September 21, 1892, only \$6,000,000 went to England; the rest was shipped to France and Germany, from whence, according to the same report, a large portion was reshipped to Austria.

Now, according to a statement of ex-Minister Fred. D. Grant as published in the New York Morning Advertiser of July 9, 1893, Austria did not hold any of our stocks at that time. Consequently the Sherman law could not be held responsible for the shipment of gold to that country. Besides, it is well known that our gold continued to go to Austria after this law had been repealed. In regard to this later movement, it was claimed at the time that the Rothschilds, who were floating the Austrian loan, were borrowing the gold from us. But this could not have been true, because those astute bankers would not be very likely to try to borrow gold in the United States, where its growing scarcity and dearth had produced a disastrous panic, when it was plentiful and cheap in England. In a letter to the New York World, under date of June 25, 1893, Julian Ralph calls attention to the abundance and cheapness of money in England at that time. He says: "So phenomenally cheap is money in London to-day that it is possible to borrow practically an unlimited amount at the rate of 25 cents a day for every \$50,000. There is now on deposit in the Bank of England alone more than \$250,000,000 more money than was lying there 9 months ago." In view of these facts it is preposterous to assume that Europe was borrowing any gold from us at that time.

Hence, the only reasonable assumption is that, inasmuch as we did not owe Austria any great amount for imports of merchandise or tourists' expenses, this gold represented the hoardings of the thousands of Austrian laborers that are scattered all over this country. Some idea of the extent of their hoardings may be gathered from the evidence submitted to the Joint Committee on Immigration in 1890 (p. 580), which shows that as much as \$75,000 a month was being sent from the town of Mount Carmel, Pa., by the Huns in that vicinity. In this connection it is to be noted that it is only since her people began to come here in such large numbers that Austria has been taking our gold.

Of course, the Austrian immigrants were not the only factors in this movement of gold. In later years the Italians have begun to take vast sums of our money. One Italian banker testified before the Senate committee in 1893 that his firm alone sent away \$2,000,000 the year before, and that there were about 80 other such firms in New York City, some of which sent away even larger amounts.

Until 1889 the extent of the hoardings of these aliens was not noticeable because our excess of exports and sales of stocks was sufficient to offset them; but about that time there was such an enormous increase in this class of aliens, principally from the south of Europe, that our excess of exports was not large enough to offset their hoardings, and hence we had to ship gold to make up the difference. And it was about this same time that a change took place in the personnel of the gold exporting trade. About 1889, and afterwards, the French and German houses, not previously active in the trade, began to take most of our gold. (U. S. Mint Rep., 1892.)

Now, as before stated, the outflow of specie from 1889 to 1893, when the panic occurred, averaged only \$54,000,000 a year; and as that is actually less than the amounts which the aliens from Europe alone were absorbing, it seems very evident that if it had not been for such absorptions the panic could not have happened, as our excess of exports would have been more than sufficient to offset our annual foreign debts.

That is my explanation of the panic of 1893; and I have a right to say here that in a letter to the Brooklyn Eagle, dated June 1, 1893, before the Sherman law was repealed, I predicted that such repeal would not stop the outflow of gold. As this prediction turned out to be true, I have certainly a much better right to assume that my explanation is correct than those who contended that the Sherman law was the cause of the panic.

Now, that panic of 1893 was the worst one that we had had in 50 years. It caused the failure of 50,000 business firms, with liabilities of over \$800,000,000, a shrinkage in values of many millions more, and a loss of over \$300,000,000 in wages, besides inflicting untold hardships and poverty upon thousands of our people. And if, as I contend, the hoarding of gold by these aliens hastened this event, then that is sufficient reason for excluding them. For, if their absorptions could inflict such injury upon us in 1893, it is very likely to have the same effect upon our prosperity again.

It may seem rash to hazard such a prediction now, when our financial leaders are making such boasts about our solid business prosperity; but I contend that the facts of current history prove that we are not as safe as these leaders seem to think. I contend that our present financial condition is such that we can not afford to lose the gold which these aliens are taking away, and that even now their absorptions are threatening the prosperity of the country.

Last year the balance of trade in our favor was \$530,000,000, while our net imports of specie (gold and silver) were only about \$25,000,000. The Wall street explanation of the reason why we got so little cash for all this excess of exports is that about \$250,000,000 of it went to pay for returned stocks, and the balance was used to pay interest on foreign investments, tourists' expenses, and ocean freights. (New York Evening Sun, June 17, 1899.) This explanation, however, does not fit in with the facts. The financial reports of the New York Sun and the Press certainly prove that from July 1 to December 31, 1898, foreigners bought more of our stocks than sold. Besides, there were outside purchases of stocks by foreigners that are not included in the regular market reports. Thus, about October 13 a large block of Pittsburg and Western bonds were sold in Europe; the next month, November 18, the Speyer Brothers sold in London \$10,000,000 worth of Southern Pacific bonds. If there were any sales to offset these purchases by foreigners, they are not recorded in the reports.

In regard to the latter half of the last fiscal year, up to June 24, R. G. Dun's report of that date says that "according to the best obtainable evidence the sales of stocks by foreigners since the 1st of January did not exceed the purchases by over \$12,250,000."

Now, I think that where the experts are wrong in this matter is in underestimating the amount of our annual foreign debts. I think they underestimate the amount due as interest on foreign investments. But the biggest mistake they make is in wholly ignoring the fact that we have this vast army of migratory immigrants sending their hoards to the old country. And yet the evidence that there is such an army is as plain and unmistakable as is the evidence that we have an army of Americans who go to Europe every year. That evidence consists of the census reports on immigration and population, as well as the testimony of numerous witnesses before our various Congressional committees. And there is certainly better evidence that these aliens absorb a big part of this trade balance than there is that it went to pay for returned stocks. For instance, one part of this trade balance is the result of our commerce with Canada. Last year it amounted to \$52,000,000, for which we received only \$13,500,000 in cash. Now, we certainly do not owe that country any big amounts for tourists' expenses or ocean freights; and as her people have none of our securities to dump on our market the only rational explanation is that the most of this balance has gone to offset the hoardings of the army of Canadian laborers that are scattered all over the United States.

In the same way it is evident a good portion of the remainder of our trade balance has gone to offset the hoards of other aliens from Europe and Asia. For the first few years after the panic the number of immigrants declined, and the amount of money sent away was not so large as in former years; but at the present time there is good reason to believe that as much money is sent away by alien laborers as ever before.

The number of Chinese and Japanese is certainly larger than it was in 1893. We see proof of this in the streets of our towns and cities, in the steady expansion of the Chinese quarters of New York, and also in the frequent reports of their being smuggled in at various parts of the country. Here are a few of these reports which give some clew to violations of the restriction act that have been going on for the last fifteen years.

HERALD BUREAU,
CORNER FIFTEENTH AND G STREETS NW.,
Washington, D. C., November 28, 1896.

Chinese Inspector Scharf, stationed in New York, has submitted an elaborate report to the Secretary of the Treasury on the smuggling of Chinese into the United States. He makes several specific charges against United States officials at the ports of New York and Malone, N. Y.

Those at the latter port, he charges, are in collusion with officials of the Canadian Pacific Railroad, and says that through such collusion great numbers of Chinese not entitled to enter the United States are yearly admitted into its territory.

The great extent of the northern border of the United States has during the past few years afforded Chinese many opportunities to surreptitiously enter the United States. It is almost impossible to maintain an effective guard along its great length, and the vigilance exercised at most of the ports on the Atlantic and Pacific has compelled those Chinese who desired to smuggle themselves into this country to resort to the northern border. Most of these Chinese come by way of Halifax.

CHARGES ACTUAL COLLUSION.

Mr. Scharf now charges that in Malone, which is in the custom district of Plattsburg, the officials of the Canadian Pacific Railroad, who encourage Chinese travel on their road, assist, by advice, and in many cases by actual collusion with United States officials at that port, in getting the Chinese into the United States.

His charges against the New York officials are directed more against the practice of examination, which, he holds, affords loopholes for illegal entry of Chinese, than against the officials themselves.

Copies of Inspector Scharf's report, which has not been made public, have been sent to the collectors of customs in New York and Plattsburg, N. Y., with instructions from Acting Secretary Hamlin to investigate the charges and criticisms made by him and report back to the Treasury Department the facts found.

MAY BE REFERRED TO ENGLAND.

In case it is found that Mr. Scharf's charges, that officials of the Canadian Pacific Railroad are conniving with United States customs officials, are true, the matter will be brought to the attention of the British Government. The Treasury Department will attend to the cases of their own officials in Malone should Inspector Scharf's allegations prove well founded.

It is announced this afternoon that W. B. Howell, special employee of the Treasury; J. J. Crowley, chief of the special agents, and John M. Comstock, chief of the customs division, will be in New York Monday to meet the customs officers on duty at the lake ports and along the Vermont and New York boundary line. The purpose of the conference is to arrange for a better uniformity in carrying out the Treasury regulations and customs laws.

CHINESE EVADE LAWS—COMING HERE IN GREAT NUMBERS—SMUGGLED INTO THE COUNTRY IN THE GUISE OF MERCHANTS OR UNDER BONDS.

Despite the stringent laws on the subject, there is no doubt but that Chinese laborers in great numbers are being brought into this country, and many of them land right here in New York, and here they stay. The principal point from which they reach here is Havana, and so long as the rules laid down by the Treasury Department are in force the local officers have no remedy. The way the game is worked on Uncle Sam is very simple, but at the same time very effective. At Havana the Chinese laborers can easily become merchants by the payment of \$25, that sum securing them a nominal interest in some mercantile house, and for a few dollars more there is no difficulty in securing affidavits to the effect that they are bona fide merchants. Of course, when these are presented to Consul-General Williams he promptly visas, and the holders are entitled to admission to this country. With these the local inspection officers have nothing to do; it is the laborers who give all the trouble. These men come here on the way to Montreal, and are permitted to land under a bond of \$200. This bond once given, they are allowed to roam about the city at will for twenty days, and it is during this time they perfect arrangements for staying in this country.

They find some bona fide merchant who either wants to return to China or is willing to make the journey to Montreal, for a consideration, so that when the twenty days are up the Canadian Pacific Road transports the number of Chinamen

they have given bond for, but not the same Chinamen. The deputy collector at Malone, N. Y., certifies that the proper number has passed over the border, the bonds are canceled, and the whole transaction, so far as that particular batch of Celestials is concerned, is at an end. The law has apparently been enforced, but in reality it has been evaded in the most barefaced manner.

As for European immigration there are sure signs that it is rapidly reaching the higher rate of former years. The increase the last 6 months has been larger than for many years back. A significant feature of last year's immigration is the evidence of an increase in the proportion of migratory immigrants. Of the 311,707 aliens who came last year, Italy sent more than any other country, 78,000; and according to ex-Commissioner Senner, 80 per cent of them are birds of passage. Among these migratory immigrants there is always a greater proportion of males, and last year's immigration figures show this proportion to be greater than in former years.

In view of these facts, and considering that labor of all kinds commands higher wages than it has for many years back, I am convinced that these aliens are draining the country of as much money now as they ever did before. And every dollar they send away goes to offset what is owing to us abroad for excess of exports.

That, I contend, is the true reason why we got so little cash for our enormous trade balance last year. The greater part of what was left after paying interest dues, tourists' expenses, and ocean freights, has gone to offset the drafts and money orders of these aliens.

And hence it follows that the money famine, which at this moment hangs like a dark cloud over the country, threatening ruin and disaster to our people, owes its origin to the same cause as that which precipitated the financial crash of six years ago. Even if the existing money stringency should disappear for a time, the indications are that it is almost certain to appear again in the near future and produce serious results.

The fact that we got so little cash for last year's trade balance proves that our annual for debt amounts to about \$500,000,000. Next year one item of this debt (tourists' expenses) will be doubled, perhaps trebled, on account of the Paris Exposition. Suppose now that while this debt is growing bigger there should come such a change in crop conditions, here and abroad, as to cause a decline in our exports. Such changes have happened before. Thus in 1892 our excess of exports amounted to \$202,000,000, and the very next year it was the other way. There was an unfavorable balance of \$18,000,000. Now, even if the decline in our excess of exports should only be to what it was two years ago (1897), when it stood at \$359,000,000, the result would be that in order to settle these foreign debts we might have to pay out every dollar of gold there is in the National Treasury. And with the experience of 1893 before us we can well imagine what would be the consequences of such a drain.

Under these circumstances I hold that there are good and sufficient grounds for the absolute restriction of immigration. It is not right that the welfare of 80,000,000 people should be put in jeopardy for the benefit of a class of alien vampires who have no other object in coming here but to rob the country of that which is the life blood of its trade and industry.

Respectfully submitted,

W. H. ALLEN.

WASHINGTON, D. C., October 12, 1899.

TESTIMONY OF JOSEPH H. SENNER,

Formerly Commissioner of Immigration at the Port of New York.

The commission met at 10.30 a. m. Vice-Chairman Phillips presided and introduced Dr. Joseph H. Senner, who, being first duly sworn, testified concerning immigration as follows:

Q. You will please give your name and address.—A. Joseph H. Senner, 16 Nassau street, New York City.

Q. How long were you commissioner of immigration at the port of New York?—A. From March 29, 1893, to August 5, 1897.

Q. I believe that you have some statement that you wish to make to the commission.—A. I preferred to put at least the general scope of my remarks on paper, in order to give the commission an opportunity to ask me about any specific point,

either in connection with same or independently of that, in reference to the immigration question. If I am permitted to read—

Mr. FARQUHAR (interrupting): Go right ahead and read.

The WITNESS: Newspapers have a great deal to say at present about the recent large increase in immigration. There is again, as often before, much ado about nothing. The report of the Immigration Bureau for the fiscal year ending June 30, 1899, shows a total of only 311,707, which is more than 10 per cent smaller than the immigration in 1898 and a great deal less than in any year from 1880 to 1893. While it is true that there is some increase over the preceding two years, the total immigration of last year was nevertheless abnormally low, considering the almost unprecedented prosperity the country enjoyed after a successful war, and the rapidity with which reports of such prosperity spread all over the world in modern times. Industrial and commercial activity and financial prosperity of such dimensions ought to have brought to the United States, according to all theories of immigration, at least twice as many immigrants as actually landed. According to the same theories, the largest number of immigrants ought to have come from the most densely populated European countries; in fact, just these countries, like, for instance, Germany, show a decided tendency of decrease in their immigration, while some of the most numerous types of immigrants come from countries which could easily support twice as large a population as they possess. Immigration depends upon a variety of causes, partly local, partly individual, partly national, partly economical, but in all these directions so diversified that it is hardly possible to establish rules about it. To regulate immigration by statute is almost as impossible a task as to control prosperity or a financial crisis by legislation. Some of the most potent factors of immigration, which is naturally based on emigration from other countries, are entirely beyond our own control. All we can do is to discourage the immigration of undesirable persons, and even then opinions may greatly differ as to the desirability or undesirability of certain classes of immigrants. Besides, persons who may be very undesirable in a certain location are most desirable in another section of this vast country. This was clearly shown by the replies from governors or heads of bureaus of the different States, to whom the Immigration Investigating Commission in 1895 issued official inquiries on that subject. I beg to quote from the report of this commission, of which I was a member:

"The immigration question is preeminently a national one. This nation consists neither of a few large cities, which, as in all countries, furnish only limited employment to a dense population, nor of the few States whose farms are deserted and whose manufacturing cities are overcrowded with idlers. Immigration concerns the West not less than the East, and South as well as the North, and the only line of policy which can be consistently recommended is one which will benefit the whole country most and harm each part of it least. Certain classes in the community have demanded the complete abolition of immigration because of abuses of the naturalization laws in conferring the right of franchise upon newly arrived immigrants; of religious or race antagonisms; or because of the discouragement induced by the recent financial depression. But it is a remarkable fact that, notwithstanding the financial crisis, and the widespread agitation against immigration, a large number of the governors of States have emphasized a desire for immigrants."

A great deal has been said recently about the noticeable change in the nationalities which predominate among immigrants. It stands established as a fact that in recent years immigration from the United Kingdom, Germany and Scandinavian countries is smaller in numbers than that from Austria-Hungary, Italy, and Russia (including the Poles, which have no empire of their own). I do not dispute this fact, though I do not hesitate to declare the statistics cited in connection with it as inaccurate and partly misleading. As to the causes of the remarkable change, I decidedly differ from the members of the Immigration Restriction League, who apparently hold the steamship companies almost entirely responsible for it. I believe I am justified in the statement that the remarkable increase in immigration from southern Italy during the last years was to a large extent, if not entirely, due to nothing else but the agitation of the American restrictionists, and especially for the so-called Lodge bill. It is not at all surprising that tens of thousands of Italians from the South, if illiterate, hastened to the United States before they were barred out by a new law. Only three years ago a new steamship line was actually started in business exclusively on this theory. As a matter of fact, immigration from southern Italy during the last years of financial depression and business inactivity, but of liveliest agitation of the Boston restrictionists, was larger than in the present year of prosperity and enormous business activity.

On the other hand, immigration from Germany decreased to only about 10 per cent of what it used to be ten or fifteen years ago. The extraordinary development of the German Empire in the last decade furnishes but a partial explanation of this very startling phenomenon, because some of the largest immigration from Germany fell just in this period of German imperial rise, while the largest decrease only occurred during the last few years. Besides, Ireland, which is certainly all but equally prosperous, shows during these same last few years an enormous decrease in immigration to the United States. The same is true of the Scandinavian countries, Sweden, Norway, and Denmark. Why, then, it may be asked, have the United States lost so much of their attractive powers for the thrifty and enterprising people of these European countries? Nobody can justly claim that the richest country of the world in natural products, with its, on the whole, still scant population, does not any more offer sufficient opportunities. Nobody can justly claim that this country is thoroughly settled, and much less, that our demands for domestic help, with high wages and abundant opportunities for marriage, is in any way filled. Every housewife will certify to this fact. Why, then, was the influx so materially and almost instantly stopped?

There is but one reasonable reply to these questions, and that is that the unequalled vexations to which any steerage passenger was subjected since 1893 have done their full work. The restrictive force of the law of 1893, which I personally had the privilege to inaugurate practically, has as yet not been sufficiently recognized. The very large decrease in immigration since 1893 was heretofore almost exclusively attributed to our financial depression. That the entire removal of this depression and the return of extraordinary business activity for more than a year, combined with an unusually successful war, ordinarily a great attraction by itself, had comparatively so little effect on our immigration may perhaps open the people's eyes. The law now in force works immensely as a restrictive measure, not so much by actual prevention of the landing of undesirable persons as by the deterring of them, and also of many desirable, from taking passage. This is done in two ways: First, directly, by imposing upon the steamship companies heavy financial responsibilities not only for maintenance and return of all undesirable passengers detected at the landing, but also for maintenance and return of all landed immigrants who become public charges within 1 year after landing, from causes existing prior to landing. The steamship companies, on the other hand, hold their agents strictly responsible, and no agent sells a ticket to any possible deportee without proper deposits or guaranties. Besides, the agent, especially in Italy, has, since the enforcement of said law, been held responsible to any deported person for the passage money and other damages. Tens of thousands of would-be immigrants were refused tickets annually by the agents, and a still larger number was deterred by the annoyances of the minute inquiries made by agents in self-protection. This was and is a wholesome and beneficial restriction, because its effects naturally extend principally to the less desirable.

Quite different, however, is the second more indirect and harmful effect of restriction caused by the law of 1893, and I can speak of it so much more freely as it is universally recognized that during the four years and four months of my term as commissioner of immigration at the principal American port I faithfully enforced the law. Even the most eligible, desirable immigrant coming, as they usually do, in steerage does not succeed as a rule in landing in less than 24 hours later than his more fortunate fellow-passenger in the cabin, and not without a long series of vexations, annoying, oftentimes distinctly hard tribulations, as they are almost unavoidable in the present procedure, requiring frequent removals and repeated examinations. And if the admission of any immigrant be in any way questionable, it has become quite usual that one or more weeks pass before the immigrant, whether male or female, adult or child, is landed. This frequently extended period of detention, during which the immigrant is practically treated as a prisoner, and by no means as well as an inmate of a modern and humanitarian prison, brings forth so many and manifold hardships to the immigrant that people belonging to nations of higher civilization keenly resent it. I have called these vexations unequalled, and, as a matter of fact, they have no equal in any civilized country in the world. The statement of Mr. Schulteis that "They have restrictions in nearly all European countries, and they are far more strict in some of them than we are" (page 28 of his testimony), is entirely without foundation.

Incidentally I may remark right here that one of the principal objections against the Lodge bill rests in the necessary enormous increase in these vexations, and in its natural influence on immigrants from nations of a higher civilization. It has been repeatedly stated, with some pretense of surprise, that Americans of German or Bohemian or Scandinavian descent are unanimously opposed to the Lodge bill, although they are with hardly any exception fully able to pass its examina-

tion. As a matter of fact, however, it does not help very much any single immigrant, whether he or she is able to read and write, if his or her group of 30 is admitted to examination in order, perhaps a day later, or if in his group he or she stands at the end of the line and has patiently waited until those preceding have passed the curious examination of reading, and, as originally intended also, of writing the translation of the American Constitution—a performance, by the way, which in many cases can be nothing but a farce, because the immigrant inspector, in nine cases out of ten, does not understand the language at all in which the document is read or written, and therefore has no possibility of proper and fair judgment. Based on my extended practical experience in charge of the paramount immigration station, I state that with the present number of inspection aisles and of available registry clerks an introduction of the Lodge bill would much more than double the time for examination and thereby double the hardships of steerage passengers. Its practical effect would, therefore, in my opinion, come dangerously near to an annihilation of immigration from nations of higher grade.

In order to dispose right here of the Lodge bill, I wish to state that our opposition to the same is principally based on our conviction that the proper time for such an educational test is at the time of naturalization and not upon admission to the country. We further regard its application to women not only generally unjust, but practically, also, as a severe aggravation to our much vexed servant-girl question. We believe that its introduction for immigrants stands in a rather curious contrast with the present policy of expansion and its consequence as to wholesale reception of illiterate, if not savage, co-citizens. And finally, as a protective measure for American workingmen, the Lodge bill would be simply a farce, because the skilled laborer, whose competition organized labor wishes to restrict, could at any time pass any such examination.

I believe I have sufficiently shown that the immigration laws now in force have a decided restrictive effect. I am far from stating that the present laws are perfect. As member of the Immigration Investigating Committee I joined in the recommendation of not less than 29 amendments, some of which could be easily carried out in an administrative way, and a good many of which I personally only agreed to as a compromise with the two other members of the commission. But while it is a fact hardly disputed by any student of the laws, and much less by any person connected with their practical handling, that the wording of the laws often is ambiguous and defective, I hesitate to recommend a new codification, because I apprehend only new complications and difficulties and reopening of all questions pertaining to immigration. I believe that in due time all existing disputes can easily be worked out by decisions of the courts and by improved regulations of the department. It appears to me that the present laws could be enforced more efficiently, and that all difficulties with future immigration could be solved with the existing laws, provided ways and means could be found for a better distribution of the immigrants. I stated intentionally that the difficulties with future immigration could be solved in this way. There are unquestionably many difficult problems to solve as consequences of the large immigration of former years and of its partly unwholesome distribution; but these problems do not fall within the province of the immigration laws and their handling, as there are no more immigrants to deal with, but residents of the States, and to a large extent often citizens. American civilization, assisted by restriction of naturalization, will readily dispose of the problems from old immigration.

As to my remark that the immigration laws could be enforced more efficiently than they are, I do not wish to reflect on the honesty and conscientiousness of the officers. Their shortcoming, however, is unquestionable, an unavoidable consequence of the prevailing system in their selection, qualification, and compensation. If there is any public service in the United States which requires peculiar qualifications in knowledge additional to the standard qualifications of any public officer, such as honesty, faithfulness, and energy, it is certainly the immigration service. The officer has not to deal with goods, but with living and speaking subjects. He has no established standard of appraisement which may be passed upon in wholesale, but he has to judge of every single individual according to his merits. And these individuals who appear before the examining officer speak not the American language and are not brought up in the American way. They are entitled, however, to all consideration due to human beings, and as to their eligibility as American residents to a fair and just judgment of their natural qualifications.

An officer who has no knowledge of foreign countries, their peculiarities and language, will be seriously hampered in passing a fair judgment on the immigrant unless he has another officer on hand who can act as an intelligent interpreter, and who, therefore, practically does what the American officer is supposed and paid to do. The prevailing system of appointing the largest number of

American officials without any requirement as to knowledge of foreign languages or countries, and to supply them with a few poorly paid and, therefore, naturally neither select nor competent interpreters—this system, as a matter of course, cripples the efficiency of the service. My former assistant in New York, Commissioner McSweeney, evidently came to the same conclusion as to the necessity of a knowledge of foreign languages for an efficient service, as he has taken considerable pains to study Italian; and he will surely bear me out in the statement that he was materially helped in his administration of the office by the ability not only to control the interpreter, but, if necessary, to dispense with him entirely. I heard it repeatedly stated, even by gentlemen of high public standing, that the immigration service should be exclusively handled by native Americans, who are alleged to possess, exclusively, sufficient determination to carry out the law. The implied insinuation against foreign-born Americans may well be overlooked, but it can be emphatically stated that an immigrant inspector, or a member of the board of special inquiry, or a contract-labor inspector, who has entirely to rely on the usually poor interpreter, rarely receives correct information, and therefore, as a rule, is unable to do justice to the country and to the immigrant.

Some years ago, shortly after I assumed charge of Ellis Island, I suggested to Mr. Samuel Gompers, the president of the American Federation of Labor (by the way, also foreign born), the advisability of sending immigrant inspectors abroad to return among the immigrants and to detect by personal observations all attempts of circumvention. Mr. Gompers embodied this suggestion in a widely reprinted letter to the then chairman of the Senate Immigration Committee. Nothing, however, was done in this direction, for the very simple reason that we had no available inspectors conversant with these foreign languages who could have mingled with immigrants and gained their confidence without being detected at once in their true position.

I do not hesitate for these reasons to go on record as decidedly differing with my successor in office, who stated before your subcommission that honesty and determination to carry out the law are the principal, if not the only, requirements for an immigrant inspector, and therefore declared himself opposed to civil-service regulations in this department. I, on the other hand, can not see any reason whatever why honesty and determination to carry out the law should not be combined with the ability to understand and to properly handle the various nationalities asking for admission to a free country. The immigration service suffers in its efficiency more than any other under the burden of political drones who are officially called to the sitting of persons whose language they understand as little as their character.

A person who is still struggling with the national language, and can not as yet express himself to the full understanding of others, is naturally at a disadvantage, not only in his fight for daily bread, but also and especially as to the recognition of his merits. It is therefore but natural that the foreigner is met with prejudice, which, as a rule, grows stronger and stronger, especially if commercial depression impairs the livelihood of the natives, and strengthens the belief that any increase in the supply of the labor market only increases the struggle for a living. In such cases men are apt to lose sight of the fact that but for immigration the United States could never have built up its unparalleled home market, and that every immigrant very soon turns up as a consumer. Any American only needs to watch the reception of immigrants by their relatives or friends at the immigration station to convince himself at once of the immense difference in the appearance and outfit between the newcomer and his waiting friends, most of whom only preceded him a short while, but all of whom are stylishly dressed in American goods. This important point is generally overlooked, and not the least by workmen who earn wages in the production of these very goods.

Now, as to the character of such nationalities which recently furnished the largest part of immigration, I have to mention first of all the Italians. That they are an orderly and law-fearing class is hardly ever denied. Isolated cases of too free use of the knife are much too rare exceptions to annul the rule. No doubt they are frugal, and their standard of life is in the first years a good deal lower than that of the average American. But this, too, is only temporary, and American civilization exerts its overwhelming power in due time. True enough, a good many Italians maintain for some years the habit of returning to Italy for a time, and either take along or send their savings home. Close observation, however, convinced me that this also is rapidly decreasing, and that at the second or third return to America their families come along for permanent settlement, which of course makes an end to all sendings of money abroad. This change of condition is plainly shown by the statistics of Italian immigration of the last years as compared with former times. In 1883 arrived 28,217 males and 3,567 females; in 1890 arrived 40,717 males and 11,082 females; in 1898 arrived 40,248 males and 18,365 females from Italy. The number of Italians under 15 years in the same years was

2,528 in 1883, 8,759 in 1890, and 11,935 in 1898. Immigrants from Italy are Americanized fast enough, as stated by me in the North American Review of June, 1896, and meanwhile they are certainly very much more welcome than the Chinese, whose places they have taken in building railroads and waterworks, and doing other labor which the native American and the immigrants from the English-speaking countries have long ceased to undertake.

Another very much misjudged nationality are the Poles, whom not a few of our restrictionists are pleased to call Huns; of course, with very little regard to ethnology and similar minor matters. I happened to get a copy of a letter addressed in March, 1893, by the collector of customs in Buffalo, Mr. William J. Morgan, to a gentleman very much interested in the question. Buffalo is known as a Polish-American center. Permit me to read verbatim part of the interesting letter dated March 6, 1893:

"The Polish colony in Buffalo is quite large. The total number is 55,000, who own about 3,000 lots, valued at \$6,181,100, and also 5 large churches and 4 school-houses, valued at \$450,000, in addition making the total Polish real estate investment in this city \$6,631,000. No class of foreigners reaching here display as much anxiety to secure a little home at once as do the Poles. Whole streets are owned by them and several election districts are nearly exclusively peopled by them. They are well organized for the promotion and protection of Polish interests, there being at least one society for this purpose in nearly every Polish election district.

"As a people they pay their taxes more promptly than any other nationality, not excepting the Americans. They take great interest in informing themselves as to American institutions, particularly as to American politics, and for foreigners they are remarkably well informed as to our election laws. It is a well-known fact that when the political organizations established schools in the various localities for the enlightenment of voters as to the practical workings of the new ballot law, the Poles were found to be the best informed as to the subject of any nationality, not excepting the Americans. They had been making the new law a special subject of study in the societies already mentioned and were very well posted. As regards the matter of general education, I think they surpass many people now flocking to our shore. They are industrious and frugal and fill an important place among the army of unskilled labor. Socially, morally, and as regards drink they are as good as the generality of mankind."

Immigration of Russian Jews was at one time alarmingly strong during the years of suppression and expulsion by the Russian Government. It attracted the attention of Americans principally because it appeared to be, and probably was, assisted. It invaded and actually revolutionized many lines of trade and, besides, aroused quite strong race prejudices. We have, however, for some time passed the tail end of this specific immigration, because the effects of the famous Russian edicts had to stop at the end of the few years which the Russian Government fixed for their enforcement. Merely from old habit our statesmen continue to worry about the Baron Hirsch fund, and about its alleged but never proven systematic assistance of immigration. As a matter of fact, this Baron Hirsch fund was for years only applied to some more or less ill-fated agricultural experiments, and principally to educational purposes, the tendency of which is strongly Americanizing. Whenever we succeeded in tracing an influence of the fund or of the Alliance Israelite on immigration, it was exclusively in the direction of helping a wife or children of an American resident to join the husband and father. If there are evils in this immigration of Russian Jews, they belong to the category of old evils which are beyond the sphere of immigration laws.

We heard quite frequently, and especially from the advocates of further restriction by educational or other tests, that the change in the character of immigration which took place in the last 10 or more years greatly added to the increase of crime. It is alleged that the formerly prevailing immigration from the United Kingdom, Germany, or from Scandinavian countries brought more law-abiding persons than the more illiterate recently stronger immigration from Italy, Russia, or Austria. In fact, the alleged close connection between illiteracy and crime always appears as one of the most powerful arguments for the Lodge bill. A careful examination of the official records about the nationality of inmates of State prisons shows, however, quite different results.

I beg to submit in Appendix A reliable abstracts from official records, prepared by a student of the question and revised by myself. Special attention is suggested to the statistics from Massachusetts, the center of agitation for restriction, and from New York, where the greatest congestion of the so-called undesirable immigration takes place. A summary of the commitments to the enumerated institutions in 11 States and of their proportion to the total immigration into this country from 1886 to 1897, from the United Kingdom, Germany, Italy, Austria,

Russia, Sweden, and Norway, also including that from so-called Poland, furnishes a quite interesting result:

	Total commit- ments.	Immigra- tion 1884- 1897.	Percent- age.
England	3, 199	530, 872	0.60
Ireland	15, 819	655, 968	2.61
Scotland	1, 027	124, 494	.82
Germany	1, 214	945, 008	.13
Italy	733	613, 531	.12
Austria	253	642, 642	.04
Russia	445	537, 201	.08
Sweden and Norway	745	518, 602	.12

In this table the figures from Poland, which was recognized as an independent country only by the American statisticians, but unfortunately had ceased to exist long before these statisticians were born, were evenly distributed between Russia and Austria, thereby following quite closely the proportion on the actual partition. It appears from this table that Italy, Austria, and Russia furnished a much smaller proportion of commitments than their more literate fellow States from the north of Europe. The plea of danger to our national morals, of contamination by the larger influx of illiterates, hardly stands the illumination of facts. I wish to state, however, that the statistics are only submitted for what they are worth, as I am in general not an admirer of and much less a believer in statistics, unless they are prepared with far more accuracy than has been and largely still is the case for immigration matters.

The large and complex subject of the influence of immigration on wages can not be treated in the ordinary way of jumping to conclusions from a few facts within the much-limited eyesight of a casual observer. Wages depend upon the iron law of demand and supply, only limited by the minimum standard of life on one side and by the maximum power of organization on the other. Furthermore, the standard of life stands in close connection with the much-varying purchasing power of money, and organized labor is met by combinations of capital, which at times are forceful, at other times windy. It is therefore enormously difficult to draw any reliable conclusion from mere statements of the amount of wages, without taking into close consideration the influences prevailing at the specific time.

The late Henry George, who built up his brilliant syllogisms on the abnormal conditions of a pioneer State of gold miners, furnished a warning example of the danger in treating this perplexing subject, even for the most brilliant and loftiest minds. In this place I desire but to contradict emphatically the widespread opinion that wages have fallen with the setting in of great tides of immigration. As far back as 1891 an exhaustive report of a Senate committee charged with the duty of ascertaining the cause of prices and wages of labor stated that wages have been highest during the years of heaviest immigration, which were naturally coinciding with the periods of prosperity, and further that they have steadily increased during the last three decades. The Immigration Investigating Commission before mentioned stated on this subject, page 10: "It would be manifestly unfair, however, to jump to the conclusion that immigration has increased wages, though for that position something may be said. Trade unions have unquestionably been a potent influence in increasing wages, and immigrants have made, broadly speaking, first-class trades-unionists."

In Appendix B I beg to submit a few tables, based on official bulletins and reports. Table I proves that in no single instance average wages were lower in the twelve largest cities in the year 1896 than in 1870; that, on the contrary, an increase in wages took place in spite of the large immigration that poured in since 1870, in many trades such advance even assuming quite respectable proportions. Table II compares the average retail prices of 1872 with those of 1897; Table III compares the purchasing power of money in the same years in Massachusetts, and, finally, Table IV shows the course of wages in each year from 1870 to 1897, with percentages of increase and amount of immigration in the corresponding years.

These tables, as far as statistics are at all able to prove, show that, with but two exceptions, larger quantities of all commodities enumerated could be purchased in 1897 than in 1872, or, in other words, that the purchasing power of wages was larger. It will be noticed that flour, sugar, dry goods, and coal show especially large percentages of increase. The laboring classes ought to consider whether or not without immigration such a development would have been possible, and principally whether or not the commodities enumerated could ever have been pro-

duced so cheaply. Table IV deserves the greatest attention by the laboring classes, as it clearly shows that the highest increase in wages as compared with 1870 took place in the years when immigration into the United States was the greatest.

I expressed before my skepticism as to immigration statistics, and desire to emphasize it on the strength of close observation during several years. Apparently we have very complete records, at least since 1836, about the number, nationalities, ages, destination, and money of immigrants. The most superficial comparison of census figures and immigration statistics, however, shows at once that either of the two must be entirely wrong, even as to the simplest of all accounts, the number of immigrants. Some of these very large discrepancies may be explained by the neglect, prior to 1893, of determining whether an immigrant had been in the United States before, and therefore had not been counted twice or even more times.

The immigration station in New York, which was under my personal charge, had beyond doubt the best organized statistical bureau as to immigrants. Nevertheless, in carefully looking up old records, I found that the largest part of statistical figures was based on guesswork without actual counting of numbers, and as to nationalities, ages, or destination often without records of any examination as to these points. It can not be different as long as appointments to office are principally dictated by the desire to give to a friend an opportunity of drawing a salary from Uncle Sam. As to destination and money the statistics are simply absurd. About one-half, if not all, of the immigrants are recorded with destination as New York. No immigrant will ever tell the truth about his available money, and the law of 1893, which only obliges him to disclose his treasure if he has less than \$30, made any kind of exactness about the amount brought into the United States by immigrants plainly impossible. I know personally of more than one case where immigrants held as paupers on account of their own statements and appearance, under the pressure of impending deportation disclosed thousands, and I remember one case in which we were all startled by a Russian immigrant showing, finally, not less than \$40,000 in good drafts and money. As to nationalities, our statistics are equally unreliable, and not the least on account of the ignorance of inspectors as to the manifold nationalities of polyglot Europe, or on account of the frequent not always well-advised changes in the make-up of the tables. I lay stress on these findings as important, because of the general overestimation of so-called official statistics.

Permit me finally, before concluding this testimony with a few general remarks, to turn to the different attacks made upon me on account of my determined position on the immigration question. Your own pamphlet on immigration contains, on page 25, the statement of Mr. Shulteis that I am one of the agents of the Baron Hirsch fund and a countryman of Baron Hirsch, and that after I went out of office I immediately went back into the same service. These statements are as equally malicious as untrue. It is a matter of record that I had at no time any connection whatsoever, in business or otherwise, with the Baron Hirsch fund, and as an Austrian I could never have been a countryman of the Bavarian Baron Hirsch. Only a few weeks ago the New York Press designated me as an agent of the German colonial party, indeed a very high compliment for an Austrian who never had any bonds of allegiance to the Kaiser. If anything, these two statements prove clearly the lack of knowledge of European geography and ethnology, which I mentioned as an obstacle to a proper enforcement of immigration laws. Other insinuations, including those from a United States Senator on the floor of the Senate, are of the same character. I may take it as a personal compliment if such personal attacks are believed necessary to weaken the force of my arguments.

In conclusion, I beg to state that in my conviction the danger from immigration to the welfare of our country is actually decreasing from year to year. It is obviously clear that a nation of 70,000,000 inhabitants assimilates very much easier 300,000 or 400,000 foreigners than a nation of 40,000,000 could ever assimilate 700,000 to 800,000 a year. Besides, while the United States are continually progressing and strengthening as a nation, Europe does by no means stand still. From year to year education, civilization, and wealth, and with this the general standard of life, advance also in Europe. If the Lodge bill, as I believe, can not be passed within the next few years, it will become obsolete from lack of illiterates in Europe. I freely admit that the immense immigration of former years, prior to the new law of 1893, created quite a number of difficult problems for the United States, especially on the political field, but no new law on immigration would or could assist in solving the problems of old immigration. As stated before, American civilization will work them out successfully. We may help it by strictness in the admission of foreigners to the privilege of voting, but it is absurd to protect the ballot box at the ports of entry and to exclude sturdy and useful immigrants

who desire to be admitted to the blessings of this free country of ours and are ready to assume the duties of American citizenship in the course of time. We may further assist the forceful work of an American civilization on the millions of former immigrants by a systematic influence on their better distribution over the country; and in this respect the suggestion of the present commissioner-general, in designating by statutes the heads of State bureaus of labor statistics as agents of the Federal Government for collecting information about the condition of trade and labor, may be more fruitful than if applied to newcomers.

As to immigrants proper, I suggested to the Immigration Investigating Committee, and it was embodied in their report, that an immigrant clearing house, with permanent exhibition, should be erected by private enterprise under Government control for the purpose of influencing a better distribution. This country is not yet ripe, and will not be in the lifetime of any of us, for shutting our doors tightly to the brawny laborer who is willing and able to at least improve our much neglected roads and to perform other menial work which the Americans, for one reason or another, are loath to perform. What we need, besides improvement of our naturalization laws, are ways and means for a more appropriate distribution of the immigrants, so that the newcomers may be directed to the localities where they are peculiarly needed and into the work for which they are fitted; in other words, where they could do the most good to the country as well as to themselves. As to restrictions, however, the law of 1893, if properly enforced, is amply restrictive, and as a matter of fact we have now rather more restriction than is beneficial to the country.

APPENDIX A.

STATISTICS ABOUT IMMIGRATION AND CRIME.

According to the State reports from Massachusetts for the year ending September 30, 1897, of 826 inmates of the State prison in that year 81 were natives of Great Britain (27 of England and 57 of Ireland), whereas only 35 were born in Italy, 8 in Russia, 2 in Poland (so called), and 2 in Austria. Taking the official returns of the jails and houses of correction in the State of Massachusetts for the year ending September 30, 1897, of 28,755 inmates of these institutions 10,006 were natives of Great Britain (1,615 from England, 510 from Scotland, 7,881 from Ireland), and 491 were natives of Sweden and Norway, as against 252 Italians, 78 Poles, and 94 Russians, 30 from Austria, 10 Armenians, 2 Syrians, 16 Hungarians. The commitments for drunkenness to all penal institutions in the State of Massachusetts for the year ending September 30, 1897, furnish considerable food for reflection. Of 21,443 commitments for drunkenness, 8,360 were natives of Great Britain (6,777 from Ireland, 1,170 from England, 413 from Scotland), 299 from Sweden and Norway, 94 from Germany, 59 from Italy, 71 from Finland, 41 from Poland (so called), 25 from Russia. The three State prisons of the State of New York for the year ending September 30, 1896, had 3,120 inmates, 339 of which were natives of Great Britain (105 of England, 37 of Scotland, 197 of Ireland), 192 were German, 156 Italians, 60 Austrians, 47 Russians, 36 Poles. The Matteawan State Hospital for the Criminal Insane during the year ending September 30, 1896, contained 21 natives of Great Britain (6 England, 15 Ireland), 15 Germans, 8 Italians, 2 Austrians, 1 Russian, and 1 Pole.

An investigation of the nationality of the persons committed to the State prisons in Illinois (containing the second largest city and a very great proportion of immigrants) during the year ending September 30, 1896, shows, of a total of 2,218, 126 natives of Great Britain (35 England, 88 Ireland, 3 Scotland), 130 natives of Germany, 24 Italians, 19 Russians, 19 Austrians, and 22 Swedes and Norwegians. The Illinois State reformatory during the year ending September 30, 1896, contained 694 inmates, of whom 8 were natives of Great Britain (4 Ireland, 4 England), 30 of Germany, 8 of Sweden and Norway, 10 of Italy, 1 of Austria, 2 of Russia, and 7 of Poland (so called); Southern Illinois penitentiary at Chester, out of 869 there were 37 from Ireland, 15 from Germany, 2 from Italy, no Hungarians, and no Poles.

Pennsylvania, another one of the States which receives a large percentage of foreign immigration from Austria and Italy, has but incomplete prison statistics; but an examination of the official reports shows that of 947 inmates of penitentiaries in 1896, 47 were natives of Great Britain (25 from Ireland, 22 from England), and 42 natives of Germany. The other foreign-born inmates are bunched together, and the reports show 61 natives of all other foreign countries as against 89 natives

of Great Britain and Germany. The commitments to county jails and work-houses in Pennsylvania show 538 natives of Great Britain and Germany as against 485 natives of all other foreign countries not specified. The statistics of outdoor relief in Pennsylvania show 1,000 natives of Germany, 3,134 natives of Great Britain (2,101 Ireland, 930 England, 103 Scotland), as against 835 natives of all other foreign countries not specified.

The official reports of the *New Jersey* State prison show of 1,131 inmates, during the year 1897, 80 were natives of Great Britain (44 of England, 9 Scotland, 27 Ireland), 61 natives of Germany, 45 Italians, 7 Austrians, 10 Russians, and 2 Poles. The Essex County penitentiary in 1897 contained 839 inmates, of whom 135 were natives of Great Britain (35 England, 6 Scotland, 94 Ireland), 79 were Germans, 35 Italians, 9 Russians, 10 Austrians, and 4 Poles. The Hudson County penitentiary showed 815 inmates in 1897, of whom 153 were natives of Great Britain (23 of England, 11 Scotland, 119 Ireland), 101 Germans, 40 Italians, 11 Russians, 9 Austrians, and 8 Poles.

The State of *Connecticut* (like the former one of those States in which the proportion of Italian and Slavonic immigration is comparatively large) shows in its prison reports for 1897 of a total number of 444 confined in the Connecticut State prison, 40 were natives of Great Britain (10 of England, 30 of Ireland), 18 Germans, 32 Italians, 4 Poles, 8 Russians, and 2 Austrians. The total commitments to the Connecticut School for Boys at Meriden, Conn., during the year 1896-97 were 160. Of this number 42 were Irish, 15 Germans, 5 Italians, 8 Russians, and 2 Austrians. The Connecticut Industrial School for Girls at Middletown, Conn., showed the number of inmates committed in 1896 to be 1,257, of which 277 were Irish, 55 Germans, 8 Italians, 1 Hungarian, and 1 Russian-Pole.

Taking the State of *Ohio*, we find on examination of the official reports that the total number confined in the Ohio penitentiary in 1897 was 2,435. Of this number 49 were natives of Great Britain (23 of England, 7 of Scotland, 19 of Ireland), 68 of Germany, 7 of Italy, 14 of Austria, 8 of Russia, and 1 of Poland (so called). Of a total of 350 commitments to the Ohio State reformatory in the same year 13 were natives of Great Britain (7 of England, 1 of Scotland, 5 of Ireland), 3 of Germany, 1 of Austria, 1 of Russia, and 3 of Poland (so called).

The State of *Indiana* shows the following comparative nationalities among its prisoners: The Indiana State prison (north) in 1896 contained 842 inmates, of whom 10 were from Great Britain (4 from England, 6 from Ireland), 26 from Germany, 2 from Hungary, and 2 from Italy. The Indiana State prison (south) contained 817 inmates in 1896, of whom 5 were natives of Great Britain (4 from England and 1 from Ireland), 11 natives of Germany, and 2 of Italy.

The State of *Missouri* shows the following figures: The State penitentiary in 1896 contained 1,923 persons, of whom 44 were natives of Great Britain (20 from England, 2 from Scotland, 22 from Ireland), 54 natives of Germany, 4 of Austria, 3 of Russia, and 3 of Italy.

The *Wisconsin* State prison in 1896 contained 318 inmates, of whom 17 were natives of Great Britain (6 of England, 2 of Scotland, and 9 of Ireland), 28 natives of Germany, 1 of Austria, 15 of Sweden and Norway, 1 of Italy, 2 of Russia, and 1 of Poland (so called).

The State penitentiary of *Minnesota* in 1895 contained 410 inmates, of whom 27 were born in Great Britain (12 in England, 15 in Ireland), 35 in Germany, and 7 in Russia.

The State of *Michigan* does not appear to publish any prison statistics. The only report that is accessible is that of the Detroit house of correction, which contained 2,143 inmates in 1897. Of this number 201 were natives of Great Britain (63 of England, 27 of Scotland, 111 of Ireland), 192 were natives of Germany, 6 of Italy, 4 of Austria, 28 of Poland (so called), and 2 of Russia.

APPENDIX B.

STATISTICS ABOUT IMMIGRATION AND WAGES.

The bulletin of the Department of Labor in Washington, No. 18, September, 1898, in its first article, entitled "Wages in the United States and Europe, 1870 to 1898," quotes the average daily wages in 12 of the largest cities in the United States in the years 1870 to 1898. For purposes of comparison we take the average wages in each occupation in the years 1870 and 1898 in these 12 cities.

176 HEARINGS BEFORE THE INDUSTRIAL COMMISSION.

TABLE I.

Occupations.	1870.	1898.	Occupations	1870.	1898.
Blacksmiths	\$2 43	\$2 43½	Iron molders' helpers	\$1 53	\$1 58½
Blacksmiths' helpers	1 40½	1 52½	Joiners	2 25½	2 47
Boiler makers	2 35½	2 56½	Laborers, street	1 46½	1 65½
Boiler-makers' helpers	1 41	1 53½	Laborers, other	1 39½	1 45
Bricklayers	3 15½	3 51½	Machinists	2 30½	2 41
Cabinetmakers	2 14	2 29½	Machinists' helpers	1 34	1 35½
Carpenters	2 36½	2 52½	Masons, stone	2 80½	3 20½
Compositors	2 52½	2 81½	Painters, house	2 22½	2 60
Conductors, railroad	3 43	4 03½	Patternmakers, iron works	2 70	2 90
Engineers, railroad	3 22½	4 42½	Plumbers	2 74½	3 15½
Firemen, railroad	1 75	2 20	Stonemasons	3 07	3 23
Hodcarriers	1 75½	2 00½	Teamsters	1 58½	1 88½
Iron molders	2 60½	2 60½			

In order correctly to estimate the actual advance that wages have made in this country since 1870 the prices of commodities and the purchasing power of money must be taken into account. For this purpose the Twenty-eighth Annual Report of the Massachusetts Bureau of Statistics of Labor, published in March, 1898, may be consulted. This report contains a table showing the average retail price of commodities during certain years between 1860 and 1897 in Massachusetts. We select the year 1872, and compare the average retail prices, expressed in the gold standard, for that year with the year 1897.

TABLE II.—Average retail prices for the years 1872 and 1897.

Article.	1872.	1897.	Increase (+) and decrease (-) in 1897, as compared with 1872.

In order correctly to estimate the actual advance that wages have made in this country since 1870 the prices of commodities and the purchasing power of money must be taken into account. For this purpose the Twenty-eighth Annual Report of the Massachusetts Bureau of Statistics of Labor, published in March, 1898, may be consulted. This report contains a table showing the average retail price of commodities during certain years between 1860 and 1897 in Massachusetts. We select the year 1872, and compare the average retail prices, expressed in the gold standard, for that year with the year 1897.

TABLE II.—Average retail prices for the years 1872 and 1897.

Article.	1872.	1897.	Increase (+) and decrease (-) in 1897, as compared with 1872.

Q. (By Mr. FARQUHAR.) In your statement just read to the commission, you have, in several places and in several particulars, somewhat severely criticised the inaccuracy of immigration statistics. Now, could you state to the commission particularly some of the faults that you have discovered as to the executive office at Ellis Island, and could you suggest any remedy outside of the registry system that we have there now?—A. I assumed charge of Ellis Island on the 1st of April, 1893, just during the time when, in view of the new law about to take effect, there was an immense immigration brought into our country. We had a record of not less than 72,000 in 1 single month, in April and May, 1893. I had an opportunity during this time of acting under the old law and I had an opportunity to watch the system as it had been enforced before. I made a study of it for the purpose of deciding about the changes which I regarded as necessary, and I found, especially in looking up the old records which were all kept on Ellis Island, that while the few registry clerks in the office were supposed under the old law to take a statement from the immigrants about their nationality, destination, and ages, that, as a matter of fact, whole pages did not contain any reply to any of these points. They were nothing more than an index of names of people arriving at the port. It was, as a matter of fact, physically impossible for those people—the port officers—to do more. There were but a few of them, who had to register sometimes 4,000 or 5,000 in a day. Now, under no circumstances could it be expected from them that they could examine the immigrants as to all these specific points, and put them down, and then expect that when through with the day's work they would make up the statistics. I saw immediately the importance of condensation of such a system. I asked the officials, "How do you get these figures which we now have in our reports?" They freely admitted that, in most cases, it was merely guesswork on their part; even the count could not be accurate and complete. Now, this was especially the case under the old Castle Garden administration. As long as the State authorities and, you may practically say, the municipal machine had control of immigration, where immigration was especially large and where the employees were few—at least, where the employees who worked were few, while more may have drawn salaries—it is a matter of impossibility to rely in any way on these old statistics; and I speak from my personal observation and examination of the officers who had it in charge.

Q. What do you say as to the statistics taken since 1893?—A. They are vastly improved.

Q. Would you suggest any improvement to the present way of taking statistics?—A. I would suggest one remedy, which I believe would facilitate proper examination as well as statistics. The immigrant is supposed to answer a number of questions submitted to him by the ticket agent. I can not see any reason why these replies should not be taken in writing, together with the interrogatories. As a matter of fact, when the law of 1893 was introduced, the steamship companies originally started out that way and submitted to me these answers to interrogatories, and I found them immensely beneficial for everything. These interrogatories should be signed by the immigrant himself, and if he can not sign his name it would at least establish the fact finally as to his illiteracy from the very start. Such interrogatories should be turned over to the statistical bureau. They certainly could collect reliable total figures. That would change the whole system at once.

Q. Would not that in a great measure relieve the inspectors and also your special-inquiry bureaus there?—A. It would.

Q. Would it not simplify the matter?—A. Very much in that way. The inspector would then have before him in a much better way the answers to the different questions which the immigrants have to reply to.

Q. You say the law of 1893, to your mind, is sufficiently restrictive without any additional legislation?—A. That is my conviction, and I believe that the immigration since last year proves it better than anything else. Up to last year we did not know how much of the decided, conspicuous falling off of immigration was due to the prevailing financial depression, and how much to the restrictions of the law. We hesitated about expressing an opinion about it, and the annual report of the superintendent was rather hesitating in that direction. But the experience of the last year, a year of undoubted, almost unequalled, prosperity, proves that there is but one explanation of the decided decrease in immigration, and that is the restrictive power of the law, and it is natural. If you, especially the gentlemen of the subcommission, who have seen it themselves working on Ellis Island—if you bear in mind how much trouble an immigrant now has before he gets his ticket at the port, and how much trouble he is subjected to after he lands at New York, you will realize that it is but natural this should have a restrictive effect on immigration.

Q. But is it not also a fact that the steamship companies themselves, in the series of questions that they furnish their agents in Europe, furnish a shadow of what the immigrant is to meet here, and the immigrant knows how difficult immigration is made?—A. Exactly. The first examination by the ticket agent, who is held personally, officially, responsible for every deported immigrant, is the most efficient of all.

Q. Would you suggest any amendment to the 1893 act?—A. I have expressed my opinion that I am rather reluctant about suggesting any new legislation on this question, because I know too well that the whole question would again be reopened, and there is evidently a confusion prevailing on this whole question, and a very important one. As I stated, there were a number of evils, unquestionably from the form of the law, in unrestricted immigration, and I fully understand that our people, and especially the laboring classes, and mostly in times of financial depression and enforced idleness—that they in such times are sore on immigration, also for the future; though it is a matter of fact that no matter how much we would restrict immigration at present, even if we shut our doors entirely to new immigrants, this would not do a particle of good in the solving of our own problems of congestion of labor at certain points, of massing of people of the same nationalities, of the same language, in certain points, and of their influence on politics.

Q. Would it not only take a very few minutes to make the physical examination of a group of 30?—A. Certainly, the physical examination takes place before they come off.

Q. Now, then, do not the delays you speak of, of one day or two days and sometimes a week, result more from detentions on account of alien contract labor law than from any other difference that may be in the minds of the inspectors or the board of inquiry: is not that the cause that usually detains the immigrant?—A. First of all, they are detained very much longer than cabin passengers in being landed. The first immigrant leaves the ship after the last cabin passenger has left. Then his examination of baggage commences. Then he is taken over the tedious trip to the Barge Office; after being grouped in these groups of 30 they are taken down to the Barge Office, and there commences the unloading. They then pass in single file, and if there are 800 of them you can imagine how long it takes. Then again, if grouped in groups of 30 they have to pass the physical examination first. If there are only 800 passengers, for instance, to take this as an example; that will furnish 27 groups, in round figures. There are only 4 or 5 registry aisles, through which but 1 group can go at a time: say 4 groups can only be dispatched at the same time; if there are 27 it takes about 7 turns for all of them to pass. Meanwhile it is getting dark; the officials are expected to work overtime when necessary, but not too long. They adjourn until the next morning. The very best man may be in the last group. The last 10 groups are not handled until the next day, and they have to wait until the next day. These are hardships.

Q. How would the lessening of the group or the multiplication of aisles assist this inspection?—A. Very much, certainly.

Q. Well, how are the quarters there at the Barge Office now?—A. We could not do very much under any circumstances. We made the most of the Barge Office as it was.

Q. Then could your suggestion be practiced at Ellis Island, when you go there? What improvements would you make of inspection?—A. There must be at least ten aisles working at the same time, and they must all be filled by inspectors who understand the language; otherwise it takes twice the time. He gets the reply through the interpreter as it is now. What enormous difficulty is to be met with under such circumstances you can well understand—if you consider that in this group of 30 there are sometimes five or six nationalities represented, and that nevertheless the same inspector is supposed to examine these people individually as to their eligibility to land. We had many times to hunt around for interpreters to understand at all what the immigrant desired, and to put any questions to him. Of course, meanwhile, we did not delay the whole work.

Q. What is the ordinary salary paid the interpreter?—A. A thousand dollars. Cities pay \$2,000 to every court interpreter—\$2,000. The Government interpreters have \$1,000, which is not very high, and you can not expect good work from them; it is simply impossible.

Q. Has there not been at the port of New York a great improvement in the last 10 years, last 6 or 8 years, in the number and ability of interpreters?—A. No.

Q. While you were commissioner there, did you have a sufficiency of interpreters to make at least a partially intelligible examination?—A. No, I did not; and a great many nationalities I could not handle at all by Government employees—for instance, the Portuguese. I should have had a particular interpreter in the Portu-

guese language. We could not do it. All we could do was to take an employee of the ship to act as an interpreter for us. Now, that is not a proper way.

Q. Well, did you have any trouble with Asiatics in respect to language?—A. We had one or two interpreters, one especially excellent interpreter, but the difficulty again was that we had to rely entirely on him and on his statements, and sometimes there was quite a good reason to doubt some of his statements; but we had to rely on them, we were entirely helpless.

Q. They were liable to be in favor of their own countrymen in the matter?—A. Certainly.

Q. (By Senator MALLORY.) Those positions are not under civil service?—A. They are now. They are under civil service by the last order of 1896.

Q. Is it feasible to cultivate a corps of interpreters?—A. Certainly. Why have the courts proper interpreters? Because they are paid accordingly.

Q. Well, the courts very often have to call in certain interpreters to suit the language spoken. I assume that you have at your office at Ellis Island almost every language spoken on the face of the earth, in the course of a year, and I should think it is necessary to have a large corps of interpreters, or at least a corps of men who speak a very great variety of languages?—A. It could be done in this way. For the most prominent languages, permanent employees should be employed, while in extraordinary cases of languages which are rare—like, for instance, Asiatic—

Q. (By Mr. FARQUHAR.) (Interrupting.) Armenian, Turkish, and Greek?—A. Yes; a good many of those—it might be arranged that persons should work only by the day who are selected as having passed the civil-service examination, and only to be employed for that specific day. It would be no extraordinary hardship, especially on this class of immigrants, to be detained for one day and wait until an interpreter was available; but it would be for the more common languages—Slavonian, German, French, and Portuguese, if permanent interpreters should not be employed. Spanish is one of the rare languages, but of Portuguese there is a permanent immigration. We also never had interpreters for the different Slavonic dialects, which are so different that the same interpreters ought not to be employed for all.

Q. (By Senator MALLORY.) That is done now under the civil-service system, is it not?—A. That is not done as yet. A good deal of the money is spent differently, and not for the proper kind of employees, in my opinion.

Q. You think it is essential, then, so far as the statistical part of the duties of that bureau is concerned, that you should have court interpreters?—A. Not only for the statistical portion, but for the direct enforcement of the law, in order to understand whether a certain person is really desirable or not; to examine him properly; and the board of special inquiry most of all and first of all ought to have competent interpreters.

Q. (By Mr. FARQUHAR.) Interpreters as advisors?—A. Advisors or as members.

Q. In fact they ought to be members?—A. Certainly.

Q. (By Mr. CLARKE.) Why did you speak specially of the Boston immigration restriction efforts?—A. I had only to do with the Boston Immigration Restriction League during the time of my term of office, and later on.

Q. Is there any other restriction league in the country?—A. Not that I know of. That is the only restriction league.

Q. Is there no opposition to wholesale immigration anywhere in the country except in Massachusetts?—A. Oh, certainly there is; no doubt. I only mentioned those who have been most pronounced and best organized.

Q. You admit, then, that the Boston restrictionists represent in a sense large numbers of people throughout the country who entertain the same views?—A. Numbers and perhaps not. I am not quite sure about that. Congress receives quite a number of petitions from other parts just as well as from our part, I have learned from my opponents. I organized the Immigration Protective League, as I suppose is known to the commission, and we did exactly what the immigration restrictionists did: that is, sent out petitions for signature, which were submitted to Congress, when we learned the opposition was in favor of the Lodge bill. If the sentiment on one side is really representing a large number of people, it is exactly the same on the other. It would be hard to count one or the other, or even to measure them up against each other.

Q. Then your latest statement means that it is not a local question or local prejudice?—A. Oh, certainly not, and I have emphasized it before. I wish to state again that a time of commercial and financial depression, such as we had a few years ago, is liable to come again in a very pronounced and very determined way. At present there are hardly any idle hands. Our factories work many of them with 1 or 2 years' advance orders. They employ a good many people, perhaps instigated

by the demand of labor, and new arrivals may come and may be employed. Over-production will naturally set in, and some establishments which at the present time work over time, day and night, and hardly are able to fill their orders, will again shut down for a while, and a good many of the old and of the new men will again be idle, as they have been in the last five years. It would be but natural that in another turn of the same kind the first sentiment of the Americans would go against the foreigners, who have furnished, as they believe, the abundance, the surplus of supply against the demand.

A. Now, if, unfortunately, we should have a period of depression so that labor seeks work, rather work seeks labor, and there should be a large tide of immigration, would not one effect of that be to displace considerable American labor?—A. If we had another time of depression then it would be only natural that no tide of immigration would set in at that time. Depression and large immigration practically exclude each other.

Q. There has been considerable immigration even in depressed times, has there not?—A. Very little, as compared with former years; and especially very little, if immigration is sifted down to its actual character. If there are, for instance, 300,000 arriving at the port of New York, and we find in examining them, that about 50,000 had been here before, had gone abroad and returned, and that of the other 250,000, 100,000—that is the ordinary percentage—are members of the immediate families of former immigrants, then the actual immigration remaining, to be counted as immigration on the labor market, is reduced to only 150,000 a year. And then, if taken into consideration the number of such persons who leave this country even for good, the labor market will appear to suffer very little from immigration at such times.

Q. You have referred to the comparative decline in immigration recently. Do you think that is due more to the effective administration of our law, or to the law itself, than it is to the fact that there has been a revival of prosperity in Europe as well as in America, so that these people have less inducement to come here than they had before?—A. I state distinctly that the causes are many. There is no doubt that the increase of prosperity in Europe serves to offset ours to a certain degree; but aside from that our prosperity had no large attraction on the European surplus of population. It proves, in my opinion, the restrictive efficiency of the present law.

Q. At the present time is there any advertising in Europe by land-grant railroads, and by other associations in this country, to induce immigration?—A. This has been overestimated in many ways. There is advertising perpetually done. It is done in every way. It is done with our products as well as by our land-advertising companies. There is no doubt the people have been educated to take our advertisements with a large grain of allowance. They look rather more skeptically on these matters than they did 15 to 20 years ago. When first this advertising started, it had a kind of vivid and startling effect. Europe has been educated to advertising just as well as America has. The effect of American advertising in Europe is very slight at present, very small.

Q. (By Senator MALLORY.) Are there any States that have advertising agencies or bureaus in Europe now?—A. There are, certainly; Michigan, Wisconsin, and a few others. They maintain permanent colonization bureaus in Europe.

Q. Kept for furnishing information?—A. Kept for furnishing information of all kinds. Texas has certainly one, I am sure. Mr. Johnson is the general representative. I know of that personally.

Q. Do you know anything about the efficiency of those bureaus—their success in inducing immigration?—A. They certainly have some success or else they would not be maintained and continued, but their success is very small. Colonization in the States, in the United States, has been very limited. The most successful colonization to my knowledge has been carried out by the Italians in Arkansas, the Sunny Side colony. Another quite successful organization is on the way in Georgia. Now, I shall never believe, no matter how often I hear it, that the American land is given away and being settled. It may be possessed, it may be owned, but is certainly not cultivated as yet, and there is ample room, in my thorough conviction, for a great deal of new settlement; and certainly our roads of the West and South, our railroads, would have prospered, at least four or five years ago, at the time of the depression, if we had had anything of immigration. In fact, beyond doubt, in addition to the poor crops, it was the decrease in immigration which drove a good many of those roads, like the Pacific roads, especially the Northern Pacific, into the receivers' hands.

Q. (By Mr. CLARKE.) Have you ever studied the history of immigration from New England to Ohio and other parts of the West?—A. Yes.

Q. Which began only a year ago or more?—A. Yes.

Q. Is it your understanding that the people left Massachusetts, Connecticut, and Rhode Island at that time because they believed in the overpopulation of those States?—A. No.

Q. To seek new and larger fields?—A. Not the overpopulation of their own States, but their enterprise for seeking larger fields.

Q. Does that motive actuate the immigration from Europe largely?—A. Great many; largely, largely. Those people who come for settlement in this country have a desire and feel the ability in themselves to expand, to look out for larger and better fields for their activity than they can find at home. We get some of the very best settlers from Russia, and there is room enough there, as you well know. There are large tracts almost equal to our own, but nevertheless they come here and bring their good money here, and are most excellent settlers, because they feel the possibilities are greater in the United States in the free air and the civilization of America.

Q. Are republican principles one of the inducements to this immigration?—A. Not very much. It is among Russian Mennonites to a large extent; they are sick and tired of Czarism.

Q. As a rule, then, if I understand you, it is not so much the difference in the form of government and a desire to participate in the government that induces these people to come here, as it is their belief that here is a better opportunity for prosperity?—A. Directly an opportunity for prosperity, and more particularly for liberty.

Q. Have you watched them pretty carefully after they have landed, and seen what their condition has been generally where they have gone?—A. We can not follow them; that is a matter of impossibility. The only thing we could watch—we had attempted to watch—was in our immediate neighborhood in the lower part of New York, the settlement of those unfortunate Russian Jew refugees.

Q. Your reference to the Polish quarter in Buffalo led me to think that you had followed them to some extent.—A. My reference to the Polish quarters is based on the statement of the gentleman whom I quoted.

Q. That statement shows that they were studying our institutions and learning our method of voting, etc. Do you understand that they become active participants in our politics wherever they go?—A. I do understand so, and I had some experience of it myself in the West during the two years that I lived there in Milwaukee, where there is also a Polish settlement.

Q. Do you think that their colonization is an evil?—A. To a certain extent, but a necessary and unavoidable one. Those people are naturally first drawn to such surroundings as are more congenial to them, and where they can make themselves understood. By and by they flock off from there; they do not stick together very long, the second generation especially; they flock off; they are not to be held.

Q. You think, then, it is only a temporary evil?—A. It is always only temporary and unavoidable.

Q. Is there an equal tendency among the different classes of immigrants—that is, those from different countries—to become Americanized?—A. My personal experience in many directions has convinced me that the desire to be Americanized is intense among the foreign-born population, and absolutely boundless in their church. Many an old immigrant I have found to be rather sore on the Americanizing power of this country. He would like to preserve, for instance, his old German language in his house. He can not do it. His children will all speak English, not only among themselves but also to him and to the mother. Our German newspapers feel it very strongly, that the second generation is drifting away from them rapidly; and the same is true of Italians, of Frenchmen, of Scandinavians.

Q. You have expressed the opinion that the proper place to make an application of an educational test is at the naturalization office?—A. I am distinctly, decidedly in favor of that, and by any even more difficult test than that proposed in the Lodge bill.

Q. Are you familiar with the registration and voting laws of the several States?—A. I know we have States where a residence of about 6 months is sufficient to enable you to cast your vote. I myself cast a vote for president after having been 4 years in this country.

Q. Are you aware that there are 15 States in the United States in which aliens are allowed to vote after declaring their intention to become citizens, and in many of those States on 1 year's residence?—A. Only 6 months' residence—oh, yes, I am fully aware of that; and I am also aware of the necessity, fully conscious of the necessity, of reform in this direction.

Q. What would you say to the idea that qualifications for voting should be regulated by a national law, the same as naturalization is?—A. If it is a constitutional possibility?

Q. Yes; certainly.—A. I believe that is the weak point in it. I would be certainly in favor of it; most decidedly.

Q. You think, in view of the cosmopolitan character of our population, that such a change as that would be beneficial?—A. I do not wish a cosmopolitan character of our population to be continued. I wish the character of our population to be American, distinctly American; but I do not object to people becoming Americans.

Q. (By Mr. KENNEDY.) You submitted a statement which seemed to show that this immigration was not detrimental to organized labor. I want to ask you if you know that the representatives of organized labor who came before this commission have almost without exception been in favor of further restriction of immigration?—A. I am fully aware of that, and I had plenty of opportunities during my official term to confer with members and leaders of organized labor on that subject. I find that they are sadly misinformed on that subject. I have tried my very best to make them understand that all the evils they complain of date back in their origin to a time prior to 1833. I tried my very best to make them understand that any new immigration laws would not be able to change, for instance, the condition in Pennsylvania, in the mining districts. If you read the testimony of Commissioner-General Powderly before you, you will find that the conditions of the mining district of Pennsylvania originated from the large immigration in 1881. You can not change that now by any new law. The Americans have been driven from the mining occupation there, but you can not remedy that condition now by any change in the law; that is a settled fact. The same is true of the clothing interests, of the interests in the shoe manufacturing. You can not change it now. This has been changed, and we have to accept these facts as they are at present. I believe that this commission should find out what is to be done in the future, if possible to find out remedies against the existing economic evils. In the same way, I have endeavored my very best to convince labor leaders of the fact that there is a positive restriction at the present time in force, and that any change in the law would not benefit them, especially such a change as the Lodge bill intends. The immigrants they are mostly afraid of would not be excluded by an illiteracy law.

The statement was also made here that any decrease in the wages of unskilled labor brings about in the course of time a natural decrease in the wages of skilled labor. This is a statement which sounds very well, but is not true. We have not to take our experience from exceptional conditions of any kind, as, for instance, Henry George, to whom I alluded, took the experience of California, where there was a scarcity of supply of labor, and therefore immensely high wages. Mr. Henry George complained that in the course of time the more labor that came there—I mean the more immigrants that arrived there—the wages would naturally decrease; but, on the other hand, the purchasing power of these same wages increased, even of the lower wages. Now I wish to remind you of what I said about wages for skilled labor, and refer you to the table which I submitted here, taken from the Bulletin of the Department of Labor at Washington, No. 18, September, 1898.

The table shows that in some special trades a decrease in wages took place, and that influenced the leaders; but as a matter of fact wages not only have increased in the average since 1870, but, as is proven by the other tables, the purchasing power of the same wages has increased.

Q. You are aware, I presume, that very many of the labor leaders of this country are of foreign birth, or the sons of foreigners, and if organized labor is sadly misinformed, as you state, it is largely due to these representatives who are of foreign birth. You know, I presume, that Mr. Gompers, president of the American Federation of Labor, is for further restriction?—A. I know very well. I mentioned him in my statement.

Q. It is remarkable that those who are of foreign birth, or the sons of foreigners, who have been before this commission—and I think perhaps a few of them are such—are emphatically in favor of restriction.—A. I fully understand this, and for that reason I took the pains to work out these facts, especially in reference to immigration.

Q. (By Mr. A. L. HARRIS.) Is this country sufficiently protected by this law, even when ordinarily executed, to save it from the expense of taking care of pauper immigrants?—A. I believe so, as a whole; by all means. We took considerable pains during the term of my office to ascertain whether any foreigners were public charges. There have been a good many, but all from former immigration. A person may change his name in the institution, and therefore it would not be found out whether or not he was a recent immigrant; but this happens only in isolated cases, and has no bearing on the answer in general, which I can give in a

most decided way, that I believe our country to be sufficiently protected by the present laws, even as they are enforced.

Q. Those exceptions you speak of are liable to occur?—A. Oh, certainly; everywhere. There is no doubt that undesirable immigrants land, just as there is no doubt that a great deal of merchandise is smuggled; but at the same time we maintain a customs service to prevent a wholesale smuggling, and we maintain an immigration service for preventing this same effect in the question of wholesale undesirable immigration, and successfully.

Q. (By Mr. PHILLIPS.) Do you believe we are sufficiently protected in regard to the criminal class that comes to this country, as well as to the pauper class?—A. No doubt; positively. Of course we can not prevent exceptions. There may be fugitives of law that we are not aware of. There is no doubt of it. But as a rule the present laws and regulations are strong enough. I beg to refer especially to the former notions about the deportation of that undesirable immigration—ticket-of-leave men who are brought to this country. This has been a practice in the past, but the laws of 1893 cut it short absolutely, simply by shifting the financial responsibility and moral responsibility on the steamship companies.

Q. (By S. nator MALLORY.) I understand you to say that the conditions existing in the coal regions of Pennsylvania and some other special districts are the results of legislation many years ago, or rather lack of legislation anterior to 1893; and that they can not be reached, those evils, by any legislation now; that we have got to simply take these things as they stand. I do not know myself what those conditions are exactly, but I understand that the character of the immigrant, the character of the labor that is employed there, is of a lower order than that usually brought into this country. Now, is it not a fact that most immigrants, you may say as a general rule all immigrants, coming to this country are followed by the next generation, who are assimilated very readily into the American people? I believe you stated about that.—A. Yes.

Q. Why is it these people who came here anterior to 1893 and went to certain districts of Pennsylvania, the coal regions, and those Jews in New York—why is it they are an exception to the general rule, which seems to be almost universal, that after the first generation they almost become unrecognizable as foreign-born people?—A. I beg to state that as far as the Jews in New York are concerned, or in any large city, they are no exception; they are rapidly assimilating and rapidly Americanizing; more rapidly, perhaps, than the majority of a lot other immigrants. As far as the Hungarian colonies in Pennsylvania are concerned, I beg to risk the statement that they could be Americanized very much quicker if they were not treated as a kind of an outcast; if they were not left alone, and if people would not look down on them, and practically despise them; if they were taken in hand the same as the large cities like New York take them in hand, because there people can not help but come in contact with them. Then these Pennsylvania settlers would also assimilate just as quickly as their own brothers and sisters in any other section. They are left alone too much, in my opinion, and they are left to live among themselves, exclusively among themselves, a good many of them; and especially their children would like very much to go out and mingle among the Americans, but they have no opportunity.

Q. Well, is that due to their segregating themselves from the rest of the community, or is it largely due to the dislike or distaste for them and for their association?—A. That is what I believe—the latter part.

Q. Is not that exceptional?—A. It is exceptional.

Q. And is not that about the only instance—these Pennsylvania Hun miners—of immigrants who come to this country and stay here and raise their families here, but do not assimilate with the American people? Are they not about the only exception?—A. They are about the only exception, and the Syrians, some portion of the Syrians. But even those in Pennsylvania, whom you call Hun miners, will not resist the Americans very long. It is simply impossible; it is too strong an assimilating factor.

Q. (By Mr. CLARKE.) You explained the desirability of some method being entered upon to cause a better distribution of the Americans in different parts of the country. I think the suggestion very wide, and I would like to have you elaborate the point a little and suggest, if you have convictions on the subject, what method would be most effectual to that end?—A. I suggested to the Immigration Investigating Commission a plan which the two other gentlemen, Mr. Stump and Mr. McSweeney indorsed, and that is to erect on Ellis Island, in close connection with the landing place, a large permanent exhibition hall, where different States may have their permanent bureaus, their permanent representatives; where different railroads may have their permanent exhibitions. I had even drafted the plans for such a building, into which only landed immigrants should

be admitted before being sent to New York or to their railroad depot. If they had an opportunity there, guided by intelligent Americans able to talk to them and make themselves understood, to learn about the condition of labor in the different sections of the United States; to know whether their own trade, for instance, is overstocked in one direction, and looked after in another; if they could find out exactly by maps and an exhibition of local products what they could look for in any section of the United States, and under what plans they could acquire land there, and so on; and if all people admitted to this institution, which would be under Government control, had to pass a rigid examination by a Government official as to their honesty and reliability, so that only responsible persons would be introduced into such an exhibition hall to give information at all; if the knowledge of all this could be spread abroad officially through the countries, imparted to all steamship agents abroad, then I believe the immigrant could easily be taught to look out for his own betterment, for the proper place to go to, and for the proper occupation to look for. As it is at present, I found, by personal observation, that unless a person goes directly to his family he does not know, in one case out of a hundred, what he is going to do in the United States when arriving. He is a carpenter, he is a plumber, he is a common laborer, he is a bookkeeper, but he has no idea what he will do in the United States. It is actually pitiable how little they know when they arrive. If such persons could receive reliable information, and especially if landed would-be settlers could know from the very start that when coming to, say, New York, or to Boston, where a branch of this institution may be established, or to the port of Philadelphia or Baltimore, that they could then and there find proper and reliable information about their future, they would fall back on it, and they could be properly guided. The State bureaus of labor would have to furnish their information to the central office at Washington at the same time; I mean the Bureau of Immigration in Washington would have to supply all information. And I believe that if properly worked such an institution would very soon become actually what it proposes to be, a land and labor clearing house.

Q. (By Mr. KENNEDY.) Can the State of Pennsylvania furnish public-school facilities for the Hun population to which you referred a short while back?—A. I do not think they are sufficient.

Q. You do not think they are sufficient?—A. And I am afraid that there are too many truants; I mean too many who do not make use of it.

Q. Do the Huns keep their children out of these schools?—A. They do not do it unless they have opportunity to do it; unless they are permitted to do it.

Q. Then you think the only way to get the truants in these schools would be by compulsory education?—A. By compulsory education.

Q. Then it seems that the Huns are resisting this Americanizing influence you speak about?—A. Pardon me; the word "Huns" I should like to have eliminated from this whole discussion, because they are neither Huns nor anything near them at all, neither by race nor in any other way. They are mostly of a Slavonic race, a race similar to that of the Poles, but somewhat inferior. They did not have the advantages which the Poles had, of an empire of their own, of some splendor and achievements through several centuries, which made the Poles after all a partly civilized nation; but they are akin to the Poles, only a little more neglected in the country of my birth, in Austria, which, as you know, suffered immensely up to about 1860 under misrule and mismanagement in every direction. These Polacks or Croats, neither of the two, are by no means Huns, even in the sense of their brutality; not at all. They are very tractable, peaceful people if let alone and not maltreated. There is a great deal of prejudice against them, which is usually brought about by wrong information from the start. They do not resist our civilization; they have no opportunity; they do not know it. Most of them were imported as far back as about 1881, from 1881 to 1885, and I really believe that most all of them were imported under contract at that time, and, in fact, their importation induced, more than anything else, the establishment of the law of 1885, the first contract-labor law. They do not resist American civilization; they do not understand it yet.

Q. I take it that you would concede that the most Americanizing of all influences is the public school?—A. No doubt.

Q. Upon population like that?—A. Yes.

Q. And you think that if there were public schools there and they did not use them, it was because they were not compelled to use them?—A. They were not compelled. They are used to being compelled in their own old home, in Austria. There are laws there for compulsory education which have been in force for more than fifty years, but at the same time they are not enforced there. People evade the law, and they are used to it. Now, here, if they could be forced to attend the public schools, the process of assimilation would be very much accelerated.

If I may be permitted, I wish to call the commission's attention to a matter in close connection with the immigration statistics, which is, in my opinion, immensely misleading—the frequent changes in the classification of immigrants made by the United States officials. For instance, an important change took place last year, as I believe your subcommission found out. A commission was appointed which decided, approved by the secretary and by the Commissioner-General, to classify immigrants from now on according to races. Formerly they used to be classified, at least professedly, by nationalities. This was never done correctly, but at least a certain basis for calculation was given which, if not accurate to the figures, was at least accurate in its general proportions. Now, last year a change was effected by establishing races. The consequence is that we find statements, as I have them here before me, of only one Swiss arrival. That is from the New York Times of July 24, which says, speaking of the last official statistics, “Only one Swiss was reported as arriving last year. There used to be about eight thousand every year”; which is easily explained. Formerly they spoke of the Swiss as a nationality, coming from Switzerland. Now, they start to establish a race basis. There is no Swiss race. Only one person was fool enough to state his race as Swiss, and only one inspector was fool enough to put him down as such. There did not arrive less people from Switzerland than before, not very many; but simply a change in the classification was carried out, which has to be understood also by the commission in order to enable it to make proper comparisons. I find “there were less than 1,000 Hungarians, which is a tremendous falling off from the average of 30,000 a year, which formerly arrived.” Hungarians are no race. There is a race, Magyars. Hungary is an empire, part of the Austrian-Hungarian Empire. Under the new classification we shall find probably 15,000 Slavs and 20,000 Croats, all coming from the Empire of Hungary. That means that immigration has not decreased, but we have changed our point of view; and if now somebody is ignorant of this change and makes comparisons, as this editor of a respectable paper has done, he is not only entirely misled, but he is apt to mislead all his readers. I believe that while a certain improvement is effected by an investigation into the race quality of an immigrant it ought to have been combined with a continuation of the old statistics: the old statistics ought not to have been abandoned; new statistics ought to have been introduced only for supplementary scientific work. As to the practical value of the new statistics, they are only misleading, especially misleading in the way they are made up. They contain quite a number of ethnological errors.

Q. Have you any present official connection with the immigration of our country?—A. Not at all. I was a member of the Immigration Investigating Commission, but this commission, I do not know for what reason, simply expired with my leaving my office. We have never been officially removed or discharged.

Q. Are you an officer of an organization which exists for the purpose of combating the work of the Immigration Restriction League of Boston?—A. Yes.

Q. What is your office?—A. I am secretary of the Immigration Protective League. Of course that is an unsalaried position. I am publisher of a trade paper, and of books. That is my business.

Q. (By Mr. PHILLIPS.) What is the chief object of this league to which you belong?—A. The object is (reading from constitution of league) “To oppose any further restriction on immigration to the United States, and to protect and advance the interests of persons immigrating to this country.”

Q. (By Mr. FARQUHAR.) Have you a copy of the circular there?—A. Yes; I submit the constitution, and will leave it with the commission.

WASHINGTON, D. C., January 11, 1900.

TESTIMONY OF MR. JULES ROSENDALE,

Special agent of the department of agriculture of the State of Pennsylvania.

The commission met at 10.55 a. m., Vice-Chairman Gardner presiding. At that time Mr. Jules Rosendale, of Philadelphia, Pa., special agent of the department of agriculture of the State of Pennsylvania, was introduced as a witness and, being duly affirmed, testified as follows, the Topical Plan of Inquiry on Immigration being followed:

Q. (By Mr. FARQUHAR.) Please give your name, address, and business.—A. Jules Rosendale; 1413 Jefferson street, Philadelphia, Pa.; occupation, agent for the dairy and food commissioner of the State of Pennsylvania.

Q. How long have you been a resident of the United States?—A. Forty-four years, some time during this year.

Q. What opportunities of observation have you had to enable you to give testimony before this commission on immigration matters?—A. In 1894, during the dull times and the panic, by assisting the factory inspectors, not officially, I admit, but simply for courtesy, in regard to the sweatshops and the overcrowded condition in the tenement houses, sweatshops, among the Polish Jews and Italians and Hungarians in the city of Philadelphia, in one word, the foreign element. That was my first observation—in 1894. The next opportunity I had of studying the condition of the foreign element or the working classes was in 1897, when the Pennsylvania legislature appointed two committees to inquire into the condition of the bituminous and the anthracite coal miners. I was then acquainted with Senator Saylor and went with him to the anthracite region to study the condition of the miners at that time. The first opportunity related only to the clothing trade and tailors; the second to the miners only. The third opportunity was after I was appointed one of the agents of the dairy and food commissioner. Professor Hamilton and Mr. Welch, the dairy and food commissioner, both requested me to take up the slum districts in Philadelphia, because they said they could not get any satisfactory report, and that a majority of those who were inspectors could not talk their language; so I told them I would oblige them. I can assure you that it was not a very pleasant job, but I got a great deal of information because I had their jargon, their language. I had no difficulty whatever to get along with the Russian Jews, but sometimes when I could not get along with the others I tried to get an interpreter. I had a little bit more difficulty with probably the Italian, because, speaking the French language fluently, he could not understand some. I found that they had a certain jargon like the Jews' jargon that I could not get along with. I took two students from the University of Pennsylvania, both interested in social science, and we found out a great deal, because they could get along and assist me in my work. Those were about the opportunities that I had in observing the conditions, first, of the miners, and next of the foreign element, including nearly every occupation in the slum districts in Philadelphia.

Q. You may state your observations in respect to the labor in the anthracite coal fields first, and state it in your own way.—A. I think I omitted to bring you the Pennsylvania legislature's report of the conditions in the bituminous region. None was issued as to the anthracite region; that is, one was made by the legislature, but not printed. It was late in the session, Mr. Saylor told me, and I think on account of the appropriation and one thing and another it was not printed. But I had the report of the bituminous. Shortly after I came back from the war of 1861, after 1865, in 1867, 1868, and 1869, I think I was up in the mining region, and found there that most of the miners were Welsh, Irish, Americans, Germans, and Scandinavians. I was then employed there as a mining engineer for 15 or 18 years, but finding mining engineering was not to my taste I left. But I had an opportunity in the beginning of 1870 to study the conditions there, so I was able to compare them with those of 1897, when I was up there with Senator Saylor. I found most of the miners there foreigners: the original report is, 60 per cent foreigners. I think I would make it even higher. Of course, I did not take any statistics. They took statistics and made it 60 per cent foreigners; and Hungarians and Italians I found in the majority. They generally use the word for Hungarians, Huns, and the Italians, Hides; those are the nicknames they gave them. I found out there were fights and quarrels between them very frequently; living in dilapidated shanties and frame houses, huddling together just like cattle. I found in one house, in one shanty, 20 Hungarians, and they hired one woman to do the cooking for them. I made no inquiry in anything else, but that was the actual state of affairs that I found.

Q. Can you mention the county or city where this occurred?—A. That was near Shickshinny, near Wilkesbarre, in the anthracite coal region. I even found children, boys and girls, occupying the same room with the parents. The average earnings that I found—I am speaking now of 1897, and I am confirmed in my view; the report of the legislature I have not copied because I went into that same county—the amount was from \$4 to \$5 a week per adult; \$1.50 and sometimes \$2.50 for boys and girls. They have to purchase at company stores at prices from 20 to 25 per cent higher than in Shickshinny. I tried to find out the religious and ethical mode of living of the people who were there in Shickshinny; and in the neighborhood I found 5 Roman Catholic churches presided over by either Italian or Polish priests; 1 Greek Catholic church; 2 Polish Jewish synagogues; 1 Methodist meetinghouse, and another meetinghouse divided in time between the Presbyterians and the Episcopalians. I had an interview with 50 of them on the subject of citizenship; 2 had applied for citizenship and 4 were

naturalized. The Polish Jews I found there were originally not so many of them miners; they were mostly traders and peddlers. I think the first Italians which were brought over to this country were brought over by the wife of a coal man in Wilkesbarre. She was traveling in Italy.

Q. At what year?—A. I think, as far as I can trace it back, in 1884; I would not say positively. She took pity on the condition of the poor workmen and sent them over here at her own expense. No doubt her intentions were very good, but it created a very bad state of affairs in the mining region, because they were followed afterwards by the Hungarians and by the Italians.

Q. Do you regard the bringing of these Italians at that time by this lady as a pure act of philanthropy, or was there some business arrangement in her relations with the miners?—A. No; I am not one of the radicals who think that that woman did that to get cheaper labor. I think it was a pure act of philanthropy on her part. As far as I could find out, she is a very estimable woman, and bears a very good reputation, and I do not think for one moment that she had any intention to bring those miners over to compete with American labor, to lower wages. I found out at that time—I can not say about the present condition—but at that time, in 1897, if mines were worked to their full capacity they could not give employment to all the miners for more than 6 months, which clearly proved to me that the supply of labor in the mining region is double the demand. I had another opportunity of studying their condition, or rather to find out something that brought out—that a large number of them were brought here, enticed, not like by that lady, whom I referred to, but by circulars that were thrown in their houses, and so on, and I could not get to the bottom of it, but I think that the steamboat agents who have their agents in those little villages wherever they are, have men who have enticed them to come over here as miners. I found probably out of 80 or 90—well, I would ask one, for instance, "What made you come over to this country? You are suffering now, and you tell me you can not make a living, and you would be glad if you could go back." "Well," he says, "we were enticed by circulars thrown into our huts and into our villages by steamboat agents." That is what I found out those circulars contained. I had several of them, and I lent them to some friend of mine and he never returned them to me. Those circulars stated that a miner could earn from \$2.50 to \$3.50 per day in the coal regions, which is virtually for those people out there a fabulous sum. I found out—I am speaking of 1897, when there was stagnation in the coal trade and the people were suffering; I am not speaking of the present time—they were actually so dissatisfied and so disgusted with their condition that they would be glad to return to their own countries. That is about, in brief, what I found out among the miners in the anthracite region of the State of Pennsylvania. Here is another statistic I have. Out of 50 whom I interviewed 8 could read and write English, 20 their own language, while 22 were illiterate. I also found that very few of their children attended the public schools. They were working mostly as helpers, pickers, etc., in the mines. I found virtually a great many women as helpers, doing work in the coal mines; and they left their infant children, sometimes 2 months, sometimes 12 months old—I could not always judge—under the shade of a tree while they were working in the mines. I have here a comparison which I made with the conditions when I was there and studied them before, in 1884. In 1884 I found another, an entirely different class of people; I found towns, and contentment among that same class of people. I found them inhabiting clean dwellings; probably a little fighting and a little rioting once in a while, but, as a rule, contented; and it impressed me as very deplorable that in from 10 to 12 years in our State we had come to the state of affairs existing in the coal-mining region, and no doubt, by that means, to a lower standard of morality in this country, owing to that class of people.

Q. What became of these foreigners, the Irish and Welsh and others, that had been in these mines before the Italians and Hungarians came in?—A. I tried to learn that, and in Pottsville and other places old acquaintances that I knew before the war in different regions told me that a large number of those Welsh and Irish miners could not stand it, and had emigrated; a great many of them went to the West and tried to find employment in other mines where the influx of the foreign element was not so strong at that time. When I was up there the strongest elements were the Hungarians and the Italians. Being so close to the landing place at Philadelphia and New York or Boston, all came to the anthracite or to the bituminous regions, and the majority of the miners who had been there, the Irish and the Welsh and a great many Scandinavians, had emigrated farther west and looked for employment in some place where their conditions were slightly better. That was the answer I got. Of course, I could only go by hearsay, what they told me.

Q. Was the displacement of these other miners caused by the lowering of wages, or what?—A. By the lowering of wages and the conditions under which those people can exist, and under which no American or any respectable foreigner can exist. I am speaking of the American and foreign workers together who try to live under favorable conditions. I tried to find out the cost, but I do not like to give the figures, because they were very unsatisfactory to me. I tried to find that out with respect to these Hungarians, who live 20 in one shanty and hire one woman to do the cooking and all; and they can exist for one-half the wages which the others can. I find the same conditions in Philadelphia.

Q. Did you ever have the opportunity to examine into the prices of coal, to learn whether there were economic causes why the wages of workmen should be driven down to this Hun and Italian standard?—A. Yes. I do not think the changes of the prices of coal have been commensurate with the lowering of the prices of their wages in the anthracite. I am not speaking of the bituminous. There are different conditions in the bituminous and individual mines, etc. The lowering of the wages and the shutting down of the mines—it is not so much in the anthracite a question of lowering the wages, but of restricted production, making a man only work 6 months or 3 months or whatever it is in the anthracite, which, of course, is equal to a reduction of wages. That is, it reduces the earning capacity of the miner if he only has 6 months' work or 3 months' work—often not even at such a rate—instead of a whole year's work.

Q. So you would argue it in this way, that it was the restricted output and overplus of labor?—A. Overplus of labor to do the work, and the actual consequence of restricting the labor and lowering the wages.

Q. Is it general that anthracite mines are owned by large corporations or operators or railroad companies, or by individuals?—A. I think there are a few individuals who own mines; but it is difficult for me to state a rule connected with corporations. For instance, there is a firm, Arrio, Pardee & Co., and several other firms in the anthracite regions, but it is difficult—I had no opportunity to find out whether they are not connected after all with the Pennsylvania Company; how they are interested. Working as I did, I had no chance to find out; but as a rule I found out that the controlling interest of the anthracite was in the Pennsylvania, the Philadelphia and Reading, the Lehigh Valley, the Delaware, Lackawanna and Western, and, well, it amounts to about 6 or 7 companies who hold the controlling output, who control the output of the mines, and then again the distribution of the mines at the same time. My observation, when I was there in 1880, was that the great difficulty at that time which the individual owners of the mines in the anthracite were having was the discrimination by the railroad companies in not giving them cars in order to bring their coal to the market. I am not speaking of 1894. In 1894 I heard very little complaint of that; but it seems to me there are no more individual operators. I think that is the reason I did not hear any more complaints.

Q. (By Mr. RATCHFORD.) Has your investigation or observation in the anthracite region brought out any connection between the mining companies and the railroad companies?—A. It is a very difficult question to answer. I think there is. There certainly must be in the Reading, because there is the Reading Coal and Iron Company and the Reading Railroad.

Q. Can you describe it?—A. I am not enough of a lawyer to give you the technical points, where the difference comes in; I could not, but I know one thing, that it is well known that the Philadelphia and Reading Coal and Iron Company are miners of coal, and that the Philadelphia and Reading Railroad Company are, of course, carriers of coal. They have been operating under the old charter issued previous to the constitution of the State of Pennsylvania in 1870, adopted in 1872 or 1873, which provides that no railroad company and no mining company can combine together. The Reading Railroad said that they were not liable to that, because their charter antedated that new constitution; neither was the Pennsylvania Company. I can not say when the Reading Railroad Company was chartered, as to-day it is reorganized and running under a different management, whatever it is, nor whether they have changed them or disconnected the two companies. I never made any inquiry, of course.

Q. We have testimony before this commission to the effect that the coal producers in the anthracite region have nothing to say as to the selling price on the seaboard; that there is an arrangement between the producers and the carriers which gives to one 40 per cent of the selling price and to the other 60 per cent. What do you know about that?—A. I could not tell, because that is not in my line; I did not investigate it. As I told you, all the investigation I have made for years has been on the simple condition of the workingman, on the economic grounds, and, in fact, I would not have the time to go into those details fully and give you a satisfactory explanation of that question.

Q. (By Mr. FARQUHAR.) What observations did you make there in respect to the attendance of the children of these foreign miners at school?—A. In 1897 not 1 out of 50 went to school. I make that sweeping assertion. The boys are helpers and pickers, and the girls were there to do the housework.

Q. Is there no law to compel attendance?—A. We have a compulsory law now in the State of Pennsylvania, but it is a dead letter in the mining regions, so far as I know. I see that they are trying to enforce it in the city of Philadelphia, but I do not hesitate to say that it is a dead letter in the slum districts. I saw the other day where a few people were arrested, but it is virtually a dead letter in the slum districts. I have my notes in regard to the condition of the children in the slum districts in Philadelphia. I found that they are not attending public schools.

Q. How many years have these Huns been in these mining districts?—A. Twenty years. Twenty years ago you could not find an Italian or a Hungarian. Those nationalities were scarce in the coal region. The present condition commenced, probably, with the large influx since 1885, 1886, 1887, and 1888. There might have been a few scattered. I doubt whether, up to 1880 or 1882, 2 per cent of the miners there were adult Italians, Hungarians, or Polish Jews; possibly up to 1884 or 1885.

Q. You can not say, on account of the recent immigration there, what the characteristics are of this coming generation?—A. Well, yes, I would say that the characteristics of the rising generation, brought up under that influence, if we keep on holding that undesirable thing, will be detrimental. I answered that the other day, if you will allow me to make that allusion, to a professor of economics. He asked me whether it was not true that our cry for this restriction of immigration came only from organized labor, and that the labor unions wanted to create a trust and make labor scarce. I replied: "I am not connected with any labor association, though I admit I am very friendly to them; but I am arguing the question from the purely moral ground, and I would like you to answer this: Supposing this city has a reservoir capable of holding 10,000,000 gallons of water, and at the same time there is only one stream where they can take a pure supply from, and they can not, with all their pumping facilities, get more than 5,000,000 gallons of pure water into that basin. According to your doctrine (you say this country is big enough and large enough to employ three times what there is here and there will be room for more), the city should go to a polluted stream and pump 5,000,000 gallons of polluted water into the pure. And that is just what we are doing."

Q. (By Mr. RATCHFORD.) You stated that a legislative committee of the State of Pennsylvania made an investigation of the mining conditions?—A. Yes; in 1897.

Q. Both in the anthracite and in the bituminous?—A. Yes; and it is even stronger than what I give you here to-day. The one as to the bituminous you can get; it is printed. I neglected to bring it.

Q. Can you state what the findings of this committee were and their recommendations?—A. The findings of the legislative committee in the anthracite and bituminous coal regions did not touch any subject that I touched. They simply described the miserable condition of the miners. Senator Saylor, of course, advocated in his report, and he was fully sustained by the majority, the proposition that it would be advisable for the legislature of the State of Pennsylvania (in view of the fact that the State of Pennsylvania could not pass any bill restricting immigration), under the existing conditions in the bituminous region, to pass a law prohibiting the importation of pauper labor into the State. I do not think there was anything done, but you will find that recommendation in the report.

Q. As the conditions in the anthracite region differ materially from those found in the bituminous region, I believe the commission would prefer that you treat the cases separately.—A. Oh, I can only speak of the anthracite. My observations were not in the bituminous. I am only speaking from hearsay.

Q. You know of the recommendations made, do you?—A. Made by the Pennsylvania legislature, from reading their report, but I could not speak on the condition of the bituminous men from my own observation, because I was not there.

Q. Can you enumerate the recommendations?—A. I am very sorry that I neglected to bring them. They are so numerous that to a certain extent I am not very familiar with them. For instance, the weighing of coal, the sliding scale, and all that, going into the details; and they passed some laws in 1897, on the strength of that, which were recommended by the committee.

Q. What laws have they passed?—A. The inspection law; and now what do you call that, for instance, loading the car above the—

Q. Limiting the weight of cars?—A. Yes; they passed several laws about that.

Q. They passed an antiscreen law?—A. Yes; and they passed another law at

the recommendation of the Pennsylvania legislature, which was vetoed by Governor Hastings, taxing the so-called company stores 10 per cent on scrip, and so on, on the books.

Q. What is the effect of those laws? How many of them are in operation?—A. I could not tell you. I have not been there lately and can not give you a satisfactory answer as to how many there are in operation.

Q. Do you know if there are any in operation?—A. Yes. I know several of the labor leaders, and I met Mr. Fay, from Schuylkill, several times in Harrisburg, and he told me it is a little better, but it is not what it should be.

Q. Would you be kind enough to submit to this commission as a part of your testimony, if you wish, the findings of that legislative committee and its recommendations?—A. I can mail it. I have a copy—it is in my desk in Philadelphia—of the bituminous; they were printed. I can not give you a copy of the anthracite. The anthracite report, as I have explained here before, was only submitted by the committee. It never was printed, and that does not exist. The anthracite had more recommendations than the bituminous, and the anthracite virtually had that recommendation—or upon the strength of the recommendations the bill was passed to tax those company stores 10 per cent. I could bring before the commission something of the record which might be of some interest to you, such as the slips which those companies issue. I have a large number of them; I gathered them up there.

Q. Have you found that the existence of the company store is a detriment to the miners?—A. In 1897, when I was up there, there was nothing else there but company stores, and the only way was for miners to get things from the Polish Jews, who carried their packs and supplied them to the women in the house. I found the small grocery store and the small dry goods store that used to exist 20 or 30 years ago completely broken up. I found worse conditions there; I found, judging from what experience I have, that the prices were higher. One man showed me a slip which had a circle and a red cross in it; he only purchased during that month \$3.75, and he said, "You know what that red cross means?" I said, "No." He said, "That if I do not deal more with the company store I can get no work." And several of these I have got.

Q. (By Mr. FARQUHAR.) Have you a scale of prices of the company stores, that you could compare with ordinary prices?—A. I can get it for the commission from Mr. George Chance, president of the United Labor League of Philadelphia, who made that a special study when he was up there. He has got it calculated. He found it from 20 to 25 per cent higher. Of course, when I was up there I did look into the condition and found it bad, but I did not give that sharp detail attention to it that Mr. Chance did.

Q. (By Mr. RATCHFORD.) You found that the men are obliged to deal there?—A. Yes; I make that statement from my best knowledge, and I can confirm it, and I can bring those slips containing the circle and the red cross, which that man told me is warning or a notice that you must purchase more of the company store. I am now speaking of 1897, but I am told the same condition exists to-day.

Q. What company was it that sent out such letters?—A. Some of the slips I had were from Arrio, Pardee & Co., and the Pennsylvania Supply Company, I think. I got some slips from Arrio, Pardee & Co., and the Pennsylvania Supply Company; the others I do not remember.

Q. (By Mr. FARQUHAR.) Now, suppose you take up the sweat-shop investigations that you made and give us your observations?—A. That happened in 1894, and I stuck to it for 2 days with Mr. John Keefe and by the advice of Mr. Watchhorn—he was factory inspector—and I did it because they always got me to do those things, because I could help on account of my knowledge of the dialects, etc.; but after 2 days, by the advice of my wife, I gave it up. I found the conditions too hard; I found such filth, such dirt, such vice, immorality, so much suffering, starvation, actually—I would rather speak about the conditions of the working class and the foreign element in Philadelphia in the slum districts for the last 8 months, because I have given that very close investigation.

Q. Well, proceed in your own way; tell us all you know.—A. I have numbers; I never mention any names. No. 14: House occupied; two-story frame; formerly a dwelling house; now, front room used as a grocery store; back room rented as a working room to make shirt waists; occupied by 6 working girls; second story contains 4 bedrooms, occupied by 3 different families; 23 people in all living in the house; all Russian Jews; only 2 adults could speak English, and that was very poorly; the rest speak the Jews' jargon only; 8 children, who did not attend public school, but they are sent to the Hebrew school to learn to read Hebrew, but not to translate it, simply so they can say their prayers, and that is about all. Children are engaged in selling matches and newspapers. Rent of the house, \$30;

received \$35 from subtenants; everything in a filthy and dirty condition and no sanitary regulation.

Case No. 20: Grocery store; looked in a fair sanitary condition; occupied by a woman about 80 years old; speaks only the Jewish jargon; married and has 3 children; her husband left her and she really does not know where he is to-day; left her several years ago; she is married again. On questioning her about it, I said, "How did you get a divorce from your first husband?" and she said, "The easiest way I could get it;" that is, a divorce from the rabbi, not legal in any court; simply goes to the rabbi and states the case to him, that her husband has left her for some years, and he gives her a paper written in Hebrew hieroglyphics, and simply divorces her, and the same rabbi marries her to another man. That is the condition I found there.

Now, here I have a very interesting case. I must give you some Jewish words in order to explain to you the man's occupation. It is a very interesting case to me; I devoted a great deal of time to it. In making the explanation you must remember one thing—that in all those districts you can not find a single English sign; all Jewish.

Q. What is the number of this case?—A. No. 24. He makes a specialty of what he calls kosher food. That means something which is allowed according to the dietary laws of the orthodox Jews—something which has not been mixed with anything impure, or anything of the kind. I found the sign in his window, which took a long time for me to understand—only three Hebrew words. The first Hebrew word was "Schocker," killer of animals. Of course, some of the gentlemen here know that the orthodox Jew is not allowed to eat the meat of any animal unless it has been killed according to the Jewish rite; that is, the cutting of the throat and leaving out all the blood. This is ridiculed by some. Through that same man I got a great deal of valuable information. According to the law the blood is injurious. That was his first occupation. His next occupation was called "Mohul," that is, he is licensed by the chief rabbi to perform the rite of circumcision. The third license—you do not need to have the Hebrew word here—was to perform the marriage ceremony; that is, authority given to him by the Jewish rabbi to perform marriages; and a divorce is considered legal from him, from the Jewish standpoint; that is, as far as the Talmudic law is concerned. He is a very thorough student of that law. I was perfectly surprised at his knowledge. When I explained to him how it was, he was bitterly opposed; he said it never ought to be taken away from the rabbi—the right to perform marriages.

Q. Or grant divorces?—A. Or grant divorces. That never ought to be given away. I need not go into that. I was very much interested in the Jewish side, but it is not interesting to the commission here. The only thing, probably, may be how these men try to have those poor ignorant people keep up their superstitious habits, and do it for no other purpose, as I can see it, but to keep control over them. Now, while I was there, some boy came in and he asked for a certain Hebrew document. Of course, I was raised by the École Polytechnique, under the direction of Prof. Samuel Monk, probably one of the ablest scholars in Talmudic languages, and he taught me all those things, not from the same standpoint of superstition, but to get an insight—knowledge; and I was perfectly amazed. I said, "Do you give that document?" His mother was confined in childbed, and he came to that store to get those papers and pin them around the room to keep the evil spirits out. And that is encouraged by these people, to my mind, simply to keep that superstitious habit up and keep them in ignorance. Prof. Samuel Monk was professor of Semitic and Talmudic languages at the École de la Science, Académie de la Science.

Case No. 30: Grocery and fruit store on the first floor; basement used for the storage of bananas and other fruit; in the month of July; family consists of 9, the oldest a girl of 15 years; they are Italians; none of the children attend school; the boys are bootblacking, and the girl, 15 years old, worked in a candy store. Out of the whole I could only find the girl of 15 and 2 boys who could read and write English; the husband and wife were illiterate.

Case No. 34: Three-story building; grocery and fruit store; rent out rooms to families. The dwelling is a 10-room house, occupied by 18 people, all illiterate.

Case No. 50: Grocery store, occupied by a single man; had arrived in this country and was supported by a Jewish charitable association for some time; after over 4 months he got desperate and tried to get work, and was enticed by he crimps and shipped as a sailor (another nuisance and another very bad thing in our city of Philadelphia). They made him drunk and landed him on board of a vessel. That is his story, and I know it is true. He worked for 4 months on the vessel, and his wages, when he landed back in Philadelphia, was \$3.75. I guess those are about the extracts I made of those cases.

Q. Now, has the State of Pennsylvania taken any legislative action in respect to the slums of Philadelphia that you have just described?—A. The board of health does interfere, but can not enforce its regulations; clean them out one day and they come back the next day. The Pennsylvania legislature passed a factory-inspection bill, and the inspectors are doing their duties. They are trying to do all they possibly can, but they clean them out in one place and they appear in another. And one thing is that no factory inspector can find out—for instance, the first case which I reported is impossible for the factory inspector; it is only by accident that I stumbled on it; that is, where they have a small grocery store and a small room back, and they have 10 or 12 girls working there, and they are not registered. They have passed a law that they must be registered and take out a license and give every girl so much space, so much room; so many feet. Well, while this is enforced in large factories it is not enforced in the slums, because I came across any number of places in the months of July and August where 10 or 12 girls were huddled together like sheep in a little shop; and the factory inspector does not know enough about it and could not touch them.

Q. What personal knowledge have you of sweat shops in Philadelphia?—A. My personal knowledge of the sweat shops in Philadelphia was acquired when I was there in 1894, and since that time I have made very little observation—in fact, I would only give hearsay evidence. I have not paid much attention to it, but I think they are existing to a very large extent yet, and will exist as long as we have two persons applying for one job.

Q. What would be your opinion of the moral standing of the Jews in Philadelphia compared with other foreigners in like conditions?—A. I think, judging from the influx of the lower class of people into the slums, especially Russian Poles and Jews, that in certain things they are lower than other foreigners, except perhaps the Italians. There is one thing I will say in their favor—I find very little drunkenness among them, but, on the other hand, regarding pure sanitary conditions they are far below the others.

Q. Do you mean viciousness in person or viciousness in mind?—A. Not so much in mind as in person; for instance, their uncleanness; they are filthy, dirty. They seem to prefer to live in dirt. That is about the only explanation I know of.

Q. Do you believe that taking an equal proportion of that class of Jews to the Italians or other foreigners in like condition, that you find them more in the police court or in the jurisdiction of the police authorities than the others?—A. Yes.

Q. You find more of the Jews than you do of the Italians?—A. No; more of the Italians than of the Jews; but more of the Jews to-day than there used to be; an alarming increase over what it was 40 years ago. Forty years ago the average of criminals among the Jews in this country was the lowest; there were very few; but to-day it is largely on the increase. Of course, there are more Jews, but I mean according to the increase of the population.

Q. What class of crimes is the Jew increasing in?—A. The increase of crime is, in the first place, for instance, in buying goods under false pretenses, swindling; that is one thing. I would say, for instance, that there is a great deal more among the Polish Jews, in setting their stores on fire; more than among the other Jews. Of course, I am only speaking of what I hear. That is greatly on the increase—not observing the laws of the land; that is the principal thing. They do not keep Sunday; they keep all their places open on Sunday. They try to enforce it in Philadelphia. I am not speaking of strict enforcement of the Sunday law; but they will keep their places open on Sunday, and they even work on Sunday.

Q. Do they keep their places open on Saturday?—A. Yes. Even the rabbi says, "We are in a condition in this country where we have to keep open."

Q. Do these Jews usually come onto the list of the poor board for support, or do the Jewish societies usually keep them?—A. The Polish Jews?

Q. I do not care which.—A. The United Hebrew Relief Association tells me that nine-tenths of their charity goes to the Polish Jews. I find another thing, that philanthropic movements, such as, for instance, the Baron Hirsch fund, have frequently been a detriment to the people—that class of people I take an interest in, the workmen in this country; I mean the workmen at large. Now, in these colonies over there in Woodbine, started by Baron Hirsch, they simply try to make farmers of them, but they all end in factories in competition with American workmen. I think that the agricultural occupation in Woodbine, and all these persons who were brought over by Baron Hirsch, I think they have all been a complete failure. They have been a failure in the Argentine Republic, and they are a failure in this country.

Q. (By Representative GARDNER.) Do you know of a single instance of the Jews prosecuting agriculture for a living?—A. Very few; very, very few. I am

not making a charge. I was born of orthodox parents. It is not his fault, but of his Christian brother. It is the fault of his Christian brother in Europe, who prevented him from being anything else, but compelled him to have a certain occupation. But the reason I am one of those who speak so strong against that class of Jews—Polish, or any other class of Jews in this country who still carry on the occupation of barter and trade—is because it is the duty of the Jew in this country, having equal opportunities and privileges, and being the first country that gave it to him, to show that he will try to become as good a citizen as his neighbor.

Q. Are the Jews within your observation, whether within the mining regions or the city, an exceptionally healthy race of people, or otherwise?—A. Healthy; only in the slum district I find there is a great deal of consumption, owing to the overcrowded condition. I find delicate children, and delicate girls—a good deal of consumption in the slums, but I attribute that to the overcrowded and unsanitary conditions they live in.

Q. An impression seems to prevail that the Jews are an exceptionally healthy race of people in this country. I want to ask how that is harmonized with the sanitary condition you described?—A. I do not think the average age of the Jews is any greater than that of his Christian fellow, if he lives in worse sanitary conditions. I believe that the condition they live in is below the average.

Q. What percentage of the Jews follow any productive occupation.—A. You mean down in the slums?

Q. I am distinguishing now the productive occupations from nonproductive occupations—the difference between making, and living off what somebody else makes.—A. You mean as regards manufacturing or distributive selling, trading?

Q. Yes.—A. I could not very well give that, but I think, as a class, a large number of Jews in Philadelphia are engaged in production. I think we have a full ratio of manufacturers in Philadelphia among the Jewish people. I am speaking now of the Jews, and including myself—those who were born of Jewish parents.

Q. (By Mr. RATCHFORD.) Would the conditions in Philadelphia in that respect hold good generally?—A. All through the United States?

Q. Yes; as far as you know.—A. I think there is the same condition in New York and all over. I think the Jews, as a class in this country, having equal opportunities, which they do not have in Germany and other places, are trying to work on a different line, and no longer pursue the same occupation. I think in the professions they are fully represented—those that take up the study of law and medicine, and even in the mechanical arts. I find that in the University of Pennsylvania, the mechanical department, the ratio of Jews is on the increase, I think, more than the population is.

Q. (By Mr. FARQUHAR.) Do you find a more peaceable race than the Jews in this country, whether native or foreign—and law observing? I want to know if in your observation you find them in the lower saloons, in streets fights, in mobs, in riots?—A. No.

Q. In brothels or what else?—A. No, no. I find that even in the lowest strata of the Polish Jews, they are not given so much to drunkenness as the others. They are more temperate, more of a temperate people.

Q. Do you find in the slums of Philadelphia, which you investigated there, that many of these people are a charge on the poor rates of the city of Philadelphia?—A. No; not so much on the poor rates but on the Jewish United Hebrew Charitable Association; mostly on that. The Italians are coming very largely to be supported by the poorhouses—inmates of the almshouses.

Q. Can you give the reasons why these foreigners herd together in the cities when the opportunities for labor are so good outside of the cities?—A. Yes; I made a special inquiry. I said, "Why is it that you people prefer to live this way? Why is it you people huddle together in this court or alley? What rent do you pay?" They said so much. "You can get an elegant house in the country; why don't you move out?" For instance, they will say, "We are amongst our people here; everybody understands me and I understand everybody. If I move out to the country, I can not talk and nobody understands me. Then, everywhere I go, they say, 'Sheeny! Sheeny! Polish Jew!' they halloo after me. Then, here we have our theaters, and we can go in the evening, only a few squares, and in the country we could not have them." They seem to prefer to live that way. You can pretty nearly draw a line, and make wards out of it—from Broad street, beginning at Shippen and Fitzwater, you find nothing along there but Polish Jews. I am speaking of Polish Jews, Russian Jews—no matter where they come from—Armenian, all that same class, speaking that jargon. When you come to Carpenter, to Fitzwater, between Eighth and Thirteenth, you find nothing but Italians. We call it "Little Italy," and the other we call the slum.

I think these Italians huddle together for the same reason, because they find more congeniality amongst themselves; but apart from that, I think a great deal may be attributed to the following: Now, for instance, there are a few Irish people living in that neighborhood, keeping grocery stores, and a few Americans; and I go in and talk with them, and they say, "We will have to get out of here; we can not stand the smell." It makes a clash between these two. These people in former times made a good living, and now they are driven out by these people who live on half what they ought to eat; and they are driving them out, and there is a certain clash between them, and that is, I think, the chief cause why they gather in these sections. I frequently hear of fights between these Irish boys and the Polish Jew boys. "Look at the Sheeny!" And they would turn around and call the Irish boys other names. They do not mix together. The Italians and the Polish Jews keep separate, keep in their own districts. One gentleman told me, and he has made that quite a study, "I have come to the conclusion that these people prefer to live in the slums because if they have clean neighbors they see the dirt, and if they have dirty neighbors they do not take any notice of it."

Q. Still you have not got to the bottom of the "why" of this colonization and this huddling together in poverty. Do you have any other reasons than those you have stated?—A. No; I have no other reasons; but it seems to me that they try to form a social club amongst themselves; that they find it more congenial to live in that atmosphere and in those surroundings and conditions.

Q. As to the rising generation of these foreigners, Jews, Italians, Huns, and all that, what is your observation? Do they intend to live in these same surroundings that their parents did?—A. Yes, the majority of them.

Q. You have no information of them learning mercantile trades?—A. There are some few bootblacks, newsboys, and similar occupations.

Q. But they can not stay bootblacks always; you will come on to an age limit when you speak of that kind of work.—A. I think the bootblack will, afterwards, when he gets stronger and older, land in a position of unskilled labor—a porter, a street sweeper, or something of that kind.

Q. (By Mr. KENNEDY.) Is there not a character of slavery which has an influence in keeping these people together in that way?—A. Do you mean the padrone system?

Q. Yes.—A. I have not been able to trace any of the padrone system as it has been described. But that exists among the Italians mostly, and I have not been able to trace those things among the Italians as I have been among the Polish Jews, because there I can understand their jargon and I can get along with them; but there is no padrone system among the Polish Jews, except only as to the sub-contractors in the sweat shops.

Q. Do you believe that there are any influences controlling their labor, interested in controlling their labor and keeping it cheap, thus keeping them in the community?—A. Well, no. I think that is the natural outcome of their condition and the constant large influx of new immigrants who, as I say, have to take the same occupation, and that will certainly keep the wages down. Now, in the clothing manufacture, cap manufacture, and all that, the revival of trade which we have now had for a year gives these people a little better wages, but the question is, How long will it last? I find now they are mostly employed, and there is not that misery and starvation that existed in 1894 and 1895, and up to 1897; but if the ratio increases and keeps constantly flocking in, of course the result will be exactly the same as in 1894—a surplus supply of labor; and it is getting worse and worse.

Q. (By Mr. FARQUHAR.) Can you suggest any remedy for the congestion of these foreigners in the cities?—A. Yes. In the first place, Senator Lodge's bill—an educational test.

Q. How would Lodge's bill, with its educational test, affect these colonies in the cities? Have you any remedy to propose to break up these colonies of foreigners in the cities, so that they can establish productive enterprises and become American citizens?—A. You can bring them out of the slums to somewhere else. The only remedy I have to suggest is what the city of Berlin has done. It has a different sort of board of health than we have in the city of Philadelphia. The city of Berlin goes down in the slums and finds conditions as I have found them, dangerous to the community. They give notice to the landlord or owner of the building that that building has to be put in sanitary condition, and kept so. If it is not done, and kept clean, the city takes these people and puts them in quarantine outside of the city, in the suburbs, and there, under police surveillance, they are forced to keep clean, to take their baths and keep their houses clean. They are forced to stay in the suburbs so long they become used to that kind of living,

and then when they come back to the city they are kept under watch. We want to adopt desperate means to clean out the slums in Philadelphia. The city of Berlin has cleaned out its slums, and the city of Edinburgh is doing the same thing, but the ordinary sanitary laws, such as we have in Philadelphia, will not do it.

Q. You spoke of the Lodge bill?—A. It will be desirable in so far as it keeps that undesirable element out.

Q. (By Mr. KENNEDY.) Will it keep any of these Jews out?—A. Two-thirds of them.

Q. Can they not read some language?—A. I would not recognize the Hebrew jargon as a language.

Q. It is a printed language, is it not?—A. Yes. A large per cent of them can read that, but they can read only so far that they go to school and learn to read their prayers—read Hebrew. He can read Hebrew, but he does not know it. I can take any gentleman here and teach him to read the Hebrew language in an hour, but of course he would not know what he reads. It would keep a large percentage out, and mostly women.

Q. (By Mr. FARQUHAR.) What other nations would it keep out?—A. The Italians, as a class, and the Hungarians, because they can not read their own language.

Q. What would be the physical characteristics of the people it would keep out—their producing qualities as laborers and developers of industry?—A. Of course I can not say whether they are producing as much as the others, but they become competitors and have to sell their labor at almost anything they can get for it.

Q. So you think that the educational test would be a measure to retard immigration?—A. To restrict immigration.

Q. Without sampling out the good and bad?—A. I hold, and I find by my experience, that the man who is so ignorant can be influenced and brought under the control of these Jewish rabbis and priests far more than the man that can read and has a mind of his own. I only would judge it by that. I do not mean to say that they are less inclined to commit crimes or anything of that kind.

Q. Do you think this legislation would give us a better class of immigrants?—A. It would give us, at any rate, a better class of immigrants than absolutely no restriction.

Q. Would that same test exclude a good many honest, hard-working immigrants?—A. Yes, I admit it.

Q. (By Mr. KENNEDY.) Do you know anything about organized labor?—A. I had some experience when I was connected with Local Assembly 6401, Knights of Labor.

Q. Do you know what is the sentiment of the organized working people?—A. Unanimously in favor—all those I have spoken to are unanimously in favor of restricting immigration. The only class that I can find against it is the newspapers and the steamboat agents.

Q. A great many of the leaders of organized labor are foreigners or sons of foreigners, so far as you know?—A. Mr. Gompers, of course, is a foreigner. George Chance, of course, was born in England. I do not know whether they can be called foreigners any more—they are 50 and 60 years in this country.

Q. The question I desire to ask is whether the leaders of organized labor, native born or foreign born, are in favor of restricting immigration?—A. Yes; all those I have come in contact with are in favor of restricting immigration, and say something should and must be done.

Q. (By Mr. FARQUHAR.) What are the reasons for it? Is the labor market overcrowded?—A. Overcrowded. The reason given is that, with all the prosperity we have to-day, there is a surplus, an oversupply of labor. The reason I give you, and there are a great many who agree with me, is that while we have a protective tariff—and I am in favor of protection to the manufacturer—the manufacturer can scour the markets of Europe where he can get the cheapest labor and import it free of duty. I think if protection is given to the manufacturer, protection should be given to the workingman, and the only protection he needs is not too much competition in the labor market.

Q. (By Mr. RATCHFORD.) You spoke of the leaders of labor organizations being unanimously in favor of restricting immigration.—A. Yes.

Q. Have the great labor organizations of the country expressed themselves?—A. So far as I know, the leaders have. I do not know whether they have passed resolutions at their business conventions. I have not looked over the proceedings of the American Federation of Labor, and I do not know.

Q. Can you state to what extent they are in favor of such restriction?—A. In favor of such restrictions that the Hungarians, the Italians, and these others will not come over.

Q. That is the thing they want to meet, but what are the remedies that they apply? To what extent are they in favor of restriction?—A. Of course, as I say, Senator Lodge's bill goes to the educational test. I am very much in favor of another bill, which was introduced by Congressman Stone, suggesting the following remedy: "Section 4. That it shall hereafter be unlawful for any male alien, who has not in good faith made his declaration before the proper court of his intention to become a citizen of the United States, to be employed on any public works of the United States or to come regularly or habitually into the United States by land or water for the purpose of engaging in any mechanical trade or manual labor, for wages or salary, returning from time to time to a foreign country." This bill was mostly aimed, I think, against the Canadian immigration.

Q. (By Mr. FARQUHAR.) That bill went through Congress?—A. It went through Congress once and was vetoed by President Cleveland.

Q. (By Mr. RATCHFORD.) You state that so far as you know the labor organizations of the country have expressed themselves in favor of restriction of immigration. Is it not a fact that some of the labor organizations of the country admit to membership in their unions and to places in their factories and workshops immigrants who come to this country with the union card?—A. Yes; but that class of people would not be kept out, I think, under restriction.

Q. (By Representative GARDNER.) Do you mean to intimate that there is an educational test anywhere in Europe for membership to the labor unions, and that it is impossible for a member of a labor union, entitled to the international card, to not be able to pass an educational test?—A. Yes. I make this sweeping assertion: That in Germany there is not a member of a labor union who is not only able to read and write his language, but has actually got a good education.

Q. Yes, in Germany; but any country in Europe?—A. Italy has no labor unions. You will find no labor unions in Russia, Poland, Austria, or any country where that class of people come from. They are not tolerated.

Q. Take it in London?—A. Even in London, in that class of immigrants who come over here from London, if a man is a member of a union, that class of people become more intelligent, more educated, more enlightened. That is my experience.

Q. You say a man that has been a member of a labor union for several years will be able to read and write, because that is a kind of a school. I admit that to be true, but still might there not be many members coming here with cards that would not be members for a number of years, but comparatively new; and suppose an immigrant should appear and be submitted to the educational test, and should fail to pass, and should then produce his union card, what would you do with him?—A. I do not think that case would arise; but of course if it should, under the strict interpretation of the law, the law of the United States could not recognize the trade-union card, and he would have to be excluded. But I do not think this case would come up.

Q. (By Mr. KENNEDY.) If the immigration laws were amended to meet the desires of the workmen of this country, and there should follow an educational test in the immigration laws, would the workmen raise any question that because a man who was illiterate came with a union card he should therefore be admitted to American citizenship?—A. You mean whether the labor unions would protest if the man were to be excluded?

Q. Yes.—A. I do not think they would.

Q. (By Mr. RATCHFORD.) You say you are not a member of a labor union now?—A. I am not a member of a labor union.

Q. (By Mr. FARQUHAR.) You spoke of this class of labor being brought in, up to the present time, in large bodies. Do you think the alien contract labor law is imperfect?—A. Yes.

Q. Can you suggest anything better?—A. The alien contract labor law should be so that the American manufacturers should have the right in all new arts and in all new industries to go to Europe and bring men over to teach American workmen that new industry.

Q. (By Representative GARDNER.) Following that very point that you have now brought out, that the manufacturer, in your judgment, should be permitted to go anywhere to get men of special skill: Suppose that we had had a rigid immigration law for the last 50 years, would or would not, in your judgment, the people of this country, up to this time, have been able to establish successfully the potteries of the country, the tin-plate industry, and many others, the hardware and cutlery business, and so on? Put the question in a different form: Do we not owe the establishment of our potteries, cutlery business, and a long list of industries that are now employing many thousands of skilled workmen in this country to our ability to first draw from foreign countries for the skill to make these

goods?—A. We would have never come to the present condition unless it was through the foreign element. That is what has made the American manufacturer and the American inventor so successful. For instance, in Germany there is only one class of people working in the same class; in England the same way, in France the same way. The great advantage of the American manufacturer is in drawing his people from those who have seen the different methods and ways of another country, and taking what is the best of all and combining it. That is what has made the American manufacturer so successful.

Q. Do you know of any man who would now agree to a law that would have excluded him when he came?—A. Yes; I think a great many of these Polish Jews and Hungarians are sorry they came here, and would be only too glad if they could go back.

Q. The question now is, while each man, in a general way, expresses himself for restrictive laws, would that same man, when you come down to particularize with him, agree to a law that would have excluded him or any of his family?—A. I do not know. I have never had much experience. I do not know that I could answer that question. For instance, you know, of course, if a man was illiterate he would say he opposes the educational test, because he could not read; but the question is, Would he not want it enforced to-day after he is here? That I do not know.

Q. (By Mr. KENNEDY.) Do you believe the position of the workmen of this country, and especially those that are foreigners, is very much the same as that of a manufacturer who wants the protective tariff; that it is self-interest and self-preservation that impels them to be in favor of further restriction of immigration?—A. I do not blame them. Self-interest always come first. Self-protection, I believe, is the first law, and they would be foolish if it were not so. I perfectly agree with you there.

Q. Do you admit that certain industries have been built up that could not have been built up without the aid of foreign workmen?—A. Most surely.

Q. Now, these foreign workmen and the American workmen engaged in these industries want to preserve their own status and high order of living in this country; is that not the object?—A. Certainly it is, to a certain extent—to better their condition and not be compelled to live in the slums like those who are coming over here.

Q. You do not think it is a good argument against further restriction of immigration to admit that these industries were built up by foreign workmen?—A. Yes; I say they were built up by the combinations of foreign workmen; but the difficulty lies here, and you forget one thing—that that was an intelligent class. The restriction of immigration which we are after now is to keep out the lowest strata. I do not think there is anyone who wants the working classes of Europe kept out, but the difficulty is to keep the undesirable element out.

Q. (By Representative GARDNER.) The questions asked have already drawn a distinction between protection to labor and the idea of good citizenship. A man may be kept out because he will come in competition with some other workmen, or he may be kept out because we do not think he would make a good citizen. They are two things. Do you think that the educational test, reading, writing, etc., has anything to do with a man's ability to run a jigger machine in a pottery, for instance, or doing any other thing that requires quickness of eye and hand?—A. I do not think that the educational test is anything to gauge the ability of a workman by, but the majority of workmen coming from countries like Germany—all good workmen—are educated, and those not educated are not good workmen to-day any more. They are only that class of people who are fit to sweep the streets and do that kind of work. They are not, in other words, skilled mechanics.

Q. You speak more particularly of Germans?—A. Not alone of Germans. The immigration from Germany and France is down to zero. There is no more immigration, practically. The statistics show the immigration from Germany is down to 12,000. I think that is what it is. That is the whole sum and substance from Germany—the whole immigration we are getting to-day. At the time I was connected with the Knights of Labor, Local Assembly 6401, it was a mixed assembly, and my experience at that time was that there was not a single man who could not read and write; in fact, hardly any one of us who could not be elected an officer of the association. I found very few who could not read and write.

Q. The better class of workmen is naturally a different thing from the class of better workmen. A man may belong to a very bad class of workmen, speaking in a general sense, and yet be a very skilled performer at his machine, or whatever it is?—A. Yes. There is, if you sift that matter—I still hold that view, and I think I am supported in my observation, that if we should take statistics to-morrow among the better class of workmen we would find that they are capable of reading and writing and have an education.

Q. (By Mr. KENNEDY.) Is the sentiment, which we read about in the newspapers, in opposition to further restriction of immigration a general, spontaneous expression, or a worked-up sentiment?—A. No; I do not think it is worked-up sentiment. I think it is genuine. Of course I can only speak from my limited experience.

Q. (By Mr. CLARKE.) Do you know any manufacturers who have imported low-priced, low-conditioned, contract labor?—A. No; not especially of late; but I hear a great deal of inquiry about it; it is done in a certain way. For instance, those men in the coal regions have told me that agencies in small towns distribute circulars, giving a glowing description of the conditions of the American workingmen.

Q. You do not know that the manufacturers have done anything of that kind, do you?—A. No. I do not think I have heard of a single manufacturer that has done anything of that kind.

Q. You do not know of any manufacturer who does not prefer the high class of intelligent labor to the low class of ignorant labor?—A. The majority of them do. The majority of them do think they are better, and there is a reason: You find that those Italians and Polish Jews have so few occupations to follow in this country that they are only left with the sweat shops or with the coal mines.

Q. You do not know of any manufacturer who seeks protection for himself and is not willing to grant equal protection to the working people, do you?—A. Well, that is impossible to answer. No; I do not think a good many of them are willing to give equal opportunities to the workingmen; they want it all themselves.

Q. How do you know that?—A. It is easy to tell by the way they treat their workingmen, by the sharp practices they apply on workingmen, which come to my knowledge. For instance, in some of our machine shops, the contract system and the docking system; but at the same time there are plenty of manufacturers who treat their workingmen as good as any man can treat them, and do not want to cut down wages if they can possibly help it.

Q. I did not ask you about the way they manage with their help, but I asked about the application of the principle of protection.—A. Well, I think the average manufacturers in this country are trying to get all the protection they can, and make as much money as they can out of the workingmen as a class.

Q. Is not everybody else trying to do so?—A. Yes; and consequently I say the trades unions' duty is to see that they get a fair share of the profit.

Q. (By Mr. A. L. HARRIS.) When did this class of immigrants that you speak of come to this country?—A. As I said before, they began to arrive here in small numbers in 1884, and in alarming numbers up in 1888, 1890, 1892, and 1894. It decreased slightly in 1894, owing to the depressed conditions—what we called the panic; but rapidly increasing again at the present time.

Q. Has the present legislation and its execution, upon that question, had any effect upon increase or decrease?—A. Well, it has not kept them out; they were admitted as before, with the exception of a few formal questions asked—whether they had \$30, and whether somebody would vouch for them. They were indiscriminately, to a certain extent, admitted.

Q. Was there no effort to execute the law we have upon the statute book, at the ports of entry?—A. I know; but the difficulty lies in the crowded condition. I do not think, under the present inspection, that it is possible to take care of the immigrants rapidly enough. I think there is where the trouble lies. I do not think it possible for a thousand immigrants to go through, especially when they have 4 inspectors.

Q. Is the same encouragement, distributing circulars in the old country, continued as in former years?—A. I can not tell that, because I have not heard of it; but the same thing springs up again and is established as before. That is a system I did not mention. They do not need to have the circulars distributed in the old country. The steamship agents in Philadelphia, on Second street, Third street, or Fourth street, go around to families and ask: "Have you a brother, sister, or father? Have you not some relative? Why don't you bring them over?" They sell tickets on the installment plan to those people. For instance, for \$20 they pay 50 cents a week. They are like life insurance agents. These people are hunted up and tickets are sold to them to bring these people out. That exists; that I have found out.

Q. You say many of these people are dissatisfied with their condition here. Do they encourage their kinsmen to come over and place themselves in the same conditions they are in?—A. I spoke of some who are dissatisfied; some are not dissatisfied, because under the low conditions and the way they live they are doing better here than they were doing in their own country. Even in my paper I remarked, for instance, that 1 house rented for \$30, and by taking 25 subtenants,

living 20 to 30 in 1 house, and all that—under these conditions they will accumulate more money than out of what they had in Russia.

Q. (By Mr. CLARKE.) Do you not think that if the Berlin plan were put in force rigidly in our cities, sanitation was required, and the highest style of living enforced, it would have the effect after a little while to restrict immigration of those poorer classes?—A. Decidedly so. It would have a good effect on it, decidedly, because it would break up that system, as I describe, of 20 people living in 1 house. It would not be tolerated; consequently they would be compelled to have a higher standard of living.

Q. (By Mr. A. L. HARRIS.) You spoke about the large charity fund going to a certain class of immigrants. Do they find their way in the almshouses in this country?—A. No, the Jewish class, as a class, do not find their way in the almshouses. As a rule the Jews of Philadelphia—I do not speak from experience; I do not belong to a synagogue, or anything of the kind—try to keep their own poor as long as they can. The United Hebrew Charity Association, as they call it in Philadelphia, I think distributes annually a large amount to keep these people out of the poor house. Then they have their own organization. For their benefit they are kept out of the poor house, but they are kept in a condition which makes it dangerous to the surroundings. What I mean is that their unsanitary condition, their low method of living, poisons the atmosphere.

Q. Can not the sanitary condition of the locality be controlled by local legislation?—A. No, it can not. If we would once get a city council in our cities out of political control, as in the city of Berlin, a different class of men—it can not be done under our present conditions.

Q. Do you think that the politics of this country weakens the power of a city to protect itself?—A. Great influence over it, but the sanitary conditions—

Q. (By Representative GARDNER, interrupting.) You say the city can not protect itself because of politics?—A. I do not say it can not. There is no such thing as "can't."

Q. Do you mean that the presence of these people, of their voting power, or political power, makes it impossible for a council to correct the evils and still hold office?—A. No; I do not mean that by any means. I mean that to clean them out, the sum of money that would be required, and all that, would be too big for the city of Philadelphia, even if they tried to do it.

Q. Then, the difficulty is financial and not political?—A. The difficulty is a financial one and not a political one. I do not think politics has anything to do with it, because I do not think they have any political influence.

Q. (By Mr. CLARKE.) Do you see any objection to the State taking hold of that work?—A. I would be in favor of anyone who would take hold of that work; but the point is here: Just as soon as you clean out that district another ship comes here with 2,000 or 3,000 or 20,000 for New York, Philadelphia, or Boston, their landing places, and you will have to do the work over again. It is an endless chain as long as you bring them over.

Q. But you say they will not come in in such numbers when they are obliged to live decently?—A. They would get around that and live in the other way, and of course the expense to the State would be enormous.

Q. (By Representative GARDNER.) If a part of a shipload of immigrants came into the Italian district of Philadelphia next week and found all quarters in a sanitary condition and found their countrymen living as they had never seen them live before, and were told that they had to live that way under the law or else the penalty, whatever the existing code prescribed, would be visited upon them—it might be, perhaps, to the extent of deportation to their own country—do you suppose they would proceed to comply with the law as they learned it from their countrymen and saw it had been enforced upon them?—A. No; I do not. They live in the same condition as they did on the other side. For instance, you go in the slum districts, and you need not go out of their districts to see that they still stick to their old habits.

Q. Have you observed that the administration of the office of Commissioner of Immigration of late, by Mr. Powderly, has had the effect of returning to the countries from which they came applicants for admission into this country who heretofore would have been admitted, and that that in turn has had a material influence on the starting of others from those countries?—A. Yes. I think the rigid enforcement by Mr. Powderly of the immigration laws as they exist will have a beneficial effect in Europe, but the trouble is that they are not strict enough yet.

Q. But they have had a double effect, by returning people?—A. Those returned, and also those who voluntarily go back to Europe, will spread the news; that I admit.

(Testimony closed.)

WASHINGTON, D. C., December 5, 1900.

TESTIMONY OF MR. GOODWIN BROWN,*Counsel for the New York State Commission in Lunacy.*

The commission met at 10.15 a. m., Vice-Chairman Phillips presiding. At that time Mr. Goodwin Brown, of New York City, counsel of the New York State Commission in Lunacy, was introduced as a witness, and, being duly sworn, testified as follows:

Q. (By Mr. CLARKE.) Will you please give your post-office address?—**A.** 192 Broadway, New York City.

Q. How long has the New York State Commission in Lunacy been established?—**A.** Since 1889.

Q. What is its particular duty?—**A.** If you will permit me, I might make a little statement in regard to it. The system is so extensive that I hardly know where to begin, but I might make a few preliminary observations. New York State is peculiar in this, I think, that it is the only State, so far as I am aware, that has established solely and exclusively what is known as State care of the insane. In other words, the State of New York, since 1893, or practically since 1890, pays absolutely for the support of all the dependent insane within its borders. One great difficulty in regard to the treatment of this subject of caring for the insane—as of all the dependent classes, I conceive, in the past in the various States—is the conflict between the State and the various municipalities. Prior to 1836 in the State of New York, or I might say prior to 1843, for the first act was passed in 1836, the care of the insane was purely a local affair—that is, they were cared for by towns, by cities, by municipalities, counties, etc. In 1848 the first lunatic asylum was established in the State, at Utica, to care for a limited number of insane; and from that time up to 1890 a large number of institutions have been established, the State paying a portion of the expense and the counties a portion, sometimes the cities. But the abuses became so great in the care of the insane by the local authorities, principally by reason of the fact that the local authorities were unwilling to appropriate the necessary money, that an act was passed in 1890 providing for the care of all the insane by the State. Certain counties were exempted, notably New York, Kings, and Monroe, and the act provided that those counties might turn over their insane to the State on certain terms. The last of those counties turned over its insane in 1896, so that from 1896 down, under the provisions of the act of 1890, as I said before, New York pays absolutely all the expenses whatsoever. It has ceased to be a local affair in any sense, with this possible exception, that the local authorities are obliged to provide the clothing and pay the expenses of the commitment; after that has been done the State from that time on assumes all expenses.

Q. You believe that is the only State in the Union which does that?—**A.** Well, I will not say that absolutely. I think there are one or two States in the West—the newer States—that started out at once with a system of State care. I never have looked into it particularly, but I think that is the case, possibly. There are some States which divide the expenditures—that is, where they have, you might say, State control with a portion of the expense paid by the counties or the municipalities, but in New York the municipalities, towns, cities, and counties were relieved of all taxes whatsoever. The burden absolutely was shifted to the State. To-day there is a great confusion in the State of New York in the minds of many people who do not understand it, and who think that the expenses of the State government have enormously increased. They have increased theoretically, you might say, by about \$5,000,000 for the cost of caring for the insane in the State of New York to-day is about \$5,000,000 a year. On the other hand, of course, the municipalities have been relieved entirely from that tax.

In 1889, about coincident with the passage of this State-care act, the State provided for the establishment of a State Commission in Lunacy—that is, the interests had become so vast and so complicated that it was felt that it was necessary to have a separate board having jurisdiction and control over the matter. Therefore the State legislature created what is now known as the State Commission in Lunacy, consisting of 3 paid members, which has sole and exclusive jurisdiction over the insane, and this was followed in 1894, in the last constitutional convention, by making the commission a constitutional body and devolving on this commission the sole and exclusive care of the insane, and excluding from its jurisdiction the care of idiots and epileptics, a jurisdiction which up to that time—up to the 1st of January, 1895—they had. So that the State of New York is unique in this, that the care of the insane is not complicated, if you please, with

any other question whatever. The commission at that time resented somewhat the removal of its jurisdiction over idiots and epileptics, on the ground that they were so interlocked, if you please, that it might lead to some serious question, but on the whole I think it has been a satisfactory thing. The minute that that happened, the whole organization became centralized, and the legislature, from the time of the creation of the commission, began constantly to extend its powers, and, beginning with 1893, it gave it control over expenditures for fixed charges, what we call ordinary board or maintenance; that was extended in 1895 to cover expenditures for buildings, and, by subsequent acts, all expenditures whatsoever.

Now, following as a necessary consequence of all that, a very elaborate system in that State has grown up, which has enabled the State to go into all sorts of questions in a careful and scientific way which it was impossible that the State could go into prior to that time on account of the conflicting jurisdictions. I recall very well when I was appointed in 1889 that we had to deal in some instances with towns, in some instances with counties, sometimes with cities, and there was a constant conflict. We had great difficulty in procuring information, getting statistics, etc. It was almost impossible for a time there to know what the cost of caring for the insane was. So that we felt, in order to bring about any systematic effort, that we should have absolute control. And about that time the State conferred the authority of removal of insane from its borders that belonged to other States and countries. Up to that time that duty had devolved on the State board of charities. After this organization had been perfected and after the financial side of it had been settled, then the commission began to turn its attention to various other questions. Of course, the first thing to do was to establish a uniform system of accounts, a uniform system of commitment, a uniform system of dietary, of wages, of officers' salaries, etc.; all of that has been worked out. Then came other questions. Up to that time the State was in the habit of receiving everything that came and asking no questions; and, in fact, practically to-day that is what the State is obliged to do, although it is empowered to return lunatics before or after commitment, in its discretion. Now, the most startling thing that we found when we came to look at this question was the disproportion between the number of insane of foreign parentage as compared with the inhabitants of the State; that certainly was the most startling thing. And I might say here something about the increase in the number of the insane. There has been a great deal of public talk, you might say, a great many observations in regard to the increase of the insane. It is a very questionable whether the insane actually are increasing. I do not think at this time it can be known that it is true. For instance, apparently they increase much faster than population. We attribute that very largely to the fact that more of the insane are being given public care and treatment than formerly. The management of the institutions of the State of New York to-day is so satisfactory that relatives and friends are no longer unwilling, as they were formerly, to commit insane persons to the public institutions. So that I can conceive that the increase can largely be accounted for in that way; that is, so far as the native population is concerned, laying aside, of course, this question of insane being brought in here from other countries. I can recall very well when I was a young man and lived in the country that it was not an uncommon thing at all to have pointed out to me by my father a certain house in the locality where an insane person was kept. I think that, practically, has passed away. The insane up to 1890 were increasing in the State at the rate, perhaps, of about 1,000 a year—that is, there was a net increase. In the last few years the number has dropped down, and I think the last year it was between 600 and 700, and I think that has been the average for the last 4 or 5 years—that is, the absolute net increase. I always believed personally that the time would come when the increase in the insane would just about keep pace with the population, and, in fact, that as medical science advanced the number would tend to diminish, as, in other words, insanity now is regarded as a disease to be cured. Of course, it is a disease which is likely to grow. Then, further, a good many of these people are committed over and over again, discharged as cured, and perhaps in a few months they come back. And I might say here that the State of New York has unlimited means, of course, at its disposal, and that no reasonable expenditure has been spared to discover the causes of insanity, to employ the most skillful physicians, to give these people proper food, clothing, nurses, and attendants; and violence in an institution has almost practically ceased. That is, there is not 1 violent case now where there used to be 10.

Q. (By Mr. CLARKE.) What do you mean by violence—on the part of the attendants or on the part of the insane?—A. On the part of the insane. I remember in 1890 that I walked through one of those wards, and it was so terrible that I came back outside. Now, that has all practically disappeared simply for the reason

that the State employs a vast number of people to take care of them; and perhaps a few figures here will not be out of place. The State to-day employs in round numbers 1 employee to every 5 insane persons, to care for them, and there is—I am only giving round numbers here—perhaps 1 physician to every 170. The number of insane during the past year, as I see by the last report of the lunacy commission, is something over 23,000; about 1,000 of those are in the private institutions, so that there is a permanent number at the present time of about 22,000 dependent cases, and they are increasing at the rate of about 700 a year.

Q. Does that increase include recomitments?—A. No, that is the net increase; for instance, there are 700 more at the end of any one year than there were the previous year—actual persons. So you see this is becoming an immense thing. In 10 years more at that same rate of increase there will be 6,000 more. To-day, say, we have 22,000 in all—in 10 years more there will be 29,000. It does not require very many figures to show where this is likely to lead.

Of course, personally I do not have the same feeling of apprehension about it perhaps that a person might who had no experience. These people must be cared for somewhere, either in homes or in public institutions. My own judgment has been, and that has been the judgment of the commission, that it is better to care for these people in public institutions than to have them cared for at home or wandering about the country, because they are constantly committing acts, if not of violence, of depredation; and often when they are cared for at home, they break up families, they destroy earning capacity, they cause untold suffering and misery; so that it has been the policy of the State to take in every person that is properly committed. And I might say right here that the safeguards in regard to the reception of persons other than insane are very carefully drawn. The superintendent of a State hospital in New York can override a judge's order. That is, a judge may sign an order for the commitment of a lunatic; and if that lunatic is brought to the hospital for reception and the superintendent believes that the person is not insane, he can refuse to receive him. Of course the State is very anxious to return these people, to discharge them and get rid of them. Vast numbers of writs of habeas corpus are taken out. The position of the State is that it simply throws the responsibility on the courts. It makes no objections before a court to the discharge of any person, except to insist that the court shall have before it ample information. Then if the court decides to take the responsibility, the State makes no objection.

Now, another point—in regard to the extent to which private individuals pay for the support of the insane: The ratio is about 1 to 16; in other words, the fixed charges for caring for the insane in the State of New York are about, in round numbers, \$4,000,000 a year, and the friends and relatives contribute about \$250,000; I think that is about one-sixteenth. In the State of Ohio, if I am correctly informed, no charge is made by the State whatsoever, and any person can be committed as a State charge—that is, so far as the hospitals for the insane are concerned. Vast numbers in Ohio are cared for in the county houses, as I understand it.

Now, with that as a preliminary statement, the thing which I conceive this commission is more particularly interested in is the effect of foreign immigration. There are some things about that that are certainly very puzzling. By the census of 1890—and I think the last census shows the same thing practically—the foreign population of the State of New York constitutes 25 per cent of the whole. The foreign population in the hospitals for the insane in New York is 50 per cent and a fraction over. Exactly how that is to be accounted for, you gentlemen perhaps can determine.

Q. (By Mr. KENNEDY.) You mean foreign born?—A. I mean foreign born—exactly 50 per cent, while there is only 25 per cent in the State. Now, the conclusion is inevitable in my mind that in the admission of immigrants here the defective classes have not been kept out. I will not undertake to say that it has been a systematic effort on the part of foreign countries, or a deliberate effort, to send out of those countries defective persons for the sake of their care and support in this country; but I do say this, that it has been done, that an undue proportion of those persons have been sent out and have been received here. Of course the State of New York suffers more by this than any other State.

Q. (By Mr. CLARKE.) Have you any information as to whether there has been an increase or a decrease in the immigration of these insane people, or mentally defective people, in recent years?—A. I do not think so. I am sorry that I have not here the last report of the commission in lunacy, but there they present a table showing the fluctuations. In 10 years it has varied from, say, about 40 per cent up to 50; some years it has risen to 50, and last year it had risen to 50 per cent—the year ending September 30, 1899, what we call the last fiscal year.

Q. Do the statistics show what countries they come from mostly?—A. Yes; that of course is a thing that could be figured out; but I could not give it to you off-hand here except to say that, of course, the greatest number come from Ireland.

Q. (By Mr. FARQUHAR.) Can you furnish this table with your testimony now?—A. No; I can not.

Q. Well, you can send it to us with your revised testimony?—A. Oh, yes; I can send the figures in regard to that, showing exactly the countries where they come from. It is well known that that is not only true in regard to the insane but it is true in regard to the prisons; it is true in regard to all public institutions. I have noted that repeatedly in the State of New York. And I might say in this connection that prior to being a State commissioner in lunacy, which office I occupied for 10 years, I was for nearly 7 years in the governor's office in New York and had charge of the criminal business; that is, the extradition of fugitives and looking after criminals generally.

Q. (By Mr. KENNEDY.) May I ask you if you have any information as to whether that large percentage from Ireland is assisted from the other side or more largely from this side by relatives and friends?—A. I could not answer that. Of course I think we all appreciate this fact, that owing to the unfortunate conditions which prevail in Ireland, there are more of these people there; but this happens right along, that when people come over from Ireland or from any other of those countries and become a little bit prosperous, they immediately try to bring their friends over here. They are exceedingly clannish—I have observed that—much more so than our own native population. They seem to care much more for their own people, and they will save money and put forth efforts, and make sacrifices which, I feel free to say, would not be made by the native-born people. It is astonishing how they get those people over here. I can conceive in some instances perhaps—in fact I feel pretty confident that in England that was the case, certainly for a number of years—deliberate efforts were made, fare was furnished, transportation was given for those people to come. The fact remains that that is the condition of things.

In regard to the cost of caring for those people, to show what an enormous thing this burden is, and how, I believe, it is worthy of the most serious consideration that this honorable commission can give it, we have, for instance, a net increase in the State of New York of 700 per year. Half of that is foreign-born population, just one-half of it—in other words, 350 a year. It is known, so far as anything can be known, that the average duration of life of the insane—that is, in an institution—we will not say anything about how long they have lived outside or how long they live after they get out—but the average length of time which they live after they get in is supposed to be about 12 years; and we will call it 10 years for convenience. Last year the fixed charges of caring for the insane were the lowest in the history of the State.

I might say here, as perhaps being germane to some of the questions that come before you on the value of cooperation, that in 1893, when the State consolidated all its hospitals for the insane under one charter, and had them operated from one central office, the average cost of caring for the insane was \$222 per year. The first year that the commission had charge of the finances the cost went down to \$187; and it has been dropping ever since, so that last year the average cost of caring for the insane in New York dropped down to the unprecedented low figure of \$165. As compared with 1893, say—that is, in round numbers—a saving of nearly \$60. That would mean a saving to the State, on a basis, say, of 20,000 insane, of \$1,400,000 a year. That has been brought about by cooperation. I am not here in behalf of trusts, but I just simply desire to say a word showing what can be accomplished by intelligent, well-directed, centralized effort—what has been accomplished in one direction in the State of New York.

Q. (By Mr. CLARKE.) And at the same time you claim they have been very much better cared for than before?—A. I can say this, that it is said by competent judges that the system of caring for the insane in New York is the finest in the world. I venture to say that you gentlemen could not be any better entertained than to visit one of the hospitals for the insane in the State of New York and see how these people are cared for. They are comfortably clothed, they are well fed, they are kept warm, they are supplied with trained nurses; there is not a hospital that has not a training school; they are given the best medical attendance that can be had; the recovery rate is rising constantly; and all that has been brought about with a constantly diminishing rate of expenditure. Why? Simply by cooperation. The State has now in round numbers a dozen State hospitals. In the old days when it had six, or seven, or eight, each of these institutions was governed by a board of trustees and each was going independent of all the others. They never compared notes; they never visited each other's institutions; their

that the State employs a vast number of people to take care of them; and perhaps a few figures here will not be out of place. The State to-day employs in round numbers 1 employee to every 5 insane persons, to care for them, and there is—I am only giving round numbers here—perhaps 1 physician to every 170. The number of insane during the past year, as I see by the last report of the lunacy commission, is something over 23,000; about 1,000 of those are in the private institutions, so that there is a permanent number at the present time of about 22,000 dependent cases, and they are increasing at the rate of about 700 a year.

Q. Does that increase include recomitments?—A. No, that is the net increase; for instance, there are 700 more at the end of any one year than there were the previous year—actual persons. So you see this is becoming an immense thing. In 10 years more at that same rate of increase there will be 6,000 more. To-day, say, we have 22,000 in all—in 10 years more there will be 29,000. It does not require very many figures to show where this is likely to lead.

Of course, personally I do not have the same feeling of apprehension about it perhaps that a person might who had no experience. These people must be cared for somewhere, either in homes or in public institutions. My own judgment has been, and that has been the judgment of the commission, that it is better to care for these people in public institutions than to have them cared for at home or wandering about the country, because they are constantly committing acts, if not of violence, of depredation; and often when they are cared for at home, they break up families, they destroy earning capacity, they cause untold suffering and misery; so that it has been the policy of the State to take in every person that is properly committed. And I might say right here that the safeguards in regard to the reception of persons other than insane are very carefully drawn. The superintendent of a State hospital in New York can override a judge's order. That is, a judge may sign an order for the commitment of a lunatic; and if that lunatic is brought to the hospital for reception and the superintendent believes that the person is not insane, he can refuse to receive him. Of course the State is very anxious to return these people, to discharge them and get rid of them. Vast numbers of writs of habeas corpus are taken out. The position of the State is that it simply throws the responsibility on the courts. It makes no objections before a court to the discharge of any person, except to insist that the court shall have before it ample information. Then if the court decides to take the responsibility, the State makes no objection.

Now, another point—in regard to the extent to which private individuals pay for the support of the insane: The ratio is about 1 to 16; in other words, the fixed charges for caring for the insane in the State of New York are about, in round numbers, \$4,000,000 a year, and the friends and relatives contribute about \$250,000; I think that is about one-sixteenth. In the State of Ohio, if I am correctly informed, no charge is made by the State whatsoever, and any person can be committed as a State charge—that is, so far as the hospitals for the insane are concerned. Vast numbers in Ohio are cared for in the county houses, as I understand it.

Now, with that as a preliminary statement, the thing which I conceive this commission is more particularly interested in is the effect of foreign immigration. There are some things about that that are certainly very puzzling. By the census of 1890—and I think the last census shows the same thing practically—the foreign population of the State of New York constitutes 25 per cent of the whole. The foreign population in the hospitals for the insane in New York is 50 per cent and a fraction over. Exactly how that is to be accounted for, you gentlemen perhaps can determine.

Q. (By Mr. KENNEDY.) You mean foreign born?—A. I mean foreign born—exactly 50 per cent, while there is only 25 per cent in the State. Now, the conclusion is inevitable in my mind that in the admission of immigrants here the defective classes have not been kept out. I will not undertake to say that it has been a systematic effort on the part of foreign countries, or a deliberate effort, to send out of those countries defective persons for the sake of their care and support in this country; but I do say this, that it has been done, that an undue proportion of those persons have been sent out and have been received here. Of course the State of New York suffers more by this than any other State.

Q. (By Mr. CLARKE.) Have you any information as to whether there has been an increase or a decrease in the immigration of these insane people, or mentally defective people, in recent years?—A. I do not think so. I am sorry that I have not here the last report of the commission in lunacy, but there they present a table showing the fluctuations. In 10 years it has varied from, say, about 40 per cent up to 50; some years it has risen to 50, and last year it had risen to 50 per cent—the year ending September 30, 1899, what we call the last fiscal year.

about \$6,000; but for the sake of being conservative on that question, we might cut that rate in two and say \$3,000. We have 350 a year of foreign-born people admitted into these institutions. They live 10 years at the rate of \$3,000 a piece, and you can multiply that \$3,000 by 350 and see what you get—in round numbers you get \$1 000,000.

Q. (By Mr. KENNEDY.) For the State of New York alone?—A. For the State of New York alone. Now, mind you, that is going right along indefinitely; and unless the United States Congress, through the medium of such a commission as yours, can provide some remedy for this evil it will require more figures than we could put on this table here to see where this will end.

Q. (By Mr. CLARKE.) Have you studied our immigration and the practice at the barge office in New York with reference to a diminution of this evil?—A. Only in a general way. I was going to speak of that a little bit later. I have never visited the barge office, but, of course, we know something about it. We are to-day, of course, caring for over 5,000 people in excess, according to our figures, of what is the normal percentage in the State of New York. In other words, we have got over 50 per cent—11,000, of these people who are foreign born, whereas, according to the foreign-born population in the State, we should have only 5,000 or between 5,000 and 6,000. It already runs into millions and millions, and it will run into millions and millions more; it is a vast thing. I am not prepared here to-day, for instance, to give the figures in regard to the idiots and epileptics; but I might say in this connection, although I am not charged especially to do so, that the State of New York has assumed practically the care of all the epileptics in the State; it has assumed practically the care of all the idiots; and then when you come to take into consideration the prisons of the State, when you come to take into consideration the vast number of reformatories, its houses of refuge, its various charitable institutions, why, the figures simply reach an appalling size. As I say, I am simply interested in this question of the insane.

Now, we get down to the practical question why the lunacy commission was charged with the duty of deporting persons who belonged to foreign countries. The insane are a very difficult class to deport. For instance, you take the average paupers, and they are shifted about from one city to another by the purchase of a railroad ticket; they are generally ready to move on if anybody will give them a ticket. But you can not do that with a lunatic; as a class they are difficult; and it is especially difficult to send them back to Europe. I think, in round numbers, they send out of the State to other States and foreign countries about 188 a year; a large number of them—I think about 100—are sent to foreign countries, sent back, and the others are distributed to other States.

Q. By Mr. PHILLIPS.) How are they cared for in being sent back; what provisions do you have for them?—A. I am very glad you suggested that. The policy of the State commission in lunacy—we do not claim to be any more moral than other people, but as a matter of sound public policy when the State of New York assumed the entire care of the insane and when all this was placed under charge of this commission, a commission which could be held directly responsible, three men, by the legislature and by the public, it was felt that it would hardly do to tolerate certain practices which had theretofore existed by the local authorities. Now, I will not go into the cases and mention the States, but I know of instances after instances—I can recall one State in particular that makes it a regular practice to send an agent around to its hospitals for the insane like this: They come across a patient and say: Where did you live before you came here? I lived in New York. Got any friends there? Yes; oh, yes. Like to go back there? Very glad to. Well, I will see if I can fix it. They literally gather up those patients, take them to a railroad station, buy them a ticket, give the train men half a dollar or a dollar and say, If you will kindly look after this patient until he gets to the Grand Central Depot you will confer a favor. Now, what happens? They are dumped out at the Grand Central Depot and go out on Forty-second street, and the police see them wandering around, and they are taken to the police station and examined and found to be insane, and taken to the receiving pavilion, kept under detention for a week and committed to the State hospital. Then the State of New York has to begin to get those persons back; and, of course, the question of domicile is a difficult one to determine, especially in cases of that kind. So that they are constantly pouring into the State of New York, and ultimately they drift and gravitate from the State of New York to other States for various reasons. Of course the State has always been willing, and I would not undertake to state that we had been entirely free from guile; but we never have taken a poor, helpless lunatic and put him on a train and paid anybody for doing it. If we have sent anybody out of the State, we have always sent a trained attendant and made arrangements beforehand with friends and relatives to take care of him.

that the State employs a vast number of people to take care of them; and perhaps a few figures here will not be out of place. The State to-day employs in round numbers 1 employee to every 5 insane persons, to care for them, and there is—I am only giving round numbers here—perhaps 1 physician to every 170. The number of insane during the past year, as I see by the last report of the lunacy commission, is something over 23,000; about 1,000 of those are in the private institutions, so that there is a permanent number at the present time of about 22,000 dependent cases, and they are increasing at the rate of about 700 a year.

Q. Does that increase include recomitments?—A. No, that is the net increase; for instance, there are 700 more at the end of any one year than there were the previous year—actual persons. So you see this is becoming an immense thing. In 10 years more at that same rate of increase there will be 6,000 more. To-day, say, we have 22,000 in all—in 10 years more there will be 29,000. It does not require very many figures to show where this is likely to lead.

Of course, personally I do not have the same feeling of apprehension about it perhaps that a person might who had no experience. These people must be cared for somewhere, either in homes or in public institutions. My own judgment has been, and that has been the judgment of the commission, that it is better to care for these people in public institutions than to have them cared for at home or wandering about the country, because they are constantly committing acts, if not of violence, of depredation; and often when they are cared for at home, they break up families, they destroy earning capacity, they cause untold suffering and misery; so that it has been the policy of the State to take in every person that is properly committed. And I might say right here that the safeguards in regard to the reception of persons other than insane are very carefully drawn. The superintendent of a State hospital in New York can override a judge's order. That is, a judge may sign an order for the commitment of a lunatic; and if that lunatic is brought to the hospital for reception and the superintendent believes that the person is not insane, he can refuse to receive him. Of course the State is very anxious to return these people, to discharge them and get rid of them. Vast numbers of writs of habeas corpus are taken out. The position of the State is that it simply throws the responsibility on the courts. It makes no objections before a court to the discharge of any person, except to insist that the court shall have before it ample information. Then if the court decides to take the responsibility, the State makes no objection.

Now, another point—in regard to the extent to which private individuals pay for the support of the insane: The ratio is about 1 to 16; in other words, the fixed charges for caring for the insane in the State of New York are about, in round numbers, \$4,000,000 a year, and the friends and relatives contribute about \$250,000; I think that is about one-sixteenth. Vast numbers in Ohio are cared for in the county houses, as I understand it.

Now, with that as a preliminary statement, the thing which I conceive this commission is more particularly interested in is the effect of foreign immigration. There are some things about that that are certainly very puzzling. By the census of 1890—and I think the last census shows the same thing practically—the foreign population of the State of New York constitutes 25 per cent of the whole. The foreign population in the hospitals for the insane in New York is 50 per cent and a fraction over. Exactly how that is to be accounted for, you gentlemen perhaps can determine.

Q. (By Mr. KENNEDY.) You mean foreign born?—A. I mean foreign born—exactly 50 per cent, while there is only 25 per cent in the State. Now, the conclusion is inevitable in my mind that in the admission of immigrants here the defective classes have not been kept out. I will not undertake to say that it has been a systematic effort on the part of foreign countries, or a deliberate effort, to send out of those countries defective persons for the sake of their care and support in this country; but I do say this, that it has been done, that an undue proportion of those persons have been sent out and have been received here. Of course the State of New York suffers more by this than any other State.

Q. (By Mr. CLARKE.) Have you any information as to whether there has been an increase or a decrease in the immigration of these insane people, or mentally defective people, in recent years?—A. I do not think so. I am sorry that I have not here the last report of the commission in lunacy, but there they present a table showing the fluctuations. In 10 years it has varied from, say, about 40 per cent up to 50; some years it has risen to 50, and last year it had risen to 50 per cent—the year ending September 30, 1899, what we call the last fiscal year.

Q. Then who provides for them?—A. The steamship company.

Q. They provide the nurse?—A. No; I do not know what they do; we simply deliver them. That is a thing which I think might very well interest this commission, because I imagine the suffering and hardships of those people must be very great when they are transferred back under those circumstances. Of course, all the State does is simply to take them down to the Barge Office; it is arranged by the immigration authorities. The number of those cases is very small, because it is a very difficult thing to establish that a person became insane from causes which arose prior to departure for this country. Now, it does seem to me that some provision should be made whereby if the State desires to return lunatics or other dependent persons to a foreign country the steamship company should be obliged to take them, if they are properly accompanied. I do not think any State would object to that.

Then, again, this question of a year. Now, that is altogether too short a time. You take the history of those people. They come over here, even the very poorest of them, perhaps with a little money. They may have the promise of employment, and it may be pretty nearly a year, and often is, before this malady begins to develop. After money is gone and after employment ceases and loss of friends, etc., despondency ensues, a case of melancholia results, and the consequence is that a year elapses before the disease becomes apparent. We believe that that time should be extended.

Q. (By Mr. FARQUHAR.) How much extension?—A. I should think it should be extended to 2 years; I think that would be a reasonable time.

Q. Why should you not make your extension to cover citizenship? These people are not citizens of the United States.—A. Not at all.

Q. You mentioned it simply as an arbitrary term?—A. That is all. We should prefer to have that time very much extended. I mention 2 years as the shortest time. Of course you would have to adopt some arbitrary period, I conceive. I mention 2 years as the shortest time.

Q. (By Mr. LITCHMAN.) Would you not also in that connection adopt a regulation that in case they became insane they should be deported anyhow, without reference to this examination that you speak of to show that the primary cause existed at the time of the immigration from the foreign country?—A. I do not think that would be an unreasonable thing at all. I think that question you ask is a very pertinent one, and I say it for this reason: A very elaborate system of records is kept. For instance, when a hospital is notified that a person is ready to be received, a trained nurse goes to get this person. They are not only trained in that particular, as to the care of the insane, but they are trained in regard to the question of issuing the certificates; and they take long blanks and they question the relatives and friends, because the history is a very important thing in relation to the care of a case. We find in almost every instance where the history can be known that heredity plays a very important part. It is wonderful. On the records of the wards of the State of New York I have seen grandparents and grandchildren. I have seen as many as 2 sisters at a time. It is not an uncommon thing to see 2 brothers and sometimes 3 sisters. I do not mean to say that that is very common, but it occurs, and it only points out that heredity plays a very important part in this matter.

Q. Is that heredity manifest more in the female than in the male?—A. I do not think there is any difference. Experience shows in New York, and I imagine almost everywhere, that the sexes are almost equally divided. There is a slight excess as to women, but I attribute that entirely to the fact that women are more tractable. When the question comes up about their commitment, if they go, they do not make any resistance as a rule.

Q. Have you investigated the question as to the age at which insanity manifests itself?—A. Why, as I recollect it, it manifests itself more particularly between 30 and 45.

Q. That applies to both sexes?—A. Applies to both sexes. I desire to say that I am not a physician. I am simply a lawyer, representing the legal end of this commission; but, of course, I acquire some information, some knowledge, which a physician perhaps could only be expected to know. But that is generally the case. In other words, you find very few young people, you find scarcely ever a child in these institutions.

Q. Do you find any special cause for the insanity manifested?—A. That would be difficult.

Q. That would be a physician's answer?—A. That would be a physician's answer. Of course, in round numbers, in generalizing you might say that heredity is the most important cause, if you are pleased to call it a cause. Then comes in the question of intemperance and excesses of various kinds. Take a

that the State employs a vast number of people to take care of them; and perhaps a few figures here will not be out of place. The State to-day employs in round numbers 1 employee to every 5 insane persons, to care for them, and there is—I am only giving round numbers here—perhaps 1 physician to every 170. The number of insane during the past year, as I see by the last report of the lunacy commission, is something over 23,000; about 1,000 of those are in the private institutions, so that there is a permanent number at the present time of about 22,000 dependent cases, and they are increasing at the rate of about 700 a year.

Q. Does that increase include recomitments?—A. No, that is the net increase; for instance, there are 700 more at the end of any one year than there were the previous year—actual persons. So you see this is becoming an immense thing. In 10 years more at that same rate of increase there will be 6,000 more. To-day, say, we have 22,000 in all—in 10 years more there will be 29,000. It does not require very many figures to show where this is likely to lead.

Of course, personally I do not have the same feeling of apprehension about it perhaps that a person might who had no experience. These people must be cared for somewhere, either in homes or in public institutions. My own judgment has been, and that has been the judgment of the commission, that it is better to care for these people in public institutions than to have them cared for at home or wandering about the country, because they are constantly committing acts, if not of violence, of depredation; and often when they are cared for at home, they break up families, they destroy earning capacity, they cause untold suffering and misery; so that it has been the policy of the State to take in every person that is properly committed. And I might say right here that the safeguards in regard to the reception of persons other than insane are very carefully drawn. The superintendent of a State hospital in New York can override a judge's order. That is, a judge may sign an order for the commitment of a lunatic; and if that lunatic is brought to the hospital for reception and the superintendent believes that the person is not insane, he can refuse to receive him. Of course the State is very anxious to return these people, to discharge them and get rid of them. Vast numbers of writs of habeas corpus are taken out. The position of the State is that it simply throws the responsibility on the courts. It makes no objections before a court to the discharge of any person, except to insist that the court shall have before it ample information. Then if the court decides to take the responsibility, the State makes no objection.

Now, another point—in regard to the extent to which private individuals pay for the support of the insane: The ratio is about 1 to 16; in other words, the fixed charges for caring for the insane in the State of New York are about, in round numbers, \$4,000,000 a year, and the friends and relatives contribute about \$250,000; I think that is about one-sixteenth. In the State of Ohio, if I am correctly informed, no charge is made by the State whatsoever, and any person can be committed as a State charge—that is, so far as the hospitals for the insane are concerned. Vast numbers in Ohio are cared for in the county houses, as I understand it.

Now, with that as a preliminary statement, the thing which I conceive this commission is more particularly interested in is the effect of foreign immigration. There are some things about that that are certainly very puzzling. By the census of 1890—and I think the last census shows the same thing practically—the foreign population of the State of New York constitutes 25 per cent of the whole. The foreign population in the hospitals for the insane in New York is 50 per cent and a fraction over. Exactly how that is to be accounted for, you gentlemen perhaps can determine.

Q. (By Mr. KENNEDY.) You mean foreign born?—A. I mean foreign born—exactly 50 per cent, while there is only 25 per cent in the State. Now, the conclusion is inevitable in my mind that in the admission of immigrants here the defective classes have not been kept out. I will not undertake to say that it has been a systematic effort on the part of foreign countries, or a deliberate effort, to send out of those countries defective persons for the sake of their care and support in this country; but I do say this, that it has been done, that an undue proportion of those persons have been sent out and have been received here. Of course the State of New York suffers more by this than any other State.

Q. (By Mr. CLARKE.) Have you any information as to whether there has been an increase or a decrease in the immigration of these insane people, or mentally defective people, in recent years?—A. I do not think so. I am sorry that I have not here the last report of the commission in lunacy, but there they present a table showing the fluctuations. In 10 years it has varied from, say, about 40 per cent up to 50; some years it has risen to 50, and last year it had risen to 50 per cent—the year ending September 30, 1899, what we call the last fiscal year.

Q. You would include epileptics in the excluded class?—A. I certainly should.

Q. Would you use the expression "weak-minded" to cover other classes?—A. That is a very troublesome question. For instance, we had an immense amount of difficulty under the constitution of New York. The lunacy commission's jurisdiction was cut off from idiots. Now, legally, an idiot is a person without a mind. An idiot may be born as such—that is, without a mind—or it may be a case of arrested development. For instance, a child may live for 6 months or a year and it may have scarlet fever or some other disease and practically the mind be destroyed. Now, there is much dispute between alienists as to whether that person is an idiot, and the State has had considerable difficulty in framing a suitable definition. But I would include imbeciles. There is a distinction between an idiot and an imbecile. That is a word that may be used with perfect safety. An imbecile may be known. If you go to the idiot asylum at Syracuse or the institution at Newark for feeble-minded women, you can see the distinction between idiots and imbeciles and persons of weak minds. I think that such legislation as that could be safely, and should be, provided.

Q. How full are your statistics in New York as to those aliens that have come under that law concerning lunacy?—A. You mean as to what country they come from?

Q. Yes; are they very full and go back for several years?—A. Yes. We could furnish them back to 1890.

Q. Can you furnish also the statistics of deportation?—A. Oh, yes. Of course, in some instances it is very difficult to find out the private history of these people, but every effort is made, and I think that could be furnished.

Q. (By Mr. PHILLIPS.) Have you ever gone into the question of insanity among the uncivilized—for instance, the North American Indians—and whether older nations are not more liable to have their subjects become insane than newer ones?—A. No; not especially. We have some Indians.

Q. You have some insane Indians?—A. Yes; but there are very few Indians in the State of New York, and it would be very hard to generalize, the number of Indians we have is so small; but in regard to the old countries—I suppose you are referring to China and Japan—it would be practically impossible to get any information that would be of any real value in regard to the matter. It is astonishing how much of inaccuracy there is in regard to statistics. Now, I undertook to go into one of our neighboring States—one of the most highly civilized—to find out about the cost of maintaining the insane, and I found it necessary for me to make a special study of their institutions to find out anything about it. The methods were so entirely different.

Q. Have you studied in regard to the proportion of insane to the population in England, Ireland, France, and Germany, as compared with those in the United States?—A. Our figures would show that. Of course, in New York and in other of the Eastern States the whole thing is vitiated by the fact of this stream of immigration; and there is another thing: We put down a person as native. Here is an Italian family that comes into this country and a child is born a few days after arrival; that child has to be put down as a native, and yet, practically it is foreign born to all intents and purposes.

Q. (By FARQUHAR.) Have you found in your investigations that any organizations or municipalities or smaller subdivisions of states in Europe do deport their insane to this country?—A. It is only on information and belief. We never have gone to the extent of going over there and thoroughly investigating it.

Q. Do you recollect the report made by a special commission in 1891 that went all over Europe and reported that in Switzerland and England, and especially Ireland, they deported many of their insane and imbeciles to this country?—A. I recall that.

Q. Do your later investigations show there is anything of that now at all?—A. We do not know, except there are certain earmarks which indicate that thing is being done. We do not know it to a certainty.

Now, as to the remedy, outside of this matter of legislation: I might say the lunacy commission had a bill introduced in both Houses of Congress a year or two ago on this very subject. We should like to get that legislation if we could, and we would like to get the support of this commission in regard to it.

Q. What was your proposed law to cover?—A. Substantially the lines we have discussed.

Q. Was it an amendment to the immigration law or a separate law itself?—A. It was an amendment. It was prepared and introduced in the Senate of the United States by Senator Fairbanks on May 2, 1898; it was an amendment to the act of 1891.

Q. What is the form of the amendment?—A. Shall I read it?

Q. Yes; if you please.—A. (Reading:)

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of the act of March 3, 1891, in amendment of the immigration and contract-labor acts, be, and hereby is, amended by adding to the classes of aliens thereby excluded from admission to the United States the following:

"All persons who have been confined in an asylum for the insane, or have been insane before landing in the United States, or who shall within 2 years after arrival in the United States become insane, unless it shall affirmatively appear on special inquiry that such insanity is due to causes arising after such arrival."

Of course that covers substantially what we have been talking about. [Reading:]

"Section 2. That section 1 of the act of March 3, 1893, to facilitate the enforcement of the immigration and contract-labor acts of the United States be, and hereby is, amended by adding to the statements which are now required in the lists or manifests in answer to questions at the top of said lists statements as to each immigrant, 'Whether ever insane or confined in an asylum for the insane.'"

Q. Adding just one question?—A. Just one question. [Reading:]

"And section 2 of said act is hereby amended by adding after the words 'insane persons' in said section the words 'or been insane or confined in an asylum for the insane.'"

That covers substantially the same ground. Section 3 of this proposed bill provides that [reading:]

"SEC. 3. That every alien immigrant landing in the United States furnish to the inspector of immigration a certificate of a surgeon of the immigrant's last place of residence, showing whether such immigrant has ever been insane or confined in an asylum for the insane, or whether either of the parents of such immigrant was ever so confined, accompanied by a certificate of a consul or consular agent of the United States, in the same State, province, or country, that such surgeon is a qualified and practicing surgeon thereof.

"If such certificate is not furnished, the inspector of immigration shall, with the medical examiner or examiners, make careful inquiry as to the matters required to be shown by such certificate, and if it shall appear that a parent of an immigrant who is permitted to land has ever been insane or confined in an asylum for the insane, the fact shall be reported by the inspector of immigration to the superintendent of immigration.

"SEC. 4. That any alien or foreign-born insane person in the United States, whose return to a foreign country from which he migrated is not now provided for by the immigrations acts, but whose return may be voluntarily had upon the request of the family or relatives of such insane person or other persons in interest, shall, upon the demand of the superintendent of immigration or of a State board or officer having charge of the insane in any State, the furnishing of the necessary attendant or attendants and the payment of the regular fare of the persons carried, be transported to the country from which such insane person migrated to the United States by any steamship or transportation company, or owners of vessels doing business between any port of the United States and any foreign port in the line of travel to such foreign country. And any company or owners violating the provisions of this section shall pay a fine not exceeding \$500, to be recovered in the proper United States court, and said fine shall also be a lien upon any vessel of said company or owners found within the United States.

"Section 5. That this act shall take effect three months after its passage."

This bill I recall now, upon reading it. I have been out of office nearly 2 years, but when this bill was prepared of course I was very familiar with it. I certainly think that would be a very wise provision, and I do not see how any great hardship could be worked out. If it could be shown that any person contemplating migration to this country had been insane, it does not seem unreasonable to say that that person should not be admitted here. I think the United States could go a great deal further. I never was down to the Barge Office, and do not know what the system of inspection is, but I do say this: If the exclusion of these people could be predicated upon the determination of the fact, even to be ascertained on this side, that the person was of the defective class—an idiot, insane person, or epileptic—it would be worth to the State of New York alone any sum of money. The State could afford—to say nothing of the United States—to keep at every port by one or two trained alienists to examine these people as they come. Now, the manifestations of degeneracy, if you please, are so striking in most instances, that any expert would know it instantly.

Q. (By Mr. CLARKE.) Is it your opinion that a person who has been insane could be detected ordinarily by one or two physicians when that person might pass in line before them?—A. No; I think in many instances that they

escape observation, but I think in a large number of instances it would be perfectly apparent; that the manifestations of physical degeneracy would be so apparent that it would result in their being set aside and detained for a further inquiry. That is what it would result in.

Now, it is very curious. These alienists, trained men with experience, can detect certain manifestations of the eyes and the ears—you might say of the face. I have watched these physicians in a hospital; they would have the person cross his legs and then strike a sharp blow with the hand below the knee. What that sign is I can not recall, but I have seen it done repeatedly, and it is certain to show a certain—you might say a nervous lesion—if I use the expression correctly. Now, I believe that might be done, and I do not believe with the large number that is admitted here it would be any great hardship. It is certainly the case that these people are coming here in vast numbers, and I certainly think that legislation should be obtained somewhat on the line of this bill.

Q. (By Mr. FARQUHAR.) It is also a very expensive class of immigration?—A. Very; the most so. For instance, the inmates of our workhouses and reformatories, and the epileptics and insane are capable of largely supporting themselves. The insane are at work some, but their working is only an incident to their cure and treatment. They are only given that amount of work which will benefit them. You can see the enormous number of employees. I stated it is 1 to 5; my recollection is it is greater than that—between 4 and 5—approximately 1 to 5.

Q. (By Mr. KENNEDY.) I would like to ask one question about something you said in regard to the people of a certain country. You said, I believe, that 25 per cent of the population of New York was foreign born, and 50 per cent of the insane were foreign born, and that about 40 per cent of that 50 per cent were Irish.—A. That is the general impression that I have.

Q. General impression? You think there can be no question about that?—A. I do not think there is much.

Q. Is it not a fact that the Irish are generally a pretty hardy and healthy race, and you do not look for insane people among them?—A. The trouble about that is this: I apprehend that the thrifty Irish largely do not come over here—that is, they have not in the early days and to this time. They naturally come over here to better their condition, and they come over here as a result of severe poverty. In other words, we might apply the same thing here. If emigration were to take place from this country, only those would go whose condition had become desperate by reason of great hardship, poverty, etc. I believe it to be the case that these people live largely on a low diet. I believe it to be the case that the Irish are peculiarly prone in this country to tuberculosis—peculiarly prone to it. I think, without stating it as a fact, that statistics will show that that race is taken off more rapidly by tuberculosis than any other class. As to tuberculosis, I might mention here what Dr. Trudeau told me in the Adirondacks. I had quite a long talk with him, and he said that the germs of tuberculosis existed everywhere. He said, "You are just as liable to get it in Albany as here. Everybody breathes the germs, but if a person is in excellent physical condition, the germs pass right through and do no harm, but if persons are in a low physical condition—if their diet has been poor and they are run down, disease readily attacks them." And I certainly think that is so in regard to the Irish. Their climate is a severe one, as I understand it; it is moist.

Q. You would not find many predisposed to insanity among the police force of New York City?—A. They are a picked class.

Q. Picked from the Irish class, too?—A. Generally from that race, but the hardy ones are picked out.

Q. (By Mr. CLARKE.) Have you studied the subject of intemperance among immigrants as a cause of insanity?—A. No; except that we know in a general way that intemperance plays an enormous part in this thing. I think it is generally true. For instance, take the English, I think intemperance is much greater over there than it is here. That is my impression. I think that is so among the Irish; but I would not speak with any authority on that subject.

Q. (By Mr. PHILLIPS.) You say the larger per cent of the foreign-born insane are from Ireland. If we now had statistics of the number of insane in Ireland and England in proportion to the number of inhabitants, and from some of these other countries, we might find that their per cent may be much larger; and that therefore we are not getting so many shipped in on us as there would seem. Is there any way to do that?—A. I see what your point is. In New York, Pennsylvania, Ohio, Massachusetts—in fact, all the Eastern States—the ratio of insane persons to the whole population is pretty nearly constant. The last time I looked at it it was about 1 to 800. As you go farther west you will find it grows less and less until you get out in the far Western States, where the proportion runs to as high as 1 in 1,500.

Q. The conditions surrounding the American people are different?—A. Of course it is different. The tendency is with these people to go into the Eastern States when they come into the ports of Boston, New York, or Philadelphia. The number has been so great that there is in the Eastern States 1 lunatic to every 800 of population. I do not know what this last census will show, but that was the condition when I looked at it last. When they migrate and go West it is only the hardy ones that go. The same rule does not seem to apply here as applies when they come from the foreign countries over here. Only the hardy ones go to the Western States; they leave the feeble and defective ones behind them here. So you get a proportion out there so small that you might practically say there are no lunatics at all out there. I still think—no matter what the statistics might show in Great Britain, Ireland, Germany, and France—I still think vast numbers of these people could be kept out.

Q. Do you not think there is a greater per cent of these in the old nations, where they are thickly populated, compared with America?—A. I should think so. I do not know how many of you have ever undertaken to look through lunacy reports, or the reports of Great Britain, that we concede to be about the most highly civilized country across the water; and yet I should say, to the most expert man it would be impossible to take their reports and figure out anything satisfactory. That is because they have no centralized administration. Take it in London—it is one of the most confused things. There is the county council, the borough of this and the borough of that, and they do not seem to have any responsible head there anywhere. So it is almost impossible. And then they allow far greater numbers of their affected people to roam at large. In the State of New York it could not ever be known with any certainty how many lunatics there were. We know of instances, all of us, where there are people who should be committed, but out of sentiment and considerations of humanity, mistakenly so-called, no steps are taken to lock them up. I think that condition prevailed much more generally in the old days. I meant to have brought that out more fully. It was true in the State of New York just as long as the insane were a municipal, or county, or town charge, and had to pay the State a certain rate per week, they were unwilling or reluctant to commit the people. They said, "Let this crazy Mary wander around. We will have to pay \$4 a week for her board, and we can care for her in the poorhouse better and more cheaply." That ceased to operate the minute that the State took hold of it. They saw that they were relieved of local taxation, and said, "We might as well get this person out of the poorhouse." So the State now has them all. But the benefit has been such that the people recover quicker now, get cured quicker. And, in spite of the fact of all these people being brought in, the number appears to be diminishing.

Q. (By Mr. FARQUHAR.) The whole expense in New York comes out of the general fund?—A. Out of the general fund. The \$250,000 which is now received goes into the treasury, but it is a general State tax. I want to emphasize the fact that the State of New York has ceased to treat the question as a matter of charity, but simply as a matter of the highest financial consideration.

Q. (By Mr. PHILLIPS.) Do you admit persons to the insane asylum whose people are able to support them?—A. They have to be admitted.

Q. Do you not charge it up to them?—A. The State has 7 or 8 agents, whose duty it is to investigate all of these cases. For instance, in the city of New York an agent stands there at the receiving pavilion, where the persons are brought for preliminary examinations, and if it is found there is anybody liable for their support, they are charged with it. But to show the poverty-stricken condition of these people it is only necessary to point out that the State receives less than \$300,000.

Q. Out of the \$5,000,000?—A. Out of the \$5,000,000. Of course, this may be said, that the policy of the State of New York to-day is not to pauperize the family. For instance, here is a mechanic whose wife becomes insane. He may be earning \$2.50 per day. He has 3 or 4 children to care for and has to hire a housekeeper. To make that man contribute the average cost of support, \$3.50 a week, would cut into his wages so as to impoverish the family. So the State says, "We will remit this charge." We had the criminal procedure amended a couple of years ago extending the liability to brothers and sisters and husband and wife.

Q. It stops with the immediate family?—A. No; it takes in everybody in the order of their relationship; brothers and sisters would come first. The liability of parents always continues. The liability of the husband always continues. The liability of the wife always continues, and the other relatives in point of order.

Q. Down to cousins?—A. As a practical question I do not think they ever pay.

Q. They have compelled brothers and sisters?—A. Yes; but if the State chose to exercise its power it could bring these people into court under our amended criminal procedure and have a judicial order made establishing their liability. But in spite of all that to-day they only get about 1 in 16.

When you come to get the statistics of Germany or England—I will not speak of France, because their government is much more centralized—I think they would only show approximately the number of insane in proportion to the population. Under our census, of course, that would be a matter of opinion—the number of insane persons outside of institutions. The census taker would have to form his own judgment as to whether a person was insane. He would have to guess at it. Naturally relatives are very reluctant to make any admission. They have an idea it casts a stigma and interferes, perhaps, with the marriage of sons and daughters. They are very reluctant to admit anything of the kind.

Here is a thing that happens, and it seems to me there ought to be some remedy: We will say here is an immigrant that starts here from way back in some interior port—away from the coast. The steamship company, when it returns him, simply deposits this person right at the point of departure and leaves him. Now, I conceive that there ought to be some provision made for these persons being sent back to the place they came from. It has led to an immense amount of difficulty and hardship.

Q. (By Mr. CLARKE.) Would not that be a matter for foreign determination, or to be provided for by treaty provision?—A. Perhaps. I leave it with you, gentlemen, if they undertake to return them, whether they should not send them back to the point of original starting. Of course, as a matter of fact, I think they purchase tickets right through.

Q. I would like to inquire if your insane in New York are employed in any productive industry?—A. Yes. If you are interested, I could say a word about that. Of course, labor on the part of the insane in New York is only an incident. It is simply with reference to their cure. In other words, no lunatic is permitted to labor except practically on the certificate of the physician. The State seeks to make no profit out of them. It simply employs them for their own benefit. But, as a matter of fact, in the last few years all the shoes used in these institutions and all the clothing is made by them; all the hats and caps—I won't say all, but practically all. Then the State has gone into the business of making its own soap; has a finely equipped factory at Rochester, where all the soap is made. They simply employ one soap maker, and the patients assist him. They make all the soaps used, even the shaving soap. At Utica all the coffee is taken there and ground and distributed, and all the spices.

Q. You mean all the supplies for the various insane hospitals or for other State institutions?—A. Confined absolutely to the hospitals for the insane. Of course the other institutions have sought to get the privilege of buying their own coffee. We used to pay 25 cents a pound, the average wholealer's price, for coffee up to about 3 years ago. Now this coffee is bought directly by the broker from the importers, taken to Utica and roasted, cleaned, ground, and distributed, and it is simply a matter of bookkeeping. The actual cost is taken into consideration and it is distributed according to that cost, and to-day it is billed to them at 11 cents. It is so fine that the officers drink it on their tables. I venture to say if you would drink a cup of that coffee you would say you never had better coffee in your life.

Q. Are any goods produced for the general market?—A. No; not a dollar.

Q. That is prohibited by law, is it not?—A. I do not know that it is prohibited as far as the hospitals are concerned, but in the penal institutions it is. They carry out that rule to such an extent that a warden is not allowed to be shaved by a convict. But, so far as the hospitals for the insane are concerned, they manufacture their own supplies, and they are distributed from one point to another.

Q. I suppose there are farms connected with some of the hospitals?—A. Yes. Every institution in the State of New York has a farm; and that is a very interesting thing, that question of the running of these farms. We found, when we came to go into the matter from a financial standpoint, that in some instances it would be better to abandon the farms altogether and buy everything than to undertake to operate them. We found that on their balance sheet they showed a profit. Of course they would give themselves credit for the milk and for the hay, and give themselves credit for the corn that the hogs ate and also for the pork; but when we came to analyze their accounts and charge it on a proper basis we found that about half of them paid the State and the State more than got its money back, and that the remainder of them were bankrupt. So that led to a reorganization. None were absolutely abandoned, because it is an advantage to keep a certain number employed. Generally speaking, we found that the old methods of agriculture were not the best. The State in some instances has farms

amounting to 1,000 acres. Willard and Binghamton each has a farm of about 1,000 acres. We found that the raising of the ordinary farm products, such as are commonly raised in the East, were financially a failure. So we instructed the people to turn the farms so far as possible into market gardens, and we began to raise immense quantities of asparagus and fine fruits and raspberries, gooseberries, and all sorts of fruits of that kind. In some cases they have 8 or 4 acres in strawberry beds. At one time when I was at Utica the patients were gathering 1,000 quarts of strawberries a day. Those were things the State could not afford to buy. We used to give these people a certain amount of fruit, but we could not, of course, begin to do anything like what we ought to do; and when we turned these farms into fruit gardens and market gardens they began to pay. The State could not compete in raising corn and barley and oats and rye with the West. The things were laid down in our market at a cost much less than the labor; but the moment we began to raise small stuff it began to pay.

Q. You raise these garden products for the general market?—A. No; simply for the insane. We used to purchase it.

Q. Do not sell anything?—A. Do not sell anything. But of course it was much more valuable. You take an acre of asparagus and compare it with an acre of corn as to value, and you will see what a difference it will make. Of course that would diminish the amount of meat we would have to give them. Of course they raised vast numbers of hogs. That is something we gave a great deal of attention to. In the old days the hogs used to die off and the herds were destroyed every year or two. Right here I should say that we employed Professor Atwater, of the Wesleyan University at Middletown, Conn. He has been employed for 2 or 3 years in working out a dietary for the insane, finding out by experiments and observations the class of food used, and seeing what foods could be substituted for the present food and what waste could be prevented. In his preliminary report he showed to us beyond the cavil of a doubt that at least 25 per cent could be saved on the food supplies alone. Now, the State of New York is doing all these things, and yet in spite of all this and an enormous reduction in expenditure the number is piling up at a fearful rate.

Q. (By Mr. KENNEDY.) Do the hospitals of the State of New York use any of the products of the inmates of the penal institutions of the State?—A. Yes; I should have spoken of that.

Q. I want to ask in that connection if that has had any effect on the marked reduction in the cost of maintaining the convicts you spoke of?—A. I should say not. I want to say a word about that. When the constitution prohibited convict labor the legislature, in carrying out the provisions of the constitution, among other things, provided that the convicts should be employed solely in the manufacture of articles for the use of State institutions and for the use of the political divisions of the State. On that basis the penal institutions have been making furniture and clothing and all sorts of things, and to a certain extent they have the convicts employed, but only partially so. The amount of stuff they can turn out is so great, compared with the consumption of the State, that they can keep these people employed only a part of the time.

Q. Through labor-saving machinery?—A. Yes. The act provided that the hospitals should pay the State a price which should be as near as possible the market price. The State has found it can go out in the market and buy a better iron bed, for instance, than the State can make, and for a lower price. You can go down to Wanamaker's store and buy a better iron bedstead than the State can make, and at a less price, and buy at retail. Of course there has been a great deal of dissatisfaction in regard to that.

Q. Does it cost the State a good deal less now?—A. No. There are two forces at work. The prison system wants to be as nearly self-sustaining as possible, and they claim that they only charge for the goods they turn out what the goods could be obtained for on the outside; but that is a question. I notice they charge the State more generally than the same article can be bought for outside, but they are supposed to pay the same.

Q. (By Mr. FARQUHAR.) Does not the State get the whole of the convict's labor that is in the iron bedstead, or pair of shoes, or school bench, or desk? If you had to pay an outside mechanic for doing that and you do not pay your convict for doing it, is it not a saving for the State?—A. Not very much. The difficulty is with convict labor and the way it is applied. It is applied under such peculiar conditions. The overseers or assistant labor is such a heavy element in the cost that large numbers of them are practically without free labor. I do not know that you could say their labor was worth one-fifth what the labor is outside. It is worth very little.

Q. (By Mr. LITCHMAN.) Do you know that of your own investigation?—A. — know it from an investigation I made at the time. We looked into it pretty carefully. When I was a member of the lunacy commission our object was to keep down the cost of running the hospitals; and they would often charge us for bureaus, bedsteads, and various articles prices which we believed to be in excess of the market prices. They took the ground: Here is all this labor that goes in. We call our labor worth so much a day, and it takes us so many days' labor to produce these articles. My answer was: I do not care what it costs you. You can not charge us for those beds more than the beds can be purchased for in the open market. That is your loss. The price charged in the regular market is so much.

Q. The price charged in the regular market is the compensation to the State for the labor of its convicts, is it not?—A. That is all.

Q. Now, if it is charged to your department, it becomes a part of the expense of managing the insane, does it not?—A. Yes; it would.

Q. Then in the last analysis there is a saving to the State, is there not?—A. Possibly there would be.

Q. It is simply a matter of bookkeeping?—A. Possibly it is a matter of bookkeeping, of course, affecting the labor question. Years ago I used to know considerable about it. The difficulty is that all these people come in there untrained and with no trades. There is not one man in a hundred that has a trade, and they only work comparatively few hours a day, and there are certain rules and regulations in there, and they have to have a great many trained employees over them. They tried to have convicts trained, but that did not work.

Q. Is it not true that the convict in the prison learns as much of a trade as the workman outside of the prison?—A. Under the present management I should say that he learned a good deal more than he used to. That was one of the evils of the old contract system that I was opposed to when I had something to do with the prisons. For instance, they used to have great stove contracts at Sing Sing. They used to do more than one particular thing, but when they got into the prison they never did anything else; a fellow would stay in prison for 5 years or 10 years, and he would be an expert driller or an expert polisher, but he would not learn a trade. Of course, when they started in with this new scheme they said, Here, we will teach these people trades as distinct from making them mere laborers. Now, that would be an excellent idea; and my own judgment is, of course, that we are branching out into other things, and that it would pay every State in this Union to teach these people in these prisons trades.

Q. Even if it did cost a little more?—A. Even if it costs a little more.

Q. (By Mr. FARQUHAR.) Is not there a proposed amendment now coming before your present legislature to make it hand work, the same as Pennsylvania?—A. I presume likely. Of course the labor people look at it as competition, and they are looking after it. An iron bedstead from the prison standpoint would cost 10 times more if they undertook to do it by hand.

Now, the best-managed penal institution in the world, so far as I know, is the reformatory at Elmira. The very last thing I knew anything about it they had in round numbers 40 different trades, and a fellow actually was taught bricklaying. They had fellows learning the trade of stone masons, blacksmithing, and barbering, and when a man went out into business he had a trade. Run on that basis, the State ultimately will get a return, because when they go out they have some occupation to turn to and be useful; and having an occupation, in my judgment, would diminish crime in this country more than anything else.

Q. Have you noticed statistics of the State of New York in the last two years since this bill came into operation? What is the difference between commitments now in penitentiaries and reformatories and before this went into operation?—A. The diminution of crime in the State of New York has been enormous in the last 3 or 4 years.

Q. (By Mr. CLARKE.) That might be owing to the general prosperity, might it not?—A. Well, good times have undoubtedly affected it some, and of course better police supervision and better education; the people know more than they used to. There are some county jails in the State of New York that practically haven't got an inmate.

Q. (By Mr. FARQUHAR.) Is it not a fact, since the enactment of that law in the State of New York, that there is not any inducement for a justice of the peace, or a judge of a municipal court, or whatever court may have jurisdiction of that small class of crimes, to convict and send anyone to the penitentiaries or to the reformatories?—A. I think so.

Q. It does not pay now to send any?—A. No.

Q. Constantly diminishes?—A. Diminishes. But if I had my say about it, if I was superintendent of prisons of the State of New York to-morrow, I would turn every one of these prisons into institutions for teaching these people trades; I would wipe out every possible source—I think it has been wiped out legally—every source of profit. I would abolish, for instance, the fee system among petty officers; I would abolish the mileage system; I would remove all temptation. I believe it is the cause, not only in New York, but in the States generally, of numbers of instances where these people, for instance, are sent to various penal institutions for what there is in it.

Q. (By Mr. KENNEDY.) We have testimony here to that effect.—A. That is my judgment, and I was connected with prisons indirectly for several years, and in fact I take great interest in prison associations in New York to-day. My views, however, have entirely changed in regard to that from what they were 10 or 12 years ago. I was in favor of the contract system, and at the time they tried to abolish it I was very much opposed to its abolition, but I believe it was a mistake.

Q. (By Mr. FARQUHAR.) The only argument in its favor was revenue?—A. That is all.

Q. And it admitted of division of revenue among politicians?—A. No doubt about that at all.

I was just going to say in conclusion—I won't say that humanity and charity, that side of human nature, should be eliminated, but I do think that the sooner that our Government and our States come to recognize this whole question as one of sound financial policy, the sooner they will eliminate the difficulties with which they are surrounded; just as in the State of New York in regard to its care of the insane, which was regarded as a charity, and the question was to do or not to do, and we had a constantly increasing burden. The minute the State came to look at it as a business proposition, and endeavored to see what was best to be done, it began to succeed.

Q. (By Mr. LITCHMAN.) Do you think the State management of the insane has eliminated to any degree the brutal treatment of inmates of institutions?—A. Practically it is impossible. I do not believe I have seen in a paper in the State of New York—I can not recall a single instance where a matter of that kind has been mentioned. It used to be a common thing, and the reason why it has been discontinued is that the State employs more people; their tenure is secure. In the State of New York both parties by common consent leave the hospital for the insane outside of the domain of politics. There is not a political party in the State that pretends to interfere with the appointments of attendants or nurses. The whole thing is under the civil-service regulations, but outside of that there is no sentiment in favor of it.

Q. What State inspection is there?—A. None whatever. The lunacy commission is held simply and solely responsible, and they are subject to removal by the governor on charges.

Q. Do you know how often inspections are made by that commission?—A. They are required to visit each institution at least twice a year. As a matter of fact, they are visited more often; every inmate has an opportunity of being heard, etc.

Q. (By Mr. CLARKE.) Coming back to this question of the financial aspect in the management of the insane, have you any statistics showing the diminution of the cost?—A. Yes; we can give you the statistics as to the cost of caring for the insane in the State hospitals. When you come to the State of New York, for instance, in the counties of New York and Kings, which include Greater New York, nobody on earth knows what it formerly cost to care for their insane, because their figures were constantly juggled. The cost of caring for the insane in the poorhouses were inextricably mixed. For instance, the care of the insane and the care of the paupers were together; but when we came to aggregate the whole thing we found that the cost became diminished; it became diminished so far as the State institutions were concerned. It went down from \$223 to \$165 last year.

Q. Is it not possible to get statistics from some of the cities, or counties, or towns, which will show that this State assumption of the cost of maintaining the insane has been economical to them in the respect that it has diminished their local charges?—A. That brings up the great question of taxation. It is a curious thing. Now, for instance, we can only approximate what it cost the city of New York and the county of Kings to care for their insane. We know what the figures were, but we know that the figures are very much less; that is, they juggled with them. Some years they included the buildings, and in other years they struck them out. In other words, the city government of New York would make a favorable showing. They would juggle with those figures and we never could arrive at a satisfactory conclusion. Neither could we in the counties. Now, for

instance, in some counties, in round numbers, it cost \$2 a week to care for their insane. We found when we went to investigate it that it cost a great deal more to care for the insane than for the paupers, but to show what that difference was they kept no separate books; it was impossible to get at it.

Q. (By Mr. LITCHMAN.) Do you have under your control the epileptic colonies?—A. No; that is under the control of the State board of charities. That is a new experiment on the part of the State. They are gathering up those people very rapidly, but there is a class that is perfectly hopeless, and the only thing you can do for them is to care for them properly. That is a disease that is practically incurable, as I understand it.

Q. You made a statement that the convict was worth about one-fifth as much as outside labor. That you do not know from any investigation of your own?—A. Not at all. That is a mere guess.

Q. I asked that because of an investigation by the legislature of Massachusetts showing under the conditions then prevailing that the convict in the prison was worth about two-thirds as much as outside labor.—A. I should doubt that exceedingly.

Q. It was proved before that commission, of which I was a member.—A. Of course it would depend on what work they do; they might be employed in certain lines of work where they would be worth that much.

Q. But on the long-term men they were worth exactly as much, hour for hour, but of course their pay was very much less?—A. Here is a long-term man, for instance; he becomes expert in a certain trade. Now, you can say he produces as much under good conditions as the man outside, but then you have got to take into consideration what it costs to maintain that man—what it costs to operate that prison.

Q. That is not the point. The point I asked you was as to his comparative productive power compared with the outside mechanic.—A. For instance, here is a fellow who gets in for what we call a 2-year term—that means 1 year and 8 months; here is a fellow that gets in for 5 years—that means 3 years and 7 months; here is a man that gets in for 10 years—that means 6 years and 6 months. Now, there are lots of those convicts who do not really get into the harness before their term is out. Take the average hours of labor of those people, and the average production, and that is the only way you can get at it. When a man becomes expert in one thing he is suddenly removed, sent out, and a new man takes his place. Take the average hours with the average number of men right through and undertake to compare their productive labor with the things they ordinarily work at, I do not believe that my one-fifth would be so much out of the way.

Q. Our prisons were conducted in Massachusetts at that time under the contract system, under which the labor was contracted out to private employers, who used exactly the same machinery in the prison as outside the prison, and the testimony before that commission was to the effect that the convict was worth about two-thirds as much as the outside man.—A. Well, I should doubt it.

Q. We got it from the manufacturers themselves, who were in a position to know.

(Testimony closed.)

NEW YORK, May 21, 1901.

TESTIMONY OF MR. THEODOR RITTER,

Manager of the Austro-Hungarian Home, of New York.

The special subcommission being in session at the Fifth Avenue Hotel, New York, Mr. Clarke presiding, Mr. Theodor Ritter was introduced as a witness at 12.14 p. m., and, being first duly sworn, testified as follows:

Q. (By Mr. CLARKE.) Please give your name and post-office address.—A. Theodor Ritter; 14 Greenwich street, New York.

Q. What is your occupation or official position?—A. I am the manager of the Austro-Hungarian Home and Free Employment Bureau.

Q. Will you please describe that home, how it was instituted, and by whom it is supported?—A. This home was founded for the purpose of giving aid to the immigrants coming from Austria-Hungary, and it originated in the fact that many of these men and women were put in places on the East Side of New York, in the lower part of the city, where they had no good places to stay and no help in their troubles. Therefore this house was founded. The Austro-Hungarian Government sends over

to this country every year a certain sum for the support of the house, and the money to pay the rest of the cost is raised by the Austrian Society of New York and the Hungarian Relief Society. All we have to do in said house is to take in charge the people coming from the other side—from Austria-Hungary—and bring them to the home and find out what they want to do. Most of them want to get work in this country, while many come on invitation of their relatives. Of course, when they have the address of relatives where they want to go, our task is fulfilled as soon as they go there. The others we put into positions as laborers or mechanics or office workers or servant girls, and that is the part of our work, I suppose, that interests this commission.

In securing employment we have to make discriminations between men and women. The laborers, of course, we try to put into work in factories or on farms, and a great part of them with hotels and similar places, according to the ability of the men. Certainly the hardest thing is the language, because nobody coming from the other side speaks the language of this country; therefore it is absolutely necessary to put even intelligent men to work as laborers, the only positions we may be able to secure for some of these men being such as porters in hotels or restaurants or that kind of position.

As to laborers, farmers, and factory hands, we try to come into contact with factories, and in the last few weeks we sent out circulars. Of course, all that goes very slow. It is not possible to do it all at once. We tried every way, and finally we came to these circulars which we sent to the factories known to us and asked them to answer certain questions—what kind of laborers they want, whether mechanics or whatsoever, and how they pay their wages; whether there are houses there, and so on. We have got quite a number of answers to that circular, and it seems it will be quite possible to dispose of these laborers coming from the other side in some of these factories. We will try our best to get families who will settle down in these places where there are big factories, such as sugar factories, etc.

Q. (By Mr. KENNEDY.) You say, "We will try our best to get families to come over." It is your object to induce families to come?—A. No. I did not mean that I will induce families to come over, but I will try my best to get the families coming over to settle down in places like these sugar factories, for example. That is the meaning of the circulars, and I thought I could put that in because I thought in many places outside of the cities there are factories that need laborers, and the only way I could give them steady laborers is to make the families settle down there, and then they would do good work. Most of the single men settle down near New York or in some of those other cities not very far from New York. Those cities are as stuffed with laborers as can be; whereas farther away from New York there are many places where they could use laborers, but have none. Many times I hesitate to send them to these places, because I do not know them, and there are many cases where men are lured to these places on the promise of good work and good earnings, and when they get there it turns out that the agents of those places would promise anything without having authority from the factories. That is the reason why we are very careful not to send them out until I can find through other people which factories are reliable in doing what they promise.

Q. (By Mr. FARQUHAR.) How far West does your work extend?—A. The farthest which I have in mind now is Michigan and Nebraska, with which States we have correspondence. We have many correspondents in Ohio and Pennsylvania.

Q. Have you any in Kansas?—A. Not yet.

Q. Any in Indian Territory?—A. None.

Q. Any from coal miners in the West?—A. Oh, yes; I have had from coal miners in Virginia and West Virginia—the Pocahontas fields. I do not now remember all the places. A very important factor in these factories is the employment of able foremen. Some of them make it nearly impossible for green men to go to work. In many of these places everything is in the hands of the factory. The justice of the peace, the policemen, and everything belongs to the factory, and the laborer who is unable to speak the language of the country is not able to make himself understood, but is at a great disadvantage, just as much on account of the labor as on account of the payment and anything that he wishes, and that is the reason I never send any men to the coal mines any more.

Q. Do you or others in this city keep a registry of immigrants from Austria-Hungary?—A. Oh, yes.

Q. Is it taken from the ship's manifest or records?—A. No. I have a few of these records here, and if they interest you I will submit them for your inspection. Every person who comes to our house is asked his name, the place he comes from, the language he speaks, how much money he brings to this country, the ship by which he arrived, the destination to which he desires to go, his occupation, and in the case of girls, the address of relatives. Then, when sent out of the house the first time, it may be to a position as laborer, servant girl, or whatever it may be—the facts are all entered on the sheet, and we keep a record of all persons so that we can trace them.

Q. How are they directed from Ellis Island to your headquarters, and where is your headquarters?—A. Our agent has a permit to go to Ellis Island and take out our countrymen. In some cases he has to bring them before the board, and it is investigated as to whether they will be delivered into our care. If they are discharged in our care, he brings them to the house, and from that moment I take care of them and try to put them into a position, or send them to their relatives, or do whatever it is necessary to do.

Q. What proportion of the Austro-Hungarian immigration do you handle through your office?—A. I think about half. I am not prepared to answer that question exactly.

Q. What is the character of the employment of the Austro-Hungarian immigrants to this country?—A. The men generally are laborers—farmers or laborers. Some are mechanics, blacksmiths, and machinists.

Q. Are there many miners?—A. Very few.

Q. (By Mr. TOMPKINS.) Have many of the people gone to the Southern States?—No. We handle very few.

Q. Farmers or cotton mill operators?—A. Very few of them; very few.

Q. (By Mr. CLARKE.) Have you any complaint to make of any of the methods of the steamship companies?—A. No; I have no complaint to make about steamship companies.

Q. Are there any agents employed in Austria-Hungary by any corporations in this country to induce persons to come here?—A. That is a question which I will answer with yes and no. I know there are such agents, but I know that none of the people are engaged by any person who has a good interest in them. They are only engaged by persons who want to do business with them. For example, nearly all these Hungarians or Slovaks get their tickets from these agents who induce them to come over, but that is all private and officially unknown.

Q. Do you know who these agents represent in this country?—A. No; I do not. I guess they represent their own interests. I do not think they are engaged by anybody. I think they sell the tickets and work in their own interests, and I do not think they are engaged by anybody in this country.

Q. You think they receive a commission on the sales of tickets?—A. Certainly. That is their business.

Q. And therefore they are in a sense in the employment of the steamship companies?—A. I can not answer that question. I never looked into that side of the subject.

Q. Is it desired by the Austro-Hungarian Government that there shall be emigration to this country?—A. No; it is not.

Q. Do they prefer to keep their people at home?—A. Yes.

Q. But since they will come, they deem it necessary to take some measures to help them when here?—A. Yes.

Q. Are you paid by the Government?—A. No; I am paid by the two combined societies here.

Q. And your Government contributes to those societies?—A. Yes.

Q. (By Mr. KENNEDY.) I should like to ask whether the Government or provinces or municipalities have assisted undesirable people to come to this country; such as, for instance, criminals, paupers, or diseased people?—A. No; on the contrary, it is very difficult to come over to this country from our old country. They do not encourage it at all; on the contrary.

Q. Do you find any such people—criminals, paupers, or cripples—coming from your country?—A. I do not think it is possible for them to land, because if they are criminals they are caught at the ship before they can land; and if they are paupers or unable to work for their living they are not allowed to land on Ellis Island. Then, we are held responsible in case a pauper or cripple should be taken out by mistake. We would, of course, not be allowed to take out anyone who would become a public charge. To prevent such is what the house is for. There may be a man well able to work, but without any means; we take care of him and get work for him and start him out, and then all is right. We have many cases like that where all the men got work.

Q. (By Mr. LITCHMAN.) Do you in those cases give bond to the Ellis Island authorities that the immigrant shall not become a public charge?—A. We do not give bond in writing or in cash, but we give bond in so far that the authorities hold us responsible, and in case there should be a pauper delivered to us—there have been none so far as I know since we have had the right to go to Ellis Island—but if there should be a case like that, we would be held responsible. That is the purpose of these societies—to take care of our people and see that they get work and do not become public charges.

Q. The law provides that a person may not land where there is any fear that he may become a public charge unless a bond be given in a certain sum. I did not know whether you had given such bond at any time. You say you have not, however?—A. I could not tell you anything about that. I know we have not given any

bond from the management of the house, but it may be there is an arrangement between the consulate and the Government, because the consulate has the supervision of the house.

Q. When you put out the help, either men or women, are the wages paid to the help or to your society?—A. The wages are paid to the help unless there be some misunderstanding. I hold the parties responsible to pay in our office, if their hired help complains.

Q. If any of the help put out by you has a dispute with the person who employs him, do you assist the help, as far as you are able, in securing justice?—A. Yes.

Q. What is your method?—A. If there is any trouble like that I write a letter first to this party, and a very polite letter, too. Then, if I do not get a suitable answer, I write a letter, "If you do not pay the wages in 24 hours I will sue you." Then I turn the matter over to our lawyers.

Q. Have you found that your system of distributing the immigrants in different parts of the country has on the whole worked well for your people?—A. Yes.

Q. And they seem to have confidence in your establishment and report the fact to their friends in the old country who are coming over here?—A. Yes. Of course, at first it was quite different, because these people did not understand what we were and how we worked, and there were many cases where they tried to get as far away from the house as possible. After some time (it is now the third year the house has existed) they came to a right understanding of our ways, and we have many cases where people who have gone away from the house have come back and asked us to forgive their mistrusting and help them. So it shows the society is a good one and is the right thing for the interest of these people.

Q. How far are you able to protect the women from falling into habits of vice?—A. Well, that depends. If these women are discharged to our house and we put them into positions, we have the right to look after them for a full year, because they are supposed to be lauded conditionally, and this condition prevails for a year's time. During the year I have the right to take a woman away from any position or put her in any position I want; but after this time it is impossible. The percentage going astray now is practically nothing in comparison with what it was formerly. One reason why this house was founded is the fact that these women were getting into bad habits and even sometimes into disorderly houses.

Q. You spoke of conditions. Do you refer to the condition that the immigrant shall not become a public charge within a year?—A. Yes; that keeps us responsible.

Q. You have to keep track of the immigrant in order to protect yourselves?—A. Yes.

Q. (By Mr. FARQUHAR.) What experience have you had with these so-called intelligence offices here that propose to provide employment for immigrants?—A. That is a very hard question to answer in a few words, because it is with intelligence offices just as it is with people. Some may be very good and some not. But there are many employment offices that do not act in the interest of the people who go to them. Of course, you could not expect much different, because these people are there to do business, and certainly our idea is quite different from the employment offices' idea. We want to raise those people intelligently as well as morally, but they are there to do business; and that is quite a different thing. There are many houses on the east side of New York City, in the lower part, where the Slovaks or Hungarians live, and without having a regular intelligence office and even without having a boarding house, they keep their "friends" with them. These people are "friends" that come from the same part of the country, and they keep them there for a few days and then put them into a position with some family and give them all the good advice they can: "You must not work too hard;" "you must go out every day;" "you must not work on Sunday," and "you must get so much wages every month." This is the first influence upon these people. You know these immigrants have to be considered from quite a different standpoint than an American. They must be treated in a different way. You could not talk to a Slovak the same way you could to an American girl; and that is the reason why these boarding houses on the east side should be checked.

Q. You say that the Austro-Hungarian Government does not desire to have these people emigrate to this country. Feeling that way, I would like to ask you how your people would view further restrictive legislation on the immigration question by this country?—A. You mean to prevent them from landing in this country?

Q. Yes. That question has been discussed by many people; not to prevent them altogether, but to further restrict the volume of immigration from your country.—A. Yes; but I do not see in what way it should be done. Do you mean the laws enforced more strictly than now to prevent paupers and such people from landing?

Q. For instance, would your people object to an educational test—that is, reading, for instance, a selection from the Constitution of the United States or any other instrument in their own language?—A. I do not see how they could object. If the law is here it is not their place to object, but to obey.

Q. I mean what would be the sentiment of your people in this country in regard to such legislation as that? Would they feel it was directed against them as a people or a race?—A. I guess they would feel like it was a restriction upon their landing, and so it would be.

Q. Are you a German or a Hungarian?—A. I am a German; from Vienna.

Q. How long have you been in this country?—A. Ten years.

Q. You have perhaps been aware of efforts to pass immigration bills with educational tests in them?—A. Yes.

Q. You are also aware of the opposition in German societies, for instance, against this measure?—A. Yes.

Q. I would like to ask you if you are aware whether that opposition is a spontaneous opposition on the part of the German people, or whether it is a prompted opposition on the part of certain individuals in the interests of the steamship companies?—A. I think that it may have been more an opposition by some individual interests than for any other reasons, because you know these Hungarian Slovaks are the very best laborers—no doubt about it. They are good laborers, but there are many educated among them, and there are many that are not able to read and write, although, of course, not so many of them as there used to be.

Testimony closed.

TESTIMONY OF MR. JOHN J. BEALIN,

Superintendent Free Employment Bureau, New York.

The subcommittee met pursuant to recess at 2.11 p. m., Mr. Clarke presiding. At that time Mr. John J. Bealin was introduced as a witness, and, being first duly sworn, testified as follows:

Q. (By Mr. CLARKE.) Please give your name and post-office address and official position.—A. John J. Bealin; 107 East Thirty-first street, New York City. I am an employee of the department of labor of the State of New York, officially designated as the superintendent of the free employment bureau. My duties are to superintend the bureau, to see that the law is carried out, to keep such books and records as the commissioner may direct, to collect statistics, and to work generally under his instructions.

Q. What class of people do you look after?—A. The law directs us to register all applicants for labor—that is, to register every one that will come to us seeking employment, and to keep a register of all people who wish to employ them. In carrying out the work of the bureau we have a form which is filled by all applicants who desire to place their labor on the market through the bureau. This blank, when filled out, will give the name of the applicants, their address, their occupation, their nativity, the name of the last employer, the character of their employment, the duration of their employment, the cause for being unemployed, and whether they would be willing to go to the country if employment was found there for them. When this blank is filled out a reference blank is sent to the last employer, asking for a verification of the statement made by the party seeking employment. This inquiry asks as to the character and ability of the party, the duration of employment, somewhat as to their temper, asking whether they were willing and obliging. We have found some few people who give us fictitious addresses as to the last employer, and we have found very few people whose last employer did not speak of them as being competent, sober, honest, willing, and obliging.

The bureau has now been in operation since July 20, 1896. We have worked under and we have lived up to the law. We have met with the commendation of such people, for instance, as Bishop Potter, the Society of St. Vincent de Paul, the Charity Organization Society, and other kindred bodies.

We will average a little over 5,000 applicants for labor in the course of a year—say 5,500. Year before last we found employment for 45.4 per cent of the applicants; last year for 51.7 per cent.

Some things we have learned that I wish to state. For instance, the average woman who earns her living as a domestic is commercially dead after she is 45 years of age. There is no place for her if she has not saved sufficient money to keep herself, unless she goes to the almshouse. There is no place for a man that is 50 years of age if he is a common laborer, if he shows his age. There is no place for him unless he has saved sufficient from his former earnings or is kept by his children if he is married and has such. Except in rare instances he has to face toward the workhouse.

The labor market in New York is very singularly situated. Skilled labor is highly organized here, and the organized workers, all of them, in some form or other, maintain employment agencies of their own. Some of them, for instance the painters and

stationary engineers, have places where men go when they are out of employment places where they are taken care of. All the men in organized labor who are unemployed report to their organization if they are out of employment, and it is the business of the much condemned so-called walking delegate to find employment for the people.

I would say that the free employment agency was called into existence at the solicitation of the Working Woman's Association of New York City, which at the time had as its president Miss Alice Woodbridge. It was called into existence to benefit working women, and its mission has been principally along that line. As I have stated, organized labor takes care of its members through its employment agencies. The average everyday laborer, if he does not belong to the ranks of the so-called organized labor, and he wants to find employment in the city of New York digging a sewer, if you will, on that subway that they are building that is managed to the dominant political party of this city, has got to go to his district leader and he has to be verified by his election district leader; and then when they know he is of the faithful he will get work for a certain period of time, only to be displaced later on because of the swarms of people going to the headquarters of the organization looking for employment.

In the fall of 1896 the commissioner of labor, who was at that time Mr. John McDonough, our present secretary of state, at the solicitation of the Working Woman's Association, held an investigation as to the methods of employment agencies in the city. I would respectfully ask permission to file later on the testimony taken then under oath. A summary of it is of this character: That women were treated very coarsely and brutally in some of the employment agencies; that, contrary to law, the fees paid by them were kept and not returned when work was not found for them. Since then it has been constantly reported to our office that the same condition of things prevails, and I say that to the best of my knowledge and judgment and belief in very many instances the law is not lived up to by many employment agencies in this city. No later than last week a woman called my attention to the evasion of the act. I asked her why she did not go and get her money. She said, "It is too much trouble. I would have to do this, that, and the other." No later than last week people who had put advertisements in the World were answered by requests to call at a certain institution; and finding out the character of the institution they reported the matter to the office—Broadway, Sixth avenue, and Third sixth street. The people at the World office called my attention to that. Now may be asked, why the commissioner of the bureau of labor statistics, when he held this investigation, did not report the matter to the mayor. He reported it where the law instructed him to report it—to the legislature of the State of New York. Reports that come to me of the management of some of the employment agencies I bring to the attention of the commissioner. It is my duty. I am not a prosecuting officer of this county.

We have investigated this employment agency business not only in New York but in other cities of the State. I was sent by the commissioner to the city of Buffalo some 2 years ago. I sat on the bench with Judge King, and I asked him for his opinion as to the condition of things in that town. He said it was infamous. He said: "Just wait a while and we will see." That morning there were 3 cases. The judge looked at the man that was running the agency. He was a young man. His parents were known to the judge, and Judge King said: "It makes an honest man's eyes sore to look at you." And so it would. This condition of things brought on a terrible strike in the city of Buffalo a little over a year ago. It was known as the freight handlers' strike. Thousands of men were out on strike, simply because in order to get employment they had to go to a certain employment agency that was kept by a liquor dealer. He was master of the situation, and they had to drink a certain amount of beer. For the man that drank the most beer and spent the most money at the bar, he got employment as a grain shoveler. That thing went on a long time until it was finally settled by Bishop Quigley. Since then the men are free to find employment through any channel they like. They do not have to go to the employment agency; they can go direct to find employment.

In the city of Rochester the same condition of things prevails. Testimony of this character was filed in the records of the department of labor, including a letter from the assistant chief of police.

And so we find all over the State the same condition, and in order to remedy it wrong there was drafted an act placing all the employment agencies in the State under State control. This act was drawn in obedience to the recommendation of the State legislature of Governor Roosevelt. State control was asked because it was not a local complaint. It was all over the State, and it was considered wise to have a State law enforced by a State department, where the discipline would be uniform.

This bill, a copy of which I hold in my hand, was drafted and presented in the senate by Senator John Ford and by Mr. Kelsey in the assembly. After a conference

it was sent back to New York City, with the instruction that the people interested here should have a hearing—that is, that the employment agencies should be heard. There was a conference held at the office of the bureau of labor statistics, at which conference were three representatives of the employment agencies. There was a representative of the Society of St. Vincent de Paul; the University Settlements had a representative. As the result of the conference this bill was submitted to the legislature. It was passed by the assembly, twice amended in the senate, and at the end of the session it remained in charge of the senate committee on cities, not being reported to the body for final action. I will read this bill with your permission and explain it in order that there may be no misunderstanding of the terms.

(Witness read as follows:)

AN ACT to regulate the keeping of employment agencies in cities of the first and second class where fees are charged for procuring employment or situations.

The people of the State of New York, represented in senate and assembly, do enact as follows:

SECTION 1. The term person when used in this act means and includes persons, company, society, association, or corporation; and the term employment agency means and includes the business of keeping an intelligence office, employment bureau, or other agency for procuring work or employment for persons seeking employment, or the acting as agent for procuring such work or employment where a fee or other valuable thing is exacted, charged, or received for registration or for procuring or assisting to procure employment, work, or a situation of any kind, or for procuring or providing help for any person, excepting procuring employment as school teachers exclusively.

SEC. 2. No person shall open, keep, or carry on any such employment agency in the cities of the first and second class, unless every such person shall procure a license therefor from the State comptroller, authorizing the licensee to open, keep, or carry on such agency at a designated place, which license shall be issued by the comptroller upon the payment to him of a fee of fifty dollars for the first year and twenty-five dollars for each succeeding year for each and every such employment agency in cities of the first class, and a fee of twenty-five dollars for the first year and twelve and one-half dollars for each succeeding year for each and every such agency in cities of the second class. Every license shall contain a designation of the city, street, and number of the house in which the person licensed shall carry on the said employment agency, and the number and date of such license. No saloon keeper shall conduct an employment agency, or act as agent for procuring work or employment in any building where liquor is sold or offered for sale.

SEC. 3. The State comptroller shall require such person to file with his application for a license a bond in due form to the people of the State of New York in the penal sum of two thousand dollars in cities of the first class, and one thousand dollars in cities of the second class, with one or more sureties to be approved by the comptroller and conditioned that the obligor will not violate any of the duties, terms, conditions, provisions, or requirements of this act. The comptroller is authorized to cause an action, or actions, to be brought on said bond in the name of the people of the State of New York for any violation of any of its conditions; and he may also revoke any license whenever, in his judgment, the person licensed shall violate any of the provisions of this act.

SEC. 4. It shall be the duty of every person so licensed to keep a register in which shall be entered, in the English language, the name and address of every applicant for employment, and the name and address of his or her last employer, and the name and address of the person or persons who shall employ such applicant. Such licensed person shall also enter in a register the name and address of every person who shall make application for help or servants, and the name and nature of the employment for which such help shall be wanted. Such registers shall at all reasonable hours be open to the inspection and examination of the commissioner of labor or his agents.

SEC. 5. It shall be the duty of every such licensed person to give to each and every applicant for employment or work, from whom a fee or other valuable thing shall be received for procuring such employment, a receipt in which shall be stated the name of the applicant, the amount of the fee or other valuable thing, the date, the name or nature of the employment or situation to be procured, and on a separate receipt the name and address of the person or persons to whom the applicant shall be referred or sent for employment or work. In case the said applicant, shall not obtain or accept a situation or employment through or by the procurement or agency of such licensed person within one month after registration as aforesaid, then said licensed person shall forthwith repay and return to such applicant, upon demand being made therefor, the full amount of the fee or other valuable thing paid or delivered by said applicant to said licensed person. Every receipt aforesaid shall have printed on the back thereof, in the English language, a copy of this section,

and every such licensed person shall cause a plain and legible printed copy of this act to be posted in a conspicuous place in such agency or place of business. No such licensed person shall print, paint, publish, or display on any sign, window, or in any publication, the name or a similar name to that of the State of New York free employment bureau.

SEC. 6. It shall be the duty of every licensed person to investigate at least two of the references of every applicant registered for employment. No such licensed person shall knowingly send or cause to be sent any female help or servants to any place of bad repute, house of ill fame, or assignation house, or to any house or place of amusement kept for immoral purposes. No such licensed person shall publish or cause to be published any false or fraudulent notice or advertisement, or give any false information, or make any false promise concerning or relating to work or employment to anyone who shall register for employment; and no such licensed person shall make any false entries in such register, or violate any of the provisions of this act.

SEC. 7. It shall be the duty of the commissioner of labor to look after the enforcement of this act. If he shall have reason to believe that any of its provisions are disregarded or violated, he shall report to the district attorney of the county wherein such alleged violations shall take place, the facts relating to the violating thereof, whereupon it shall be the duty of such district attorney to begin and carry on a proper criminal prosecution for such violation. Any person convicted of a violation of this act or any part thereof shall be guilty of a misdemeanor. One-half of the fines imposed and of penalties recovered under this act shall be paid to the commissioner of labor, who shall use and expend the same in payment of the expenses of investigating violations of this act, and in securing information regarding the same.

SEC. 8. All acts or parts of acts heretofore passed relating to employment agencies in cities of the first or second class and all acts or parts of acts inconsistent with this act are hereby repealed, except the provisions of chapter four hundred and fifteen of the laws of eighteen hundred and ninety-seven, known as the labor law.

SEC. 9. This act shall take effect July first, in the year nineteen hundred and one.

Section 4 would prevent fraud. This section would prevent bringing people to employment agencies to get their fee for registering when there was no possible chance of getting them employment. It is only by putting out decoys, by making false statements, that this thing can be carried on to the limit it has been carried on in the city of New York; but in this bill they are prohibited from putting out a sign or an advertisement that they have employment when they have not. By it they are required to keep a register—a tabulated list of everyone who sought employment or sought to employ people; the character of the work that they could give. Then it would be easy, when the commissioners' authorized agents would go in, to see whether there was deception or not. Objection is raised to this fourth section, saying that it violates the privacy of a man's business; that it invades his private books, papers, etc. I would call attention to the fact that the United States Government insists upon every wholesaler and rectifier of liquor keeping a special book. Now we will take, for instance, a wholesaler or rectifier. He has withdrawn from the bonded warehouse the goods placed there on bond, and before he can withdraw any of the spirits from bond he has to pay into the United States Treasury, through the collector of internal revenue in that district, every cent that is due the Government against those spirits. Naturally one would think that now the spirits is his property. The law says when those goods have come on his premises they must be designated by the peculiar stamp—a warehouse stamp—stating the serial letter and number, the number of wine and proof gallons that are in the package, by the revenue stamp—the tax-paid stamp—which declares the number of wine and proof gallons that are in the package when withdrawn from bond, and which satisfies everyone, so far as can be seen, that there is nothing due the Government. But still the Government says that it has a right, and it exercises that right, and makes that man keep the register and show that package of whisky, or spirits, as it is denominated, from the point of its production to the point of its consumption; and likewise, when a man buys tobacco, the name of the manufacturer of cigars and cigarettes has to be entered into the form. He has to tell who he buys it from, how much he uses during the month, what it is used for, in what way the cigars were packed—for instance, 25 in a box or a box of 50; the number of samples used, the number of samples on hand. And such records are open at all times for inspection by the revenue officers, and the revenue officer has promised, under oath, to inspect every such place at least once a month. That is, in my judgment and the judgment of men—many men—sufficient warrant for section 4.

The next section states just how the business shall be conducted; that when a man or a woman comes in and makes application for work, and as soon as he or she is registered he has to get a card. Applicants have to get a receipt acknowledging they have been there; that the money has been paid, and what paid for, and at the end of the month, on demand—not otherwise—if there is not work procured, that fee is returned. If there is work procured, the fee belongs to the parties operating

the employment agency. In addition to that, they get the usual percentage that they demand, the matter of sometimes 10 per cent, for instance, on the first month's salary. If this could have passed and become a law the commissioner would have been instructed to look for the enforcement of the act, to see that it was carried out in all its details. It did not pass. Why I do not know.

Q. (By Mr. FARQUHAR.) In the absence of a law what jurisdiction has the State bureau now?—A. None whatsoever.

Q. Is there exercise of police power over these employment agencies?—A. The mayor's marshal has some authority. There is a law governing employment agencies in the city of Buffalo at present. There is one covering Brooklyn and one in New York. The mayor's marshal issues the license, but the mayor's marshal has not power to go in and see that they keep this register. The mayor's marshal has not power to see that the register corresponds with the advertisements; but if this act became a law, then the commissioner would have the power to appoint officials who would go in there and see that that law is lived up to.

Q. Was this law submitted to the attorney-general of the State as to its constitutionality?—A. It was not.

Q. You have no means of knowing what the objections of the committee were as to its final passage?—A. Want of time, more than anything else. It was late in the session; but the constitutionality of the bill is vouched for by the present secretary of state, by John Ford, especially the portion of it prohibiting the putting out of signs and decoys when there was not employment. That is taken from the Illinois law; it is taken from various laws enacted in various States, and it was agreed upon. It met the emergency—came up to the necessities of the hour.

Q. Have you anything to say about the efficiency of the carrying out of the present law in the city of New York, your local laws?—A. The trouble is simply this, that the people who are victimized, and I am satisfied that there are thousands and thousands of them in the city of New York, get sick and tired of it. As they have said to me, "What's the use?" Last year or the year before there was quite a sensation here. A newspaper in the city had one of the proprietors of one of the agencies on Sixth avenue arrested and brought into court, and there were two, three, or four more arrests. The licenses were revoked in one case, and another one left the city. The other people, operating an agency on Sixth avenue, are there still; they are doing just now what was charged in court, and what was proven in Judge Mayo's court. When that trial was going on I went in and sat down there a little amongst the people, and that court was literally packed with people victimized by employment agencies right here in New York City.

But the worst has yet to come. There is some supervision over the employment agency; it has to buy the licenses. The mayor's marshal can reach them, but there are institutions, such as we have spoken of this morning, that are doing business without any licenses whatsoever. I know this, because it is part of my business to read the morning papers carefully, the advertising columns. In them you will see, day after day, sometimes with an intermission of one day, but as a rule day after day, announcements that certain people can be found at a certain address, a girl, a housekeeper; for instance, a young girl just landed; and then it will be a Swedish houseworker, or a waitress, or a chambermaid. They are getting employment through employment agencies that are not registered, that have not taken out a license. I am morally certain of that, and, talking over this phase of the question with the mother superior of the Sisters of Mercy, who has charge of the Working Girls' Home, she said to me what I had already concluded in my own mind, that the institutions of this kind were the worst, morally speaking. You get a girl; she would go to one of those places; it is a friend's house. She knew that when she got out of work she could come back there again, and after a month, perhaps, she would return there with her month's wages to have a good time, and she would get into the drink habit. That is the truth. This is the experience, not only my experience but the experience of this Sister of Mercy in control of the Regina Angelorum. That is a form of finding employment that should be wiped out. A remedy could be provided if there were men whose special duty it was to run down such places under the commissioner, and they could do that, if that law were passed, without any more expense to the State. I say that the department should have agents all over the State and could enforce that law without one cent extra expense; and to give you an idea just how they do some things, I will read from our report a statement of the case.

Mr. LITCHMAN. And the number of the report and the page.

The WITNESS. June report, 1900, page 104. This is a clipping taken from the Times of Friday, April 13, 1900. [Reading:]

"As Recorder Goff was about to sentence Amelia Monach, a pretty Hungarian girl, living at 130 Lewis street, who had pleaded guilty in general sessions to having stolen merchandise worth \$800 from her employer, David Rosenbach, of 452 East Eighty-fourth street, Mrs. Foster, the 'Tombs angel,' came forward and asked the recorder to be lenient.

"The girl has told me that she is thoroughly repentant for what she has done," said Mrs. Foster; "besides, she has told me that it is her first offense."

"This speech seemed greatly to excite a man in the court room. 'It isn't her first offense,' he said, hastening up toward the bar. 'She worked for me as a servant and cleared my flat out entirely, taking away \$275 worth of goods. My name is Abraham Spitzker, of 330 East Seventy-ninth street, and I will identify her and swear to her guilt on the witness stand.'

"Two other men in the court room also came forward and said that they had employed the girl as a servant, and that she had stolen money from them.

"Recorder Goff listened to what the men had to say, and sentenced the girl to 2 years and 6 months in the penitentiary.

"This is a splendid commentary on methods adopted by employment agencies," he said. "This girl is a specialist in the business of robbing her mistresses and helps to support her parents in Hungary in that way. She says that she secured all her positions through the assistance of employment agencies. Some of them make a practice of sending thieves into the homes of respectable citizens, giving them recommendations and first-class certificates of character."

"Five pawnbrokers were then called to the bar, forced to acknowledge numerous pawn tickets found in the girl's possession as their own, and ordered to return the goods. One wept bitterly at his loss.

"In order to make sure of this most remarkable news item, Recorder Goff was interviewed by a representative of this bureau. On stating the purpose of the visit to the recorder, he said that this fact was brought out by the evidence in the court at the trial of Amelia Monach; that she gained admittance into two families in three weeks on certificates of character given her by East Side employment agencies; that she had committed robberies in each of the places where employed, and that the agencies in question were, to say the least, criminally negligent in not investigating the references before introducing the girl into families."

This is a brief outline of conditions that exist in New York to-day. I charge no one with being the cause of it. I believe myself that this condition can not be changed unless we have a change in the law on the lines laid down in this act.

Q. (By Mr. LITCHMAN.) This you refer to as a suggestion for a law that will reach these evils you complain of?—A. That is just it. Now, I want to say in addition that there are many respectable employment agencies in New York City, many of them that recognize wrongs that exist; very many of them that would wish to have the wrongs righted, and that these people were with the bureau a year ago and asked that the bill proposed become a law.

Q. What objections were given by the Legislature at that time?—A. Simply want of time. The bill was amended twice or three times; sent back first to New York to have a conference with the people who were interested, and then it was amended twice or three times, and was not reported from the committee; consequently it died there. Some say that the breweries had a little something to do with it. I do not know positively, do not know officially, do not know that it is so.

Q. Was the matter brought to the attention of the governor to enlist his cooperation in the passage of the bill at all?—A. The governor did all he could. He recommended the legislature to move; he asked the committee to report it; but things were in a bad shape last year. You see the Republican party did not have that majority in the senate that it always depends upon to do what it wants to do.

Q. You have not tried this year to get the legislature to act?—A. The bill was introduced, but rather late. There was another bill that went through which was vetoed by the mayor April 14, and vetoed by the governor on May 4. It was not a bill that we were at all interested in; we did not think it covered the ground, and consequently did not bother our heads about it. That bill of last year was introduced by the United Charities, by the Hebrew Charities, by the Society of Ethical Culture, by the Social Reform Club, by the Society St. Vincent de Paul, by the Church Association (Protestant Episcopal, to improve the condition of labor), by the Church Temperance Society (Protestant Episcopal), and the Catholic Total Abstinence Society of America.

Q. You understand, of course, that legislation of this kind necessarily must be by the States?—A. Yes.

Q. I presume your experience has taught you that legislation is not always given for the asking, but that it is gained after long and patient trouble?—A. Yes; and continued fighting.

Q. I suggest to you that you be on hand early next year—that you get there the early part of the session.—A. We will try to do that. The Republican party in its platform last year indorsed the position of State control, and we will try again.

Q. A part of the duty of the commission is to receive recommendations for laws, not only national but State, and the suggestions you make are right in the line of our work, but of course the initiative of this legislation, you understand, must be taken in the State itself.—A. Most assuredly.

Q. (By Mr. FARQUHAR.) Have you any statement to make of the operations of your State bureau in the enlargement of its work or of its opportunities?—A. I believe that there should be in this State, and under the control of the State, knowledge at all times as to where there is a vacancy of any considerable extent in the labor market, and that that information should be sent to various centers of population. In Australia, where they do things in a more advanced shape than in any part of the world, the department of labor looks after matters in that way, and it does more than that, it helps people to go to where they can find labor, and anything the State can do to help a person to keep the home over there is done within certain limits. I do not believe in paternalism, but anything the State can legitimately do should be done. Take, for instance, a poor old woman who came to me. She was a decent woman and had raised a family. They all died, one after another. She was left at 50 years of age to commence life again. She turned to our place; we got her employment. Now, the State would either support her as a pauper or give her a chance to support herself. The State did give her a chance to support herself, and she is doing it now.

Q. Suppose that the State had agencies of the character of yours—State agencies and branches—would there be any means of cooperation between States to relieve the existing idleness of immigrants, or even Americans out of employment?—A. Any exchange of weekly reports would settle that. There are many such institutions throughout the country. Through the labor organizations—the large bodies—they take care of that for themselves. You take the printers; they know where there is work and where there is not, and they are told it officially through journals. They have not to go and pay a tax for the privilege of getting work. The idea of a civilized people in this age of ours being taxed to get the privilege to work, when it is a natural necessity and a natural right!

Q. You are mainly speaking in your criticisms of unskilled labor?—A. Yes.

Q. Not the organized labor?—A. Organized labor takes care of itself. It is a blessed thing that it does. Every labor organization that is in this State, in this union, is a blessing for the State and a blessing for the union. The one thing they do, in the darkest hour, when things are blackest, is to keep up a record of the labor wage, and when times get better men will be reemployed at the wage rate that was kept up by the labor organizations.

Q. (By Mr. LITCHMAN.) And in this advantage the unorganized labor receives the advantage equally, does it not?—A. Most assuredly, and the men who are working at trades who are not in the organization receive an advantage. The gentleman on the stand this morning—his men received the advantage of those who are willing to stand out, risk something to keep up the wage to a living scale. The mission of the American trades unions is to have a home on the American plan; to live as Americans.

Q. (By Mr. FARQUHAR.) What do you say to the proposition that it is the positive duty of the State to protect a subject if possible; to bring into productive industries that class that stand nearer pauperism?—A. Yes.

Q. Is it not a positive benefit? Is it not the policy of many States to care for these productive agencies through the unskilled in finding work for them and to enable laborers to support themselves instead of being supported out of the general tax?—A. Yes, and it is a benefit to leave a man a free man to work—not to go to work and to mortgage his vote before he gets his work. There is no such freedom here for the unorganized workers in New York. They are the chattels of the dominant party.

Q. (By Mr. CLARKE.) How is it with organized workers?—A. They are able to take care of themselves.

Q. They are not subject to the political influences of those in charge of your contracts?—A. No; and men that are now were not some time ago. For instance, the car drivers of the city of New York. I remember that the organization of car drivers forced the labor law into existence. They had a great deal of trouble about it; but after a while the State came to the rescue, and now the law is on the books that they shall work only 10 hours a day. And they would not have gotten through only for men, now in their graves, who worked themselves out trying to get them to organize.

Q. (By Mr. KENNEDY.) How long did the men work?—A. From early morning to late at night. They were forced to do it. There was no law to protect them; but they did pass a law themselves through their organization, and afterwards the State took up that law. The State refused to assist them. It was not until after years of agitation that the law was placed on the statute books.

Q. Why did you favor State control of this matter rather than local home rule control of it?—A. For the very simple reason that you have to have a uniform discipline. It is all over the State from one end to the other. You have to have one man responsible for the enforcement of the law. And it will work to the advantage of the public just as much as to the State now to license men who work for a living, which will do away with the sweatshops, or control them.

Q. Could not the mayor of the city of New York, or some other high official of this city, be made responsible for the execution of such a law?—A. If they have those registers, and if they have men that will examine them I would not have very serious objection to making the law local, but still my judgment is, by preference, for a State law. It has worked well in Illinois.

Q. You speak about the good work of organized labor and the great affairs in which they have accomplished for good; why can't you get organized labor interested in the movement of this kind and hope for good results?—A. They have indorsed that bill, the copy of which is in the hands of the commission. The organized labor of this State, the State Workingman's Assembly, had already indorsed it when it was presented to the legislature, and it was indorsed by the local bodies as well. It was first asked for by labor organizations. The first organization that asked for that was the German waiters.

Q. I would like to ask if you can name any other States that have agencies under the State control or local control?—A. There is one State in which the question is under the control of the State—Illinois.

Q. Do you know of any other States?—A. I have no knowledge.
(Testimony closed.)

TESTIMONY OF MR. GEORGE W. BROWN, JR.,

Deputy chief, bureau of licenses, mayor's office, city hall, New York.

The special subcommission met in the rooms of the Fifth Avenue Hotel at 10.37 a. m., Mr. Clarke presiding. At 3.10 p. m. Mr. George W. Brown, jr., deputy chief, bureau of licenses, New York, appeared as a witness, and, being duly sworn, testified as follows:

Q. (By Mr. CLARKE.) What is your name?—A. George W. Brown, jr., bureau of licenses, mayor's office, city hall. I am deputy chief of the bureau.

Q. What are the duties that you have to perform, in a general way?—A. The bureau of licenses issues licenses under the municipal ordinances and also under the State laws, more especially to intelligence offices and pawn brokers. The chief of the bureau of licenses under the municipal ordinances is not only charged with the administrative powers of issuing licenses, but also with seeing that the provisions of the ordinances are enforced, and in that way he hears complaints against licensees for violations of the provisions and regulations of the ordinances.

Q. Then you are familiar with the condition of the employment agencies in this city and of the regulations concerning them and of abuses which creep in, perhaps?—A. So far as they come before the bureau of licenses and so far as concerns that bureau.

Q. Can you tell how many private management agencies there are in the city?—A. I have here 2 memoranda, 1 showing the number of licenses issued by our bureau during the year 1900, and 1 showing the licenses that were issued in the old city of New York for the past 10 years; that is, the former city of New York. During the year 1900 there were issued in the principal office of the bureau of licenses located in the borough of Manhattan, and covering the territory of the former city of New York, now the boroughs of Manhattan and the Bronx, 72 licenses, and 276 renewals. In the borough of Brooklyn, a branch of our office, covering the territory of the former city of Brooklyn, we issued 18 new licenses and 52 renewals. In the borough of Queens, occupying chiefly the territory of the former Long Island City and adjacent towns and villages now included in the borough of Queens as a part of Greater New York, there were issued 3 new licenses and 2 renewals. In the borough of Richmond, which was formerly the county of Richmond and Staten Island, there were issued 5 renewal licenses. That makes a total during the year 1900 of 91 new licenses and 335 renewals, showing a total of 426 intelligence offices licensed by our bureau. If it is at all of interest I can give you the statistics of the past 10 years in the former city of New York, now the boroughs of Manhattan and the Bronx, which is the most important part, perhaps, of the Greater New York, if you care to have them.

Q. Unless you see some value in them connected with further testimony which you are to give it does not occur to me that they would be of much interest to us, except you may state in a general way whether there has been a growth in the number.—A. There has been a gradual growth, and fairly uniform. Starting in 1890 there were 39 new licenses and in 1900 the number had gotten up to 70 new licenses; there were 152 renewed in 1890 and 276 renewed in 1900. The greatest number of new licenses issued during that period was in 1895, when there were 106 new licenses issued. Generally speaking, I think it fair to say that there has been a gradual and uniform growth, and that the institutions once licensed renew their licenses and stay in business, and are fairly permanent institutions.

Q. Are most of those agencies conducted by firms or by single individuals?—A. There are no statistics that I know of that are available on that point, for the reason that it used to be the practice of the bureau of licenses to issue a license to some individual for the purpose of holding that individual responsible for the conduct of that office, the license being in that individual's name; whereas perhaps as a matter of fact there were others associated with him in the conduct of his business, but he was the one held responsible for it. In some instances licenses have been issued to church organizations, or charitable organizations in the name of the organization. I do not think there are any trustworthy statistics showing whether these agencies are conducted by individuals or firms.

Q. Have you any information as to whether they are generally conducted by the persons holding the licenses?—A. Yes; they are generally conducted by the person to whom the license is issued, but I do not wish it to be understood that one man does all the work of any particular office. He has clerks and agents and various persons for whom he is responsible.

Q. Are the licensees mostly men, or are there some women?—A. Oh, both; both men and women.

Q. There is a license fee, is there not?—A. Yes; there is a State law that regulates the issue of the licenses. The law provides for a fee of \$25 for taking out new licenses, and a renewal fee of one-half of that amount when the license is renewed for each time that it is renewed.

Q. Into what treasury does that fee go?—A. In the city it goes into what we term the city treasury, as distinct from the sinking fund or any special funds. It goes into the general treasury account.

Q. Does your bureau have the exclusive supervision of the conduct of those agencies?—A. So far as they violate the municipal regulations, yes. They might violate some other law. Of course then they might be amenable to our bureau and at the same time amenable to some criminal law. We have the authority under the municipal regulations of hearing complaints against any licensees, and, as a matter of fact, we have frequent complaints of both employers and employees against intelligence offices.

Q. Do these agencies and people whom they serve have some relation to racial lines?—A. Oh, yes. Some agencies restrict themselves to the furnishing of female help; some agencies restrict themselves to the furnishing of male help; some agencies do both; some agencies restrict themselves to nationalities; and some agencies restrict themselves to certain kinds of service—for instance, cooks, or waiters, or barbers. I think that this is simply a matter of custom, perhaps, or accident. I do not think that there are any agencies that are so exclusive that they would help only those of a certain race.

Q. (By Mr. CLARKE.) Is it the common practice of these agencies to exact a fee in advance from a person who applies for employment?—A. There is no uniform custom that I am certain of among the agencies in regard to the fees. Some agencies have one regulation and some another. Some charge a fee for registration, which entitles the person that pays it to the facilities of the office. Others collect a fee in advance, which includes all the charges for the service rendered. Others have no fee for registration, and get their fees sometimes before and sometimes after the services are performed. The law regulating the services performed by the bureau toward the employer and the employee, generally speaking, provides two conditions. One is that a servant shall remain at least a month with the employer for a given fee paid; that is to say, an employment office is under obligation to furnish a servant to an employer who shall stay at least 1 month for 1 fee. There is an obligation also on the part of the offices to the employees in refunding to them the full amount of the fee paid where no services have been actually rendered and no situation secured. In other words, they must return the fee paid if they do not do the work—the whole fee. There is in addition to that a further responsibility of the expenses incurred where an employee is sent to a place of employment where there is no employment and the intelligence office had good reason to believe or did actually know that there was no employment there. In other words, the false pretense will necessitate a return of the fee paid.

Q. Does your office employ inspectors to constantly inquire into the conduct of the business of these bureaus?—A. The bureau of licenses has attached to it, as a part of the police department, a squad which is called the "ordinance squad," and who are charged with seeing that the municipal ordinances are enforced. There are usually 1 or 2 men who are specially charged with seeing that the exactions of the licenses issued to intelligence offices are complied with, and that there is no one doing business in the city of New York without a license who requires a license.

Q. Are complaints numerous?—A. Well, some days we have quite a number and other days none at all. Of the number of persons licensed—and I speak from an experience of some 18 years or more in the bureau—I know intelligence offices in this city that have been licensed uninterruptedly during that entire period of

time, and against whom no complaint has ever been made to our office. I know of others who have been "down" much more frequently in that time.

Q. (By Mr. KENNEDY.) What do you mean by "down?"—A. Have been down to our office on a complaint. There are, as I have stated, 426 licensed employment agencies in the city of New York, and I think out of that number the complaints are confined perhaps to 10 or a dozen, maybe 15. I think a very large majority of those actually licensed we never hear any complaint against.

Q. (By Mr. LITCHMAN.) Will you designate briefly the nature of the complaints?—A. They are generally made by the employees, that they have paid a fee and that no situation has been secured for them by the agencies; or by employers, that they have paid a fee and the servants have not remained the 30 days required by law. They all fall into one of those two classes.

Q. What has been your method in dealing with these different complaints?—A. When a complainant appears we issue a notification to the licensee to appear at a certain time, and we invite also the complainant to appear at the same time, and we hear the dispute between them, and adjust it according to the law and our understanding of what is right.

Q. Now, in these adjustments that you have made what penalty have you inflicted in any case; or, rather, what has been your usual penalty?—A. In the case of employees who have paid a fee and no situation has been secured, the return of the fee to the person who paid it. In the case of an employer who has not been served for a month, a mandate to the intelligence office to supply the servant for the required period of law or return of the fee that has been paid.

Q. Have you ever gone to the extent of revoking licenses in any case?—A. Yes.

Q. And for what cause?—A. Where we had reason to believe that the office was not fairly conducted.

Q. What have you to say as to the possibility of moral abuses through some of these employment agencies?—A. I do not know. I never have seen any proof that such things exist.

Q. Have you any knowledge of complaint being made that such things exist?—A. We have had statements occasionally in our office that sometimes persons had been sent to places of ill repute. We never could find out that it was so.

Q. You would of course consider that a sufficient cause for immediate revocation?—A. If it could be proved, certainly.

Q. A suggestion made on the administration of the law by the previous witness was that there should be some system of registration by which a trace could be kept of the employment agencies, compelling them to register the application and giving a sort of history of each case. Have you anything to say in favor of that?—A. I think the agencies generally do that. I know that there are offices in this city which have set rules. They invariably investigate the references in advance, and they very frequently say to the employers, "I have not" or "I have investigated this person," and "I do" or "I do not know all about him or her."

Q. Are these records open to your inspection or the inspection of your department?—A. Yes.

Q. As a matter of favor or a matter of law?—A. Well, we take it as a matter of right.

Q. Have you really any right?—A. We have no right, except in this way. In the first place, such records are not required to be kept.

Q. Then you have no legal right, of course?—A. But as a matter of fact we say to a person who has a license, "You must conduct your business right or go out of business," and we say, "You must keep a record," and that requires them to give a receipt to the employee of the money paid by them, and we require that books shall be kept. There is no broad formality laid down. It is the practice with a great many of them to have an application blank, and these have certain spaces upon them that are filled in, and then they are pasted into a scrapbook, regularly.

Q. You see no objection to having this register and supervision required by law?—A. Not at all. I am here to-day to give the benefit of what experience I have to the commission, but I am not an advocate of any distinct procedure.

Q. We understand that. A part of our duty is, you understand, to give recommendations for remedial legislation both State and national. I am asking these questions along that line to ascertain if you have anything to suggest.—A. My experience, as I say, extends over quite a number of years, and under 7 different mayors, some of those of different political complexions and aspirations, and I think I know something of the situation in this town.

Q. Have you any suggestion for remedial legislation?—A. I think the gentleman on the stand here this morning, Mr. Redfield,¹ has the right idea. You can not make the people good or honest, nor well behaved, nor efficient, by law. You can watch those that have a tendency to do things they ought not to do. As I say, we

¹See testimony of William C. Redfield, volume on manufactures.

have upon our books intelligence offices that have been licensed, and many of them for 18, 19, and 20 years right straight along; that have done business, not very philanthropic business, but on the same sort of basis as Mr. Redfield, and we have never had a complaint against those offices. We see their representatives only once a year, when they come down to renew their licenses. There are a few offices in the city, and very few, which do business and take long chances. For instance, you can see exactly how it is. Suppose I am an intelligence-office keeper and a man comes to me that wants work awful bad, and he has got a \$5 bill, and that is all he has, and I know a job he can get, and I say to him, "If you will give me that \$5 bill, I will give you the job," and he does it, although morally speaking the place he gets is not worth it. There might be another intelligence-office keeper under the same circumstances who has sympathy for the man and would say, "Here, I will not take your last \$5; you give me 50 cents and I will find you a job." We do find occasionally people that get into the business, notwithstanding our best efforts to see what their past record has been, who will take any sort of fee and promise anything for it. Once in a while they perform those promises, but usually they get as many fees as they can and then go out of business.

Q. Do these offices specialize in procuring work for female help or for male or for both?—A. There are a few that supply only female help and a few only male help, but most of them supply both.

There is perhaps one suggestion: Mr. Bealin referred to the law that had been vetoed by the mayor and vetoed by the governor which proposed an amendment to the present law. The present law has been on the statute books for some time, and prescribes, as I read it, that the fee may be divided into two parts or may cover all the service rendered. The intelligence office is usually kept in some place where rent has to be paid and where clerical help must be employed. It is a sort of exchange between the employer and employee. Some of them charge a fee, which they call a fee for registration, which entitles the person who pays that fee to the privileges of that office for a certain period, and he takes the chances of meeting there somebody that wants to employ him. That is what they call a fee for registration.

Q. That also applies to those who desire to employ help?—A. Some intelligence offices charge the employer and the employee both a fee; others charge only the employee. Then, if the position is secured, there is an additional fee, which is generally a fixed charge, but sometimes a percentage on the pay.

There are others that charge a fee which shall include both the privileges of the place and the service secured. I think an intelligence-office keeper has a right to divide the fee up into those two parts if he sees fit. The part paid for registration, if it be reasonable, is not subject to be being returned if it is understood for what it is paid; but if, in addition, anything has been paid for a situation which has not been secured, it must be returned. If the intelligence-office keeper receives a fee which is not specifically applied on either of these divisions, but is for a position to be secured, and he does not secure the position, although the applicant may have had the privileges of the office for an indefinite length of time, he must return the whole amount.

Q. Is there any legal limit on the fee that may be charged?—A. No.

Q. You spoke of the fee being sometimes a fixed sum and sometimes a percentage on the prospective salary. In the latter case how is it collected?—A. We have nothing to do with that. The intelligence-office people take their chances.

Q. Have any complaints come to your knowledge of abuses because of that contingent fee and the manner of its collection?—A. No complaints, because we have nothing to do with the matter. But I have information that a great many intelligence offices do not get all their fees because of the dishonesty of the people, who promise to pay and get beyond their reach.

Q. Do you know whether any arrangement is entered into by the party employing that they will deduct the fee from the salary and pay it to the intelligence office?—A. We know nothing of that. I dare say there are instances of that sort. It certainly would not be contrary to the law. There is no law on the subject. It is purely a matter of agreement.

Q. That case would be very likely to happen, or more likely to happen, where the employer sought the help than where the help sought the employment?—A. Under the present law there is a very large discretion in the licensing power, and that is used as judiciously and with as good judgment as we can.

Q. Is it not practically a fact that the only penalty for a breach of the law is your power to revoke the license?—A. After an agency is licensed, yes; but not before it is licensed; of course the criminal law would apply.

Q. They are prohibited from doing business unless they are licensed?—A. That is it.

There is one other suggestion, and that is that there seems to be no definition as to what an intelligence office is. It is a pretty open question as to what offices must have a license. Where they supply help of a domestic character there seems to be no doubt; but where they supply help which is more or less skilled, then it is an

open question. For instance, there are theatrical agencies in this city, and teachers' agencies, and agencies of that sort—a great many typewriter agencies nowadays.

Q. They all come under the official designation of intelligence offices?—A. There is no official designation. There is a designation in the law which does not define, and so far as I am aware it has never been entirely determined what constitutes an intelligence office, and it is very hard to draw the line. If you start with domestic servants and end up perhaps with some agency that supplies professors to colleges, and take in all the intermediate steps, how far are you going to make that law apply?

Q. You have not thought the matter out far enough to make a suggestion as to practical legislation along that line?—A. My opinion is that the less legislation we have and the better enforcement of the law as it exists, the better off we are.

Q. But is it not true that the designation that you speak of must be a matter of legislation?—A. The difficulty is that the law in regard to intelligence offices was passed originally in 1888. Times have changed very much since then. It simply says, "No persons shall engage in the business of keeping an intelligence office, employment bureau, or other agency," except under specified conditions. There is where the trouble comes in—with the expression "other agency." That is broad enough to include any brokers' office, almost. I do not see how you are going to define an intelligence office.

Q. (By Mr. KENNEDY.) I would like to ask if you would favor the fixing of the fee, say at \$1 for men and 75 cents for women, as I understand is the case in Massachusetts?—A. I am inclined to think that perhaps is the best way of legislating on the subject, and that practically it is the only way. Pawnbrokers, for instance, are regulated in their charges, and I see no reason why intelligence offices should not be regulated in their charges. I believe that they have the right to charge justly a fee for registration, which shall include the facilities of a place of meeting between help and employers; and whether we can go further and say that the additional charge for the service rendered shall include a certain percentage of the first month's pay, or of the year's salary, is an open question.

Q. What action would be taken by your bureau in the event a judge of the city of New York should declare certain intelligence offices, which you have licensed, to be fraudulent? Has that ever happened in New York?—A. We have had this happen once or twice. Under the law a fee that has been paid upon the promise of a position must be returned if the promise is not fulfilled. I have known of instances where a number of applicants have paid fees to a person and that person has disappeared. He simply collected his fees and got out of town, and consequently there was no chance to have the fees returned.

There is one other thing, and that is the question of a bond for the faithful performance of duties under the ordinances. There are a great many of the intelligence offices in the city, I think, that are kept by married women, who use it as a means of increasing the family income, and very often it is kept in their own houses, especially among the poorer classes on the East Side. It would come pretty hard on them to furnish a bond, and almost invariably they do maintain a perfectly respectable office and there is no objection to it. I think the fact that there are so very few of these offices that are complained against shows that the law that we now have is a pretty good one, and as a rule the people in the business are very reputable people.

Q. I have been informed to-day that this sort of practice prevails in regard to this system; that is, that when complaints are made to your office against these Intelligence Offices which you have licensed, the politicians of the political parties are rushed to the front to intercede for them and get them off, so to speak. Does that practice prevail at all?—A. Not that I am aware of. If any such application was made, I am very sure it would be of no effect. The appointees and the officials are all under an official oath to do their duty, and I think they would do it.

Q. (By Mr. FARQUHAR.) Have you any license or any regulation of the so-called padrone system of employment?—A. No.

Q. Are these licensed places chiefly for domestic help?—A. Yes.

Q. Are there many mechanics who make application to them and get work?—A. We have no means of knowing that. Most of the offices have on their books records of situations in the country as workmen in the summer season and as waiters or waitresses at different hotels, or various work done about summer hotels. As Mr. Bealin stated, any person that belonged to organized labor would probably go to his union for the line of business in which he was educated.

Q. Do you think that under the present law the rights of applicants are properly safeguarded against extortion and misrepresentation?—A. I am inclined to believe the operation of the present law in regard to intelligence offices is perhaps as satisfactory as can be formulated. A person likes to keep the fee, and he knows he must return it if he does not earn it; and the presumption is that he will try to earn it.

Q. The keeper of an intelligence office is in the line of a broker furnishing employment, subject to regulation under the State. Now, with reference to the unfortu-

nates that are out of employment, is it not the duty of the State and of the municipality, if necessary, to so frame laws and put safeguards over the rights of these people and over whatever little money they may provide to get a situation that they may labor and keep themselves from being public charges?—A. That is a question for a statesman.

Q. You have had 18 years' experience and have handled the business every day, and you are in a city which is congested with foreign immigration and with people wanting and seeking situations?—A. There is this difficulty about it. Take an intelligence-office keeper; a man or woman goes to that keeper and says: "I want a place." Now, as a matter of fact, that applicant may be such that you might hunt the city over and yet find nobody that would have him or her. How are you going to get that man or woman a place?

Q. I am speaking of the worthy.—A. That is a very different thing. My experience and observation are that the worthy are pretty apt to get there if they work hard enough.

Q. How is it, when the city of New York has such a large fund for providing for the unemployed, that you have so many almshouses and institutions covering Blackwells Island and everywhere else?—A. I think that is because, as Mr. Carnegie says, everybody wants to come to New York, and the large proportion of them have no business here. Competition is too fierce. The struggle for existence is too much, and they simply become a part of the submerged tenth, and you will never be able to float them.

Q. Does not that circumstance emphasize the fact that you must have municipal or State control as a safeguard to the public?—A. I am not an advocate of a paternal government. I think the less government we have the better we are off. My impression is that if there were rules here that would make it absolutely sure that whoever came to the city of New York would get a job we would have the whole population of the United States here inside of 24 hours.

Q. If you were to establish that kind of agencies all over the State, could you not find employment for all applicants, and thus equalize matters and relieve New York and other large cities?—A. That is a theoretical demonstration, but it can not be carried out in the nature of human affairs. There are men and women who would rather live on a crust of bread in the city of New York than have a full meal served at Delmonico's in Hoboken or some other place, and you can not help it.

Q. Is it not a fact that worthy people often become stranded, on account of sickness or otherwise, and that the safety of the public, in the moral view as well as in the political view, lies in providing, through the State or municipality, in some way, employment for those who are willing to work and who are not vicious?—A. It is within my knowledge that in a great many instances servant girls and applicants for various sorts of work have gone to intelligence-offices and been provided with places without paying one single cent. Often the intelligence-office keeper has to rely on the honesty of the individual to pay the money when he or she gets it. I do not know of any place where a man who has the push and ability and determination to get along can do any better than right here.

Q. To come back to the original proposition. Have you, out of your own experience, any suggestions to make amendatory of the present law or to make it more efficient and better in its operation?—A. I have no suggestions that I have any reason to believe would make it any better than it is to-day. I have a number of theories. The only suggestion that possibly might be an improvement would be the division of the fee paid so that a part of it might be applied to what might be termed a registration fee, which should be regulated and made small, and the other part of it made in proportion to the service rendered and paid when the services are rendered; and if those services are not rendered, and it has been paid in advance, it should be returned. I think that would be fair to everybody concerned. I see no reason why intelligence-office keepers should provide a place of meeting and go to the expense of keeping a register of all people that want help and of all help that want places, and employ the necessary clerical help, and pay for a thousand and one things necessary to do it, without remuneration. I think they are entitled to a fee which shall be paid to them when they place the facilities of their place at the disposal of the applicant. Then, if they render more service they are entitled to more pay. And if they get a good place I think they are entitled to more pay than if they get a poor place. A place that will pay \$1,000 a year is worth more than one that pays \$10 a month. Now, whether any rate can be established that will gauge that is a question. The only way that you could get at that would be on a percentage basis, probably. But a percentage on what? The first month's pay or the first year's pay? Manifestly, if you make it a percentage of his first year's pay it can not be collected until the man has been there a year, and what guaranty has the intelligence-office keeper that he will be able to trace his man after a year? How is he going to make that man pay it? You do not have him under your jurisdiction. You license the intelligence-office keeper, and he is the man you can put your finger

on. He is the man you can make do what you think is right; but you can not make the employer or the employee do what is right. Many times we have complaints of a servant who has been sent to a situation and who has not paid anything, and yet there are thousands of people who would be glad to take the place and pay for it. Sometimes domestics want a great deal; on the other hand, the employer sometimes wants a great deal and pays very small wages. That is a matter that, to my mind, must be regulated by the law of supply and demand and the various incidents and circumstances of life.

Q. (By Mr. KENNEDY.) What can you say as to the comparative efficiency of State employment bureaus and of these local ones?—A. I have seen nothing at all of the operation of the State employment bureaus. I am not in a position to know anything about them, but I think I do know something about our bureau of licenses.

Q. You do not know whether they are more efficient in the matter of securing employment for persons seeking it than the local agencies?—A. It is the old question of any organization that has more far-reaching influence which can in all probability better serve its purpose, yet at the same time they may go so far and reach out so far that their lines are so stretched out that they are absolutely weak and break down of their own weight and do not accomplish any good. I think the matter of intelligence offices is one of which it may be said that the more thoroughly they are organized and the more restricted or local they are in their operations the better they will serve their constituents. They must of necessity be more thoroughly informed. It would be pretty difficult for a man out in Illinois, where they have some such law as that, to be as thoroughly informed of the conditions here in New York as those who are living here every day and keep up with the changes that are continually occurring. Take, for instance, any question like strikes. When employers want laboring men they do not get them through intelligence offices, but they learn it through the newspapers that certain men are out and they go there, but that information is not disseminated through any organization except the press.

Q. I referred to such State employment bureaus as you have in New York.—A. I know nothing about the State bureau here. I never have, to my knowledge, seen anyone that had any complaint to make about it or had anything to say in praise of it. In other words, so far as I am concerned, I have myself never heard of it except as a matter of hearsay.

Q. Your opinion, then, is that it is inoperative and ineffective?—A. No; I do not mean to say anything of that kind. There are likely many concerns in New York that are very active that I have never heard of.

Testimony closed.

TESTIMONY OF MR. THOMAS W. HOTCHKISS.

Counsel, Protective Association of Employment Agencies, New York.

The special subcommission being in session, Mr. Clarke presiding, Mr. Thomas W. Hotchkiss was introduced as a witness at 4.03 p. m., and, being first duly sworn, testified as follows:

Q. (By Mr. CLARKE.) Please give your name and address and occupation or official position.—A. Thomas W. Hotchkiss, in care of St. Bartholomew's Employment Bureau, 211 East Forty-second street, New York City. I am the superintendent of the mercantile, professional, and labor departments of that bureau. I am also the counsel for the Protective Association of Employment Agencies of this State, an organization which was formed in the winter of 1899-1900 to oppose the Ford-Kelsey bill, which Mr. Bealin offered. Since the matter of legislation seems to be the central matter of inquiry by the commission, I would select that as my topic, if I am permitted to do so.

Q. Proceed in your way to develop the points that you wish to bring out.—A. I wish to make the preliminary statement that St. Bartholomew's bureau makes no charge at all until employment is obtained. It may collect its fees before the position is obtained, but it refunds those fees if the employment is not obtained. In other words, we are operating strictly within the law of this State. St. Bartholomew's Bureau is not a member of the Protective Association of Employment Agencies; and upon this question of legislation I would speak as a representative of that association and not as a representative of St. Bartholomew's Bureau.

I refer directly to the matter of legislation because I do not want to take up too much time, although I might speak at considerable length on the general question of the unemployed.

The Protective Association of Employment Agencies opposed the Ford-Kelsey bill for several reasons. All legislation affecting employment agencies is intended to regulate their operation and to prevent frauds being perpetrated against employers and employees. That would be the starting point of all legislation. The Protective Association of Employment Agencies concedes that these frauds may be perpetrated, but to my knowledge none of its members have ever been guilty of any of those frauds. I have to take the evidence from hearsay as to these existing frauds. I derive it from the statements of Mr. Bealin, whom I have heard on former occasions, and from the bureau of licenses. I cite also the paper of Prof. E. L. Bogart, of Indiana University, printed in the *Quarterly Journal of Economics* for May, 1900, in which he makes a very clear statement of specimen frauds. The *Encyclopedia of Social Reform*, in an article under the title of "Unemployment," written by Mr. Bliss, also gives samples of fraud. These are the sources of my information as to existing frauds. I have Mr. Bogart's paper before me, and I read his mention of such frauds. (Reading:)

"The least of the abuses which are perpetrated is the universal practice of accepting a fee whether there is a prospect of finding a position or not, and of refusing to refund it when a position is not secured. No pay agency will ever admit that the labor market is overstocked. Worse than this is the practice of advertising for laborers to undertake work in distant cities, and of sending them to fill purely fictitious openings after accepting their fees. In the case of some of the more dishonest agencies there is an agreement between a foreman and an agency, according to which men sent by the agency are employed, but only for a few days, and then discharged to make way for others. The fees are divided between the agent and the foreman. An additional refinement, which is reported from New York, consists in an illicit connection of employment agencies with alleged employers, who refer an applicant to a guaranty agency which is also in the league, and which exacts another fee for looking up the reference. It is a not uncommon plan to have the employment agency located in the rear of a dramsshop, which the men, who are purposely kept waiting in the hope of securing a position, will unfailingly patronize."

Now, the Protective Association of Employment Agencies wants to see the business of employment agencies in New York State conducted according to law. We consider it a matter of protection to ourselves. An agency which is licensed and which is put under bonds, which is inspected by proper officers of the municipality, which is liable to fines or penalties or punishment for misdemeanors, is protected against the unwarranted statement that frauds are perpetrated. There has been a good deal of talk concerning frauds practiced by employment agencies, without specific proof of frauds. It is much easier to make the allegation of frauds than to prove it. I make that statement not only because the evidence may be difficult to get, but because the circumstances of the case are such that the allegations come easy, especially to a person who is out of employment. The person who is out of employment is a very discontented person, and he looks at life with distorted vision. He thinks he is an object of fraud, and in many cases will make himself believe that he is a victim of fraud. If fraud is perpetrated, the fraud must be proved; but in many cases the allegation has been made when the proof was not forthcoming. Instead of indulging in an indiscriminate denunciation of employment agencies, the most direct, radical, and effectual remedy for wrongs that really exist is to bring the wrongdoers to justice. The courts are open, and the mayor's marshal stands ready to see that substantial justice is done to any person wronged by any employment agent in this city.

The employment agency which is self-supporting, that is, which charges fees for its services, and which is not a free bureau of the State or a charitable organization, has got to guard its earnings very carefully. It has already been explained as to how fees are charged and something of the amount charged.

The Ford-Kelsey bill, inspired by a zeal to reform, went far beyond the steps necessary to make that reform equitable. It overlooked the rights of the employment agents.

The objection of the Protective Association of Employment Agencies to Mr. Bealin's bill was, first, in regard to its first section. The Ford-Kelsey bill made an exception of agencies operated for teachers and members of the theatrical profession. Now, it seems to us that employment agencies of that character are operated for the same purpose and in practically the same way and may be guilty of the same frauds which may be practiced in any other agency. I make that statement as applying not only to domestic employment agencies, hotel agencies, and agencies for laborers or workers at mechanical trades, but also as applying to professional and mercantile agencies and so on, covering the whole field and making no exceptions whatever. It is stated that the object of this legislation is to check frauds. I never heard any other reason given, and frauds may be practiced in any of those agencies. So that making an exception of agencies operated for school teachers and

theatrical people seems to me to be unfair to the other agencies—a sort of legislative favoritism.

Secondly, the Ford-Kelsey bill, when first presented, charged an annual license fee, so called, of \$200. That is the amount in the Illinois law, and there is no other State which requires so high a license fee. The States of Colorado, Minnesota, and Washington have an annual license fee of \$100. The only other State requiring any annual license fee is Pennsylvania, where the amount is \$50. Now, \$200 a year is not a license fee, but a tax, and is so large that it would wipe out of existence many employment agencies.

The Protective Association of Employment Agencies maintains that employment agencies are necessary to the public good and for the benefit of both employers and employees, and the orderly and convenient marketing of labor. Therefore, any law which is prohibitive and prevents agencies doing such a business, by charging too high a license fee or a fee that becomes a tax, is unfair to those agencies and detrimental to the public good.

In that connection I want to call the commission's attention to a decision in the State of North Carolina taking that position. The case was decided by the supreme court in 1893. It is the *State v. Moore* (113 N. C., 697). This is a case upon the constitutionality of chapter 75 of the acts of 1891. That chapter of that act is by this decision held to be unconstitutional, because the occupation defined in this chapter (that of an emigrant agent) does not belong to that class of trades or occupations which are so inherently harmful or dangerous to the public that they may either directly or indirectly be restricted or prohibited.

I maintain that what is true of emigrant agents is also true of employment agencies for the same reason, and that any tax which is too large (although that tax may be imposed, as was attempted in this statute, under the police power of the State) is unconstitutional. I am not a constitutional lawyer, but I offer this as evidence of what was found in the State of North Carolina.

As to the amount of annual fee which seems to me to be fair for these employment agencies, I should say that \$100 for the first year and \$50 annually thereafter would be a fair maximum charge or license fee for the purpose of properly administering such a law, including all the expenses connected with the inspection of the offices, for I am in favor of the inspection theory. In connection with the Ford-Kelsey bill, the Protective Association was willing to concede that amount, but opposed the \$200 license fee as proposed by the original bill.

Under the third section of the Ford-Kelsey bill, which is the section referring to the bonding of the offices, the Protective Association is in favor of such bonding to the amount of \$2,000. We do not say that such a bond must be obtained from any certain surety company, but a bond with responsible sureties; and it is my individual opinion that such a bond should run, not to the municipality, but to the party aggrieved. If the law is administered by the municipality, a suit on such a bond would be brought by the municipality against the licensee who is accused by a citizen of having fraudulently taken money. Now, in a suit on a bond, as I understand it, if it go to the question of the payment by the sureties, such payment should be reached by the terms of the statute, so that the aggrieved party, if he has been defrauded, may be reimbursed. It should not stop at the municipality. The bond should not be paid simply to the municipality, but to the aggrieved party. For that reason we favor such an amendment to the Ford-Kelsey bill.

We are heartily in favor of the regulation which requires that books shall be kept and certain information be entered in those books which is required by the fourth section. That is to enable the proper officers to make such inspection and also to aid the police in tracing thieves who may have registered at the employment offices. But we do not agree with Mr. Bealin that the books should be kept as outlined in the Ford-Kelsey bill. Such a system is practically impossible in an office where cashbooks and receipt books are necessary, as well as the registers of employers and employees. That section should be revised. The inspection of employment agencies should be made, in my opinion, by the inspection officer, only on the sworn complaint of an applicant for employment or an employer. This would avoid an unnecessary disclosure of confidential communications on file in these offices concerning the condition, character, and ability of persons out of employment, and private information as to the needs of employers. It would also avoid the possibility of lists of unemployed workers being made for partisan election purposes.

Under the fifth section the association is concerned with the character of the contract entered into between the applicant for employment and the employment agent. We oppose the Ford-Kelsey bill as unconstitutional in its fifth section, and I have here the opinion of Mr. Carl L. Schurz, jr., attorney and counsel of the Legal Aid Society, that this section 5 is unconstitutional because it takes away the property of the employment agent without due process of law. Applicants for employment who fancy that they have been defrauded by employment agents should know that

(as stated in its report for 1900), "It is the object of the Legal Aid Society to assist the poor and helpless whenever they appear to have been wronged."

(Witness submitted opinion, which is as follows:)

THOMAS W. HOTCHKISS, Esq.:

DEAR SIR: I beg to submit that the bill submitted by you to me is, in my opinion, unconstitutional as to so much of section 5 thereof as I quote: "In case the said applicant shall not obtain or *accept* a situation or employment through or by the procurement or agency of such licensed person within one month after registration as aforesaid, then said licensed person shall forthwith repay and return to such applicant the full amount of the fee or other valuable thing paid or delivered by said applicant to said licensed person." That it is unconstitutional for the reason that it deprives a citizen of his property without due process of law.

At the time of the payment of the deposit by the person seeking a situation it is within the contemplation of the parties that the licensed person expend his time and his money in seeking a situation for the applicant. To require the licensed person to return the full deposit to the applicant is to take from the licensed person his time and his money without reimbursement for the same. This is taking his property without due process of law. The law of the land in any form has no more right to require a licensed employment agent to do work for nothing, or to expend money without return, than it would have to require a baker to buy materials, bake bread, and then give away the baked loaves without payment.

The only question remaining is whether the contract to find a position for the applicant can be carried out without the expenditure of time and money. Clearly not; for even to be entitled to make such a contract the agent must have his license, for which he pays; must give his time, and must have a place in which to do business. There is no question but what to require him to return the full deposit paid takes from the agent this property.

Labor is property.

In re Jacobs (33 Hun., 379).

Slaughterhouse Cases (16 Wall., 127).

The police power is not without limitations, and in its exercise the legislature must respect the great fundamental rights guaranteed by the constitution.

In re Jacobs (98 N. Y., 110).

Quoting Slaughterhouse Cases (16 Wall., 36-87).

Coe v. Schultz (17 Barb., 61).

The right of the legislature to regulate certain things in regard to businesses affected by a public interest is recognized. Admitting for the purpose of argument that this is a case of that kind, we can not lose sight of the fact that so much of this act as we object to does not regulate the price to be paid or the manner of conducting the business, but deliberately orders that all the requisite work for the carrying out of the contract in question shall be done and shall not be paid for in any way. Especially is the phrase "or accept," at line 20 of paragraph 5, objectionable. By this it is left at the option of the applicant to take from the employment agent the entire fruit of his labors, however faithfully and successfully performed and carried out.

It is, however, even questionable whether this business is one which is "affected with public interest." All the cases in the United States which have sustained such regulations relate to commercial carriers, ferrymen, hackmen, etc., i. e., those whose business was affected by a public interest. On this basis the leading case of *Munn v. Illinois* (94 Ill., 113) upheld the control of rates of the use of grain elevators in Chicago and in New York. A similar provision was sustained in *People v. Bobb* (117 N. Y., 1); but even in this last-named case there are strong dissenting opinions by Gray, J., and Peckham, J. In his dissenting opinion Gray, J., says:

"The learned judge writing the opinion concedes that the uses to which a man may devote his property, the price which he may charge for such use, how much he shall demand or receive for his labor, and the methods of conducting his business are, as a general rule, not the subjects of legislative regulations. He well says that 'these are a part of our liberty, of which, under the constitutional guaranty, we can not be deprived.' He believes, however, that he finds in this particular business of elevating grain 'special conditions and circumstances' which justify legislative control. In my view, the concession which the learned judge is obliged to make with respect to our constitutional liberties impairs the force and effect of his opinion, unless he is able to show that the business in question is affected with a public use or interest, within the strict and proper meaning of the term. This I do not see that he accomplishes."

Peckham, J., in his dissenting opinion, states:

"As is said, there can be no legal objection to the power to direct the weight of a loaf of bread, for that is a mere police regulation, interfering with no man's real liberty, and it is the same as if the length of a yard were declared by law, or the

weight of a ton. But I deny the right of any legislature in this country to limit the price for which an individual baker shall sell his bread per loaf, or the price per ton for which a coal dealer shall sell his coal, or the price which a tailor shall charge for his coat, or the shoemaker for his shoes."

Section 5 of this act is a taking of property without due process of law.

C. L. SCHURZ.

I agree with Mr. Brown in his testimony that an employment agency is entitled to a reimbursement for services rendered, even though no employment results from his efforts, and a law which does not recognize that right is, according to the opinion of Mr. Schurz and according to the minds of employment agents, unfair and unconstitutional. Labor is property. If the agent performs service, he does not wish to perform that service and not be compensated for such performance.

What is the operation of the employment office? If it be considered only as a registry of names and a place where the agent's sign hangs out before the public, it seems to me that the applicants for employment may reasonably be expected to pay their registration fees for the maintenance of such registry. But an employment agency is not a mere registry of names; it is an active agency. You must take into consideration not only the equipment of the office and its wear and tear, but the expense connected with advertising, stationery, postage, and also the intelligent conduct by the agent in seeking employment for the applicant. Those are actual services rendered for every applicant for employment, and any statute intended to regulate the conduct of employment agencies should recognize the right of the agent to be compensated for services thus rendered.

I wish to refer to the ordinances of the city of Buffalo, which has a schedule of such rates as the agent may charge and keep, whether employment results or not; also to the ordinances of the city of Boston, and to the law of the State of Maine, which permits a fee of not over \$1, which may be retained by the office if no position has been secured. So the Protective Association of Employment Agencies would favor a definite scale of fees, arranged according to the character of the different kinds of offices, which the agent may keep although no employment may result from his effort, and a certain percentage in case employment is obtained by the applicant for employment, just as outlined by Mr. Brown in his testimony.

Q. You mean to say that there ought to be a scale from, say, \$3.50 to \$4 a week, up to \$50 a week, and that the man that simply brings together an employer and employee is entitled to any of the usufruct after the first fee? What right has the man that simply brought together the two parties to any part in the amount that is earned? What right has he who simply is an errand boy, and has no money in it at all; who pays probably a few dollars of rental, who may have a few blanks, and use a few postage stamps and some shoe leather? Do you advocate that he has the right, after the contract is made, to get a percentage out of the earnings of that man simply because of getting the position for him?—A. I can answer that best by referring to my own experience in St. Bartholomew's Employment Bureau, and that evidence is contained in the Parish Year Book for 1900. The expenses of the conduct of that office for the year ending October 31, 1900, were \$5,759.93. The number of persons placed in employment by that office that year was 2,592. In other words, the per capita expense of placing those applicants in positions was \$2.22, and that office is operated as economically as an office could possibly be. The average per capita expense in the last five years has been \$2.15. Money received in fees and not applied to defray current expenses for the operation of the bureau, has been used for the benefit of applicants for employment through advertising, or turned over as a surplus to the parish treasurer to offset the advantages the bureau receives in the use of rooms, electric lights, and telephone service.

Q. And you charge a fee?—A. You are speaking of free offices; but where are they going to derive a revenue? An employment office is just like a doctor. Many of the cities have their free dispensaries, but the doctor is entitled to his compensation even if he does not cure the patient; the lawyer is entitled to his compensation if he does not win his case. The free employment offices are all right, and the charitable office operated by public contributions is all right; but those that are self-supporting have to look out for their finances. These offices, whether operated under church auspices or as private enterprises, should, as I have stated, be regulated by law, but the law should not be prohibitory.

Q. (By Senator KYLE.) May I ask what are the number of applications you had during the past year?—A. In the year 1899 to 1900 the number of applications from employers in all departments was 3,713; the number of applications from workers in all departments was 5,169.

Q. So you place more than 50 per cent?—A. We have placed exactly 50 per cent. In that connection I want to call your attention to the fact that St. Bartholomew's Employment Bureau, perhaps unlike most employment bureaus, covers the whole field of industry, and operates in four distinct departments—the domestic department, the professional department, the mercantile department, and the department of

labor and mechanical trades—and we have kept statistics separate in those four departments. We placed last year 72 per cent of the applicants in the domestic department, 20 per cent in the mercantile, 11 per cent in the professional, and 36 per cent in the labor department.

Q. How do you regulate your fees of parties seeking employment? In the two cases of a girl that wishes employment in a store at \$4, \$5, \$6, or \$7 a week, and another party who wishes a position, probably a position in a store, at \$75 a month, how do you regulate the fee in that regard; do you charge the same for each?—A. Yes; on a percentage basis.

Q. Percentage of what?—A. Of the first month's salary.

Q. So that a girl getting a place at \$5 per week has to pay what?—A. Fifteen per cent of the first month's salary, as a sales girl, for example. We charge 10 per cent of the first month's wages when we place an applicant in the domestic or labor department. In the mercantile and professional departments we charge 15 per cent of the first month's salary. That is the customary charge in New York City, and I want to explain that. In the last 4 months St. Bartholomew's Bureau has been operating without charging any registration fee, and for the first time in its history is operating at a loss. In other words, when the fee charged for the use of the office, to reimburse the office outlays, the actual expenses, is cut off, the office operates at a loss.

Q. Then the fee for registration is required whether you secure a position or not?—A. We have no fee for registration at present. We charge now only in case employment is obtained. This method is all right for St. Bartholomew's Bureau, which is backed by a substantial church corporation. The private, self-supporting agency, which must derive its income from its fees and cover expenses or go out of business, must demand of most of its applicants for employment the payment of the fee in advance as a guarantee of the applicant's good faith, and to reimburse the agent for actual outlays which must be made for the applicant's benefit whether employment results or not.

Q. What fee was formerly charged?—A. Twenty-five cents for the domestic department and 50 cents for the other three.

Q. You say you have 3 or 4 departments. What are they?—A. Domestic, mercantile, professional, and labor.

Q. The first is 10 per cent?—A. Ten per cent in the domestic and labor departments.

Q. Then in the two higher, or the two or three higher, what is your percentage?—A. Fifteen per cent of the first month's salary in the mercantile and professional departments.

Q. That is higher?—A. That is higher. That is a very fair charge, made only to cover expenses.

Q. (By Mr. KENNEDY.) What do you mean by "professional"?—A. Well, that is really semiprofessional, for our applicants in that class are mostly matrons for institutions, housekeepers, nurses, trained and untrained attendants, and that class of workers. We do not pretend to compete with the teachers' agents in placing teachers; we do not pretend to compete with other agents who deal with a particular kind of employment, and it is an interesting thing to know that the agencies are more and more specializing.

Q. You do not get employment for printers, do you?—A. We have few applications from organized trade workers. They, as has been stated by Mr. Beulin, can take care of themselves. In that connection I will refer again to Mr. Bogart's paper. The title of his paper is "Public employment offices in the United States and Germany," and he concludes, so far as the offices in the United States are concerned:

"And thus, as to the general outlook for the free offices, the following paragraph from the exhaustive report of the English department of labor on 'Agencies and methods for dealing with the unemployed' will apply equally to the United States:

"With the best of conditions, labor bureaus can hardly be expected to become the sole or principal means of bringing together employers and unemployed. The bulk of the work of living labor and seeking employment will, in most trades, continue to be done directly between workmen and employers, as in the case where, as in France, the system of bureaus has been carried much further than in the United Kingdom. Nor as regards the organized trades can labor bureaus, as a rule, compare in utility, so far as workmen are concerned, with the work of a well-managed trade society. The chief field of usefulness of labor bureaus is likely, therefore, to be found for some time to come in the less highly organized trades."

Q. (By Mr. LITCHMAN.) In the less skilled trades?—A. By no means. Many of the most skilled trades are unorganized. As has been stated by Mr. Brown, you must remember that agencies are springing up for professional workers, for all kinds of workers, and those are mostly, as stated in this quotation, unorganized.

Q. (By Mr. KENNEDY.) I should like to ask your opinion of that fee which is permitted by law in the State of Massachusetts, to which reference was made a while ago, \$1 in the case of males and 75 cents in the case of females. Do you think this

would be a proper fee to be permitted by law in the State of New York?—A. You mean, to be retained by the agent whether employment results or not?

Q. Yes.—A. I think that is a very fair rate for domestic or hotel agencies, and all agencies which place workers at labor and mechanical trades. I do not think it is adequate for the teachers' agencies. I am not so familiar with any of the others. But, you must understand that if the agent succeeds in placing the applicant, a larger fee than \$1 or 75 cents is required. The amount you name would only cover incidental expenses. It would not compensate the agent for his services.

By Mr. COMMONS. I think that in Massachusetts that fee is required to be refunded in case there is no employment found. That is the law in Massachusetts.

WITNESS. Yes. I verified the tabulated digest which Mr. Bogart has printed in his paper. There are two matters in which he is incorrect, and I may say that only two State laws require that the agent shall receive no fee unless a position is obtained.

Q. (By Mr. KENNEDY.) I stated that the fee was not returnable. You say you verified that?—A. The State of Massachusetts is one of those States where the agent is not permitted to receive and retain a fee unless a position is obtained. The State of Maine recognizes the right of the agent to make a charge for his services and be reimbursed for his outlay. The law there was revised in 1899 permitting the agent to receive and retain \$1, although no employment results from his efforts. The ordinance of the city of Buffalo is the same or similar.

Q. You would not consider that an adequate compensation in the State of New York if the fee were to be returned in case of failure to procure employment?—A. As I say, a scale should be arranged which would accommodate itself to the different agencies. It seems to me the more professional agencies should have a larger compensation on account of the special learning; and then there are certain agencies which do business with out-of-town employers almost altogether, as in case of most teachers' agencies, requiring a larger amount of correspondence.

I do not know whether the opposition of the Protective Association of Employment Agencies had to do materially in preventing the passage of the Ford-Kelsey bill or not, but I will take the same stand as heretofore if that bill is introduced again. Our great principle is the principle of home rule, the principle which we wish to emphasize most emphatically. There are State enactments in 13 States, regulating private employment agencies. In one there is no supervision, State or municipal; in Illinois there is State supervision; in the other 11 States the agencies operate under license of the municipality, town council or common council, or by permission of the mayor. Our objection to State supervision lies in the fact that the State bureau of labor statistics has a free bureau in the city of New York, which is conducting a business in opposition to ours. The placing of the business of inspection in the hands of that free office, to examine the books of our offices which are doing business in competition with them, is manifestly unfair, it seems to me; and, moreover, the proposition of the commissioner at the time the Ford-Kelsey bill was introduced was that employment offices should be reduced in number by a large license fee, in order to keep them more easily under inspection, and then to use the revenues derived from the balance of the agencies for the establishment of free bureaus throughout the State of New York. In other words, the offices in New York City were required to pay taxes for the establishment of free offices in New York and up the State.

Q. (By Mr. FARQUHAR.) Do you speak of competition for St. Bartholomew's in this intelligence agency? Do you mean in this modern age that it is run for business profit?—A. I simply stated our aim, which is to cover our expenses, and the purpose is to have an office which will deal with perfect fairness with all concerned.

Q. What are the competitive features of the State bureau as to your work?—A. I may say that it is antagonistic to the private offices. That antagonism is shown in their printed reports, and I think that while there are frauds and abuses, as I said in the beginning, it is easy to check them. The objections to the private "pay" agencies may outrun reason, may outrun justice, may outrun equity, and the officers of the State Labor Department must guard themselves against that.

Q. Do you think that the Ford-Kelsey bill, if enacted into law, would have been an advance or of benefit in the regulation of the employment agencies over and above the present laws you have in the State?—A. I would much prefer the existing law in the city of New York to the Ford-Kelsey bill.

Q. What percentage of the agencies in your own city are semicharitable or philanthropic?—A. Some of the philanthropic agencies in the city of New York are the Young Woman's Christian Association agency, the agency of the Salvation Army, and the Alliance Bureau, which is affiliated with about 20 charities. And I want to say that every semiphilanthropic employment agency in the city of New York indorsed the Price-Fuller bill, which the Protective Association of Employment Agencies advanced at the last legislature, which was passed by the legislature, vetoed by the mayor, repassed over the mayor's veto, and then vetoed by the governor.

Q. (By Mr. KENNEDY.) Why did the mayor veto it?—A. I am sorry I have not a

copy of his veto here. I think Mr. Brown might more easily answer that if the question was referred to him.

Q. (By Mr. FARQUHAR.) Was it the present administration at Albany—the present governor—that vetoed it?—A. Yes.

Q. (By Mr. KENNEDY.) Do you know why the governor vetoed it?—A. I have no means of knowing; I can only guess. I think it was merely because the mayor had vetoed it. I think that our bill, the Price-Fuller bill, could have been improved upon had the Protective Association of Employment Agencies, who had the drawing of that bill in charge, consulted with the mayor's marshal, Mr. Roche, chief of the bureau of licenses, and the deputy chief, Mr. Brown. We might have agreed upon a bill which would have passed and would have been signed by the mayor. It is my desire to draw another bill, either as an amendment to the existing law or an entirely new law, for the next session of the legislature, so that all interested can agree upon its terms and to avoid in the future having this question reopened.

Q. (By Mr. FARQUHAR.) Has the establishment of the State bureau or this intelligence office by the State been of any advantage in the regulation of intelligence offices of this city?—A. I have no knowledge that it has ever had any advantage. I am not posted as to that.

Q. Has there any advantage come from the bureau in this city in respect to the management and mismanagement of intelligence offices through that department of the State government?—A. They attempted legislation in the Ford-Kelsey bill, and legislation failed. At that time there was a crusade against employment offices, conducted by the New York Journal, which resulted in closing, I believe, only one or two employment offices in the city.

Q. (By Mr. LITCHMAN.) What difference is there between the fees charged by the association you represent and the ordinary fees charged by employment agencies? I am not speaking now of the semicharitable, but I am speaking of the ordinary agencies that come into the work as a matter of business.—A. The Protective Association of Employment Agencies has no uniform charge for all its members. The charge is left to the discretion of the separate agencies, and the charges are quite different among those agencies, as has already been stated by Mr. Brown.

Q. Are your fees less than the average of other societies in the same business? I am speaking now of the St. Bartholomew Society that you belong to?—A. There are some agencies that are not under philanthropic auspices. Charitable societies, church societies; they have the same basis of fees that we have. That is, they make a charge on the same principles that we do, but I think their charges are less in amount. One reason we make a charge is to avoid the charity basis. The other is to give support to the Employment Bureau.

Q. Do the bulk of them have higher fees?—A. Am not informed as to that. I do not think so. I think, as far as I am informed, that there is a good deal of freedom of contract on that point.

Q. You have testified, as I understand, that the fees now charged by you are not remunerative—that you are conducting part, at least, of your business at a loss. Are you recouping on the other part of your business for the loss in the free work you are doing?—A. What other part, sir?

Q. Well, is there any part of the business you are doing at a loss?—A. I am speaking of St. Bartholomew Employment Bureau as a whole; for January, February, and March there was a deficit. Whether there will be a deficit at the end of the fiscal year or not I am not prepared to say.

Q. But under the conditions you have reason to anticipate the same?—A. I have reason to fear there will be a loss.

Q. How is that loss recouped?—A. I do not see how it can be, except through the treasury of the parish.

Q. That is, if it can not come out of the business.—A. If it can not come out of the business.

Q. Are you practically running a free establishment to that degree?—A. Philanthropic to that degree.

Q. Then it is only a question of degree between you and the State establishment, is it not? I understand you that the State establishment is free entirely.—A. Entirely free.

Q. And yours is practically so?—A. We do not aim to be. I think we can arrange that by cutting down expenses so that we will come out even at the end of the year. We are going to try to do so. That is what we aim to do. We want to do it.

Q. You are not running the institution as a money-making concern?—A. By no means. We want it to pay its own way, and we are going to make it do so if we possibly can. It ought to, if possible.

Q. (By Mr. CLARKE.) Do you think it is any part of the business of the State to furnish or find employment for people?—A. I have no reason to oppose the State free employment bureau in any of its purposes or operations if its purpose is to place needy employees in position. There are many applicants for employment

who do not go to that office because it makes no charge for positions, as they think they would be receiving charity. Mr. Bealin contends that it is not a charity, that it is supported by the taxpayers of the State, but the applicants for employment do not all see it that way. They prefer the private pay offices, just as a man seeking medical attendance prefers his private physician rather than the free dispensary. Applicants for employment are not taxpayers. The benefits derived by these applicants from the State free bureau are paid for not by themselves, but by some one else. In this sense they may be right in maintaining that the free bureau, as to them, is a charity. The taxpayers derive a benefit from the free State bureau in only one way—it is a convenience to some of them as employers. It can not be said that employers are saved by that bureau from the annoyance of having their premises invaded by applicants for employment, because 9 out of 10 of the applicants for employment in that bureau are women for domestic service, a class of applicants who never solicit work by going to the homes of employers uninvited. Then, too, so far as employers are concerned, many of the taxpayers who, as Mr. Bealin claims, are the persons who pay for the maintenance of the free State bureau, are not employers of help of any kind, and of those taxpayers who are employers few patronize that bureau as compared with the number of employers who patronize the 426 private pay employment agencies in Greater New York. I do not mention this as an objection to the free bureau. I mention it only for the sake of distinction between the private pay agency and the free public agency. The same distinction exists, possibly, as regards taxpayers that exists between private and public schools. Each has its field and proper place and should not attempt to impair the usefulness of the other, but rather set an example of excellence which the other may emulate. Many employers do not patronize the free bureau because they assume that the free bureau attracts the unthrifts or the otherwise undesirable applicants. My observation has been, after considerable experience in studying applicants for employment, that lack of money is not, *prima facie*, an evidence of lack of character or ability, although the possession of money may be good evidence of the possession of both. It is a fact, however, that the free bureau, while aiding the deserving poor who are in need of work, does not obtain the registration of self-reliant persons who do not choose to be dependent upon State aid. I do not mean the poor and proud only, but the fairly well-to-do and independent, who, when out of work, prefer to do business on a business basis. An employment agent who is paid by employers or employees for his services is under not only a moral obligation, but is bound by a legal obligation, having in it a monetary consideration, to perform the services and do them well. The pay office has this advantage over the free office. It has the activity of enterprise. It wins clients and patrons by deeds of kindness, also, which are impossible in the free office, however charitably inclined. Besides giving counsel and encouragement to assist the struggling applicants to seek employment, they lend money without interest to applicants who are well known to them, they advance car fares, place many applicants in positions, and trust them for payment or make no charge whatever, or act as bankers for the saving of wages which servants going to distant places for a season's work do not wish to take with them, but which they may wish to draw upon during their absence or receive in full on their return to town. There is charity in abundance given in the private pay employment agencies as occasion requires. So far as the State is concerned, I do not think it is a necessary part of its business to furnish or find employment for people in the city of New York in normal, prosperous times like these, nor do I think the State ought to create avenues for bestowing charity if the occasion does not require it. The private employment agencies in the city of New York relieve applicants for employment from having to ask charity, while dealing charitably with all; and being self-supporting they relieve the general public of the burden of supporting them. They are maintained only by those persons who pay for services rendered them under the contract of agency. As to the success of the free State employment bureau in this State and other States, I respectfully refer your attention to the excellent compilation of facts and opinions contained in Mr. Bogart's paper, already mentioned.

Since giving my testimony to the commission and before presentation of the proof of it to me for revision, I have made a thorough inquiry into the condition of employment agencies in the city of Buffalo. The information I obtained modifies Mr. Bealin's testimony materially in one very important particular. Judge King has not been on the bench there as police justice for about 3 years. The ordinance now regulating employment agencies there went into effect in June, 1898. This was before the Ford-Kelsey bill was presented in Albany. It is the testimony of the present justice (Murphy), the license clerk in the mayor's office, and 9 employment agents whom I interviewed, the best in the city, including the Women's Christian Association, that the ordinance has worked very well indeed, having reduced the number of agencies to 23 through its annual license fee of only \$24, and easily and effectually removed the fraudulent practices described by Mr. Bealin, which were

prevalent there in Judge King's day, before the ordinance went into effect. That ordinance is a municipal ordinance, and it recognizes the right of the agent to be compensated for services and reimbursed for outlays although no employment results from his efforts. Some of its provisions could be improved upon, I think, but as it is it has worked so well that no criticism can be made to-day about the condition of the employment agencies in Buffalo.

Testimony closed.

WASHINGTON, D. C., March 9, 1907.

TESTIMONY OF MR. SIMON WOLF,

Attorney at law, Washington, D. C.

The commission met at 10.40 a. m., Mr. Phillips presiding. At that time Hon. Simon Wolf, Washington, D. C., an attorney at law, was introduced as a witness and, being duly sworn, testified as follows:

Q (By Mr. LITCHMAN.) Will you kindly give your name, post-office address, and occupation?—A. Simon Wolf; 926 F street, Washington, D. C.; attorney at law.

Q. You have been the representative of the United States Government abroad at one time?—A. I have. I was consul-general and agent diplomatique to Egypt.

Q. You have been for a great many years connected with the fraternal and benevolent societies of the Hebrew people?—A. Yes.

Q. You are familiar in a general way with the measures taken by those people for the reception and dissemination of the immigration that comes into this country?—A. I am.

Q. You have been connected with the organization of B'nai B'rith, have you not?—A. Yes.

Q. You are at the present time vice-president of that organization?—A. I was up to last May.

Q. Is that an organization having in a general way charge of these matters?—A. No; I will explain.

Q. Then go on in your own way.—A. In the first place, the Jews of the United States have never, either in their collective or individual capacity, had any organization looking to or aiming at Jewish immigration in any way or manner. The exodus caused by persecution in Russia in 1882 was the first cause which stirred the people of our faith, citizens of the United States, to care for, to distribute, and assimilate those of the sufferers who had found their way to this country. At that time leading representatives of the Jews of the United States met in the city of New York, and, fearing that the large number of people that would be dumped on the United States would become not only a menace for the moment but a great burden upon their coreligionists, they appointed representative men to go to Europe and confer with leading Jews of London, Berlin, Frankfort, Vienna, Paris, and other centers, and to prevent this wholesale immigration and divert as much as possible the large stream of unfortunate refugees. Notices were published in the Jewish press of the disturbed districts warning the people against precipitate flight from their homes, and especially against indiscriminate emigration to America. A great deal was accomplished at that time, and but a fraction of the immense number of expatriated Jews of Russia came here. Of those who came, many were impoverished, and to the end that these should not become a burden to the country or to local communities the generous-hearted citizens of the United States of Jewish faith took them in hand. Thus, for instance, we received some 10 or 15 families in Washington, for whom we cared. They were men that were engaged in various industries. One was a shoemaker, another a carpenter, another had been a dairyman. For one man we purchased cows, and he sold the milk; for another we purchased a horse, and he did work on the roads; to another man we furnished tools for his carpenter's trade, and for another man tools for his work as a shoemaker. These people have maintained themselves, and are now in this city, as others like them are in nearly every center of our country, and are industrious, law-abiding, prosperous citizens.

The exodus continued for a year or two and then diminished for 7 or 8 years, until 1891, when all at once the same conditions, only aggravated, broke out again in Russia. It was at that time that Baron Maurice de Hirsch, the well-known Jewish philanthropist, whose acts of benevolence have become known throughout the world, offered the Czar some \$10,000,000 for the purpose of establishing secular primary schools for the Russian Jews, whose children were practically debarred from the public schools. Historically, it is stated that the Czar was willing and anxious to comply, but the ruling party of the nobility in Russia prevented it, and persecu-

tions, more terrible than ever, were renewed. The neighboring states of Austria and Germany attempted to stem the tide of the fleeing refugees, and these poor people were hounded from pillar to post, until their condition became most deplorable. Nothing in the history of mankind has been more heartrending than the condition of these unfortunate Jews. Despite the efforts to avoid it, a considerable number of the refugees came to the United States, and a large proportion of the immigrants settled in New York City. The American Jews at once addressed themselves to the task of Americanizing the newcomers. Special attention was given to the danger of pauperizing these people by unscientific charity, and therefore the greatest efforts were directed to educational methods. To advance these and the moral, mental, and physical conditions of the poorer Jews, a considerable fund was provided by Baron de Hirsch, and the same was augmented later by his widow, the baroness. What is known as the Baron de Hirsch Fund is managed by a board of trustees, of which Judge Meyer S. Isaacs is the president, and of which Hon. Oscar S. Straus, lately our minister to Turkey, Mr. Jacob H. Schiff, Mr. Seligman, and Mr. Hoffman, of New York, and Mr. W. B. Hackenbush and Judge Meyer Sulzberger, of Philadelphia, are members. The trustees have built industrial schools at various centers, and have in general achieved splendid results. The Jews of New York established the great Educational Alliance on East Broadway, the attendance upon which averages in excess of 5,000 persons per day. The Baroness de Hirsch made a loan of \$100,000 to the building fund of this institution, and thereafter, being so much impressed by its usefulness, made a gift of the mortgage to the alliance. This institution has taken an active part in the vice crusade that is now being waged in New York City. Mr. Isadore Straus is president. There also exists the Hebrew Technical Institute, which educates Jewish boys for mechanical and scientific pursuits. Mr. Steinem, of New York City, recently gave \$100,000 to establish the metal-working department. The institution has been achieving wonderful success, and is one of the great factors in eliminating mendicancy and pauperism.

Q. Is that the one with which Mr. Blaustein is connected?—A. Yes. That has been thoroughly established and is doing a vast amount of good. No doubt you are aware of the educational methods pursued in all these institutions. The Constitution of the United States and the Declaration of Independence are made a part of the educational system, and on every desk of the children there is a tiny United States flag. The duties of patriotism are inculcated in the fullest degree. The De Hirsch trust has also founded, or rather has stimulated and encouraged what had previously been founded under the first exodus of Russian refugees, the well-known "Vineland Colony," and other colonies in New Jersey, and various settlements in Connecticut. Those in New Jersey, however, have proven most effective and prosperous. They are doing admirable work there. In these different settlements are farmers, tilling the soil as their ancestors did thousands of years ago. They are a sober and law-abiding people. They have no drinking shops and no police. None are necessary. They take care of themselves and various industries have been built up there in Vineland and other parts of New Jersey.

Q. (By Mr. PHILLIPS.) What is the population, please, of Vineland?—A. The figures are given in an article relating to the colonies, which I will submit:

"THE NEW JERSEY COLONIES.

"From the independent New Jersey colonies at Alliance, Norma, Carmel, and Rosenhayn, we are in receipt of detailed reports by Mr. J. C. Reis, one of the most earnest-minded and resolute of the later settlers at Norma. From these it appears that the settlement at Alliance and around its railway station, Norma, contains 512 inhabitants, composing 96 families. Of these, 33 families are devoted exclusively to farming; 12 to farming and tailoring combined; 36 to farming and other workshop occupations; 15 to tailoring exclusively. They own over 1,500 acres of land, of which 530 are in fruit cultivation, 577 are devoted to truck raising, and the remainder is uncultivated. There are 87 dwelling houses and 141 additional buildings. The total valuation is \$112,000 of which \$44,000 is unpaid. The value of last year's product was \$17,808, of which \$10,712 worth was sold and the remainder consumed. They own 55 horses, 79 cows, and 4,700 chickens.

"Carmel contains 89 Jewish families, comprising 471 individuals. The exclusively farming families number 19, farming and tailoring 14, farming and trades other than tailoring 23, and tailoring exclusively 33. They own 1,029 acres of land—113 under fruit, 504 under truck, and 456 uncultivated. There are 46 dwelling houses occupied, besides a number that are vacant, and 86 occupied outbuildings. Their holdings are valued at \$84,574, on which there remains an indebtedness of \$26,273. The yearly product is valued at \$12,585, of which \$8,206 was sold and the remainder consumed. They have 36 horses, 114 cows, and 3,300 chickens.

"The figures for Rosenhayn were obtained by Prof. A. L. Sabsovich, the well-known superintendent of Woodbine Colony. At this place there are 47 settlers, holding a

total of 1,388 acres, of which 948 are under cultivation. These colonists have 7,215 fruit trees, 28,770 grape vines, 128 horses and cows, and 6,000 chickens. The valuation is \$85,520, on which there is an indebtedness of \$26,981.

"From these accounts it is manifest that these colonies have quite passed the problematic stage, although some of the colonists are still insecure in their holdings. All would be greatly helped and the general cause be greatly furthered if some of the efforts now being given to less promising fields of philanthropy were devoted to the educational and material upbuilding of these settlements. The establishment of a properly equipped wine press and of a canning factory, under competent business direction, would be a great desideratum to the end in view."

Q. (By Mr. LITCHMAN.) You speak of Vineland. That is a village adjoining Vineland? It is not Vineland proper?—A. No; but it is usually so designated. Vineland was the post-office originally. Now there are 4 post-offices in the colonies.

Q. There is another settlement farther down in Jersey, Woodbine, is there not?—A. Yes.

Now, in all these movements and in all these endeavors there has never been on the part of the Jews of the United States any organization that stimulated, encouraged, desired, or wished this wholesale influx of their coreligionists, and for the very natural reason that, as the traditions and customs and habits of the Jews from time immemorial have been to help their own, the larger the number of unfortunates that would come here, the larger the burden that would fall upon the shoulders of our older Jewish communities. And while our hearts were surcharged, as every human being's should be, with pity and sympathy, we naturally preferred that they should remain in the countries in which they had been born, provided they could there enjoy at least the immunities, if not the privileges, of their fellow-countrymen. But this has legally been made impossible in Russia and in Roumania. By studying the tables of immigration, as furnished by General Powderly, you will find that the streams of immigration or rather of refugees, came mainly from the Slavic States, and, within the last few years, from Austria and its Slavic provinces. From the countries where the Jew is treated with equality and is recognized as a citizen, there has been scarcely any immigration at all. The people are reasonably happy in their respective countries, and they accordingly do not leave their native lands, even for the greater opportunities they would naturally enjoy here. In 1870, when the political ferment in the Balkan States, which afterwards resulted in the Russo-Turkish war, was beginning to be of international importance, our Government, for the first time, felt called upon to have a diplomatic agent in Roumania, and for that purpose President Grant accredited Mr. Benjamin F. Peixotto to the Roumanian Government. Mr. Peixotto had been for five years the head of the order of B'nai Brith, and, with the consent of our State Department, he took steps looking to the political amelioration of the Roumanian Jews, with a view to preventing their enforced immigration from their homes. He founded the Society of Zion, on the exact model of the order B'nai Brith, and organized it especially as an educational agency, open and subject to governmental supervision. This society, through Mr. Peixotto, brought about the recognition of the Jews in the Treaty of Berlin in 1878. By the provisions of this treaty, through the efforts especially of Lord Beaconsfield and Prince Bismarck, the political rights of the Jews in Roumania were guaranteed, and for a number of years the Jews of Roumania did enjoy a higher degree of tolerance and protection. But, within the last two years, as a result of the Dreyfus agitation, anti-Semitism has broken out afresh in Roumania, and over 20,000 men and women of that country have recently been compelled to leave their country, harassed, antagonized, persecuted, maligned, with every privilege of humanity denied them, through the malignant conduct of the ministry of that period. The present ministry is more liberal, but how long it will last remains to be seen. A fraction of the refugees from Roumania came to this country; but the larger number of them required no assistance, inasmuch as they possessed some means with which to establish themselves in the United States. Believing it to be inexpedient that the most helpless ones should settle in large cities, the order of B'nai Brith addressed itself to the task of securing employment for these in different parts of the country, and so distributing them that they might the more readily become Americanized. The plans of the order have been carried out and about 2,000 Roumanians have been distributed to over 200 different places in the United States. Prior to this, however, correspondence by cable as well as by post had been carried on with the various communities of Europe by Leo N. Levi, president of the order, urging them to prevent all but those fully competent to maintain themselves from coming to these shores. The stream of immigration has been, accordingly, largely diverted. Some of these people were attracted by the Zionist movement to Palestine and went there; others went to Anatolia and to Cyprus, and some went to Argentina. Every effort was made by the Jews of the United States, and especially by the order of B'nai Brith, to prevent wholesale immigration to this country, and we accomplished our purpose. The number of immigrants and refugees that have come here has been comparatively small, and they have been of a

very high order of manhood and womanhood—people of a very superior character, artisans and mechanics. One ship came over with 119 persons, every one able to care for himself or herself and to go forward at once to the various centers in the interior of the country to make a living without becoming a burden.

You will find from the report of Robert Watchhorn, special agent of the Bureau of Immigration of the Treasury Department, that he found the condition in Roumania exactly as I have described it, and he praises in no unadorned words the character, ability, intelligence, and moral worth of these people.

The order of B'nai Brith is nearly 60 years old. It was founded by a number of earnest minded men (German immigrants, mostly), who had come here under normal conditions, as other immigrants came in those times. It has had for its main object the Americanization of its members, and in this direction has accomplished a vast amount of educational work. The president of the organization during the 35 years ending May, 1900, was Mr. Julius Bien, of New York, well known as a leading cartographer and as a map maker for many departments of our Government. Under his direction the order spread throughout America, and has been successfully established in Europe. There are lodges of the organization in Austria, in Germany, in Roumania, in the Holy Land, and efforts are now being made to start one in France.

Thus you will see the scope and wide range of usefulness of this order of B'nai Brith as an agency of commercial and national progress. Its function is primarily one of education, and it strives to elevate the moral and intellectual standard of its members and to fit them to become worthy citizens of the United States.

Q. Right there would it not be well to say something concerning the membership and resources of the organization in this country and so on?—A. The membership of this organization is at present about 20,000. It has 7 districts in the United States and 3 in Europe. The fifth district, for instance, in which Washington is included, combines the District of Columbia, Virginia, Maryland, North and South Carolina, and Georgia.

I would state that it is not only in the direction of education that this organization and kindred organizations have worked, but also in the founding of hospitals, of homes for the aged, of orphan asylums for unfortunate children, of free libraries, and of industrial schools. In the city of Cleveland there exists, I suppose, the model orphan asylum of the world. It has been so regarded. In the city of Atlanta there is an orphan home, which was established by the order and of which I have been the president since its foundation 25 years ago. In Yonkers the order has a home for the aged. In New Orleans there is an orphan asylum of the highest efficiency, managed and supported in part by the order. At Denver it supports a national hospital for consumptives which is open to the world without reference to creed or nationality. In Philadelphia there is a hospital, originally initiated by the order and open to all people irrespective of faith, and a manual-training school directly controlled by it. In New Orleans there is a hospital and a home founded by Judah Touro, but now largely maintained and endowed by this order. In New York there is what is known as the Maimonides Library, and the number of books taken from that library, in comparison, is far in excess of the number taken from the public libraries of New York.

But the work of the B'nai Brith is only part of what has been done to further the effective assimilation of the Russian Jewish refugees in our American Commonwealth. In every large city, and in many of the minor towns of the country, societies have been organized and have worked earnestly to that end. In New York there is a vast network of affiliated organizations which are ramifications from the central body of the United Hebrew Charities, and which all deal, almost exclusively, with this element of the population. Besides the aid given for the relief of actual physical necessities, including hospitals, orphan asylums, churches, and other like institutions, there is centered in the Educational Alliance a system of day schools, night schools, and manual-training schools, which afford instruction to thousands of pupils of all ages and of both sexes. A similar situation is presented in Philadelphia, where the Foster Home, the Hebrew Convocation Society, with its day, night, and industrial schools, the Maternity Hospital and the United Hebrew Charities, as well as the National Farm School at Doylestown, all deal with practically no other class than the Russian Jews. A similar condition prevails in Baltimore, in Boston, in Pittsburg, Cincinnati, Chicago, St. Louis, San Francisco, Portland, Oregon, and, in fact, as already stated, in all the larger communities throughout the land. In Chicago, notably, a very widely varied system of charity has been established, which includes, especially, a manual-training school of the first rank. There is also the great hospital founded by the heirs of Michael Reese and open to comers of every faith.

You will understand, gentlemen, that the revolution of 1848 brought the first notable number of Jews to this country. They were principally Germans, who have since become some of the foremost citizens of our country, active in war as well as peace. Many of these immigrants still live and they and their descendants feel a

keen interest in their coreligionists who are oppressed and persecuted, aside from the keen interest they take in the cause of humanity generally.

I have been for the last 25 years the president of the committee on civil and religious rights of the Union of American Hebrew Congregations of the United States. This organization maintains a college in Cincinnati, which was founded by the late Dr. I. M. Wise, and which is well known and recognized as a great educational institution. And throughout these 25 years I have had more or less intimate connection and frequent contact with the various branches of our Government, especially the Immigration Bureau and the State Department, through my work in caring for and protecting the rights of the Jews, individually and collectively, at home and abroad, so far as it came within the power of an American citizen so to do without infringing the constitutional laws of our country.

As I said, so far from there having been any systematic effort to stimulate immigration, all our strivings have been to regulate, and, if possible, to reduce it. Whatever has been done has been in the nature of humanitarianism, of protection, of education, of assimilation; and we are thoroughly in sympathy with every effort of this Government to prevent improper immigration, or such as may prove inimical to this country.

We are in full accord with the laws that have been passed to prevent the immigration of criminals or paupers, or diseased persons, or any persons that are unfit to enjoy the franchise of our Government; but we do know one fact, and it can not be too strongly emphasized, and that is that the vast majority of the immigrants of all nationalities who have in the last 50 or 60 years come to this country, and who are now the bone and sinew of American citizenship, came in practically the same condition of financial poverty as that in which the majority of the immigrants come now, a poverty which is often made the pretext for projects of exclusion.

I remember that when I came with my grandparents in 1848 we had scarcely \$5 to our name. A relative who had come 5 or 6 years before met us and cared for us. I do not wish for a moment to insinuate that the country has specially profited by my being permitted to land, but I am sure it has not lost anything; and so it has been with nearly all of the immigrants who have come here, and many of whom have made this country greater and more happy.

There is no fund available in this country, either out of the funds of the Order of B'nai Brith or out of the Baron De Hirsch Trust Fund, for paying the transportation either of any of these refugees or unfortunate immigrants.

Q. How are the funds provided for this charitable work, and this work of distribution to which you have referred?—A. The transportation to the different points in the interior of the country is paid out of the charity funds of the various larger communities. At the seaboard cities, the Baron De Hirsch Trust Fund contributes to relieve these centers and to send these people to the various places to which they have been allotted.

Q. How are these various asylums maintained, to which you have referred?—A. They are maintained solely by the voluntary contributions of the members of the order and of the Jews generally in the respective districts.

In addition, I may take occasion to state that in Denver there was founded last year a hospital for Jewish consumptives, which is maintained largely by the Order of B'nai Brith, each member of the order in the United States contributing 25 cents annually toward the maintenance. Jews from all over the country become annual subscribers. One of the lady agents of this institution was here the other day, and I went around with her, and in a short time we succeeded in raising \$500 in annual contributions for that very worthy charity, which takes in no pay patients whatever, but only those who are unfortunate and unable to care for themselves.

Q. (By Mr. PHILLIPS.) Is there any objection to the existence of that institution in Colorado?—A. Objection?

Q. Yes; among the citizens in the community?—A. None at all. In Denver there are 6 or 7 hospitals caring for consumptives who pay, and this institution is only another of similar character. You see, Jewish consumptives were flocking to Denver on account of the climate, and they became a great tax and burden upon that small Jewish community; and hence their coreligionists throughout the country and the order of B'nai Brith took the matter up and assisted. A number of philanthropists in different parts of the country gave a thousand to five thousand dollars each. One gentleman gave ten thousand and Mr. Grubfelder, of Louisville, the president of the hospital, gave \$20,000.

Q. (By Mr. LITCHMAN.) These institutions are also sustained by bequests by benevolent Jewish people?—A. Yes. For instance, I received for the home in Atlanta, from the Baroness de Hirsch \$7,500; and she showed her liberality and her world-wide recognition of all faiths in that, when I wrote to her, she sent me a check for \$5,000 for Garfield Hospital of this city. Furthermore, quite a number of members of the order, and other Jews, have insured their lives for the benefit of the homes for the aged and of the orphan asylums. The other day I received checks

from the relatives of three persons who had died and who had insured their lives for the benefit of the orphan home in Atlanta, each of them for \$1,000. Bequests are made frequently. I was called up day before yesterday by a gentleman from Richmond who wanted to know the exact title of the Hebrew Orphan Home in Atlanta, as a client of his wanted to leave something by will. And what is true of the home in Atlanta is unquestionably equally true of almost every one of these institutions. They do not receive a dollar from any public or State treasury. Of course there are quite a large number of Christian friends living in the communities where these institutions exist who recognize the worth and value of these institutions and who undoubtedly contribute annually and possibly leave something in their wills. But they are not very numerous, as we do not make propaganda in that direction. We have a pride in caring for our own, apart from doing our share as citizens in every other direction.

Q. Does your work contemplate and carry out, in some localities, manual training for the younger portion of your people?—A. It does in Cleveland, in Philadelphia, and in Atlanta. In the Atlanta asylum we not only care for the orphans while they are with us, but we try and secure for them employment afterwards. We educate the girls to be housemaids and cooks—the great social problem in the future of our country; and the boys become mechanics, artisans, and stenographers and typewriters. We have had two weddings in our orphan home in the last three years. After the girls have gone away they consider themselves still under our guardianship, and the weddings were held at the home. All the children were present and had a glorious time.

Q. Is not this the case also at Woodbine, in New Jersey?—A. Absolutely; and in Philadelphia, as I have already remarked, there is an industrial school under the order of the B'nai B'rith; and we have industrial schools under the order of B'nai B'rith in Jaffa and in Jerusalem. Indeed, when I was consul-general to Egypt I aided in the starting of a lodge of the order at Cairo, Egypt, which has done a large amount of good; and all the good done in this direction naturally, like a wave current, reacts to aid us here.

Q. (By Mr. PHILLIPS.) At some point in your statement will you come to the number of the Israelites or Jewish people in the world? Have you an idea of about the number?—A. Yes; there are at present between nine and ten millions.

Q. How are they distributed?—A. There are between five and six millions in Russia.

Q. Indeed?—A. Yes; and the others are scattered all over the world.

Q. Could you give the reason why so many drifted into Russia?—A. Yes; briefly. They moved eastward from the Rhineland under the stress of persecutions during the Middle Ages, and were welcomed by the Kings of Bohemia and Poland. They grew in numbers there and lived at peace until Bohemia was conquered by the Hapsburgs of Austria, and Poland, later, became a prey to the Muscovites. Since then, especially in Poland and Lithuania, the Jews have suffered, in common with the Roman Catholics and Baptists, from the political and religious enmity of the Russians. A considerable number found their way to central Europe after their expulsion from Spain.

Q. About the time Columbus discovered this country? In that persecution?—A. Yes.

Q. At the time of the establishment of the Inquisition?—A. Yes. In 1876 Mr. Hackenbush, of Philadelphia, and myself tabulated a census of the Jews of the United States, and at that time—in 1876—there were only, as far as we could find, 150,000 Jews in the United States. But owing to these persecutions in other lands that number has of course very largely increased. I suppose there are at present in the United States between 800,000 and 900,000 Jews. Yet, as I have shown in a book published by me, entitled *The American Jew as Soldier, Patriot, and Citizen*, there were a larger number of Jews in the Northern and Southern Armies, in proportion to their numbers, than of men of any other faith in the United States.

Q. (By Mr. LITCHMAN.) Is there any means by which the Jewish population of the United States is shown in the census of 1900?—A. I think not, except so far as the congregations would show. There has been a question and a contention, of which you are no doubt aware, as to scheduling or tabulating the immigrant Jews as Jews. I protested against this classification to Mr. Powderly, and we had a conference in the city of New York, at which he and some of his agents were present. People come in as Austrians, Italians, Germans, Greeks, and not as Catholics or Protestants. The religious proclivities of the individual is no concern of the United States. And I believe the Attorney-General, in answer to the question propounded by the Superintendent of the present census, sustained that view. That is a matter, however, which you can easily ascertain.

Q. How, then, can you form an estimate that there are but 800,000 Jews in the United States?—A. I say we ourselves have estimated that number. The number of synagogues is given, with their location and their membership, just as are other places of worship.

Q. (By Mr. PHILLIPS.) About what per cent of the Jewish people belong to the church—attend synagogue worship?—A. Among those who adhere strictly to the ancient Jewish ritual and liturgy nearly all are members of the synagogue; of the reform Jews there is quite a contingent who are not members of any congregation, yet who contribute to every Jewish charity and every Jewish educational enterprise. Of course I do not suppose you want to go into the difference between the orthodox and the reform element?

Q. You spoke of the general thrift of the Jewish people. How is it in New York, in the Jewish settlements there? Are not a great many of them, or quite a large per cent, engaged in the sweat shop work in that quarter of the city?—A. There have been and undoubtedly still are many undesirable conditions in that respect, but much has been done to ameliorate these conditions and to prevent their growth. The so-called sweat-shop system is not at the present time so serious a condition as it was a few years ago, owing to the fact that the people in New York have taken hold of it energetically and systematically and intelligently.

Q. Well, in that portion of the city about where Five Points used to be, how do the Jewish people compare with the Italians and others that are immigrants to this country in sweat-shop work?—A. There is, strictly speaking, no such comparison to be made, because the Jews of that section are of a far higher grade of manhood and intelligence. As the New York Sun stated in an editorial a few years ago, when there was a great deal of trouble among the laboring men, the Jewish laborers, when Friday evening comes and the Sabbath commences, withdraw from all the deliberations and from the vicinity of their shops to their places of worship, and are always law-abiding and orderly, showing a high grade of moral and religious instinct, which the others never do.

Q. You think there are not as many of them engaged in the sweating industry as of other elements?—A. The sweat shops, or, more accurately, the small shops, are those of the tailoring industry, and the operators are nearly all Russian Jews. But the Educational Alliance and the industrial schools, of which I have spoken, are all in that locality, and thus, as you can easily imagine, a very beneficial influence is exercised in that quarter.

Q. The impression is prevalent, however, that a large per cent of the immigrants and of the Jewish people have been engaged in the sweat shop service and work. That impression seems to prevail.—A. I am aware of it. But it is not accurate. The subject has been taken hold of and investigated by intelligent and impartial American citizens not of the Jewish faith, and much of the popular impression regarding the matter was found to be exaggerated.

Q. Have the Jewish people been as competitive among themselves as the Aryan race?—A. There is far more mutual help and charity among these Russian-Jewish working people than among immigrants of other faiths, but there is also a keener and more searching competition. The Jew is innately individualistic, optimistic, and ambitious. He accepts charity only as a last resource, and would rather work for half a loaf than take a whole one in charity. The poor immigrant may accept a low wage as better than none, but he is sharp to further his own interests, and uses the low wage only as a stepping stone to a higher one. As a result, the strife between the wage taker and the wage giver and between the members of each class comparatively is sharper and keener than among the other newcomers. In general I may say that the economic question involved in the presence in this country of the Russian Jews is one that would quickly solve itself and vanish from our consideration if but the condition out of which it has grown were normalized. So long as these people are forced out from their homes, as they have been, we here, in this land of freedom and of hope, must permit them to find here an asylum, as all of us here have found one in the past. But we may reasonably suggest to our Government, and this commission is in a position to make the suggestion, that it might use its influence with the Government of the Czar to do justice to his Jewish subjects, and not to enforce on the American people the alternative of taking the burden of alleviating the miseries of Russian oppression or shutting our gates against its victims.

The late President Harrison stated, in the following forcible language, in his third message to Congress, the feeling of each and every citizen of the United States:

"This Government has found occasion to express in a friendly spirit, but with much earnestness, to the Government of the Czar its serious concern because of the harsh measures now being enforced against the Hebrews in Russia. By the revival of anti-Semitic laws, long in abeyance, great numbers of those unfortunate people have been constrained to abandon their homes and leave the Empire by reason of the impossibility of finding subsistence within the pale to which it is sought to confine them. The immigration of these people to the United States—many of the other countries being closed to them—is largely increasing, and is likely to assume proportions which may make it difficult to find homes and employment for them here and to seriously affect the labor market. It is estimated that over 1,000,000 will be

forced from Russia within a few years. The Hebrew is never a beggar; he has always kept the laws, often under severe and oppressive civil restrictions. It is also true that no race, sect, or class has more fully cared for its own than the Hebrew race. But the sudden transfer of such a multitude, under conditions that tend to strip them of their small accumulations and to depress their energies and courage, is neither good for them nor for us.

"The banishment, whether by direct decree or by not less certain indirect methods, of so large a number of men and women is not a local question. A decree to leave one country is, in the nature of things, an order to enter another, some other. This consideration, as well as the suggestions of humanity, furnish ample ground for the remonstrances which we have presented to Russia, while our historic friendship for that Government can not fail to give the assurance that our representations are those of a sincere well-wisher."

Mr. Louis E. Levy, of Philadelphia, has written a very able and exhaustive report which contains a great deal of very substantial information in regard to statistics and to what has been accomplished by the various organizations in this country, which I submit. Mr. Levy is one of the most recognized authorities on the subject.

JEWISH IMMIGRANTS¹

[By Louis Edward Levy.]

LOCAL STATISTICS

In submitting to the association this report for the year ending November, 1, 1900, I have to note my regret that my prolonged absence from my accustomed post, in connection with the exposition in Paris, has belated its presentation. Our secretary, Mr. Hoffman, and our treasurer, Mr. Fels, were also in Europe during a part of this time, but the association's work, I need scarcely add, suffered no interruption throughout this period, having been continued as usual by our agent, Mr. Ehrlich, under the supervision of our honored vice-president, Mr. Abraham Kaufman. That those who had charge of the association's interests during the summer and fall of the past year found their offices so sincere will be apparent from even a brief review of the data at hand. The number of Jewish immigrants at this port during the year ending November 1, 1900, was 3,870, more than double that of the preceding year, which was 1,649; and of this year's arrivals more than two-thirds—namely, 2,708—reached here during the last 6 months of the term. The summer is naturally the season when immigration is always the heaviest, but the disproportion has this year been greater than usual. The cause of this has been the sudden disturbance of the Jewish populations of Roumania and southern Russia, and the continued disorganization in Galicia, a condition to which I will have further occasion to allude.

The general immigration to this port during the past year numbered 30,081, as against 11,079 for the preceding period, an increase of some 42 per cent. Thus, while the Jewish immigration at Philadelphia in 1899 was 11.7 per cent of the total, the proportion in 1900 was 19.2. In 1898 it was 18.5, and in 1897, 14.5; but in 1894 it was 20 per cent, and in 1893, 25 per cent. These fluctuations result in the main from exigencies of the trans-Atlantic steamship service, the strike of dock laborers at the North Sea ports last summer affording a notable example.

GENERAL STATISTICS.

The improvement in the condition of industry and commerce in our country during the past year or two, together with a tendency to a reverse condition in Europe, has resulted in greatly augmenting the general immigration movement to our shores.

In 1899 the total immigration to the United States was figured by Commissioner-General Powderly (for the fiscal year) at 337,000, for 1900 his total, counting immigrants by both steerage and cabin, foots up to some 515,000, an increase during the latter year of some 53 per cent.

From figures at hand regarding our larger landing places, together with close estimates of the remainder, it appears that the total Jewish immigration to the United States during the year ending November 1 ultimo was about 63,000. During the preceding 12 months the number was about 37,000, showing an increase during the present year of some 67 per cent. Our figures are for a period 4 months later than the Government data, and as these 4 months are those of heaviest immigration, the discrepancy between the two ratios is probably very much less. Making some calculated allowances for this difference, it appears that while the percentage of the Jewish contingent in the total immigration was 11.9 in 1899, it was 12.2 in 1900, exactly the same as in 1898.

SOURCES OF THE IMMIGRATION.

Of our local arrivals more than 99 per cent were registered as coming from the Slavie countries of Central Europe, and of the remaining 1 per cent a number probably were natives of that region. With regard to this aspect of the movement Commissioner-General Powderly's official tables afford an instructive study. From these compilations it appears that of the total immigration from the Russian Empire, numbering 90,787, only 1,165 were Muscovite Russians, the remainder consisting of 12,515 Finns, 5,349 Germans (probably Stundist Baptists), 32,797 Poles and Lithuanians, 1,859 Scandinavians, and 37,011 Jews, the latter belonging to all the various nationalities of the Empire.

Of the immigration from Austria-Hungary, which reached the enormous total of 114,847, the highest figures in the list, there were 22,802 Poles (Galicians), 29,183 Slovaks (Moravians), 13,776 Magyars (Hungarians), 2,832 Ruthenians (Stundists), 17,163 Croatians and Slavonians, 3,056 Bohemians, 6,901 Germans (Austrians), and besides some small numbers of Italians and Dalmatians there were 16,920 Jews.

The majority of these latter, as we know from the current history of the dual monarchy, and as is further indicated by our own records, are of Galician, Bohemian, and Austrian nationality, natives of the lands where the miasma of clericalism has sickened the body social.

¹ President's report, presented at the sixteenth annual meeting of the association, February 7, 1901.

The most marked illustration of the effect of this pestilence is afforded by Roumania. Of the 6,459 immigrants from that country 214 only were classed as Roumanians, 58 were Germans, 2 were Poles, 1 was a Bohemian, and 1 a Slovak. All the rest—namely, 6,183—were Jews, Roumanians by nationality, natives of the soil, and not only native, but doubtless in a large majority of cases descendants of those who had been natives of the country for centuries before Roumania had being as a State. Of these refugees from Slavic civilization 672 (nearly 11 per cent) landed in this city.

On the other hand, in the vast concourse of Italians who thronged hitherward during the closing year of the nineteenth century, numbering over 100,000 souls, there were two Jews, but whether Italian Jews or possibly Tunisian, Egyptian, or Palestinian Jews, the record saith not. There are many Jews in Italy, some in Parliament, some in the army, some in all the walks of civilized life, but there is no legalized anti-Semitism there, and so the Italian Jews stick to their native soil because they can.

A similar object lesson is afforded by France, which among its meager contingent of 1,739 emigrants included 17 Jews, none of them, in all probability, natives of French soil. Germany sent us last year 18,507 emigrants: of these 16,481 were Germans, 1,663 were Silesian Poles, and 337 were Jews; but the latter, if classified by their nationality, would probably have brought the number of Polesians up to 2,000. Belgium, with a considerable Jewish population represented in its Parliament, sent out 368 Flemings and 218 French, and in addition to these 4 Jews, of what nativity is not stated. Holland, among 735 immigrants to our country, included 2 Jews, possibly Dutch. From the United Kingdom, among a total of 48,237, there were 133 Jews, probably not all of British birth. From the Turkish Empire, among 4,247 immigrants, 114 were Jews, but among the 31,151 arrivals from Denmark, Sweden, and Norway, although these countries contain a considerable number of Jewish inhabitants, there was not a single Jewish immigrant. On the contrary the Jewish population of the north countries is noted as increasing through settlers from outside, probably from the disturbed Slavic districts.

CONDITIONS ABROAD.

For many years past, indeed since the first great revival of mediævalism in Russia in 1882 drove such large numbers of the refugees to our shores as to necessitate the organization of this society, we have anxiously scanned the eastern political horizon in the hope of discerning the promise of a better day. But as yet the clouds have not lifted, and we have to face the prospect of a storm which may pass us others have passed in the centuries on which we look back. For the present the outlook for the immediate future is far from being clear, and the retrospect of the immediate past is very saddening.

IN ROUMANIA

In Roumania especially the past year has been perhaps the darkest of any recorded in any modern Jewish history. Roumania is a little kingdom, containing a population of some 5,000,000, including 260,000 Jews. It was established as a separate State in 1878, under the treaty of Berlin, in which were included special guarantees of civil and religious rights for its Jewish people. But the Roumanians are Slavs—Latinized in language and religious cult—but Slavs in affiliation and sympathy. So, when the reactionary movement in Russia, following the war of 1878 and the treaty of Berlin, took form in the repression of all nonconforming sects, and especially in outrages on the Jews, the Roumanian Government followed suit and the treaty of Berlin was practically, though not formally, repudiated. The provisions of equality of rights for the Jews were deliberately and persistently evaded, the Jewish inhabitants were placed by gradual encroachments in the legal status of foreigners, and naturalization laws were so framed as to make the acquisition of citizenship by Jews practically impossible. Jewish children were excluded from the public schools, the private schools established by the Jewish people were harried and taxed into insignificance, and the existence of the Jewish community made impossible, except on the single condition of pay, pay, pay. Every recrudescence of anti-Semitism arising from time to time in Russia, in Germany, in Austria, and especially the Dreyfus agitation in France, gave the cue for further outrages, until finally, in the early winter and spring of 1900, under the constant goading of the money-hungry Government and its horde of yet more hungry officials, the Roumanian Jews were brought into a state of panic, and an emigration movement on mass began.

THE ROUMANIAN EXODUS.

Within a short time—in May, June, and July of the past year—more than 20,000 Roumanian Jews took up the wanderer's staff and streamed out in all directions. Some turned south to find refuge with their former suzerain, the Turk, and found a welcome reception, but only a more or less precarious foothold in Anatolia; some reached as far south as Cyprus, only to find their poverty an insuperable obstacle to their existence there, and the rest turned westward, lured by the hope of that liberty to live and to work which the flags of England and America symbolize for the oppressed of Europe. The spectacle of suffering, of hunger, misery, and death that was enacted by this unorganized and impoverished throng on the highways and byways of the Roumanian land, the waiting of this hapless multitude at the frontiers; the despair of those who found their way barred and compelled to halt and return, all these tragedies and their minor episodes have gone to swell the history of that greater tragedy of which they form a part.

The suddenness and magnitude of the movement overwhelmed the Jewish organizations of Europe and practically overtaxed their machinery of charity. The *Israeltische Allianz* of Vienna, the *Alliance Universelle* of Paris, the Board of Guardians at London, strove to meet the terrible exigency, and the Jewish communities of those cities and of Budapest, Berlin, Frankfurt, Hamburg, and Rotterdam taxed themselves heavily to help. By August the movement had been tempered down and brought under control.

Meanwhile the world was busy contemplating the triumphs of civilization in the Exposition at Paris and the triumphs of the Gospel of peace and good will in China and other outlying quarters of the globe, and the passing efflorescence of Roumanian treachery went unrebuked and unnoticed by the powers whom Roumania had deceived.

THE ROUMANIAN PROSPECT.

But the nature of things, "*la force de choses*," is stronger than treaties, or the powers that sign them, and the commercial crisis which inevitably followed the industrial disorganization resulting from the governmental policy, brought about a revulsion which overturned the anti-Semitic cabinet. A new ministry was installed in September and saner counsels have followed, but what these will accomplish or how long they will last remains to be seen. So far a majority of Roumanians have found out that oppression of their Jewish fellow-countrymen is not only a craven crime, but a costly

blunder as well, and it is impossible that its people will not, sooner or later, have the sense to see and understand the significance of what our government agent, sent out to investigate the matter, saw and reported. Inspector Robert Watchorn, in his report to the United States Immigration Bureau, makes the following statement:

"The Roumanian Jews who will emigrate from Roumania in the near future, and those who are now actually en route to American ports, are not only self-supporting, but by signal abilities, despite the unfavorable condition under which they have lived, had acquired a competence, and on reaching our shores will be amply prepared to take care of themselves. Having seen many of the families, I am quite certain that they will be a desirable accession to our population."

It is the misery of these people, whom their surroundings have made miserable, that taxes our charitable efforts here, and hence it is that we are directly interested in their home conditions.

THE STATUS IN RUSSIA

Of the status of the Jewish population of Russia scarcely better can be said than that their situation has not become worse during the past year. There are, indeed, some filtering signs of improvement, notably a distinct tendency on the part of the higher authorities of the Empire toward a more liberal construction and less harsh enforcement of the laws bearing on the Jews. The manifestly settled policy of the governing senate to establish a uniform administration of these laws instead of leaving them, as heretofore, to the caprice and self-interest of irresponsible officials, is an important factor of permanent improvement, and the growing sentiment among the small but influential class of manufacturers and merchants in favor of a wider and fuller liberty for the Jews is also making itself felt. Against these favorable symptoms are to be noted the famine which last year afflicted the Jewish farmers in the Bessarabian provinces of southern Russia, and the outbreak of mob violence in the Jewish quarter of Odessa. The former was combated by the charity of the Russian Jews themselves, and the latter lost its merely Jewish significance through having developed into a plunder riot which devastated the finest business quarter of the town and destroyed the property of prominent Russian, French, Italian, and other Christian families of the city. The military was called out, about 1,500 rioters were arrested, some of them imprisoned, and many of them flogged. These measures will at least tend to confine further plunder riots to the Jewish quarter, and perhaps result eventually in their entire suppression.

CONDITIONS IN AUSTRIA

In Austria, more particularly in Galicia, Bohemia, and in Vienna, the agitation appears to be subsiding, though by no means at an end as yet. The outcome of the Dreyfus case, the object lesson of Roumania, and the inevitable revision of the populace, has checked the spirit of the anti-Semitic fever in Austria, as was made apparent by the losses of that party at the recent elections. Much remains to be gained for the cause of reason in those unfortunate sections of Europe, and much is yet to be learned from the disturbances which threaten when the present already aged Emperor of Austria passes away; but, on the other hand, much is to be hoped for from the certain, however slow and halting, process of general enlightenment.

THE ZIONIST MOVEMENT.

Meanwhile the broad gleam of hope afforded by the Zionist movement, though seeming but scarcely to have become brighter, has at least not lessened during the past year. In the ghettos of Eastern Europe, in the great ghetto of the Russian "Pale," especially, and in many a dark spot in other lands of the Dispersion, this hope is affording weary sufferers a larger reason for existence, without which the problem would seem useless of solution. For us who live in the radiance of modern enlightenment, under theegis of religious liberty and political freedom, the value of this Zionist hope is not easily appreciated, and the import of its realization scarcely understood. But for the Jews who yet live in the shadow of the Middle Ages, out in Russia, Roumania, Austria, the way east to Palestine is the nearest to redemption, and its goal is nearest to their hearts. They are waiting for the Sultan to lift the bars, but the Sultan is not ready. But they have waited and prayed through centuries of history, and history is not yet at an end.

COLONIZATION IN PALESTINE AND ARGENTINA.

The existing colonies in Palestine were last year transferred by their founder, Baron Edmond de Rothschild, to the control of the De Hirsch foundation, the Jewish Colonization Association. Under the stimulus of the new régime, and with the continued support of the founder, these colonies give promise of expanding their growth and becoming finally independent. A similar note of progress comes from the De Hirsch colonies in Argentina, where conditions have so far improved as to open the way for the addition of a limited number of immigrants to their population.

THE NEW JERSEY COLONIES.

The status of the older colonies established near us in New Jersey remains much the same as a year ago. A number of new settlers were directed by us to Alliance, Rosenhayn, and Carmel during the past year, and a few are reported to have removed from there. The statement of the property holdings of the colonists, as noted last year, might be somewhat extended now, but in general the progress of these settlements is very slow. The colony of Woodbine, established under the De Hirsch trust fund, is being steadily advanced by the trustees, and will clearly develop into a thriving agricultural and industrial center. The agricultural school established at Woodbine was recently installed in a new and commodious building, fitted with a full equipment of appliances for scientific research, and surrounded with all the requisites of thorough agricultural experimentation. Altogether this settlement, under the competent lead of Professor Sabsovitch, is making marked headway. As much would certainly be true of the older colonies if some similar measure of support, educational especially, were afforded them.

A movement in aid of these colonies, by way of giving the farmers special facilities and cost rates in the obtaining of manures, was inaugurated during the early season of last year by Messrs. Joseph Fels, Maurice Fels, and Samuel S. Fels, the latter the worthy treasurer of our association. Reports from Mr. J. C. Fels, one of the colonists at Alliance and teacher at the Woodbine school, give details of the encouraging results which this effort has afforded, and pointing anew to the desideratum of a canning factory at the colonies.

DISTRIBUTION OF THE IMMIGRANTS.

Besides the few immigrants whom we found occasion to forward to these colonies, a great number of the others landing here came in for a like exercise of our offices. Our functions were in fact so entirely similar to those which I have reported from year to year that I leave the details to be gleaned from the report of our agent. I will only remark that, of the 3,870 arrivals at our port, 2,420 settled in this city, the other 1,450 scattering to nearly 100 other destinations in various parts of the country. Among those who were distributed were 235 individuals who had no definite destination, but who were forwarded by us to friends and relatives whom we located in 62 different places in the Union, where their people were glad to receive them. These immigrants, without some proper direction, would have been stranded in this city, and eventually have found a settlement only after much suffering on their part and costly charity on the part of the community.

OUR FINANCES.

From our treasurer's report it appears that our expenditures during the last fiscal year were \$653.78, and our income for the same period was \$583.19, leaving a deficit of \$70.59. The generous annual donation of \$100 by Miss Emily Phillips, an anonymous donation of \$30, the contribution of \$125 by the Charity Ball Association, and the amount of \$270.40 from memberships make up the main items of our income, the balance of \$57.79 accruing from investments. The expenditures in our work have been restricted to the closest possible limits, closer indeed than many of its exigencies would dictate and its broader requirements demand. There is need of a fuller support of the association's work by the community, and this I believe to be obtainable through efforts to increase our membership.

(Testimony closed.)

PART II.

GENERAL STATISTICS OF IMMIGRATION AND FOREIGN- BORN POPULATION.

A REPORT PREPARED UNDER THE DIRECTION OF THE
INDUSTRIAL COMMISSION

BY

E. DANA DURAND, Ph. D.

GENERAL STATISTICS OF IMMIGRATION AND FOREIGN-BORN POPULATION.

CHAPTER I.

THE FOREIGN-BORN IN RELATION TO TOTAL POPULATION.

Percentage of foreign-born, 1890.—In the following table is shown the percentage of the foreign-born to the total population for the United States as a whole, for each of the main census divisions, and for the separate States. It will be seen that a trifle over one-seventh of the entire population of the country (14.77 per cent) was born on foreign soil. This foreign-born element is confined almost entirely to the Northern and Western States, the Southern States having less than 3 per cent of their population foreign-born. The mining States of the West show the largest proportion, over one-fourth for the division as a whole, the number being swollen by the Chinese and Japanese laborers who have come to that section. The next division in rank as to the proportion of foreign-born is the North Atlantic, the original core of the nation, where the percentage is 23.34. In the North Central Division 18.16 per cent are foreign-born. Several of the farming States of the North Central Division show a very large proportion, North Dakota having no less than 44.58 per cent of foreign-born. For the most part, however, the foreign-born are found in largest proportions in the States containing a high percentage of urban and manufacturing population, Massachusetts, Rhode Island, Connecticut, New Jersey, New York, Illinois, Michigan, and California all showing more than one-fifth of their population of foreign birth. The tendency of immigrants toward concentration in cities, and the causes thereof, will be discussed later.¹

Percentage of foreign-born by States, 1890.

[Census of 1890, Population, Part I, p. lxxxii.]

The United States	14.77	North Central Division—Continued.	
North Atlantic Division	23.34	Minnesota	35.90
Maine	11.94	Iowa	16.95
New Hampshire	19.21	Missouri	8.77
Vermont	13.26	North Dakota	44.58
Massachusetts	29.35	South Dakota	27.69
Rhode Island	30.77	Nebraska	19.13
Connecticut	24.60	Kansas	10.36
New York	26.19	South Central Division	2.93
New Jersey	22.77	Kentucky	3.19
Pennsylvania	16.08	Tennessee	1.12
South Atlantic Division	2.35	Alabama98
Delaware	7.81	Mississippi62
Maryland	9.05	Louisiana	4.45
District of Columbia	8.15	Texas	6.84
Virginia	1.11	Oklahoma	4.43
West Virginia	2.48	Arkansas	1.26
North Carolina23	Western Division	25.46
South Carolina66	Montana	32.61
Georgia54	Wyoming	24.57
Florida	5.89	Colorado	20.38
North Central Division	18.16	New Mexico	7.33
Ohio	12.51	Arizona	31.52
Indiana	6.67	Utah	26.52
Illinois	22.01	Nevada	32.14
Michigan	25.97	Idaho	29.69
Wisconsin	30.78	Washington	25.76
		Oregon	18.27
		California	30.32

¹p. 278.

Relative percentages of foreign-born, 1850-1890.—By comparing the percentages in the following table for the different census years we see that the most rapid increase in the proportion of foreign-born for the nation as a whole was from 1850 to 1870, when it rose from 9.68 to 14.44 per cent. There was a check in the influx of immigrants during the decade from 1870 to 1880, although part of the relative decrease in the foreign-born shown in that decade is believed to have been due to an understatement of the total population, especially the negro population, in the Southern States, by the census of 1870. The Northern States themselves, however, show a relative decrease of foreign-born during this decade. During the period from 1880 to 1890 there was again a considerable increase in the proportion of foreign-born, from 13.32 to 14.77 per cent for the country as a whole, the increase being wholly confined to the North Atlantic and North Central divisions.

Roughly speaking, the relative condition of the various divisions and States as regards the native and foreign born elements has varied comparatively little at the different census periods. The increase in the foreign-born has gone chiefly to the States already having the largest proportion. However, in Wisconsin, Minnesota, Nebraska, Kansas, and nearly all of the Southern and Western States there has been a decrease or very slight increase in the percentage of foreign-born since 1850. The most marked increase has been in the New England States and Illinois. The States which have shown the most striking increase in the proportion of the foreign-born in the decade between 1880 and 1890 are the New England States, New Jersey, New York, Pennsylvania, and Illinois, which constitute the great manufacturing and urban States. In each of these States the percentage of foreign born increased by from 2 to 4 during the decade.

CHAPTER II.

FOREIGN-BORN POPULATION ACCORDING TO COUNTRY OF BIRTH, 1890.

The following table shows the number of natives of the leading countries of the world found in the United States at the census of 1890, together with the number for each leading race group. The percentage which the number of each nationality and race bears to the total number of foreign born is also indicated. It will be seen that of 9,219,547 persons of foreign birth the United Kingdom and the Germanic nations contributed practically the same number, a trifle over one-third of the total in each case. The Scandinavian nations and the North and South Americans (chiefly Canadians) contributed somewhat over one-tenth each; the Slav nations 5.52 per cent; the Latin nations 3.46 per cent, and the Asiatic nations 1.23 per cent. The Irish constituted nearly two-thirds of the immigrants from Great Britain and the Germans nine-tenths of those of Germanic race. Italy furnished about 2 per cent, the larger part of whom had come to us during the decade of 1880 to 1890. The French have never been conspicuous as an emigrating nation.

Foreign-born population according to country of birth, 1890.

Japan	2,292	.03	Other countries	479	.01
India	2,143	.02			

Foreign-born population according to country of birth, 1850-1890.—The following table shows the total number of persons of foreign birth for each leading nationality at the last five censuses, together with the proportion which each bore at the time of the census to the total foreign born. We can thus trace the changes in the relative importance of the different nationalities in our population. The Census of 1890 makes the following comment on this subject:

"In 1850 the leading foreign nationality was the Irish, which comprised nearly 43 per cent of the whole foreign-born element, while the natives of the United Kingdom jointly constituted nearly three-fifths of all the foreign born. Next to the Irish were the natives of Germany, who constituted one-fourth of the entire foreign-born population.

"In 1860 the Irish, as well as the natives of the United Kingdom, had relatively diminished, the Irish constituting less than 39 per cent, and natives of the United Kingdom as a whole constituting but little more than one-half of the foreign-born population, while the Germans had increased nearly one-third.

"In 1870 the proportion of Irish and of natives of the United Kingdom had still further diminished; the proportion of Germans had remained practically at a stand-still, while that of natives of Canada and Newfoundland had slightly increased.

"In 1880 the proportional diminution of the Irish had continued; the Germans showed a slightly diminished proportion, while the proportion of natives of Canada and Newfoundland had still further increased.

"In 1890 the proportional reduction of Irish had continued; the natives of the entire United Kingdom constituted barely one-third of the whole foreign-born element; the Germans had slightly increased; the natives of Canada and Newfoundland had held their own; the Scandinavians had largely increased, while several other elements, especially the Russians, Hungarians, Bohemians, Poles, and Italians, which previously constituted very small proportions, became noticeable."

"The Irish have in 40 years diminished from 42.85 to 20.23 per cent. They have become relatively less than half as important in 1890 as in 1850. The Germans have increased from 26.01 to 30.11 per cent, but this increase has not been continuous, since this nationality constituted a larger percentage of the foreign-born population in 1860 and 1870 than in 1890. The natives of England and Wales, who in 1850 constituted 13.75 per cent, have diminished continuously until in 1890 they constituted 10.91 per cent. The natives of Canada and Newfoundland have in the 40 years increased from 6.58 to 10.61 per cent, the maximum being reached in 1880, when the proportion was slightly greater than in 1890. The Scandinavians, starting in 1850 with the insignificant proportion of 0.81 per cent, have increased until in 1890 they constituted 10.09 per cent of the total foreign-born element, this increase having been the most rapid in recent years."

The Slav countries, Italy, and China were scarcely represented in our population in 1850, and, with the exception of Bohemia and China, their chief growth has been since 1880. Combining the Bohemians, Hungarians, Poles, Russians, and Italians we find that they bore the following proportions to the total foreign-born at each census:

1850	0.22	1880	3.38
186051	1890	7.49
1870	1.44		

These nations have been sending still greater numbers of immigrants to this country since 1890, and the census of 1900 may easily show more than one-tenth of the total foreign-born belonging to them.

NATIVITY OF FOREIGNERS.

263

Foreign-born population according to countries of birth, 1850 to 1890.

Distribution of leading nationalities by divisions and States.—The Germans, who are in the nation as a whole $\frac{1}{4}$ times more numerous than the next largest nationality, the Irish, are the most numerous of the foreign-born nationalities in 26 of the States, including New York, New Jersey and Maryland, and nearly all of the North Central and the Southern States. The Irish are the predominant foreign-born nationality in 7 States: Massachusetts, Rhode Island, Connecticut, Pennsylvania, Delaware, Virginia, and Nevada. The Canadians outnumber other nationalities in the border States of Maine, New Hampshire, Vermont, Michigan, Montana, and Washington. The English are most numerous among the foreign-born in Idaho, Colorado, and Utah, mining States; the Scandinavians in the two Dakotas, farming States; the Mexicans in Arizona and New Mexico, and the Chinese in California.¹

The British Americans in 1890 were found mainly in the New England States (except Connecticut), where they constitute from 7 to 12 per cent of the total population, and from one-fourth to two-thirds of the entire foreign-born population. A large proportion of them are also found in North Dakota and Michigan, while several other border States show a larger percentage of British Americans than is found in the country as a whole. It is well known that the French Canadians are competing sharply in the manufacturing industries of New England, while in the more western States they enter agricultural and lumbering.

The Irish, who, as we shall soon see, are specially inclined to urban life, are relatively most numerous in the North Atlantic division, where they constitute 7.13 per cent of the entire population as compared with 2.99 per cent for the nation as a whole. The proportion is greatest in the States of Massachusetts, Rhode Island, Connecticut, New York, and New Jersey, in the order named. In the North Central division they represent only 1.94 per cent of the total population, the proportion being quite uniform in each State, except in Illinois, where it is much higher. The States of the Far West show also a considerable proportion of Irish.

The English, Scotch, and Welsh are likewise found in larger proportions in the North Atlantic than in any other division except the Western, where they enter largely into mining. Constituting 2 per cent of the entire population and 13.53 per cent of the foreign population of the whole country, they show the corresponding percentages for the North Atlantic division 3.55 and 15.88 per cent. The largest proportion in each case is found in Rhode Island and Massachusetts. The proportion of British to the total foreign-born is more uniform throughout the 5 grand divisions than that of any other race. The proportion of British to the foreign-born in Pennsylvania and in several of the States of the South Atlantic division in Ohio, Tennessee, and Alabama is considerably above the average for the entire country.

The Teutons, mainly Germans, constituted about one-twentieth of the entire population and one-third of the foreign population of the United States in 1890. Their proportion in each case is considerably higher than these figures in the North Central division, while the proportion to the entire population is also somewhat greater in the North Atlantic than in the country as a whole. In Wisconsin the Teutons are more than one-sixth; in Minnesota, Illinois, and New York nearly one-tenth of the entire population. They show less inclination to the New England States than to any other. In Missouri, Indiana, Maryland, Ohio, and Wisconsin, the Teutons are more than one-half of the total foreign-born, while in Iowa, Illinois, Nebraska, New Jersey, Kansas, and New York they exceed one-third of the foreign-born. The Germans, as we shall see, enter more largely into agriculture than any of the other race groups except the Scandinavians.

The Scandinavians appeared in 1890 in a considerable body in Rhode Island, Massachusetts, and Connecticut, but they bore a much larger proportion to the total and to the foreign-born population in the farming States of the Northwest. In Minnesota they constituted about one-sixth of the entire population and one-half of the foreign-born. In North Dakota the proportions are much greater, while in South Dakota the Scandinavians are nearly one-tenth of the total population and more than one-third of the foreign-born.

The Slavs, in 1890, were found mainly in the North Atlantic division, especially in New York and Pennsylvania, where they constituted between 1 and 2 per cent of the entire population; and to a secondary extent in the North Central division. The largest proportion to total population and to foreign population is found in the farming States, South Dakota, North Dakota, and Nebraska.

The Greco-Latins, including especially the French and Italians, are found principally in the North Atlantic and Western divisions. The largest proportions are found in New York, where they constitute 1.45 per cent of the total population and 5.53 per cent of the foreign-born population; in California and Nevada where the proportions respectively are about double those in New York; in Rhode Island, New Jersey, Connecticut, Louisiana, Colorado, and Massachusetts.

The Asiatics, mainly Chinese, are found principally in the Western division, where they constitute 3.23 per cent of the total population and 12.68 per cent of the foreign-born. The proportions in Nevada and California are considerably higher than these. In other parts of the country their number is insignificant.

CHAPTER III.

STATISTICS OF IMMIGRATION.

*Total immigration, 1820-1899.*¹—A different way of looking at the problem of the foreign born is by considering the current of immigration into the country rather than the number of foreign-born already there at any particular time. We shall naturally reach somewhat similar conclusions by this system to those obtained by the preceding one, although the two methods do not give strictly parallel results. Thus the amount of immigration of a given nationality during any decade may be relatively small, and yet the proportion of the persons of that nationality in the country at the end of the decade may be large, owing to preceding immigration. In order to obtain a satisfactory view of recent and present tendencies, the current of immigration gives the more instructive results. Another reason why the results obtained by the consideration of immigration differ somewhat from those obtained by considering the population at a stationary point is that there is a certain return current of persons of foreign birth from this country of which no statistical record is kept. The Italians especially are apt to come to this country as "birds of passage," so that it will be quite possible that the census of 1900 will show fewer Italians in the country than were reported to have come here during the preceding decade, a phenomenon which was also observable at the census of 1890.

The following table shows the total number of immigrants, by decades, 1821 to 1899. It is to be observed, however, that previous to 1856 no distinction was made between those who came here to settle and mere travelers. Moreover, since 1885 the immigrants from the British North American provinces and from Mexico have not been included, while only since 1894 have the numbers of European immigrants arriving in Canada but destined for the United States been included:

Number of immigrants by decades.

1821 to 1830	143,439	1871 to 1880	2,812,191
1831 to 1840	599,125	1881 to 1890	5,246,613
1841 to 1850	1,713,251	1891 to 1900	3,687,564
1851 to 1860	2,598,214		
1861 to 1870	2,314,824	Total	19,115,211

Immigration first becomes of marked importance during the decade from 1830 to 1840. During the next 20 years the influx of the foreign-born was greater relatively to the amount of native population than at any other period. Three principal causes of this increase were the hard times in Germany, the great famine in Ireland, and the discovery of gold in California. Financial depressions have always a marked influence in decreasing immigration. That of 1857 was followed closely by the civil war, and the number of foreign-born coming to this country was greatly decreased. The era of prosperity succeeding the war, coupled with the marked improvements in methods of transportation, rapidly swelled the tide so that the total immigration for 1861 to 1870 was but little less than that for the preceding decade. The severe depression which succeeded the crisis of 1873 once more greatly reduced immigration so that the entire influx for the decade was not greatly above that for 1851 to 1860. The next decade was one of prosperity in this country. The opening up of the great farming regions of the West was still actively going on, while manufacturing industry was being developed with great rapidity. We find the total immigration for this decade accordingly more than equal to that for the 20 years preceding. The year 1882 marked the climax of the movement, 788,992 immigrants coming to our shores. The movement continued with little abatement till the crisis of 1893. During the years of depression which have followed, immigration has fallen off to about half the average of the years preceding. The tendency toward returning prosperity was apparently already shown, however, in the year ending June 30, 1899, when 311,715 immigrants arrived as compared with the minimum of 217,786 for the preceding year. The almost complete occupation of the farming lands of good quality in the West, however, is likely to reduce the attractiveness of this country as a place of settlement to many foreigners.

The movements which have been described in the preceding paragraphs may be more accurately traced by the figures of the following table, which show the immigration for each year. The fluctuations may be traced more easily by means of the diagram:

¹Based on Report of Immigration Investigating Commission, 1895, pp. 8, 9.

Number of alien passengers arrived in the United States, 1820 to 1855, and number of immigrants arrived, 1856 to 1900.

Immigration by nationalities.—1820-1899.—Since the total amount of immigration into this country has considerably fallen off during the past decade, greater attention is now being given by the public thought to the character of the immigrants. A comparison of the statistics of the immigration of persons of different nationalities shows that there have been marked changes in this regard in the more recent decades and especially during the past 10 or 15 years. The following table and accompanying diagrams show the number of immigrants of each leading nationality by decades:

Nationality of immigrants by decades.

	1821 to 1830.	1831 to 1840.	1841 to 1850.	1851 to 1860.	1861 to 1870.	1871 to 1880.	1881 to 1890.	1891 to 1900.

Immigration of Leading Nationalities by Decades, 1821-1899.

Nationality of Immigrants. Percentage of Total for each Decade, 1821-1899.

The Irish were the first to appear in large proportion among our immigrants. They came most rapidly during the decades from 1841 to 1860, since which time they have fallen off greatly in absolute numbers and in the proportion which they bear to the total immigrants. The course of German immigration has been more regular, but shows a falling off in the decades 1861-1870 and especially 1891-1899, as compared with those immediately preceding. The English and Scotch have been even more regular, gradually increasing in absolute numbers each decade except the last. Immigration of other nationalities was not important enough to be noteworthy until 1860. The Scandinavians then began to come, and since 1880 they have come to constitute about one-tenth of our immigration. The Russians and Poles, the Hungarians and Italians began to appear in moderate numbers during the decade from 1871 to 1880, increased with enormous rapidity during the following 10 years, and for the decade 1891-1900 constitute 50 per cent of our total immigration.

To present these changes somewhat more specifically it may be noted that from 1830 to 1840 the proportion of Irish among the total immigrants was about 35 per cent, that of other British about 12½ per cent, while the Germans constituted 25 per cent. The French immigration at this time was also considerable, amounting to 8 per cent.

From 1840 to 1850 the proportion of Irish increased to 46 per cent, of other British to 15½ per cent, that of Germans remaining unchanged. During the next decade the Irish, although increasing in absolute numbers, were only 35 per cent of the total immigrants, the English and Scotch had still further increased to 16 per cent while the Germans were a little less than 37 per cent. In the decade from 1860 to 1870 the importance of the Irish still further diminished, their percentage being only 19, while that of the other natives of Great Britain had risen to 26, and that of Germans had fallen slightly, to 34 per cent. Norway and Sweden now furnish 5 per cent and the Canadians 7 per cent. The following decade shows the Irish only 16 per cent of the total immigrants, the other British somewhat reduced, to 19 per cent, the Germans likewise fallen off to 26 per cent, while the British Americans and the Scandinavians had shown a marked increase, the former furnishing 14 per cent and the latter 8 per cent. From 1880 to 1890, when the tide of immigration was at its height, the Irish constituted only one-eighth and the other British only one-seventh of the total immigration. The Germans doubled in absolute number as compared with the preceding decade, and increased slightly, to 28 per cent, in their proportion to the entire inflow. Norwegians and Swedes rose to 11 per cent. Russians and Poles now amount to 5 per cent, Hungarians to 7 per cent, and Italians to 6 per cent, each of these nationalities having at least quadrupled its absolute numbers and doubled its proportion of the total immigration as compared with the preceding 10 years. The immigration from Canada, had statistics been continued, would apparently have fully held its own.

Detailed immigration by nationalities, 1875-1899.—So marked have been the changes in the proportions of the different nationalities among our immigrants during the past 25 years, that it will perhaps be profitable to present more detailed statistics. The following table shows the absolute number of immigrants of each leading nationality by five quinquennial periods, together with the proportion which each bore to the total immigration for the same periods, these proportions being indicated graphically in the diagram:

Immigration by leading nationalities, 1875-1899.

¹ Tables compiled from Reports of Commissioner-General of Immigration, 1892-1899. Immigration and Passenger Movement, 1894, pp. 73, 74.

From this table it appears that the natives of England, Scotland, and Wales reached their highest absolute numbers among our immigrants in 1880-1884 and 1885-1889, with over 400,000 for each period. In the latter period they constituted no less than 18.6 per cent of the total immigration. The number of these nationalities fell off considerably during the next 5 years, while during the years 1895-1899 about one-fifth as many came to us as from 1885 to 1889. The proportion in the latter period was little over one-third as great as in the former, 6.8 per cent. The year 1899 shows by far the smallest proportion ever known, 4.4 per cent.

The proportion of the Irish among the total immigrants has varied much less but, it also reached its maximum in 1885-1889, 14 per cent, the absolute number occurring in the preceding 5 years being, however, greater—365,107. For the years 1895-1889 the percentage has been 12.6, and the absolute number of Irish immigrants less than one-half the number from 1880 to 1884.

The number of Germans coming to our shores reached the enormous total of 920,215 for the period 1880-1884, when it constituted no less than 30 per cent of the entire number of immigrants. The total number of Germans arriving during the next ten years was only about 60,000 more than during the 5 years preceding. The proportion of Germans had fallen off to one-fifth during 1890-1894. The most striking change, however, was during the 5 years last past, when only 121,178 natives of Germany landed in this country, constituting but 8.8 per cent of the total immigration.

The proportion of Scandinavians reached its highest point from 1885 to 1889, 11.6 per cent. The decrease since that time, however, has been less rapid than for Germany, and the proportion for the past 5 years is still 7.9 per cent, although the total number of Scandinavians arriving during that period was barely one-third of the number arriving from 1880 to 1884.

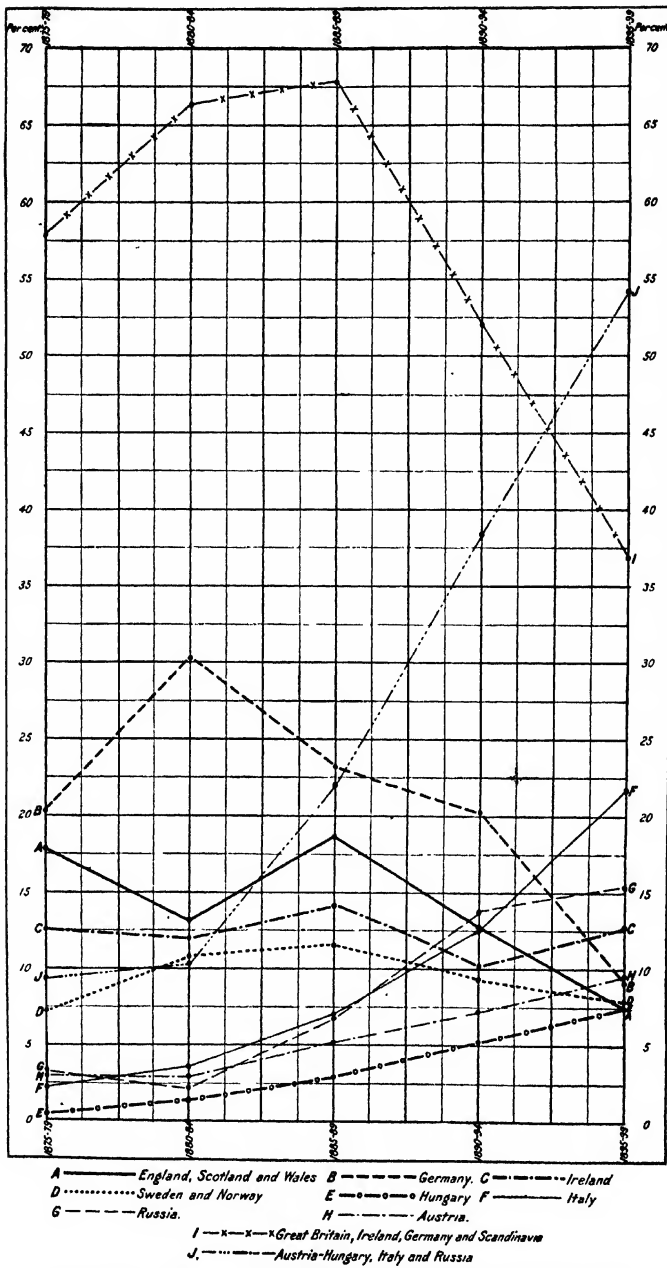

The losses which have been thus shown in the immigration from the countries of western and northern Europe have been made up by an increased influx from southern and eastern countries.

Italy shows the most striking increase of all. While only 19,976 Italians came to this country from 1875 to 1879, the arrivals from 1890 to 1894 were no less than 307,077, while those for the succeeding 5 years were scarcely less, despite the great falling off in the total immigration. The proportion of the Italians to the total immigrants has increased by geometric rather than by arithmetic progression. It rose from 2.3 per cent in 1875-1879 to 13.1 per cent, in 1890-1894, while the proportion for the past 5 years has reached 21.8 per cent more than one-fifth of the total. For the year 1899, in fact, almost one-fourth of all our immigrants were Italians.

The increase in the absolute numbers and the proportions of the Russians and Poles was up to 1895 even more striking than that of the Italians, the number for 1890-1894 being 343,544, or 11 times greater than for 1875-1879. In the two years after 1896, however, there was a very considerable falling off in their absolute number, the proportion to the total immigration for 1895-1899, however, increasing somewhat as compared with the preceding 5 years, and amounting to 15.6 per cent.

The number and proportion of the Hungarians coming to this country, while less than half as great as that of the Russians and Poles, has increased during the period since 1875 with about the same proportionate rapidity. While barely one hundredth of the total number of immigrants from 1875 to 1884 were Hungarians, the proportion from 1895 to 1899 was 7.5 per cent. The immigrants from Austria are, on the whole, of a higher class than those from Hungary, but there has been a tendency in recent years for relatively fewer of the inhabitants of that country of German birth to immigrate, while a larger proportion of those belonging to the Slavic races have been coming to this country. The proportion of Austrians to the total immigration has increased from about 3 per cent for 1875-1884 to more than 9 per cent during the past 5 years.

It is customary to consider the immigrants from the more western and northern countries of Europe as higher in character than those from the south and east of the continent. Taking only the leading nationalities, as indicated in the table, a broad view of the recent change in the character of our immigration may be obtained by comparing the proportion which the number of immigrants from Great Britain, Germany, Sweden, and Norway has borne to the total immigration for each 5-year period with the proportion borne to the total by the immigration from Austria-Hungary, Russia and Poland, and Italy. The figures thus obtained are shown in the above table and in the accompanying diagram. It will be seen that the immigration from the northern countries reached its maximum during the decade from 1880 to 1889, when it represented a little more than two-thirds of the total influx. For the past 5 years, on the other hand, the absolute number of immigrants from these countries has been barely one-third the number for the 5 years from 1885 to 1889, while the proportion to the total immigration has fallen to 36.9 per cent. The immigration from the southern countries of Europe began to increase greatly during the period from 1880 to 1884 but reached its maximum in absolute numbers from 1890 to 1894, when the immigration was more than 10 times greater than from 1875

Nationality of Immigrants. Percentage of Total for each 5-Year Period, 1875-1899.

607A—18

to 1879, the proportion to the total number of immigrants having risen from 9.4 per cent to 38.6 per cent. The proportion borne by the immigration from these countries to the total for the period from 1895 to 1899 is still greater, amounting to no less than 54.1 per cent.

Yearly immigration, by nationalities, 1890-1899.—The following table shows the number of immigrants of each leading nationality for each year from 1890 to 1899. It confirms the general results of the preceding table for the period from 1875 to 1899, although the marked fluctuations in the total immigration during the past 10 years make comparisons of the proportions of the different nationalities difficult. It will be seen that the immigrants from Great Britain, Germany, and Sweden and Norway have steadily decreased in absolute numbers from year to year, as well as in their proportion to the total number of immigrants. The immigrants from Italy, on the other hand, have nearly held their own in absolute numbers, despite the falling off of the total immigration, while for the year 1899 the number is the largest ever recorded. The immigration from Hungary and from Russia and Poland has decreased somewhat along with the general decrease, but the falling off has not been so great as in the case of the nations first mentioned.

Number of immigrants by leading nationalities, 1890-1899.

Year.	Total	England, Scotland, Wales.	Ireland.	Germany.	Austria, including Bohemia, etc.	Sweden, Norway.	Hungary.	Italy	Russia.
1890	455,302	60,730	53,024	92,427	34,137	41,002	22,062	52,003	46,671

	1,373,649	92,832	172,460	121,178	130,414	108,816	103,408	298,950	214,350

The race elements that have entered into the immigration problem, decade after decade, are shown in the table and chart, on pp. 275, 276, giving the percentage afforded by immigrants of certain nationalities to the total immigration of successive decades. It will be noticed that down to 1870 immigration was mainly British, Irish, and German, and that from 1870 on there was a progressively rapid decrease in the percentage of British, Irish, and German immigration and a proportionate increase in immigration from Italy, Austria, Hungary, Russia, and Poland. Immigration from all these countries put together did not amount to 1 per cent of the total immigration until the decade 1861-1870, when precisely that proportion was reached. In the next decade each of the three countries furnished notable percentages of the immigration, and in the decade just passed (1891-1900) had increased so much as to outweigh the British, Irish, Germans, and Scandinavians combined.

The progressively rapid rate of change is seen more plainly by comparing the proportions for the last years of the decade with each other and with the decade as a whole (see chart). In 1898-99 immigrants from Great Britain, Ireland, Germany, and Scandinavian countries made up only a little over 27 per cent of the total immigration, while immigrants from Italy, Austria, Hungary, Russia, and Finland (not Poland as in the proportion for the decade) made up about 65 per cent of the total. The following year the first group of peoples was reduced to 22 per cent of the total; the second group rose to 68 per cent.

Part of this change is due to a difference in grouping the nationalities between the single years as given and the decades. Immigrants from Finland have been added to the Russian group in the statement for the two separate years, making that group by so much the larger. Poland has been omitted as a separate heading in the 2 years named, but this omission makes a difference in the relative proportions of Austrian and Russian immigrants only—not in the relative proportions of the two great groups—as the immigrants formerly classed as Poles are now simply distributed between Austria and Russia.

These analyses are based upon the census classification of foreigners by country of birth, irrespective of race. A more satisfactory method, however, is to use a race classification, as is now done by the immigration department. The reasons why this is more satisfactory are obvious. Under the old system groups with most unlike

social traditions, characteristics, and possibilities are united indistinguishably in one group, while the elements of what should be one social group, as far as their characteristics and possibilities are concerned, are scattered about among several other groups. For example, under "Russia" of the census classification were gathered Germans, Hebrews, and Slavonic peoples of various kinds; under "Austria-Hungary" were collected Germans, many distinct Slavonic peoples, Hebrews, the true Hungarians or Magyars, and many Italians; while, on the other hand, no one group designation covered all Germans coming here, all Italians, or all Hebrews.

Analyzing the arrivals for the year 1899-1900 by races, then, and adding the Finns to the Scandinavians, where, for our purpose, they belong, it is seen (compare chart) that British, Irish, Germans, and Scandinavians made up about 28 per cent of the total immigration for the year, a slightly larger proportion than is shown by the corresponding general group taken by nationalities, while Italians, Hebrews, and Slavs of various kinds (Croatsians, Slovaks, Poles, Bohemians, etc.) made up about 61 per cent, a somewhat smaller proportion than that shown by the nationality group for the year.

to 1879, the proportion to the total number of immigrants having risen from 9.4 per cent to 38.6 per cent. The proportion borne by the immigration from these countries to the total for the period from 1895 to 1899 is still greater, amounting to no less than 54.1 per cent.

Yearly immigration, by nationalities, 1890-1899.—The following table shows the number of immigrants of each leading nationality for each year from 1890 to 1899. It confirms the general results of the preceding table for the period from 1875 to 1899, although the marked fluctuations in the total immigration during the past 10 years make comparisons of the proportions of the different nationalities difficult. It will be seen that the immigrants from Great Britain, Germany, and Sweden and Norway have steadily decreased in absolute numbers from year to year, as well as in their proportion to the total number of immigrants. The immigrants from Italy, on the other hand, have nearly held their own in absolute numbers, despite the falling off of the total immigration, while for the year 1899 the number is the largest ever recorded. The immigration from Hungary and from Russia and Poland has decreased somewhat along with the general decrease, but the falling off has not been so great as in the case of the nations first mentioned.

Number of immigrants by leading nationalities, 1890-1899.

Year.	Total	England, Scotland, Wales.	Ireland.	Germany.	Austria, including Bohemia, etc.	Sweden, Norway.	Hungary.	Italy	Russia.

	1,373,649	92,832	172,460	121,178	130,414	108,816	103,408	298,950	214,350

The race elements that have entered into the immigration problem, decade after decade, are shown in the table and chart, on pp. 275, 276, giving the percentage afforded by immigrants of certain nationalities to the total immigration of successive decades. It will be noticed that down to 1870 immigration was mainly British, Irish, and German, and that from 1870 on there was a progressively rapid decrease in the percentage of British, Irish, and German immigration and a proportionate increase in immigration from Italy, Austria, Hungary, Russia, and Poland. Immigration from all these countries put together did not amount to 1 per cent of the total immigration until the decade 1861-1870, when precisely that proportion was reached. In the next decade each of the three countries furnished notable percentages of the immigration, and in the decade just passed (1891-1900) had increased so much as to outweigh the British, Irish, Germans, and Scandinavians combined.

The progressively rapid rate of change is seen more plainly by comparing the proportions for the last years of the decade with each other and with the decade as a whole (see chart). In 1898-99 immigrants from Great Britain, Ireland, Germany, and Scandinavian countries made up only a little over 27 per cent of the total immigration, while immigrants from Italy, Austria, Hungary, Russia, and Finland (not Poland as in the proportion for the decade) made up about 65 per cent of the total. The following year the first group of peoples was reduced to 22 per cent of the total; the second group rose to 68 per cent.

Part of this change is due to a difference in grouping the nationalities between the single years as given and the decades. Immigrants from Finland have been added to the Russian group in the statement for the two separate years, making that group by so much the larger. Poland has been omitted as a separate heading in the 2 years named, but this omission makes a difference in the relative proportions of Austrian and Russian immigrants only—not in the relative proportions of the two great groups—as the immigrants formerly classed as Poles are now simply distributed between Austria and Russia.

These analyses are based upon the census classification of foreigners by country of birth, irrespective of race. A more satisfactory method, however, is to use a race classification, as is now done by the immigration department. The reasons why this is more satisfactory are obvious. Under the old system groups with most unlike

Effects of immigration on the increase of population.—It is, of course, impossible to measure the effect of immigration upon the population of the country, but at any rate it is a hasty assumption which holds that immigration during the nineteenth century has increased the total population. The late Francis A. Walker, superintendent of the censuses of 1870 and 1880, maintained that had there been no immigration whatever into this country during the past 90 years, "the native element would long have filled the place the foreigners have usurped." (See article in *Forum*, 1891, pp. 634-743; reprinted in *Discussions in Economics and Statistics*, Vol. II, pp. 417-426.)

Population and immigration.

	Population	Watson's estimate.	Watson's error.	Foreign immigration for decade.
1790	3,929,214
1800	5,306,483	50,000
1810	7,229,881	70,000
1820	9,633,822	9,625,734	-8,088	114,000
1830	12,866,020	12,833,645	-32,375	143,439
1840	17,069,453	17,116,526	+47,073	599,125
1850	23,191,876	23,185,368	-6,508	1,713,251
1860	31,443,321	31,753,824	+310,503	2,598,214
1870	38,558,371	42,328,432	+3,770,061	2,314,824
1880	50,155,783	56,450,241	+6,294,458	2,812,191
1890	62,622,250	77,266,989	+14,644,739	5,246,613
1900	75,559,258	100,235,985	+24,676,727	3,887,564

President Walker's argument gains statistical plausibility from the estimates, which he quotes, made by Elkanah Watson in 1815, of the future population of the United States, on the basis of the first 3 censuses. Taking Watson's predictions and comparing them with the actual census returns (see table above), Walker found that in the censuses of 1820 and 1830, when immigration was so slight as to be negligible, the predictions were within four one-thousandths of the actual population; and again, in 1840 and 1850, with immigration amounting to 599,125 in one decade, and 1,713,251 in the second decade, Watson's predictions were again as close as before. Speaking of these predictions, Walker says:

"Here we see that, in spite of the arrival of 599,000 foreigners during the period 1830-1840, 4 times as many as had arrived during any preceding decade, the figures of the census coincided closely with the estimate of Watson, based on the growth of population in the preimmigration era, falling short of it only by 47,073 in 17,000,000; while in 1850 the actual population, in spite of the arrival of 1,713,000 more immigrants, exceeded Watson's estimate by only 6,508 in a total of 23,000,000. Surely, if this correspondence between the increase of the foreign element and the relative decline of the native element is a mere coincidence, it is one of the most astonishing in human history."

It might be added to what President Walker says, that even in 1860, 45 years after Watson's predictions, and following an immigration of 2,598,214 during the preceding decade, Watson's figures were within 1 per cent of the actual figures.

The explanation given by Walker for the check on the native increase following the increased immigration of foreigners is based partly on sentimental and partly on economic reasons. "The American shrank from the industrial competition thus thrust upon him. He was unwilling himself to engage in the lowest kind of day labor with these new elements of population; he was even more unwilling to bring sons and daughters into the world to enter into that competition."

After the civil war new causes entered, especially city life and more luxurious methods of living, and Watson's predictions fall wide of the actual population, mounting as high as 33½ per cent in 1900. "Yet," says Walker, "still the great fact protrudes through all the subsequent history of our population, that the more rapidly foreigners came into the United States the smaller was the rate of increase, not merely among the native population separately, but throughout the population of the country as a whole, including the foreigners. * * * If the foregoing views are true, or contain any considerable degree of truth, foreign immigration into this country has, from the time it first assumed large proportions, amounted not to a reinforcement of our population, but to a replacement of native by foreign stock." (P. 425.)

to 1879, the proportion to the total number of immigrants having risen from 9.4 per cent to 38.6 per cent. The proportion borne by the immigration from these countries to the total for the period from 1895 to 1899 is still greater, amounting to no less than 54.1 per cent.

Yearly immigration, by nationalities, 1890-1899.—The following table shows the number of immigrants of each leading nationality for each year from 1890 to 1899. It confirms the general results of the preceding table for the period from 1875 to 1899, although the marked fluctuations in the total immigration during the past 10 years make comparisons of the proportions of the different nationalities difficult. It will be seen that the immigrants from Great Britain, Germany, and Sweden and Norway have steadily decreased in absolute numbers from year to year, as well as in their proportion to the total number of immigrants. The immigrants from Italy, on the other hand, have nearly held their own in absolute numbers, despite the falling off of the total immigration, while for the year 1899 the number is the largest ever recorded. The immigration from Hungary and from Russia and Poland has decreased somewhat along with the general decrease, but the falling off has not been so great as in the case of the nations first mentioned.

It will be seen that the two cities possessing the largest proportion of foreign-born population are New York and San Francisco, each having no less than 42 per cent, or nearly three times as large a proportion as that for the United States as a whole. Chicago has almost as large a proportion, while St. Paul, Detroit, Milwaukee, Cleveland, Minneapolis, and Buffalo follow in the order named, each having more than one-third of its population of foreign birth. Eighteen out of the 28 great cities have more than one-fourth of their population of foreign birth, while the only cities having a less proportion of foreign-born than the average for the United States as a whole are New Orleans, Indianapolis, and Washington.

Great differences exist as to the relative tendency of the different nationalities toward city life. The following table shows the percentage of the total number of the various nationalities in the country who are residents in cities:¹

Percentage of total foreign-born in principal cities.

This table shows the marked aptitude for urban life of the Russians, Italians, and Irish, each of which nationalities has more than one-half of its numbers in this country dwelling in large cities. Owing to the much greater absolute number of the Irish, as well as of the Germans, we find from the table on page 3 that these two nationalities constitute more than one-half of the total foreign-born population in the cities of the country as a whole, the Irish furnishing 20 per cent and the Germans 30 per cent.

¹ Census of 1890, Population II, p. cl.

to 1879, the proportion to the total number of immigrants having risen from 9.4 per cent to 38.6 per cent. The proportion borne by the immigration from these countries to the total for the period from 1895 to 1899 is still greater, amounting to no less than 54.1 per cent.

Yearly immigration, by nationalities, 1890-1899.—The following table shows the number of immigrants of each leading nationality for each year from 1890 to 1899. It confirms the general results of the preceding table for the period from 1875 to 1899, although the marked fluctuations in the total immigration during the past 10 years make comparisons of the proportions of the different nationalities difficult. It will be seen that the immigrants from Great Britain, Germany, and Sweden and Norway have steadily decreased in absolute numbers from year to year, as well as in their proportion to the total number of immigrants. The immigrants from Italy, on the other hand, have nearly held their own in absolute numbers, despite the falling off of the total immigration, while for the year 1899 the number is the largest ever recorded. The immigration from Hungary and from Russia and Poland has decreased somewhat along with the general decrease, but the falling off has not been so great as in the case of the nations first mentioned.

Number of immigrants by leading nationalities, 1890-1899.

Year.	Total	England, Scotland, Wales.	Ireland.	Germany.	Austria, including Bohemia, etc.	Sweden, Norway.	Hungary.	Italy	Russia.

	1,373,649	92,832	172,460	121,178	130,414	108,816	103,408	298,950	214,350

The race elements that have entered into the immigration problem, decade after decade, are shown in the table and chart, on pp. 275, 276, giving the percentage afforded by immigrants of certain nationalities to the total immigration of successive decades. It will be noticed that down to 1870 immigration was mainly British, Irish, and German, and that from 1870 on there was a progressively rapid decrease in the percentage of British, Irish, and German immigration and a proportionate increase in immigration from Italy, Austria, Hungary, Russia, and Poland. Immigration from all these countries put together did not amount to 1 per cent of the total immigration until the decade 1861-1870, when precisely that proportion was reached. In the next decade each of the three countries furnished notable percentages of the immigration, and in the decade just passed (1891-1900) had increased so much as to outweigh the British, Irish, Germans, and Scandinavians combined.

The progressively rapid rate of change is seen more plainly by comparing the proportions for the last years of the decade with each other and with the decade as a whole (see chart). In 1898-99 immigrants from Great Britain, Ireland, Germany, and Scandinavian countries made up only a little over 27 per cent of the total immigration, while immigrants from Italy, Austria, Hungary, Russia, and Finland (not Poland as in the proportion for the decade) made up about 65 per cent of the total. The following year the first group of peoples was reduced to 22 per cent of the total; the second group rose to 68 per cent.

Part of this change is due to a difference in grouping the nationalities between the single years as given and the decades. Immigrants from Finland have been added to the Russian group in the statement for the two separate years, making that group by so much the larger. Poland has been omitted as a separate heading in the 2 years named, but this omission makes a difference in the relative proportions of Austrian and Russian immigrants only—not in the relative proportions of the two great groups—as the immigrants formerly classed as Poles are now simply distributed between Austria and Russia.

These analyses are based upon the census classification of foreigners by country of birth, irrespective of race. A more satisfactory method, however, is to use a race classification, as is now done by the immigration department. The reasons why this is more satisfactory are obvious. Under the old system groups with most unlike

Comparative percentages of illiteracy of population 10 years of age and over, etc.—Cont'd.

	Per cent of total na- tive whites illiterate.	Per cent of total for- eign whites illiterate.	Native whites of native parentage.	Native whites of foreign parentage.
Western Division	4.49	10.36	5.55	1.98
Montana	1.59	8.20	1.01	1.56
Wyoming	1.31	7.06	1.10	1.62
Colorado	3.83	7.80	4.57	1.18
New Mexico	42.79	30.54	45.03	19.37
Arizona	7.87	42.22	5.20	13.84
Utah	2.34	10.27	2.68	2.05
Nevada85	10.00	1.03	.60
Idaho	1.91	8.29	1.98	1.75
Washington	1.33	6.99	1.33	1.35
Oregon	1.77	7.87	1.84	1.46
California	1.65	10.48	1.79	1.41

From these figures it will be seen that, for the United States as a whole, 6.2 per cent of the native whites are illiterate, while more than twice that proportion, 13 per cent, of the foreign-born whites are unable to read and write. The disparity between the natives and the foreign born is especially marked in the North Atlantic Division. The proportion of native whites in that division who are illiterate is only 2.3 per cent, while 15.6 per cent of the foreign born are illiterate. Among the foreign born in the New England States especially the illiteracy is great. In the two southern divisions of the country the proportion of illiteracy, even among the native whites, is very high, and in the case of the South Atlantic States fully exceeds the proportion among the foreign whites, although the latter figure has comparatively little significance, owing to the small total number of the foreign born in those States. In the North Central Division the illiterates among the native whites are 3.4 per cent; among the foreign whites, 10.6. In the States of that division where large cities are less important, the percentage of illiteracy among the foreign born is much less, showing that the agricultural population of foreign birth which settles in those States is of a comparatively high degree of intelligence.

Owing to the large proportion of the immigrants who settle in our great cities the question of the ignorance of the foreign born in them is especially significant. The following table shows the percentages of illiterate population, 10 years of age and over, in each of our leading cities, classified by general nativity:

Percentage of illiterate population 10 years and over, classified by general nativity, for cities having 100,000 inhabitants or more—1890.

Cities.	Native whites.		Foreign whites.
	Native per- centage.	Foreign percentage.	
New York	0.52	0.68	14.06

Indianapolis	2.16	1.35	11.83
Allegheny59	1.04	8.95
Wheeling	3.17	1.85	9.72

It will be noticed that among the native whites, both of native and foreign parentage, the percentage of illiteracy in our cities is, on the whole, less than the percentage in the States in which they are situated. The efficiency of the common school system is especially indicated by the fact that the illiteracy is scarcely greater among native whites of foreign parentage than among those having native parents. The illiteracy among the foreign-born city dwellers, on the other hand, is very much greater than that among the natives. Thus in New York City the percentage of illiteracy among the native whites of native parentage is only 0.52; among the native whites of foreign parentage, 0.66, while among the foreign whites it is 14.06.

The statistics secured by the Bureau of Immigration regarding the ability of those who enter the country to read and write confirm the evidence of the above tables. In fact the percentage of illiteracy shown is even higher than that of the foreign-born resident population, indicating apparently that a certain proportion of immigrants learn to read and write after landing. The proportion of illiteracy among immigrants of 14 years of age and over during the 6 years from 1895 to 1900 averages above 20 per cent. It varied considerably from year to year, the specific figures being as follows: 1895, 20.37; 1896, 28.63; 1897, 23.1; 1898, 23.2; 1899, 22.9; 1900, 24.2.

The relative degree of illiteracy differs greatly among immigrants of different nationalities. The following table shows the percentage of illiteracy among the immigrants according to nationalities and according to races for 1899 and 1900.

Total number of immigrants in 1900 and percentage of illiteracy among immigrants 14 years of age and over for the years 1899-1900, by races.

[Computed from annual report of Commissioner General of Immigration, 1899, p. 6, 1900, p. 6. The table is arranged according to the precedence of illiteracy in 1900.]

Portugal	2,766	77.69	Cuba	6,077	21.49
Romania	785	21.63	Other West Indies	751	33.18
Russia (proper)	45,137	41.14	South America	35	6.90
Finland	6,308	11.82	Turkey in Asia	4,139	46.66
Poland	691	47.78	China	1,441	17.85
Spain	351	15.81	Japan	1,110	10.73
Sweden	21,177	1.16	Asia (not specified)	74	7.04
Switzerland	2,304	7.79	Australia	87	6.56
Turkey in Europe	169	31.43	Africa	21	11.76
England	19,492	3.44			
Ireland	40,262	7.			
Scotland	3,483	5.70	Total	343,267	28.63

From these figures it appears that the immigrants from the northern countries, Great Britain, Sweden, and Germany, show a very low percentage of illiteracy. The illiteracy among the immigrants from Germany and Sweden is no greater than among the native-born Americans in our most highly educated States. The Irish are somewhat more illiterate than the natives of the rest of Great Britain, but even here the percentage is not high. The immigrants from the southern and eastern countries of Europe, on the other hand, show an excessive proportion of illiteracy, and it is those classes that are now coming to our shores in the largest numbers. More than one-half of those from Turkey, Italy, and the Portuguese Islands are unable to read and write, about two-fifths of the Rutenians from Russia, about one-third of the Croatians, Poles, and Lithuanians from Austria-Hungary and Russia, and more than one-fifth of the Slovaks from Hungary, and the Hebrews.

The foregoing distinction is brought out still more clearly by the following tables, in which the illiteracy of the different races is shown by three groups, namely, those coming from western Europe, those coming from eastern Europe, and other races, mainly Asiatic. The line adopted as dividing eastern from western Europe is as follows: Beginning at the boundary between Finland and Russia the line leaves Finland and Germany on the coast, then follows the boundary between Bohemia, Austria, and Corinthia on the west and Galicia, Hungary, and Croatia on the east. The line then follows the division between northern and southern Italy. Spain and Portugal are also included in the eastern division because of their high illiteracy.

The tables show that in 1899 the per cent of illiteracy from western Europe was 2.8 and in 1900 4 per cent, whereas from eastern Europe the per cent of illiteracy in 1899 was 38.4 and in 1900 36.6.

Illiteracy and financial condition of immigrants.—There is a close connection between the amount of money brought by immigrants and their illiteracy. In the following table the per cent of illiterates 14 years of age and over is given for the more important races for the year 1900, and also the amount of money per capita. The per cent of illiteracy for all immigrants is 24.2, and the money per capita \$14.84. Comparing these averages with the figures of the individual races, it will be seen that in only one case was more money per capita shown than the average by a race with a per cent of illiteracy above the average. This was the Russian. The smallest amount of money was brought by the Lithuanians, whose illiteracy was 32.1 per cent. The southern Italian, with a very high per cent of illiteracy, showed a small amount per capita. On the other hand, the highest amount of money per capita was \$41.51, brought in by the Scotch, with an illiteracy of only 2.1 per cent. Of those races then having an illiteracy below the average, only the Hebrew, Magyar, Irish, Finnish, and Chinese showed less money per capita than the average for all. In general, then, the amount of money brought seems to vary inversely with the illiteracy of the immigrants, so that those with the greatest illiteracy have the least money, and the largest amount of money is found among the least illiterate.

Illiteracy and money shown by immigrants per capita for certain races.

CHAPTER VI.

PAUPERISM AND CRIMINALITY AMONG THE FOREIGN-BORN.

It is often charged that the large influx of foreigners of low class has been especially injurious in its effects on account of the relatively large proportion of pauperism and criminality among these classes. The recent immigration laws of the United States have sought to debar, so far as possible, the entrance of those who are likely to become dependents and criminals. The working of these laws, the number and character of those debarred, etc., will be discussed in another place. It is doubtless true that they have had some beneficial effect, which will perhaps show itself in the statistics of the census of 1900, although the relatively lower standard of immigration as a whole since 1890 may offset any effect of closer inspection or debarment.

The following table from the census of 1890 shows the relative proportion of the different elements of the population who were found among the dependent, defective, and delinquent classes. The figures show the proportions to 1,000,000 of the population. Thus the number of prisoners of foreign birth among 1,000,000 of the total number of foreign born is ascertained and compared with the similar proportions of the other elements of the population:

Proportion of inmates of penal and charitable institutions to 1,000,000 of total population.

[Census, 1890, Crime, Pauperism, and Benevolence, I, 10.]

Classes.	White.				Colored, total.
	Aggregate.	Total.	Native born.	Foreign born.	
Total	4,505	4,431	3,708	8,065	5,040
Prisoners	1,315	1,042	898	1,768	3,275
Juvenile offenders	237	235	250	159	254
Paupers in almshouses	1,166	1,211	829	3,131	847
Inmates of benevolent institutions	1,787	1,943	1,731	3,007	664

On the basis of these, and of other similar figures, the compiler of the volume on Crime, Pauperism, and Benevolence of the United States Census of 1890 makes the following comments:¹

"The total white population of the United States (54,983,890) is divisible into two parts—native white, 45,862,023; foreign white, 9,121,867.

"The white inmates of penal and charitable institutions whose nativity is known (235,782) are also divisible into two groups—native white, 164,475; foreign white, 71,307.

"Of the total white population therefore 16.59 per cent is foreign born, of the corresponding institution population 30.24 per cent.

"Of the total native white population (45,862,023) the number with native parents is 34,358,348; with foreign parents, 11,503,675. By adding the latter to the foreign population we find the total number with foreign parents to be 20,625,542. The percentage of those with native parents is 62.49; of those with foreign parents, 37.51.

"We have seen, however, that the nativity of 396,416 parents of inmates of institutions is known, and that the percentage of native parents is 38.60, but of foreign parents, 61.40.

"In other words, if attention is confined to the nativity of the inmates of institutions 16.59 per cent of the entire population furnishes 30.24 per cent of the institution population. But if attention is directed to the nativity of the parents (a) of inmates 37.51 per cent of the entire population furnishes 61.40 per cent of the entire institution population."

The conclusions thus reached, however, require very material qualification before they can be accepted. So far as the statistics concerning the prisoners are concerned the figures in the above table have almost no significance whatever, because they fail to consider the great differences as to the relative number of males and the relative numbers belonging to the various age periods among the foreign born as compared with the native born. This point will be developed in detail further on. The proportion of males and the age distribution, however, should have much less influence on the number of persons who become paupers or who are inmates of

¹Census, Population, II, p. 38.

benevolent institutions. At any rate, it is impossible to trace any close causal connections or to demonstrate them statistically. The proportion of paupers in almshouses is seen to be nearly 4 times greater for the foreign-born whites than for the native whites, while the proportion of the former in other charitable institutions is more than 75 per cent greater than in the case of the natives.

It will be interesting to know what nationalities among our foreign-born population furnish the largest contributions to our criminal and dependent classes. The following table, condensed from the census of 1890, shows the proportion of the different classes of defectives, dependents, and delinquents to the total population of each nationality in this country. The ratios are reduced to the basis of 1,000,000 of the total population:

Ratio of criminals and dependents of each nationality to 1,000,000 of total population of that nationality, 1890.

(Census, Crime, Pauperism, and Benevolence, I, 35.)

Taking the inmates of all penal and charitable institutions, we find that the highest ratio is shown by the Irish, whose proportion is more than double the average for the foreign born, amounting to no less than 16,624 to the million. The French, Italians, Swiss, and English furnish the next largest contributions to these undesirable classes. The relatively low proportion of dependents and delinquents among the Russians, Poles, and Bohemians is noteworthy. The immigrants from Sweden, Norway, and Denmark appear to be especially desirable from this standpoint.

Although, as we see, the comparison between the number of prisoners of foreign birth and those of native birth is entirely misleading, we can yet gain some information by comparing the different nationalities of foreigners among themselves, since differences in the proportions of sexes and in the age groupings are not so marked between the different nationalities as they are between the foreign born as a whole and the native born. Nevertheless the comparison even between nationalities is much less satisfactory as regards criminals than as regards paupers and inmates of benevolent institutions. The Italians appear to furnish the largest proportion of criminals, a fact which is doubtless connected with the exceedingly high proportion of males of ages capable of committing crime. The Irish come next, and the French follow the Irish. The Russians, Poles, and Germans stand almost on a par with one another, having a comparatively low proportion of criminals, while, as before, the most northern countries appear to furnish the most desirable immigrants, judging from this standpoint alone.

The proportion of the different nationalities among the paupers in our almshouses varies very greatly. The Irish show far and away the largest proportion, no less than 7,550 per million inhabitants, as compared with 3,031 for the average of all the foreign born. The French come next, while the proportion of paupers among the Germans is somewhat unexpectedly high. The remarkably low degree of pauperism among the Italians is possibly due to the fact that such a large percentage of them are capable of active labor, coming to this country especially for that purpose.

The Italians, on the other hand, show a very large proportion of inmates of other benevolent institutions—insane asylums, hospitals, etc.—falling first after the Irish in the proportion of such classes. The Russians, also, who are to a very slight degree represented in our almshouses, are in comparatively high proportions in the

various benevolent institutions. It should be noted that the benevolent institutions referred to include those supported by private charity, whereas almshouses are mostly public institutions. Several of the nationalities among our foreign-born inhabitants, notably the Jews, maintain institutions for persons of their own birth, which explains the marked discrepancy between the figures in the last two columns.

As already intimated, the gross statistics as to the proportion of foreign-born criminals to the total number of foreign born in this country are entirely misleading. The proportion of males in the United States, as we have already seen (p. —), is very much higher among persons of foreign birth than among those of native birth. We have also seen that the proportion of our inhabitants born abroad who are between the ages of 20 and 45 is 51 per cent, as compared with 34 per cent for persons of native birth. The proportion of males among the foreign born from 20 to 45 years of age is considerably higher, even than the proportion of males among the foreign born as a whole. It is a familiar fact that the amount of criminality among males is from 3 to 5 times greater than among females. Moreover, persons under the age of 20 years seldom commit crime, so that the immense numbers of persons below that age of native birth contribute very little to the number of prisoners in the country.

A somewhat fairer view of the actual tendencies toward criminality on the part of the foreign-born as compared with the native-born is obtained from the following table, which gives the proportions of prisoners to 1,000,000 of the total population by age groups. This table, however, fails to make the exceedingly important distinction between the males and the females.

Proportion of prisoners to 1,000,000 of total population, for each element of population by age groups, 1890.

[Census, 1890: Crime, Pauperism, and Benevolence, I. 166.]

	Under 15 years.	15 to 19 years.	20 to 24 years.	25 to 29 years.	30 to 34 years.	35 to 45 years.	45 to 54 years.	55 to 64 years.	65 years and over.
Total.....	31	1,370	3,180	3,127	2,419	1,964	1,356	867	403
White.....	12	891	2,285	2,430	2,019	1,708	1,222	785	354
Native.....	12	860	2,255	2,401	1,903	1,514	950	552	230
Foreign.....	36	1,199	2,434	2,528	2,416	2,222	1,774	1,216	632
Colored.....	148	4,451	9,695	8,701	6,243	4,123	2,534	1,713	906

It will be seen that this table makes a much more favorable showing for the foreign-born than the first above presented. According to the previous table there were 1,768 foreign-born prisoners per million of the foreign-born population, as compared with 898 among native-born whites. If in the above table we compare the ages from 20 to 45, in which much the largest proportion of crimes are committed, we shall see that the number of foreign-born prisoners in proportion to 1,000,000 of the total population is not more than 15 per cent greater than the number of the native born, the disparity being greater during the last two age periods than during the first two.

An article in one of our sociological journals¹ recently attempted to show that the proportion of criminality among the foreign-born whites was considerably less even than among the native whites of native parents, if both be properly estimated. The calculation was made on the basis of the number of male prisoners and number of males of voting age. Investigation shows, however, that this writer used erroneous methods of ascertaining the actual number of native prisoners of native parentage and of foreign parentage, respectively. There are a considerable number of prisoners whose parentage is unknown, and also a large number only one of whose parents is of foreign birth. All of these prisoners were included by the writer as being native whites of native parentage. The practice of the census authorities, on the other hand, in stating the total population, is to include all having one foreign parent under the natives of foreign parentage, and the writer referred to took this grouping as his basis for reckoning the population, while using the other in reckoning the number of prisoners. In the following table prisoners of unknown birth have been apportioned between the respective classes in proportion to the number of known birth, while the correct definition, according to the census authorities, of natives of foreign parentage has

¹ H. H. Hart, *Am. Jour. of Sociology*.

been applied. The table therefore shows the number of male prisoners of native birth, distinguishing those having native parents from those having foreign parents and of foreign birth, per million of the total male population of voting age belonging to these respective classes.

Number of male prisoners per million of voting population, 1890.

[Compiled from Census, 1890: Population, I, 751; Crime, Pauperism, and Benevolence, II, 4.]

	Native white.		Total native white.	Foreign white.

California.....	6,302	12,935	8,181	5,632

From this table it will be seen that, taking the United States as a whole, the whites of foreign birth are a trifle less criminal than the total number of whites of native birth. But there is a wide difference in criminality between native whites having native parents and those having foreign parents. The number of native male whites of native parentage in our prisons is 2,517 per million of the voting population, as compared with 3,269 for the foreign born, and 7,435 for the native born of foreign parentage. The excessively large proportion of prisoners among the latter class, it should be noted, constitutes just as strong an argument as to the injurious effects of immigration as would a high proportion among the foreign-born themselves. It seems to show that the second generation of the foreign element, having become more accustomed to the ways in this country and more familiar, so to speak, with crime, and less under the control of their parents whom they learn to look upon as ignorant and out of date, present an excessively high proportion of criminality.

The general statistics for the country as a whole are borne out, with some exceptions, by the figures for the separate great divisions and for certain leading States, which are included in the table. In every grand division except the North Central the foreign whites show a somewhat larger proportion of prisoners than the native whites of native parents. The relative proportions in the North Atlantic Division, where the foreign-born population is exceedingly large, are especially noteworthy, the foreign-born showing a proportion of 4,373 to the million, the native born, 2,839. In almost every case, on the other hand, the criminality among the foreign-born is somewhat less than that among the total native white population, while in every case the criminality of the native whites of foreign parentage is very much higher than that of the other classes. Notice especially the high proportion of prisoners among this class in Massachusetts and New York. The figures for the South Atlantic and South Central divisions are of comparatively little significance, owing to the small foreign-born population of those States.

If we inquire somewhat more closely into the offenses committed we shall discover interesting differences between prisoners of native and those of foreign parentage. The following table shows the birthplaces of the 114,620 parents of the 57,310 white prisoners by specified crimes. It appears that in two groups, namely, homicide and forgery, the prisoners of native parentage predominate, but that in case of public intoxication foreign parentage has more than three times the influence, and in disorderly conduct slightly less than three times the influence. In the other groups, namely, assault, burglary, larceny, and grand larceny, there is a slight predominance of foreign parentage. When it is considered that the proportion of white male population of foreign parentage between the ages of 18 and 44 was 38.02 per cent of the total white male population (Census, Population, p. clxxvii), it becomes apparent that the influence of immigration, taking into account both the immigrant and his native-born children, accounts for a much larger proportion of prisoners than does the native stock, and that this disproportion in the case of misdemeanor, such as intoxication and disorderly conduct, amounts to two-fifths of the population producing more than three-fourths of the punished offenses.

Birthplaces of 114,620 parents of 57,310 white prisoners, by specified crimes.

[Census: Crime, Pauperism, etc., Part II, p. 280, ff.]

The following table, compiled from the reports of the prison commissioners of Massachusetts and the census for 1895 of that State, shows also the significance of intoxication as a prominent cause of offenses amongst the foreign-born. It appears from the table that prisoners committed to all institutions in proportion to a thousand population of the same nativity indicates that those born in Massachusetts numbered 7.3 per thousand, but that, omitting those committed for intoxication, the number is 2.6 per thousand. Below this proportion stands immigrants from Portugal, Austria, Germany, Russia, and Finland. The leading nationality above this average is that of the Irish, whose commitments per thousand were 27.1, but omitting intoxication was 6. Next in order of commitments are Welsh, English, Scotch, and Norwegians, all of which show a large predominance of intoxication. The Italians are a marked exception, the commitments numbering 12.9 for all causes, and 10 for causes except intoxication.

Prisoners committed to all penal institutions of Massachusetts, except the State farm, during year ended September 30, 1895.

Deportations by the Bureau of Immigration.—In addition to the foregoing tables showing the relation of immigration to the problems of crime and pauperism, the following table is of interest as showing the operations of the Bureau of Immigration under the laws restricting immigration. This table gives for the year 1900 the deportation by races, arranged in the order of the percentage of total arrivals that were debarré. It will be noted that the high percentages of Pacific Islanders, Japanese, and Bulgarians is owing to the number of contract laborers deported, but that in other cases those debarré as likely to become public charges are the leading factors in the statistics. From Scotland this was almost the sole cause for deportation, while from Italy it was by far the leading cause. The same is true of the Hebrews, the Syrians, the Finns, Scandinavians, and Irish.

Deportations by races, 1900.¹

¹ Compiled from Report of United States Commissioner-General of Immigration, 1900.

Religious faith of immigrants.—Questions concerning their religious faith were addressed to immigrants by the immigration authorities during a limited period in 1899 and 1900, and have since been discontinued. The following table, compiled for the only year for which complete records were obtained, shows the number of adherents to each faith by nationalities, and the percentage of each religion in the aggregate. It appears that in that year 52.14 per cent of the immigrants were Roman Catholics, and 4.03 per cent were Greek Catholics; of Hebrew 10.39 per cent of the immigrants, of Protestants 18.54 per cent, and the miscellaneous religions were 13.91 per cent. The Roman Catholics came mainly from Austria-Hungary, Italy, and Ireland; the Protestants from Germany, Norway, Sweden, and England; the Israelites from Austria-Hungary and the Russian Empire.

Total number of passengers arriving in 1899 distributed by countries and religious faith and percentage of each religious faith.

PART III.

IMMIGRATION AND ITS ECONOMIC EFFECTS.

A REPORT PREPARED UNDER THE DIRECTION OF THE
INDUSTRIAL COMMISSION.

BY

JOHN R. COMMONS, A. M.

IMMIGRATION AND ITS ECONOMIC EFFECTS.

CHAPTER I.

OCCUPATIONS OF IMMIGRANTS.

The chief question which is usually raised regarding the advantages and disadvantages of immigration into this country has to do with its effect upon industry, and especially upon native labor. It is claimed by many, especially among the working classes themselves, that the large immigration of laborers, accustomed to a lower wage and an inferior standard of living, tends to drive out American-born labor from various occupations, or at any rate to force down the general level of wages. It is claimed on the other hand by many persons that, so far as American labor is displaced by the lower grade of foreign labor, it finds occupations in higher forms of industry. The result thus is, according to this argument, that the severest and most unpleasant work is done for us by immigrants while the level of American labor is continually raised.

Some light upon the degree to which the foreign-born enter into productive labor and into the respective classes of occupations can be gained from the statistics furnished by the United States Census and by the Commissioner of Immigration.

Predominance of males among immigrants.—It is noteworthy that a much larger proportion of immigrants are adapted for gainful labor than is the case among the native-born. In the first place, the proportion of males among the total number of immigrants is much higher than the normal proportion in a fixed population. In an ordinary population the number of females is approximately the same as the number of males, although in the United States, as a whole, the proportion of males in 1890 was slightly more than half of the total, 51.21 per cent.¹ The proportion of males among the native-born in that year was 50.6 per cent, while among the foreign-born it was considerably larger, 54.9 per cent. The following table shows the proportion of males among the immigrants to this country from 1881 to 1889:

Percentage of males among immigrants of each nationality, 1881-1889.

[Report of Superintendent of Immigration, 1892, p. 14.]

	<i>Per cent.</i>		<i>Per cent.</i>
All nationalities (1881-1890).....	61.0	Italy.....	79.4
Germany.....	57.6	Russia, including Poland.....	65.8
Ireland.....	51.0	Austria.....	62.9
England.....	61.3	Hungary.....	73.8
Sweden and Norway.....	61.0	Scotland.....	61.6

It will be seen that 61 per cent of the total number arriving during that period were males. Comparing the different nationalities, we find that the Irish and Germans show the largest percentage of females among the total immigrants. This is in the case of Ireland probably due to the large number of Irish women who come to this country as servants, while in the case of Germany a large proportion of the immigration is by families. The natives of the more southern and eastern countries of Europe, on the other hand, are much less given to bringing their families with them, and the proportion of males ranges from 65.8 for Russia and Poland to 79.4 for Italy.

Age distribution of immigrants.—From the fact just noted that a considerable proportion of immigrants do not bring families to this country, we should expect to find the relative number of children among immigrants and among our foreign-born population much less than among the native-born population. This fact is shown conclusively by the following table from the census of 1890:¹

¹ Census of 1890, Population, Vol. II, p. xix; Census of 1890, Population, Vol. I, pp. lxxii, 486.

Relative age distribution of native and foreign born, 1890.

Age periods.	Native white.	Foreign white.
	<i>Per cent.</i> 100.00	<i>Per cent.</i> 100.00
All ages		
Under 10 years	27.73	3.67
10 to 19 years	23.44	10.06
20 to 29 years	17.07	21.81
30 to 44 years	16.95	29.30
45 to 54 years	6.63	16.41
55 to 64 years	4.04	11.00
65 years and over	3.33	7.48
Age unknown	0.21	0.27

From this it appears that while more than one-half of the total native white population belong to the periods of childhood and youth, less than 20 years of age, only 13.73 per cent of the foreign whites are under 20. The years of life from 20 to 45 may be considered as the most productive. The proportion of the native-born population falling within these years is only 34 per cent, while the proportion of the foreign-born population is 51 per cent.

The same facts appear from the statistics of the ages of immigrants. * The following table shows the percentage of immigrants under 15, between 15 and 40, and over 40, during the years 1873-1890:†

Percentage of immigrants under 15 years of age, between 15 and 40, and over 40, from 1873 to 1890.

	Under 15 years.	15 to 40 years.	Over 40 years.
Total	20.9	68.0	11.1
England and Wales	22.8	65.0	12.2
Scotland	23.0	64.6	12.4
Ireland	14.6	77.4	8.0
Hungary	15.4	74.2	10.4
Austria	23.9	64.2	11.9
Germany	25.8	62.5	11.7
Italy	15.6	69.0	15.4
Norway	20.7	67.9	11.4
Russia and Poland	26.2	63.8	10.0
Sweden	17.5	73.6	8.9
British America	19.4	67.9	12.7
China	7.4	88.9	3.7

It will be seen that the proportion of all immigrants under 15 years of age is slightly over one-fifth, whereas among the native whites the proportion was almost exactly two-fifths in 1890.‡ The immigrants belonging to the more productive years, from 15 to 40, constitute no less than 68 per cent of the total number. This table shows also that the nations from which the largest proportion of immigrants fall within the ages of 15 to 40—indicating that immigration by families is relatively less than the immigration of the unmarried—are Ireland, Hungary, Italy, Sweden, and China.

The relative proportion of immigrants belonging to ages from 15 to 40 is still greater during the 5 years from 1895 to 1899 than during the period covered by the above table. The proportion under 15 during these last 5 years is 15.9 per cent; from 15 to 40, 74.1 per cent; and over 40, 10 per cent.

Relative proportions of native and foreign born engaged in gainful occupations.—Chiefly because of the predominance of males and of persons in the more productive years of life among the foreign-born, we find that a much larger proportion of the total number of foreign-born in this country is engaged in gainful occupations than among the native-born. This means, of course, that the foreign-born compete to a greater degree with native labor than their mere aggregate numbers, compared with the number of native-born, would indicate. The following table shows the proportions which the different elements of the population bore to the total population according to the census of 1890, together with the proportion belonging to each class engaged in occupations, as compared with the total number of persons occupied.§

† Report of Superintendent of Immigration, 1892, p. 15.

‡ Census, Population, II, xvi.

§ Census, Population, II, cxvii.

Percentages of each group of occupations, by nativity and color.

Nativity and color.	Proportion of total population.	All occupations.	Agriculture, fisheries, and mining.	Professional service.	Domestic and personal service.	Trade and transportation.	Manufacturing and mechanical industries.
Native white, native parents.	55.30	47.92	56.83	67.86	30.78	51.79	40.60
Native white, foreign parents	18.37	15.58	8.81	16.34	14.15	22.09	24.40
Foreign white.....	14.40	22.45	14.49	12.08	31.53	21.42	31.37
Total colored.....	11.98	14.05	19.87	3.72	23.54	4.70	3.63

From this table it appears that whereas the foreign-born whites constituted only 14.40 per cent of the total population in 1890, those foreign-born whites who were engaged in gainful occupations constituted no less than 22.45 per cent of the total number in such occupations. The competition of the foreign-born is most conspicuous in the groups of industry classed as "domestic and personal service" and "manufacturing and mechanical industries." In each case the number of foreign-born whites occupied is more than 31 per cent of the total number engaged in these occupations. The foreigners are less inclined to enter agriculture, and usually are less competent for professional service, which explains the fact that the proportion of the foreign-born occupied in these groups of industries, as compared with the total number engaged in them, is not greater than their proportion to the total population.

While, as has been said, the greater proportion of the foreign-born engaged in gainful occupations is primarily due to the predominance of males and of persons belonging to the productive age groups, it will be seen from the following table that within each age group—including those groups where the largest proportion of all classes is engaged in gainful occupation—the foreign-born show a larger proportion of persons so occupied, both among the males and among the females, than do the native-born, whether of native or foreign parentage. The difference between the proportions occupied is naturally least during the ages from 25 to 54, but even here the foreign-born show approximately 1 per cent more employed than the native-born among the males, while the disparity in the case of the females is, as might be expected, considerably greater.

Percentage of total population of each element above 10 years of age engaged in gainful occupations, by age groups.

[Census, Population, II, p. cxxii.]

Sex and age periods	Native white—		Foreign white.	Colored.
	Native parentage.	Foreign parentage.

45 to 54.....	9.84	10.89	10.51	37.59

Occupations chiefly entered by foreign-born.—We have already commented upon the fact that the foreign-born show a special inclination to enter the industries belonging to the groups of domestic and personal service and manufacturing and mechanical industries. While a considerable proportion of the immigrants on their arrival declare that their occupation is that of farming, comparatively few of these, at least in the case of the more southern and eastern nationalities of Europe, actually enter into agriculture in this country. They drift into unskilled forms of labor, the

males going largely into mining, into common day labor, and into work of a less skilled character in our factories. A record is kept by the Commissioner of Immigration of the occupations to which the immigrants declare that they belong, but this, of course, gives comparatively little light as to the occupations which they actually enter. These occupations are grouped as professional, skilled, and unskilled, but it naturally does not follow even that those who declare themselves as belonging to one of the skilled occupations actually enter upon skilled labor in this country. A large proportion are returned as being without occupation, but these are chiefly children and women. The following table shows the number and the percentage belonging to each of these groups among the immigrants arriving in this country from 1881 to 1890:¹

Classes of occupations of immigrants arriving in this country, 1881 to 1890, inclusive.

	Males.	Females.	Total.	Per cent of males.
Professional	25,257	1,749	27,006	0.8
Skilled	614,552	25,859	640,411	16.1
Unskilled	1,833,326	245,810	2,079,135	57.1
Not stated	73,327	42,830	116,157	2.2
Without occupation	759,450	1,724,454	2,483,904	23.7
Total	3,205,911	2,040,702	5,246,613	100

It will be seen that only 16 per cent of the males declared themselves as belonging to skilled occupations, while 57 per cent are rated unskilled, and 23 per cent as without occupation.

The following table, compiled from the United States Census of 1890, shows the absolute number of foreign-born males engaged in the leading occupations entered by them, together with the percentage which they bear to the total number of workers engaged in that occupation.² These figures should be considered with the fact in mind that the total number of foreign-born males in this country at that time was equal to 15.8 per cent of the total male population.

Foreign-born males in principal occupations.

	Number.	Per cent of total workers.
Agriculture and mining:		
Agricultural laborers	243,947	9.54
Farmers, planters, and overseers	743,161	14.70

Wood workers (not otherwise specified).....	21,577	33.93

It will be seen that a large number of our immigrants have entered our mines and quarries, the percentage of the foreign-born in those occupations being no less than 48.71 per cent. A large percentage of the total number engaged in the leading forms of domestic and personal service are also foreign-born, the proportion of restaurant and saloon keepers being very nearly one-half. The largest absolute number of the foreign-born engaged in any one occupation (with the exception of agriculture) are those classed as "laborers, not specified." The proportion of the foreign-born is slightly over one-fourth of the total number of such laborers.

A large number and proportion of the foreign-born are also engaged as boatmen and sailors, as hucksters and peddlers, and as merchants and dealers. Nearly one-fourth of the total number of railroad employees also are of foreign birth. It should be noted that this class, as given in the census, does not include mere track laborers.

In many of the mining and mechanical industries the foreign-born constitute from one-fourth to one-half of the total number of employees. Their competition is most conspicuous apparently in the following occupations: Tailors, bakers, boot and shoe makers and repairers, brick and tile makers, butchers, cabinetmakers and upholsters, textile mill operatives (46.05 per cent), leather dressers and tanners, marble and stone cutters, masons, and tailors.

The following table shows similarly the percentage of foreign-born females engaged in the principal occupations entered by them to the total number of females in those occupations. The proportion of foreign-born females to the total number of females in the country in 1890 was 13.7 per cent.¹

¹ Census, Population, II, cxix, I, 486.

Tobacco and cigar factory operatives.....	7,124	25.45

Another way of looking at the same facts shown by the above tables is to take the proportion of persons belonging to each class of the population who are engaged in each leading industry as compared with the total number in that class who are engaged in productive labor. These proportions for males only are shown in the following table, the total number of each class employed in all industries being taken as 100:

Percentage of total number of males employed of each element of population in principal industries entered by them, 1890.¹

Native white, native parents.....	100.00	Foreign white.....	100.00
Farmers and planters.....	35.03	Farmers and planters.....	17.16

Miners and quarrymen.....	2.24	Laundresses.....	.98
Carpenters and joiners.....	2.87	Planing-mill employees, etc.....	.80

While in each group of the population the largest proportion of the total number occupied is engaged in farming or in agricultural labor, the relative proportions in the cases of the different groups differ very greatly. While 48.79 per cent of all native whites of native parents are engaged in agriculture, only 22.79 per cent of foreign whites are so engaged. The second generation of the foreign classes shows only a slightly greater inclination toward agricultural life than the first generation, the percentage of native whites of foreign parents on the farms being only 25 per cent.

The extent to which the foreign-born and their immediate descendants perform the unskilled labor of the country is shown by the fact that 15.35 per cent of the total number of foreign-born engaged in all occupations are classed as common laborers, and 8.51 per cent of the native-born of foreign parents, while only 6.59 per cent of the native whites of native parents engaged in productive labor belong to this class. Similarly 4.35 per cent of foreign whites are occupied in mines and quarries,

¹ Census, Population, II, cxx.

while the proportion of native whites of native parents so occupied is barely 1 per cent. The proportion of foreign whites working in cotton and textile mills is more than twice as great as the proportion of native whites. Other interesting comparisons may be made by studying the above table.

Marked differences in the degree of skill and in the relative inclination of adaptability for different industries manifest themselves among the different nationalities of the foreign-born. These differences are brought out in the following table, which is prepared in the same manner as the one just preceding, so as to show the proportion of those out of the total number of each nationality engaged in gainful occupations who enter into each of the leading industries.¹ The figures for each nationality may be profitably compared with those already given for the native whites of native parents and the foreign whites.

Percentage of total number of males employed of each nationality, in principal industries entered by them, 1890.

While in no case does the proportion of immigrants who are occupied on the farms equal the proportion of native whites of native parentage so occupied, it will be seen from this table that the following nationalities, in the order specified, are more inclined toward agricultural life than the average of the foreign whites: Denmark (40.78 per cent), Sweden and Norway (38.26 per cent), Germany (27.04 per cent), and Bohemia. The immigrants from Great Britain show comparatively little inclination toward the farms, the Irish especially having but 14.17 per cent of their total number in gainful occupations thus engaged. The lowest proportions of farmers are found among the Russians, Italians (5.81 per cent), and Hungarians (3.92 per cent).

The nationalities showing the largest proportion of unskilled labor are, respectively, Italy (34.15 per cent), Hungary (32.44 per cent), Ireland (25.16 per cent), and French-Canada (16.43 per cent). The lowest percentages of unskilled laborers are found among the foreign born from England and Wales, Scotland, and Germany.

Immigrants from Hungary, Russia and Poland, and Italy are especially engaged in mining and quarrying, nearly one-fifth of the Hungarians being so occupied.

The most conspicuous fact indicated in the above table, aside from those already brought out, is the large proportion of Russians and Poles engaged as tailors and as hucksters and peddlers. It must be remembered that most of the immigrants from those countries are Hebrews, and largely settle in the sweat-shop districts of our great cities.

The following table, compiled from the report of the Commissioner-General of Immigration for the year 1900, shows, by races instead of countries, the proportion of males among immigration. The table is arranged in the order of precedence. It will be seen that the largest proportion of males is among the Chinese, Japanese, and Greeks, amounting to more than 99 per cent in the case of the Chinese and nearly 97 per cent in the case of the Greeks. The Croatians, who are immigrating in large numbers at the present time, show nearly 87 per cent males, indicating the recent beginning of that immigration. The same is true of the Slovaks, numbering 72.6 per cent male. This table brings out clearly the difference between the Russians and the Hebrews as contrasted with the preceding table based on countries of origin. In this table the Russians show 72 per cent males, whereas the Hebrews show 59.88 per cent. The Hebrew immigration is a permanent one, and the families are brought to this country as rapidly as they are able to pay the expenses. The Irish immigration shows a considerable smaller proportion of males than the preceding table, namely, 46.82 per cent, indicating the increasing immigration of Irish girls as servants.

Per cent of males among immigrants, distributed by races, 1900.

Unfortunately no statistics are available to show how many of the unmarried men coming to this country as laborers are "birds of passage," who return at the end of each season or after a short period of years to their native land. It is quite generally believed, however, that this practice is very common, especially among the Italians.

The following table, compiled from the report of the Commissioner-General of Immigration for the year 1900, shows, by races and numbers, the proportion between skilled and unskilled laborers. Unfortunately the proportions are not conclusive, since the reports include women in the class indicated as having "no occupation." At the same time the table is fairly indicative of the relative position of different races in this respect. It will be seen that the race which shows the largest proportion of skilled laborers is that of the Cubans, namely, 40.93 per cent. This is owing to the large immigration of cigar makers. The next are the Hebrews, 34.6 per cent, largely tailors. Following this are the immigrants from England, with 28.9 per cent skilled laborers, and the Scotch, 31.7 per cent. Next are the French, with 24.8 per cent skilled. On the other hand, the races having the largest proportion of unskilled and miscellaneous laborers are the Chinese, Japanese, Croatians, Russians, Greeks, Italians, Lithuanian, Magyar, Polish, Portuguese, Ruthenian, Scandinavian, and Slovaks.

CHAPTER II.

RELATION OF IMMIGRATION TO OTHER CAUSES AFFECTING WAGES AND EMPLOYMENT.

In addition to the general data regarding the distribution of immigrants among the several occupations, given in the preceding chapter, a more detailed examination is made in the following pages of certain occupations in which immigration has played an important part. These are especially the clothing manufacture and coal mining, and, to a lesser extent, cigar making and common unskilled labor. Preliminary to this detailed examination, the following introductory observations are thought to be in place:

The effect of immigration on wages and unemployment can not be considered apart from other causes which tend either to depress or to elevate wages, or to increase or diminish the amount of employment. Among the principal of these other causes are the cycles of business prosperity and depression, the introduction of machinery and subdivision of labor, the competition of women and children, country competition, and labor organization. The problem of separating out immigration from these other causes is one of extreme difficulty. It will be found that immigration exerts its greatest influence in those occupations where without immigration other causes tend already to depress wages. If machinery and minute subdivision of labor opens a place for the unskilled immigrant, they also open a place for women and children. And in other cases, where the immigrant might be supposed to have cut wages, it is found that in country competition native Americans are doing the same class of work at even lower prices than those received by the immigrant.

The competition with American labor created by immigration may affect wages in two ways, first, by an oversupply of labor, and, second, by the displacement of higher standards by lower standards of living. These two causes may be separated in our consideration and each judged upon its own merits. Suppose, in the first place, that all of the incoming immigrants for the past fifty years held the same standards of living as those Americans with whom they competed for jobs, would such immigration have overstocked the labor market and brought about depression in wages, or an increased amount of unemployment? This question may be stated in another way: Suppose, instead of immigration during the past fifty years, the same growth of population would have occurred through the natural increase of American stock already in the country, as maintained by President Walker in the article quoted on page 277, would such natural increase have caused a fall in wages and lack of employment?

To be sure, immigration, as has been shown in the preceding chapter, on account of the large proportion of adults and males, contributes to the working population more than would the natural increase of population, and, moreover, the immigrants crowd into the occupations unequally, and are not evenly distributed through all, as is the natural increase. Neglecting, for the present, these differences, and assuming that the new population comes with the same standard of living as the existing population, and is distributed evenly, it follows that the opportunities for the new hands depend upon the expansion of industry and the resources of the country. If the resources of the country are not yet diminishing, then the new hands which go into agriculture, mining, manufactures, transportation, etc., continue to produce wealth in the same proportion as formerly, and continue to get their wages by exchanging their products among themselves the same as before. Now, American industry has been expanding even more rapidly than population. New lands have been opened up either by clearing or by irrigation, and the expansion of agriculture creates a demand for increased manufactures. There has been, also, a more intensive utilization of old lands through more scientific farming. Again, in manufactures, mining, and transportation there has been a rapid advance in machinery and a better organization and division of labor, whereby the resources of the country are made more productive. This advance in machinery and division of labor often appears in itself to be a means of displacing labor and so of depressing wages, and such would be the case if industry as a whole were not continually expanding. The effect of machinery in displacing labor is similar to the effect of immigration in displacing labor. In both cases a third factor is essential, namely, business conditions. Business prosperity is but another name for expansion of trade, the opening up of new resources, the investment of new capital. Provided this expansion occurs there is no overcrowding of the labor market. The new resources and new investments demand new labor; and, if the expansion is strong enough, the new labor as well as the existing labor may secure advances in wages. But if business prosperity gives way to business depression then not only is the new labor a surplus but the existing army of laborers lacks employment. In time of depression not only machinery, but also immigration, and even the natural increase of population, add their influence in a cumulative fashion to overcrowd the labor market and displace labor.

I. CYCLES OF PROSPERITY AND DEPRESSION.

These observations are pertinent when we come to consider the alternations of prosperity and depression. Whatever the causes, the cycles of business activity and stagnation seem to be world-wide. These cycles are measured commercially in the rising and falling of the prices of commodities and in the volumes of sales. The so-called series of "index numbers" of prices present in concise form the movement of the general level of prices over a period of years. The accompanying chart is based on the index numbers of the Aldrich Report, compiled by the United States Department of Labor for the years 1840 to 1891, supplemented by the index numbers of the Bureau of Economic Research for the years 1879 to 1900. Taking the prices of a given year or set of years (Aldrich, 1860; Bureau, 1879-89), as a basis, the prices of the same commodities, including the leading staples at wholesale, are computed in percentages of the basis. These percentages, or "index numbers," will show, therefore, the rise and fall of prices, each general rise being usually coincident with increasing volume of sales, and indicating business activity and prosperity, and each general fall being coincident with decreasing volume of sales and business depression. In the diagram the annual volume of immigration is also presented, in order that it may be compared with the business prosperity and depression of the country.

In examining the diagram it will be seen that there is a striking coincidence, since the year 1868, between business conditions and the volume of immigration. From 1869 to 1872 there is an increase in prices of 13 per cent, and an increase in immigration which had begun to increase in 1869 from 352,768 and continued until 1873, when it reached 459,803, an increase of 30.3 per cent. The depression from 1872 to 1879, shown in a fall of 24 per cent in prices, was accompanied with a decline in immigration to 138,469 in 1878, a decrease of 69.8 per cent. The business recovery to 1882 shows an enormous increase in immigration, reaching the highest figure of the century, 788,992. The decline in prices to 1886 was accompanied with a decline in immigration, and the industrial recovery to 1892 by an increase in immigration. The decline in immigration after 1892 came at the same time as the new administrative law of 1893, which improved the efficiency of the restrictions on immigration, and, were it not for the regular cycle of immigration accompanying the cycle of prosperity and depression, the influence of that law might be cited as a cause for

the decline. Lastly, the recovery in business since 1897 is reflected in the rise of immigration in 1899 to 1900.

Taking these considerations into account it may well be said that immigration since the civil war is a reflection of industrial conditions. Going back to years prior to the civil war we find that political causes were added to industrial causes. The increase in immigration from 1843 to 1847 accompanied an increase in business activity, but the panic of 1847 did not cause a decline in immigration, because at that time the political revolutions on the Continent and the famine in Ireland occurred at the very time when the depression was at its depth. Again, 2 years before the rise in prosperity had received its check in 1857, the decline in immigration had begun, and very low points were reached during the civil war. Following this period, however, as already shown, immigration follows closely the state of industrial activity.

It must not, however, be assumed that in recent years immigration is strictly economic. While there has been an increase along with returning prosperity in the United States, this increase has not come in a marked degree from prosperous countries with advanced constitutional Governments nor from the dominant races of other countries. From Russia in 1900 there were only 1,165 "Russians," but there were 37,011 Hebrews, 12,515 Finns, 10,297 Lithuanians, 22,500 Poles, 5,349 Germans. From Austro-Hungary there were 13,776 of the dominant Magyars out of a total Magyar population of 19,000,000, but there were 17,163 Croatians and Slovenians from a population of 2,200,000, 22,802 Poles from a population of 3,700,000, 29,183 Slovaks from a population of perhaps 3,000,000.

Even of Italy the large immigration comes mainly from southern provinces, which, on account of their lack of political suffrage, have been discriminated against in taxes and landlord exactions. While, of course, economic considerations are always present in immigration, the foregoing considerations suggest that it is the unequal distribution of this economic pressure through political and racial oppression that drives subject races to our shores.

Average daily wages in gold, 1870-1898.

1884	2.25	2.43	2.53	2.63	1.41	1.14	1.36	1.52	1.43	1.22	1.76	1.75	1.60	1.53	1.25	1.46	1.36	1.24	1.34	1.30	1.70	1.73	1.07	1.58
1885	2.25	2.43	2.53	2.63	1.41	1.14	1.36	1.52	1.43	1.22	1.76	1.75	1.60	1.53	1.25	1.46	1.36	1.24	1.34	1.30	1.70	1.73	1.07	1.58
1886	2.25	2.43	2.53	2.63	1.41	1.14	1.36	1.52	1.43	1.22	1.76	1.75	1.60	1.53	1.25	1.46	1.36	1.24	1.34	1.30	1.70	1.73	1.07	1.58

At the same time, it is quite plain that in times of business expansion, when capital is seeking investment and the resources of the country are being eagerly developed, these immigrants enter in increasing numbers to take a share of the increasing wages and employment, but in times of business depression their numbers decline.

That immigration, however, is not a leading cause affecting wages of American labor may be inferred from a study of the movement of wages during the past 30 years. The accompanying table and chart give a comparison of the movement of prices of commodities and the movement of wages for the years 1870 to 1900. The line of prices is the same as that contained in the chart opposite page 305.

The wages are derived from Bulletin of the United States Department of Labor for September, 1898, and July and September, 1900. The Bulletin of September, 1898, presents 255 wage quotations for 12 leading cities of the United States (Baltimore, Boston, Chicago, Cincinnati, New Orleans, New York, Philadelphia, Pittsburg, Richmond, Va., St. Louis, St. Paul, San Francisco), including skilled and unskilled labor in 25 occupations.

The later Bulletin presents 192 occupations in 26 industries and 148 establishments. In the accompanying table and diagram these series of wages, for the sake of comparison, have each been converted into "index numbers," using the average wages of the year 1891 as a basis equivalent to 100. It will be seen that the wage movements indicated by the two sets of index numbers for 1891 to 1898, while not parallel, are nevertheless indicative of similar conditions operating in both cases.

Average wages and index number of wages, 1870-1900.

¹ Bulletin of the Department of Labor, September, 1898, p. 668.

² Bulletin of the Department of Labor, September, 1900, p. 914.

Comparing the level of wages with the level of prices (the latter indicating the expansion and depression of business) it can be seen that from 1870 to 1872 both show a rise. From 1872 to 1876 wages decline from 96.26 to 85.65, and then show a steady recovery until 1884. But prices decline rapidly until 1879, and then recover even more rapidly until 1882. The depression in prices of 1884-85 shows a slight depression in wages, but there is a steady recovery until 1892, after which both prices and wages fall until 1897-98. In the two years of 1899 and 1900 both prices and wages show a marked increase.

In making a comparison like the foregoing, with the view of showing the part played by business expansion and depression upon wages, it must be noted that two important factors are omitted, namely, the volume of trade and the amount of unemployment. This defect is owing solely to the absence of statistical compilations bearing upon these factors. The movement of average wages, as shown by the diagram, does not respond promptly to the movement of prices simply because the wages quoted are the rates of daily wages and not yearly earnings. They do not take into account the quantity of employment during the year. If this factor were introduced, and if the rate of wages were qualified by a coefficient of the amount of employment, it would doubtless be found that the parallel between the movement of prices and the movement of yearly earnings is very close. Evidence of this can be

found in the following table, wherein the index numbers of wages, as given in the Bulletin of 1900, have been corrected by an index of the amount of yearly employment:

Year.	Index numbers of rates of wages, Bulletin of Department of Labor	Per cent of employment of organized labor in the State of New York.	Index numbers of yearly earnings.
1897	98.96	87.8	86.88
1898	98.79	92.3	91.18
1899	101.54	94.1	95.63
1900	103.43	92.7	95.89
Increase per cent, 1897-1900	4.51	10.37

The index of employment is derived from a percentage of the number of unemployed members of the labor unions reporting to the New York Bureau of Labor Statistics, compared with the entire membership of such unions. For example, in 1897 the number of members unemployed through the year was 12.2 per cent of the total membership, or, conversely, the number of members employed through the year was 87.8 per cent of the total membership. In 1900 the number employed was 92.7 per cent. Using these percentages of employment as a coefficient of the index numbers of the rates of wages, in order to get an approximate index of yearly earnings instead of daily rates of wages, it will be seen that the index number of yearly earnings for 1897 is 86.88 and for 1900 is 95.89. In other words, the yearly earnings in 1900 were 10.37 per cent higher than in 1897, although the daily rate was only 4.51 per cent higher. Comparing the movement of this index of yearly earnings with index of daily rate of wages it will be seen that it lies much closer to a parallel with the movement of prices. (See chart, line D.) Were it possible to compile a series of percentages of unemployment for the years preceding 1897, doubtless the coincidence year by year would be found quite close between yearly earnings and business prosperity and depression. This being so, the conclusion is strongly reinforced that, since immigration follows business conditions in obedience to the opportunities for employment, it is a secondary cause in affecting wages and is indeed in importance far below the primary cause. With expanding business there is increasing room for both immigrants and natives. It is possible, of course, that the presence of immigrants in large numbers may prevent wages from reaching as high a level in time of prosperity as they otherwise would reach, but this can not, in the nature of the case, be demonstrated. On the other hand, in times of depression the lessened numbers of immigrants are entering an overstocked market and are thereby adding to the critical unemployment and depression of wages.

It must be remembered that the foregoing conclusions depend for their accuracy upon the two assumptions that the immigrant brings the same standard of living as that maintained by American labor, and that immigrants are proportionately distributed among the various occupations. That these assumptions are not valid need not be stated, and it is necessary now to inquire what modification shall be made in the conclusions after correcting these invalid assumptions.

II. STANDARD OF LIVING.

The following table shows in a comparative way the wages of unskilled laborers in Europe and in American cities and farming communities.

In this table the rates of wages quoted are to be considered as only indicative of the relative wages in the different States and localities, since it has not been possible to compile an exhaustive report covering accurately so wide and uncertain a field of research. The different sources drawn upon are the Bulletin of the Department of Labor (September, 1898); reports of the United States Department of Agriculture; the Royal Commission on Labor, 1894; King & Okey's "Italy To-day," 1900; personal correspondence with American farmers, and personal interviews with immigrants from the several countries of Europe.

The significant comparison in this table is that between the wages of agricultural labor in Europe and the wages of common labor in American cities, for it must be remembered that immigration is a part of the modern movement from the country to the city. From this point of view it will be seen that in those countries of eastern and southern Europe from which immigration has largely increased in recent years the wages of agricultural labor are about one-fifth of the wages of unskilled labor in American cities.

Average daily wages for unskilled labor in United States and in Europe.

Locality.	Agricultural labor, outside harvest.	Laborers in cities.	Hod carriers.	Black-smiths' helpers.	Boiler-makers' helpers.	Iron mold-ers' helpers.	Machin-ists' helpers.	Miners.

While wages are lower in Europe and Asia, it is also true that the cost of living is lower. It is generally claimed by immigrants that 30 to 40 cents on the Continent of Europe will go as far as \$1 in the United States. Comparing Italy, for example, it is held by immigrants that wages in the United States are five times as high and cost of living is three times as high as in their foreign home. This would indicate that the Italian can live on wages three-fifths as high as the wages of American labor with which he competes. But this comparison is inadequate, because it omits an element which is difficult of measurement, namely, the necessary change in the standard of living in order to work in America. It must not be assumed that in all cases low standards of living are an economic advantage in competition with high standards. The Italian who lives largely on vegetables in Italy can not do the work of American laborers unless he has meat and bread. It is everywhere found in all American occupations that the immigrant can not keep pace with American mechanics and laborers. For the first year or more the pattern of speed set for him exhausts his strength. It is not merely that he is ignorant of American methods and devices; he is also unequal to the American intensity of exertion. He must necessarily, therefore, begin at a low rate of pay or not work at all. This is one reason why, in occupations controlled by strong labor organizations, there is entire reciprocity between the American and European unions. The Europeans bringing their "cards" are admitted to the full privileges of American members, provided they do not work for less than the scale of wages. But at that scale and with their lower energy they are at first unprofitable to the employer. On the other hand, in the unorganized trades where there is no scale of wages, and where the employer makes an individual bargain with each workman, a place can be found for immigrants at very low pay. The employer is not usually willing to resort to such labor, preferring to pay higher wages to skilled workmen, but he finds their presence useful in order temporarily to take the places of skilled workmen who go out on a strike, or to hold as a club to threaten those who demand higher pay.

This hot exertion of American mechanics and laborers is directly traceable to the mobility of American labor, including under that term immigration. Men who have left their homes and gone among strangers are thrown upon their individual merits, and are spurred to activity greater than they ever felt before. Their traditions and habits of life are broken. They leave the customary track and break across into new

paths. Moreover, with mixed nationalities and languages, labor organization and labor traditions are weakened, and it becomes less feasible to restrict arbitrarily the amount of work a man shall be permitted to do. Where employers concentrate on that point they are able to make a stronger fight in favor of removing all restrictions, both to the introduction of machinery and to the speeding of the workmen, than the employers of other countries with homogeneous labor are able to do. It is in the mixed nationalities and the mobility of labor that the resisting power of labor is weakened. This shows itself not only in the more vigorous exertion which the employer can exact but also in the repeated reductions of wages.

Here we touch a striking feature of American labor conditions. Where divergent nationalities have been introduced and the former high-standard labor has been displaced, labor organization is usually effectively stopped. Race antagonisms are usually combined with religious antagonisms, and even politics is introduced to buy up the leaders. Cutthroat competition of the severest kind now depresses wages year after year, and even the return of prosperity affords little or no relief. Finally, the point of desperation is reached. The increased exertion and exactions require at least a minimum wage in order to provide the necessary food. Even though wages be not reduced, yet the amount of exertion may have been steadily increased until the former wages no longer furnish even the vital energy required. The standard of living now becomes a question of merely sustaining the needed physical endurance. At such a point the incomers are ready to drop all questions of race, religion, and politics. Their animal necessities compel them to organize on the strictly economic basis of getting enough food, shelter, and rest to continue work. This was the point reached by the bituminous coal miners in 1897 and the anthracite coal miners in 1900, and the remarkable organization in that occupation at the present time is a result of the direst poverty to which a large class of labor in this country has probably ever been reduced. In the clothing trade, indeed, a similar condition has been reached, but, in addition to the opposition of a class of highly skilled workmen not found in mining, the continuous influx of immigrants has not yet afforded a breathing spell for organization.

Another reason why in the clothing trade the depression in wages has not brought determined and general resistance is because, in that trade, the labor of wife and children can be drafted to aid that of the husband and father. As will be seen below, the race or class of labor which learns to depend on the labor of wife and children clings to the cities and factory towns where these can be employed. The race where the standard of living of the family is not supported by the husband alone has an advantage over other races which are averse to employing their women and children. It is in this way especially, and not because his standard itself is low after a few years' residence, that the Italian is a formidable competitor of the Jew in clothing, and of all nationalities in common labor.

III. UNEQUAL DISTRIBUTION OF IMMIGRANTS.

There is still another correction to be introduced in our assumption of the probable effects of immigration compared with a natural increase in population of the same extent, namely, the unequal distribution of immigrants in the several occupations and localities. This unequal distribution has already been pointed out (p. 298). From the eastern ports and the Canadian border much louder complaint is heard than from the interior. From unskilled and unorganized occupations in cities the complaint is more urgent than from those which have been able to protect themselves. Certain unions, such as glass blowers, charge an initiation fee higher for aliens than for citizens. Others, like the eccentric firemen in New York, have secured a State license law restricting the license to citizens. This, of course, keeps the immigrant from obtaining work until he has been a resident at least five years. On public work legislation has frequently restricted employment to citizens. But where these attempts to lessen the pressure of immigration are not applicable, the immigrant operates with concentrated effect. This is especially true in ordinary, common labor, coal mining, clothing and textile manufactures. Here there is overcrowding, displacement of American or of earlier immigrant labor, without directly depressing wages in other employments. A part of the displaced classes seek other occupations where a higher standard can be maintained. Many coal miners sought the western and northern metal mines; others turned to farming. In case migration is not available, the displaced workman may be able to rise on top of the immigrant and become his foreman, his boss, or the proprietor of his working place. On the other hand, the inferior individuals of the displaced classes, refusing to compete alongside the immigrant, and incapable or unwilling to rise and better their condition, fall into the class of hoodlums, tramps, and paupers. There is a hardship in the transition, and there is a restriction on the growth of population of the displaced classes, both of those who rise and those who fall. Those who rise restrict their

numbers by late marriages and small families, in order to lessen the pressure of competition, and those who fall reduce their numbers by vice and pauperism. In either case the intensity and extent of the result depends upon the general industrial prosperity or depression.

The fate of the immigrants themselves who have displaced the earlier workers is a matter of organization next to be considered.

IV. LABOR ORGANIZATION.

As already noted, the leading influence which at the present time resists or overcomes the depressing effect on wages of immigrant competition is labor organization. While the fate of those who are displaced by increasing numbers of immigrants turns, as already stated, upon the industrial conditions of the country and the demand for employment, a leading object of labor organization is to sustain its members in times of industrial depression and to protect them from this very displacement and to maintain the rates of wages and standards of living to which they have been accustomed. Owing to the unequal pressure of immigration, certain occupations, as above mentioned, have been brought to such a low state that the American workman finds himself miserable if he can not escape from them. Such occupations fail to respond even to a period of prosperity, since this very prosperity brings an increase of immigration which falls mainly into their overcrowded confines. Now, labor organization in America, as regards immigration, has two aspects. It is, first, apart from legislation, the only bulwark which the Americanized workmen are able to erect against the flood of immigration, and, second, in case this bulwark is broken down and the occupation has been filled by immigrants, organization is the only means by which the immigrants themselves can rise to the standards of those whom they displace. The first aspect is seen in those strong trade bodies based upon skill and not seriously affected by machinery, which, like the glass blowers, printers, molders, building workmen, and several others, have forced the immigrant to take himself to other lines of less resistance. The second aspect is seen in those occupations with less skill or more machinery, like those of the coal miners, textile workers, clothing workers, or common laborers, which have already in years passed been largely given over to the immigrant. In either of these aspects the menace of immigration is present more or less in three ways.

First, as workmen imported from abroad under contract or by solicitation to take the place of organized labor at times of strike or lockout. At such times the position of the organization is critical, since the result of the dispute determines for months and years to come the wages and standards of the occupation. The employer of course, appreciates the crisis and goes to the furthest limit in his effort to break the organization. If he can bring workmen from abroad, ignorant of the issues and the nature of organization, he has a decisive advantage. For this reason labor organizations at an early day directed their first attention to prohibiting importation of laborers under contract. This led to the alien contract labor laws in 1885 and amendments in the following years. This law and its workings are fully described in the following pages, but it is important to notice at this place that if labor organization is to be considered a desirable means of protection for American labor then the alien contract labor law and its effective enforcement are a first essential. By weakening or breaking down this law, labor organizations in the United States can be crippled and in many cases destroyed.

2. The second menace of immigration to the labor organization is in the steady immigration of poor but hardworking people who are unfamiliar with the traditions and customs of organization, unaccustomed to the rules and the control which it imposes, incapable of learning the same through their ignorance of the language, and, moreover, forced by their poverty to work for low wages, and, by their lack of friends, to work with docility and desperate energy for him who first gives them a job. This phase of immigration is undoubtedly by far the principal characteristic at the present time, and so predominant is it that there is much less inducement for employers to contract with laborers abroad than there was when immigration was an unknown risk. The constant influx of this class of immigrants into a trade nullifies, as in the clothing trade, the educational work of organization almost as rapidly as it is conducted. About 2 or 3 years after landing are enough to bring the immigrant to a realizing sense of the need of organization and to train him up to a certain ability in promoting it, but by that time a further crowd of inexperienced immigrants, who can not be reached by the organization, has gained a decisive influence in the trade. This accounts partly for the remarkable fact in the clothing trade in New York that the unions have won nearly every strike that they have conducted, but have been unable to hold the contractors to their agreements, because the latter were able so easily to introduce green laborers. This accounts also for the fact in the mine workers' organization that the State of Illinois is far better organized than the State of Pennsylvania. The latter State has the reputation throughout the

labor element of the entire Union as a State of cheap labor, and in no State are the problems of organization more trying. Immigrant labor from all nationalities of Europe, which 30 years ago was largely imported from abroad into that State and was used to break down strikes and unionism, has in later years come in large numbers by the mere attraction of those already here. To bring this constant influx of new labor into the unions is practically impossible. The fresh immigrant, who has for the most part been a farm hand, must first have a few years' practical experience of the results upon himself of his unrestricted competition, must have time to understand the conditions of the occupation and the objects of unionism, and must have opportunity to know the leaders whom he can trust. This brings us to the third aspect in which immigration menaces the organization of labor.

3. There is no country in which the problem of labor organization is more complicated by a multitude of disintegrating causes than in the United States, and these causes are based directly on immigration. In the same occupation, working side by side or in the same competitive field, are often found Irishmen, Negroes, Englishmen, Germans, Poles, Slovaks, Magyars, Lithuanians, Italians, Croatians, and in others French Canadians, Armenians, Syrians, and so on. These have largely come from despotic countries, where organization was put down by the military power and where violence is the accepted remedy for oppression. They bring with them differences in language, so that in their business meetings the motions and speeches must be translated by several interpreters. Their race differences are accompanied by the religious differences of Roman Catholic, Greek Catholic, Protestant, and Hebrew. Often within their own races and religions are factional differences, sometimes more bitter than race differences, as between the north and south Italians, or between Russian and Austrian Poles. With all of these differences it is an easy matter for employers and foremen to play race, religion, and faction one against the other. As a practical fact, shown hereafter in many cases nothing short of the verge of starvation is adequate to eliminate these conflicts and to bring these diverse races, religions, languages, and factions down to the simple economic basis of labor organization. Even this is not enough where the women and children of immigrant races can be introduced to take the places of men. In such cases the men necessarily seek work elsewhere, but, apart from women and children, poverty may be relied upon, sooner or later, to bring the nationalities together.

This problem of mixed nationalities results in at least one novelty in the method of organization of American labor unions compared with those of other countries, namely, branch organizations based on race. The difficulties of language preclude a mixed meeting of all races. The members of each naturally cling together and follow their own race leader, and are jealous of the leadership of others. These leaders, however, once elected by their own race constituencies, are able to come together in a council or governing body for all the branches. The result is that each local is based on representative government rather than the primary assembly which usually characterizes the local bodies of labor unions. This feature of organization is noted in the following pages in the case of the longshoremen, hod carriers, and coal miners. It tends to disappear in proportion as the races assimilate or the needs of the industry dictate.

The foregoing considerations regarding labor organizations lead to the conclusion that, while the general effects of immigration on labor conditions turn upon the rise and fall of industrial prosperity, yet without organization the majority of laborers are not able to share in the rise nor to resist the fall, and at the same time, where the organization already exists, their ability to maintain it, based on their power to strike, is menaced, and in some cases is overcome by the inroads of immigrants. On the other hand, where there is no organization, their struggles to organize are fruitless or long postponed if they are being continually menaced by green immigrants or are themselves made up of mixed races, religions, and languages.

V. MACHINERY AND DIVISION OF LABOR.

The remarkable development of machinery and division of labor in the United States has been coincident with the enormous immigration of foreign laborers. There is a close relationship between the two movements. In the first place, from the earliest beginnings of modern industry both skilled and unskilled laborers in England and America have implicitly argued that these mechanical innovations, which before their very eyes both substituted unskilled for skilled labor and displaced both kinds of labor, were hostile to their interests. Where, as in England, it has been possible for labor to organize, or where, as in England and Germany, without effective organization, there have been long accepted traditions and customary lethargic methods of doing work, the introduction of machinery and division of labor have been seriously checked. But in America, in the past 20 years, with its mixed races, there has been neither organization nor tradition, or, rather, obstacles imposed

by tradition and organization have been easily broken down. The same is true in England itself in those few trades where the immigrant has entered, as in the clothing trade. It was the Russian Jew who, in that country, introduced the sewing machine and the minute subdivision of labor in the face of the English journeyman tailor, who despised these innovations as destructive to his trade skill. In America this process has been nearly universal in all trades, and the high degree of machine industry in this country, with its low cost of production and large growing exports, may almost be said to be a direct effect of immigration. The industrial menace to Europe from American manufactures is very largely the work of the European immigrant himself removed to America. Not that the immigrant has been prominent as an inventor and organizer of machine production, but that he has removed all obstacles to its free and rapid introduction, and so has stimulated invention and business organization. The minute subdivision of labor in the sewing trade, described in the following pages, has indeed been devised in order to put the hordes of unskilled immigrants easily to work, and they have created for themselves practically a new industry, that of ready-made clothing for the country at large, alongside that of the journeyman tailor, who continues his traditional methods of work for the more expensive custom garments. In other trades, likewise, the objections of the old-time trade unions to the introduction of machinery or to its rapid speeding have been nullified by competing establishments springing up and entering the race with him on the basis of machinery and immigrant labor. Ultimately he, too, has been compelled to accept the innovations or lose his job. The last few years have seen a number of unions, like the glass blowers and the iron and steel workers, formally remove through their national conventions several, if not all, their restrictions on machinery, business management, and speeding of work.

In the second place, the fact that machinery and division of labor opens a place for unskilled immigrants, makes it possible not only to get the advantages of machinery, but also to get the advantages of cheap labor. If machinery were to be considered as strictly an economic force, then the labor employed to operate the machinery should receive the same wages as the skilled labor which it displaces. The economy would show itself in the greatly increased output. This has been the actual outcome in the case of the printers who, owing to their strong organization and their natural protection against immigration in the fact of the English language, receive even better wages on the typesetting machine than they formerly received in setting type by hand, and, at the same time, the cost of the work has been greatly reduced. But if, on the other hand, the new machinery is used to displace well-paid labor by ill-paid labor, it is a means of increasing permanently the proportion of low standard population in our midst. This result in past years has, in many cases, accompanied immigration. It is shown in the cotton textile industry, where, with the chronic revolution in machinery, there has been found a place for continuous succession of lower and lower standards of living, following in order the native American, the Irish, the French Canadian, the Armenian, and the Syrian. As already stated, the fate of the higher displaced classes and their ability to make the transition to other industries depends upon the expansion of industry and the restriction on the growth of their numbers. While, therefore, immigration has furnished a field for the rapid expansion of machinery, it has permitted that machinery to be used as a refuge for the low-standard population. Whether this population in course of time is itself able to rise in the scale is a problem of organization already touched upon and to be further dealt with in the description of particular occupations in the following pages. Hitherto organization has been able to do but little for those industries where automatic machinery and division of labor have displaced skilled labor by unskilled labor. This is partly owing to another factor—the introduction of women and children.

VI. COMPETITION OF WOMEN AND CHILDREN.

While it might appear at first sight that machinery would seem to offer a place for women and children, yet their competition with men is strictly limited. In the case of children legislation has in later years definitely limited the number. As regards women, comparatively a small number who are found in factories are married. They usually begin work at 14 years of age and continue 5 or 10 years. They do not work long enough to acquire skill and speed. One manufacturer states that usually the best workers are those that marry earliest. Another witness before the Industrial Commission affirms that women are not suitable in factories on account of carelessness, ill temper, and unreliability. (Reports Industrial Commission, vol. 7, p. 61.) But more important than this is the fact that machinery, while it offers opportunity for unskilled labor, at the same time requires great endurance on account of the high speed with which American factories are operated. It is for this reason that employers do not find women help profitable unless at much lower wages than men receive; and it is found in those establishments where unions have been able to maintain the same scale of wages for women as for men working by the week, or in those

establishments where piecework is fixed at the same price for both men and women, that the number of women employed is very small. The census figures show the following proportion of males and females above 16 years of age and of children below 16 years of age employed in manufacturing establishments:

Per cent of men, women, and children in manufacturing establishments.¹

Year.	Males.	Females.	Children.
1860	76.39	23.61
1860	79.34	20.66
1870	78.66	15.78	5.58
1880	74.48	18.97	6.55
1890	80.40	16.92	2.68

¹ Census 1890, Manufacturing Industries, Part I, p. 14.

From these percentages it will be seen that from 1880 to 1890 the per cent of females decreased from 18.97 to 16.92. If we take individual occupations employing the largest proportion of females in 1880, we have the following table:

Per cent of women in industries employing the largest proportion of women.¹

Industry.	1880.	1890.
Boots and shoes, factory product.....	22.60	29.01
Boxes, fancy and paper.....	70.68	64.81
Clothing, men's.....	50.37	39.94
Clothing, women's, factory product.....	88.33	62.64
Cotton goods.....	49.14	48.15
Hosiery and knit goods.....	61.30	66.86
Shirts.....	56.37	78.57
Silk and silk goods.....	52.32	57.06
Tobacco, chewing and smoking, and snuff.....	32.90	35.57
Woolen goods.....	33.95	38.11
Worsted goods.....	50.38	46.13

¹ Census 1890, Manufacturing Industries, Part I, p. 17.

It will be noticed in the foregoing table that the largest decrease relatively in the proportion of females is in men's clothing and women's factory-made clothing. This, as will be shown later, is attributable largely to immigration and to the high speed attained in the manufacture of this product.

It will be found that in those occupations where women find employment the wages of men are correspondingly low. This does not always appear as such from the census figures, from the fact that men are usually advanced to the more skilled and better-paid occupations in the establishment, while the women monopolize the others. It appears from the census of 1890 that the average wages of men by the week were \$498 and the average wages of women were \$276. In other words, the wages of women were 45 per cent less than the wages of men. These low wages are attributed not only to the causes cited above, but also to the exceptional difficulty in the way of organizing women in an effective trade union. It follows that in those particular occupations where women compete with men only the class of men who are willing to work for low wages will be employed, and these are largely immigrants, who by their greater endurance than women are able to earn more wages in a given time, though at a less cost per piece to the employer. Where men work at the same occupation as women it is usually found that the women are their own wives and daughters; and this is a secondary and highly important phase of immigration, namely, that the women and children who enter factories are the wives and daughters of recent immigrants. Nationalities differ in this respect. Among all of them the girls go to work; but while the wives of Italians are found in the shops, the wives of Jews stay at home. The daughters of the native Americans and of the earlier immigrants when they enter productive occupations are usually able to find employment as clerks, school-teachers, and in similar occupations. In conclusion it may be stated that while machinery in itself affords a place for women and children, it also places the limit upon the number that can be practically employed unless at low wages. Since women's wages are 25 to 50 per cent below those of men, the difference is so great that the men who continue to compete with women must accept wages at a substantial reduction; and, finally, the women and children who actually work in factories are mainly the wives and daughters of immigrants, and it is against them that the immigrants themselves compete.

VII. COUNTRY COMPETITION.

Another factor which in many occupations obscures the effect of immigration, by cooperating with it to reduce wages, is country competition. The complaint of labor representatives against immigration usually proceeds from the cities, where the immigrants congregate and where they can be actually seen taking the jobs of the complainants. At the same time, upon careful inquiry, it is often found that the pressure to reduce wages or to cause unemployment proceed from the cheaper labor of country districts employed in the same line of production. Wages are necessarily higher in cities than in the country for the corresponding standard of living. In the city there are such additional demands as car fare, the food costs more and must be paid for in cash, because the laborer does not have his patch of ground from which, by the help of wife and children and by his own extra work mornings and evenings and idle days, he can secure a large share of his necessary food supplies. With these incidental advantages the wages of country labor per day to the men are usually very much lower than the wages of corresponding city labor. Whether the city or the country is the more economical place from the manufacturer's standpoint in locating his enterprise turns on many considerations, an important one being the cost of labor. Highly skilled or excellent work can not be done in the country, because the labor market is not there. The cheaper goods can, however, be sent to the country for manufacture while the better grades are made in the city. This is markedly the case in the manufacture of cigars and clothing, which are affected more seriously by immigration. Even in coal mining there is an analogous situation in those new and richer mines of southern Illinois and West Virginia just entering the older competitive fields, where the greater thickness of the seams, their proximity to the surface, and the purity and quality of the coal render it possible for American-born farmers and laborers through competition to cut down the wages of miners in the older fields. At the present time, since foreign-born miners in these older fields have been able to build up an organization and to gain a notable increase in wages, more serious to them than immigration is the competition of these richer mines with unorganized native labor. And the stronger the organization and the higher it forces wages, the larger the share of the output which is diverted to these competitors.

The encouragement of country competition in its various forms would, indeed, be one of the methods for lessening the pressure of immigration in the cities in case the country should draw off the immigrant, but such is not usually the case, since it is native labor or earlier immigrant labor that is mainly attracted to these fields. For this reason country competition of native labor is one of the causes which must be taken into account in any attempt to measure the effect of immigration on wages and employment.

CHAPTER III.

FOREIGN-BORN LABOR IN THE CLOTHING TRADE.

I. NUMBER OF FOREIGN-BORN EMPLOYED IN THE TRADE.

The clothing trade leads all others in the United States as an occupation controlled by immigrants. The census of 1880 showed that, of 133,756 tailors¹ of both sexes, the foreign-born were 71,591, or 61 per cent.

In 1890 the foreign-born male tailors, numbering 86,471, were 71 per cent of the total number in the trade. This was 11.5 per cent higher than the occupation next in order, namely the bakers, in which the proportion of foreigners was 59.5 per cent. Below that came hucksters and peddlers with 53 per cent foreigners; miners with 48.7 per cent foreigners, and so on. Even unskilled laborers (i. e., "laborers not specified"), numbering 664,614, show only 25.76 per cent foreign-born.

The foreign-born females reported in 1890 as tailoresses were 31.9 per cent of the 63,809 tailoresses in the country, and there is but one occupation in which the proportion is exceeded, that of textile mill operatives, where the proportion is 38.18 per cent.

The following table shows, in comparative form, the extent of this immigrant influence by nationalities. It will be seen that the predominating nationality in 1880 and 1890 was German, although in the latter year the appearance of the Russian

¹ I. e., "Custom tailors," not factory operatives. The latter are considered on pp. 5 ff.

Jew reduces relatively the numbers of Germans, as well as other nationalities. Unquestionably the census of 1900 will give an added weight to the Jews:

¹ Reports Commissioner-General of Immigration.

The leading nationalities contributing immigrants to this occupation prior to 1890 were the Germans and Scandinavians. The German immigration reached its highest point (1,935) in 1882, and has since then declined, until in 1899 it was 224, and in 1900 270. The Scandinavian immigration has declined from 238 in 1880, 240 in 1887, and 238 in 1888, to 133 in 1900.

Since 1890 the Italians and Hebrews have taken the leading part. The Italian immigration has steadily increased from 16 in 1877 to 1,502 in 1900, and the Hebrew immigration from 59 in 1877 (Russia and Poland) to 7,031 in 1900.

The following table shows the distribution by races for the years 1899 to 1900:

¹ Commissioner-General of Immigration, 1899-1900.

The direct effect of immigration on the tailoring trade is found in the number of immigrants who have learned the trade in their native country, while the indirect effect is in the number who have learned the trade after migration. The direct effect can be judged from the preceding table, which shows the number of tailors coming to this country by years since 1875. It will be seen from this table that in 1880, when the Census returns showed 133,756 tailors in the country there were 2,134 immigrant tailors, and in 1890, when the Census showed 185,400 tailors, there were 3,879 immigrant tailors. In 1880 the immigrants were 1.6 per cent of the residents, and in 1890 they were 2.1 per cent.

The indirect effect of immigration is even greater than the direct effect. Formerly, before the division of labor had advanced to its present minuteness, it required 4 to 5 years to learn the trade, but at the present time in the ready-made work less than 1 man in 4 is a tailor. In the ordinary task shop the baster is the skilled mechanic, while those who learn the other divisions of the trade, such as operating, pressing, sewing on buttons, felling, and so on, are able to earn wages in 2 or 3 months, although a longer time is required to develop speed and endurance. Consequently, these unskilled divisions are open not only to the influx of the unskilled labor of all kinds, but also to the skilled labor which is unable in a strange land and a foreign language to find its own special field. The more recent factory system, with a division of labor much more minute than even that of the task system, to be described below, opens the way for still greater indirect effects of immigration:

The influence of immigration on the ready-made clothing trade can not be measured by a single comparison of the number of immigrants with the number of resident tailors, as could be done in other trades, for the peculiar reason that the business has largely concentrated in New York City, where it meets the first impact of the flood of immigration. This movement is believed to have proceeded with great force during the past 10 years, largely as a result of the cheap immigrant labor which has concentrated in that city. In the absence of census figures it is impossible to show this movement statistically, but estimates made from the incomplete reports of factory inspectors indicate the following numbers employed in the leading centers of New York, Chicago, Philadelphia, and Boston. These estimates give color to the generally accepted statement in the trade that one-half of the ready-made clothing in the United States is manufactured in the city of New York.

TABLE 4.—*Estimate of employees in clothing trades.*

Greater New York	103,000
Chicago	48,000
Philadelphia	20,000
Boston	7,000

2. Foreign born in New York clothing trade.—If it be true that one-half the ready-made clothing is made in New York, comparison should be made with the census returns of 1890, which show in that year 27.4 per cent of the men's factory product and 62.9 per cent of the women's factory product made in New York. In that year also 26.4 per cent of the factory operatives on both men's and women's clothing lived in New York. The tables from which these percentages are computed is given herewith.¹

TABLE 5.—*Clothing industry. (a)*

Cities.	Men's factory product.		Women's factory product.	
	Average number of employees.	Value of product, including receipts from custom work and repairing.	Average number of employees.	Value of product, including receipts from custom work and repairing.

^a Census 1890: Manufacturing industries, Pt. II, statistics of cities, pp. 654-655.

¹ It should be noted that in the census returns the employees upon "Factory Product" are not classified as tailors in the occupation tables. That is to say, the 133,756 tailors considered in preceding pages are custom tailors, who make the entire garment, whereas the employees in Table 5 are those who make the garment by division of labor. The census does not give the nationalities of these factory operatives.

The decisive influence of New York in the clothing trade is well known. Organizations of employees in other cities are met with the threat, "We will get our work made in New York." It is only as the conditions in New York are improved that the trade can be improved elsewhere.

The part played by immigration in New York is indicated by the fact that whereas in the country at large the foreign-born tailors (not factory operatives) in 1890 were 71 per cent of the tailors, in New York they were 91.5 per cent. The following table shows the percentages for the 4 leading cities of New York State, and also for the rest of the State outside these cities:

TABLE 6.—Per cent of males 10 years of age and over employed as tailors (not factory operatives) in New York, 1890.¹

	Foreign white.	Native white, foreign parents.	Others.
New York City	91.5	7.2	1.3
Brooklyn	73.8	22.9	3.3
Buffalo	72.5	24.8	2.7
Rochester	57.3	38.5	4.2
State, exclusive of above cities.....	54.2	18.9	26.9

¹ Eleventh Census, Population, Pt. II, table 118.

The desirability of an occupation may be roughly judged from the rate at which the children of the workmen follow the footsteps of their parents. The following table compares on this point "all occupations" with the occupation of tailoring (not including factory operatives). It appears that in all occupations the foreign-born males number 26.12 per cent and their children number 18.13 per cent, yet among tailors, whereas the foreign born are 73.1 per cent, their children are only 14.9 per cent. In other words, while foreigners crowd into tailoring to the extent of three times their proportion in all occupations, their sons enter that trade even one-fourth less than their proportion in all occupations. On the other hand, the daughters of tailors are more likely to follow their parents' calling, since their freedom of choice is not so great as that of their brothers, and tailoring is more suitable for female help. It may, indeed, be held, from a study of this table and a knowledge of the clothing trade in the city of New York, that this trade is peculiarly the refuge of the immigrant and the school of his Americanization:

TABLE 7.—Distribution of immigrants and native born and children of immigrants in "all occupations" and tailoring (colored and Chinese omitted).¹

	Males.		Females.	
	All occupations.	Tailors.	All occupations.	Tailors.
Total	100.00	100.00	100.00	100.00
Foreign white	26.12	73.10	26.04	32.13
Native white, foreign parentage.....	18.13	14.90	16.50	43.16
Native white, native parentage.....	55.75	12.00	57.46	24.71

¹ Census, 1890.

With the foregoing general summary of the statistical features of immigration in the clothing trade we shall proceed to a detailed account of the industry itself as affected by the movements of nationalities in the leading centers, New York and Chicago.

This portion of the report has been prepared with the assistance of Mr. A. Bisno, a practical tailor.

II. THE "SWEATING SYSTEM."

The term "sweating" or "sweating system"¹ originally denoted a system of sub-contract, wherein the work is let out to contractors to be done in small shops or homes. "In practice," says the report of the Illinois Bureau of Labor Statistics

¹ See Dictionary of Political Economy, art. "Sweating."

(1892, p. 358), "sweating consists of the farming out by competing manufacturers to competing contractors of the material for garments, which in turn is distributed among competing men and women to be made up."

The system to be contrasted with the sweating system is the "factory system," wherein the manufacturer employs his own workmen, under the management of his own foreman or superintendent, in his own building, with steam, electric, or water-power. In the sweating system the foreman becomes a contractor, with his own small shop and foot-power machine. In the factory system the workmen are congregated where they can be seen by the factory inspectors, and where they can organize or develop a common understanding. In the sweating system they are isolated and unknown.

The sweating system has undergone significant changes during the past 50 years. The early part of the last century, when the term seems to have originated in England, it applied to ready-made new clothing in the form of army clothing given out to contractors. At that time each tailor usually made the entire coat at home. The manufacturer of ready-made clothing and army clothing would give his work to a contractor who was a responsible party, usually not a tailor himself. This contractor would then give the work to some man who kept a tailors' boarding house or a saloon where the tailors were accustomed to come together. This boarding-house keeper or saloon keeper was a subcontractor, though not a tailor. He in turn would give this work out to the individual tailors whom he personally knew and who were responsible for the work. The money received by these subcontractors for their part was called "sweat money," implying that their profit was the difference between the price they received from the manufacturer or contractor and the price paid to the tailor for making the garment, and that they invested no labor in the transaction.

There was an agitation against this system in the early fifties because of the low condition of the tailors. They worked for very low wages and many of them were unemployed much of the time. The work used to be made in between seasons for one-third and one-fourth of the regular price.

In the sixties the influx of the Russian Jews in the ready-made clothing trade, who replaced the native and Irish tailors, began to be felt. Here the incursion of the foreigner seems to have been irresistible. His success was due, not always to the lower wages he was willing to take, for he was competing with the outcasts of the English tailoring trade, the unskilled English woman and the wretched and often imported Irishman, whose wages were as low as the contractor was willing to pay. But the success of the immigrant was due to his willingness to change the mode of production by using the sewing machine and division of labor against which the native tailor showed a decided aversion. Here the influx of the foreign Jew has wrought a complete change in the contract system. The old contractor was a mere middleman and had no need for any knowledge of the tailoring trade, and was mostly a lodging-house keeper, who secured the work by giving a cash deposit for the goods he took from the manufacturer and distributed among the wretched tailors in the lodging house and the helpless women in his vicinity who completed the whole garment. He was replaced by the Jewish contractor, who made his work in a shop. This Jewish contractor was not a mere middleman; he was necessarily a tailor and an organizer of labor, for his work was done by a system of division of labor calling for various grades and forms of skill, viz, the baster, machinist, and presser, with various subdivisions, such as fitter, busheler, finisher, buttonhole maker, feller, basting puller, etc.

The position of the contractor or sweater now in the business in American cities is peculiarly that of an organizer and employer of immigrants. The man best fitted to be a contractor is the man who is well acquainted with his neighbors, who is able to speak the language of several classes of immigrants, who can easily persuade his neighbors or their wives and children to work for him, and in this way can obtain the cheapest help. The contractor can increase the number of people employed in the trade at very short notice. During the busy season, when the work doubles, the number of people employed increases in the same proportion. All of the contractors

¹ The term "manufacturer" in the clothing trade has a peculiar significance. It means the wholesale merchant or warehouseman. The exact designation would be "merchant manufacturer." Such a manufacturer usually has an "inside shop" and several "outside shops." The inside shop is usually on the manufacturer's own premises, and includes the cutters who cut the cloth for the contractors, the examiners who inspect the garments on their return, and the "bushelmen" who repair and reshape the garments if necessary.

The "outside shops" are the shops of contractors who take the goods out from the manufacturer for stitching and finishing. If the manufacturer does his own work directly under a superintendent or foreman, instead of indirectly through a contractor, this shop also is known as an "inside shop." Workmen employed by a contractor often speak of themselves as employed by the manufacturer who furnishes the work to the contractor. Since the manufacturer sets the contract price, it might almost be said that the contractor is really the manufacturer's foreman, who takes the responsibility of finding help, doing the work, and making such wages of management as he can at the price set by the manufacturer.

are agents and go around among the people. Housewives, who formerly worked at the trade and abandoned it after marriage, are called into service for an increased price of a dollar or two a week. Men who have engaged in other occupations, such as small business, peddling, etc., and are out of the business most of the year, are marshaled into service by the contractor, who knows all of them, and can easily look them up and put them in as competitors, by offering them a dollar or two a week more than they are getting elsewhere. It is the contractor who has introduced the Italian home finishers in the trade; he has looked them up and taught them the work, and is getting it made for less than half the wages that he formerly paid for the same work.

The contractor never has at one time a large amount of work. Through him the industry is scattered over a wide area, among all kinds of people, and he thrives as long as they do not know one another. The contractor is an important factor in the clannishness of the immigrant nationalities. It is to him due in part that we have in large cities the Jewish districts, Polish districts, Swedish districts, etc., with very little assimilation. The contractors establish their shops in the heart of the district where the people live, and since they can practically earn their living at home, they have no opportunity of mingling with others or of learning from the civilization of other people.

The following is a typical case: A Polish Jew in Chicago, at a time when very few of the Poles were tailors, opened a shop in a Polish neighborhood. He lost money during the time he was teaching the people the trade, but finally was a gainer. Before he opened the shop he studied the neighborhood: he found the very poorest quarters where most of the immigrant Poles lived. He took no one to work except the newly arrived Polish women and girls. The more helpless and dependent they were, the more sure they were of getting work from him. In speaking about his plans he said: "It will take these girls years to learn English and to learn how to go about and find work. In that way I will be able to get their labor very cheap." His theory turned out to be practical. He has since built several tenement houses.

The contractor in the clothing trade is largely responsible for the primitive mode of production; for the foot-power sewing machine; for the shops in the alleys, in the attics, on top floors, above stables, and, in some cases, in the homes of the people. The small shops are able, on account of low rent and meager wages, to compete successfully, although with foot power, against the large shops and factories with steam or electric power. Usually it is not necessary to have more than \$50 to start a shop with foot-power machines. As there is no investment in goods, the contractor runs no risk. Little managing ability is required, because the number of employees is small.

The unlimited hours of work, often 7 days in the week, is a feature of the contracting system. The contractor himself works unlimited hours. His shop is open most of the time. He deals with people who have no knowledge of regular hours. He keeps them in the dark with regard to the prevailing number of hours that other people work.

The contractor is an irresponsible go-between for the manufacturer, who is the original employer. He has no connection with the business interests of the manufacturer nor is his interest that of his help. His sphere is merely that of a middleman; he is practically useless in a large factory. He holds his own mainly because of his ability to get cheap labor, and is in reality merely the agent of the manufacturer for that purpose. In this he in the main succeeds, because he lives among the poorest class of people, knows them personally, and knows their circumstances and can drive the hardest kind of a bargain. A very large number of the people who work in the sewing trade for contractors usually hope to become contractors themselves. When they succeed in this they reduce the prices, since the contractor when he first takes work out takes it for less money than other contractors.

Usually when work comes in to the contractor from the manufacturer and is offered to his employees for a smaller price than has been previously paid, the help will remonstrate and ask to be paid the full price. Then the contractor tells them, "I have nothing to do with the price. The price is made for me by the manufacturer. I have very little to say about the price." That is, he cuts himself completely loose from any responsibility to his employees as to how much they are to get for their labor, throwing the responsibility on the manufacturer who originally gave him the work. The help do not know the manufacturer. They can not register their complaint with the man who made the price for their labor. The man who did not make the price for their labor—the contractor—claims that it is of no use to complain to him. So that no matter how much the price for labor goes down, there is no one responsible for it.

In case the help form an organization and send a committee to the manufacturer, the manufacturer will invariably say, "I do not employ you, and I have nothing to

do with you;" and when they go back to the contractor and file their complaint, he will invariably say, "I am not making the price for your labor. I am simply paying you as much as I can out of what I get from the manufacturer." This is also true with regard to any agreements of a labor organization that may be made. If an agreement is made with a contractor, it is usually worthless, because he has no property invested that can be levied upon. If the agreement is made with the manufacturer, it does not hold, because he is not violating it. In this irresponsible state of the business it is extremely difficult to devise any way in which organizations can make agreements and enforce them.¹

There is always a cut-throat competition among contractors. A contractor feels more dependent than any of his employees. He is always speculating on the idea of making a fortune by getting more work from the manufacturer than his neighbor and by making the work cheaper. Usually when he applies for work in the inside shop, he comes in, hat in hand, very much like a beggar. He seems to feel the utter uselessness of his calling in the business. Oftentimes the contractor is forced to send work back, because he can not make it under the conditions on which he took it, yet he does not dare to refuse the offer for fear the manufacturer will not give him more of his work. So he tries to figure it down by every device, and yet, perhaps, in the end is forced to send it back.

The contractor is always speculating on what is coming next in the busy season, and sometimes in the busy season he can, as a matter of fact, save some money; but this is only for a short time. The most of the year, probably for about 9 months, he is in this cut-throat competition. This is, indeed, the worst factor in the trade.

It must not be inferred from what precedes that the contractor is the cause of the sweating system, or that the sweating system is identical with the contract system. Both the contractor and the sweating system are the product of a disorganized and crowded labor market. This distinction is not apprehended even by the tailors' unions, who direct their energies mainly to the abolition of the contractor instead of the abolition of the conditions which produce the contractor. The factory system itself is not always clearly marked off from the contracting system. A factory foreman may send work out at night to be done by his own employees at their homes. A factory may use partly mechanical power and partly foot power. A manufacturer may employ subcontracting within the factory. On the other hand, the small manufacturer may practice the same oppression and impose the same insanitary conditions upon his employees as would be done by a contractor. In the manufacture of cigars the "sweater" is not a contractor, but is a manufacturer who buys his material on the market and sells his product to jobbers or regular purchasers. In the manufacture of clothing the "sweater" is a contractor who agrees to take out material owned by the merchant and to return it to him as a finished garment. The only difference is that in the cigar business the raw material is owned by the one who directly employs the labor, while in the clothing business the raw material is the property of the merchant. In both cases the labor is equally "sweated."

The futility of directing the energies of reform solely against the contractor may be seen in New York in one branch of the clothing trade, that of ladies' ready-made garments, including cloaks and so-called "tailor-made suits." Already in this line of manufacture fully 75 per cent of the product has passed out of the hands of contractors into those of "manufacturers." Ten years ago probably 90 per cent of women's clothing was made by people who worked for contractors, while now only about 25 per cent of the trade are working for contractors. But so far as the people employed in the business are concerned, there has not been any material change for the better, since these small manufacturers retain all the abuses of long hours, small pay, and insanitary shops. The way in which this new class of manufacturers has arisen in the clothing trade and has driven out of business the large manufacturer on Broadway who sent his work out to contractors is one of the remarkable developments of this remarkable trade. These former large manufacturers who have abandoned the ready-made business have gone into the retail or custom trade, and have set up model "inside" factories on Broadway, where they cater to the more well-to-do purchasers. Small manufacturers on Division and other streets, who have absorbed the former wholesale trade, have followed a method somewhat as follows:

A contractor who had been able to save \$500 or \$600 makes up in a small shop a number of samples and designs. He then communicates with the buyers of wholesale dry goods, or clothing houses, or cloak jobbers, or country merchants, or "mail-order" houses, stating that he had opened a shop and is able to sell new and first-class designs in the several patterns of cloaks and suits at a much lower price than the cloak manufacturers were doing. He does not send out traveling salesmen, but waits for buyers to call and see his samples and leave their orders. Having received an order, he takes it to some convenient bank, which usually extends him credit with a woolen house somewhat approximating the amount of the order, furnishing

¹See testimony of I. A. Hourwich, in Vol. VII, Manufacturers and General Business, p. 150.

also a certain amount of cash to pay his help. The bank takes the order from him as guaranty, and also collects the bill after the goods are made and delivered. In this way a man with very little money is able to blossom out from a contractor into a manufacturer and to do business to the amount of the orders he is able to get.

The saving by this small man as against the large cloak manufacturer, it is claimed, is in the following ways: He does not have to pay a high-priced designer, since he designs his own patterns; he does not have to pay a superintendent, since he manages his own business; nor does he pay high rents, since he is usually located in a poor quarter of the city. He can get labor as cheap as any contractor because he runs his shop in the same method when he becomes a manufacturer as he ran it when he was a contractor; that is, his shop is open day and night, and people can work as long hours as they want to. He is always on the lookout for cheap help and he is careful in regard to saving the goods and pieces, which can not be saved in the same manner in the large factory. So he can give the buyers of these wholesale and jobbing houses and also the retail and department stores the benefit that was formerly derived by the large wholesale cloak manufacturer, selling goods in some instances for 30 and 40 per cent less than the large wholesale manufacturer can possibly do. In reality he is little more than he used to be—a contractor, with the difference that he now does his own cutting and his own marketing; and the profits on his labor and on the capital invested in the business are shared with the banker.

It is possible that the racial characteristics of the Jew have entered as a factor in bringing about the above-mentioned results. The Jew likes to be "his own boss," even if it is merely in name; from the operator and tailor he becomes a contractor, and from the contractor he becomes a small merchant manufacturer, working for jobbers and wholesalers until in time he becomes a jobber and wholesaler himself. While this is true of other nationalities to some extent, it is very largely true of the Jews, who, when they manage to acquire \$300 or \$400, will go into business and hold their own against the large manufacturers, and probably also the fact that the Jews do not like to work on Saturday has something to do with the system. These shops are usually open on Sunday and the religious Jews have the opportunity of keeping their Saturday as a day of rest, while in the large factories business is done on Saturday and on Sunday the shop is closed. In a number of instances the Jews prefer to work for smaller wages per piece with the opportunity of working Sunday instead of Saturday.

Probably the nature of the business also has something to do with this displacement of the large manufacturer by the small one. Nobody can now manufacture women's clothing very far ahead of time. Styles change every 3 months and even in shorter time, so that one can not safely produce a large stock of women's suits 6 months ahead. The manufacturers figure on selling all their goods within 3 months, and the most successful way for the large wholesale houses to buy, therefore, is in small lots, consulting the latest fashion. This could not very well be done economically in a large factory, with large investments.

The wages which these small manufacturers pay their employees vary very greatly in some places they pay as good and even better wages for first-class work than the large manufacturers, but in the majority of cases the wages per cloak are smaller. But then the people say that since a man can work in one of these small shops a longer number of hours than he can in the large cloak factory on Broadway, a man can earn more money at a smaller rate.

There is one respect in which these small manufacturers are a greater disadvantage to the employees as a class than were the contractors whom they displaced. The opportunity for labor organization is diminished. Formerly, when several contractors worked for one large manufacturer, it was possible for the cloak makers in the employment of this manufacturer to make a common cause. The unions were indeed largely based upon a system of shop organizations. The cloak makers who worked for one large firm and for the several cloak contractors employed by that firm would meet together in one association. Although working for different contractors they would join forces and make their appeal direct to the manufacturer. But as the large manufacturer disappeared from the business and the small contractors opened shops for themselves and became small manufacturers, there arose a competition in each small shop on the part of the help against all outsiders, with no common interest to join them together. There is an immense competition among these small manufacturers' shops. The manufacturer will usually say to his people: "You know there isn't work enough for all of us all the time. Now, in order that I may be able to employ you for a longer period during the year than my neighbor employs his people, I will have to underbid him in the price of my goods. I will have to sell clothing, say, to such and such a firm, who are buying both from him and me, for less money than he does so that I can get all of the trade." There are many cases where the help will agree to produce a garment for a lower price than they have been receiving, figuring on the proposition that they will have work for a longer period through the year than they have had before, and so the wages are reduced as the

years go on. In these small factories the employment is very irregular and the men work in one year for several different firms, so that it is difficult to establish union conditions.

The conclusion to be drawn from the foregoing considerations is that the sweating system is not identical with the system of contracting, although the latter has the peculiar evil of introducing an irresponsible party to whom the real employer shifts his responsibility. In view of the overlapping of conditions, the attempt to give exact meaning to the term "sweating system" as a method of business was abandoned by the committee of the House of Lords appointed in 1888 to investigate the subject, but the evils known by the name were said to be:¹

"1. A rate of wages inadequate to the necessities of the workman or disproportionate to the work done.

"2. Excessive hours of labor.

"3. The insanitary state of the houses in which work is carried on."

While the sweating system is not identical with a contracting system, yet, as already stated, in the clothing trade the wide development of the contract system with "outside" shops is a phase of immigration. Consequently the description of nationalities, organization of labor, and modes of production in the following pages must always be interpreted, both as growing out of the contract system and as furnishing the field in which the contractor develops.

III. POSITION OF VARIOUS NATIONALITIES IN THE CLOTHING TRADE.

New York.—Ready-made clothing for men was manufactured in New York as early as 1840. It was partially made in the shops of the manufacturer and partially at the homes of the tailors, each tailor making the whole garment. Most of it was made between seasons by the journeymen tailors, who worked for the merchant tailors. It is said that about 1840 the price for a ready-made coat was about one-half the price of a coat made by the merchant tailor. A coat for which one paid \$5 to \$6 to the merchant tailor would be taken home by these tailors in the dull season and made for from \$2.50 to \$3. The majority of tailors then were English, Scotch, and American. About the year 1850 the Irish came largely into the trade and along with them some Germans. It was customary for the Irish tailor to work in the back shop of the merchant tailor and for the German tailor to take his coats, pants, and vests home and do the work there, usually assisted by his wife and children. The first attempt to introduce a division of labor in the manufacture of ready-made clothing was probably made by the Germans who developed in their homes such separate divisions as machine sewing, basting, etc., though the division was not definite.

All told, the manufacture of ready-made clothing was not extensive. It was not until after the war, in 1866-1870, when the tailors and journeymen tailors formed a union and raised the price for their labor that the manufacture of ready-made clothing began to be developed on a larger scale. Previous to that the bulk of such clothing was of very poor quality, made from cheap goods for sailors, for cattle rangers, for the people on the cotton plantations of the South, for miners, etc. But very little men's fine wear was made until after the war. Beginning with 1865 this class of business began to develop and increase. It was carried on at this time mostly by the German tailors in their homes.

About the year 1873 Hungarian, German, and Austrian Jews began to migrate to this country, a number of whom were tailors, and they entered this business. They introduced the man working as a sewing-machine operator. It was said at that time that the Germans preferred these Jewish men as help because they were able to produce a quicker and better garment, but before long the Jews themselves came into the business as contractors.

Beginning with 1882 the immigration of Russian and Polish Jews to this country increased very greatly and many of them entered the sewing trade, so that the competition for work began to be fierce. The price for labor fell and coats which were made in 1876-1880 for \$1.50 to \$2 were reduced to \$1.25 and \$1.50. As early as 1890 the Jews had gained control of the clothing trade in New York, the German shops being only remnants. Beginning with 1890 the Italians entered the trade in large numbers, especially in those branches which after the development of the shop and factory system continued to be carried on at home.

The prevailing nationalities in Boston and Philadelphia have been similar to those in New York.

¹ Parliamentary Papers, Reports from Committees, 1880, Vol. XVII, 169; Fifth Report of the Select Committee of the House of Lords, p. xlii.

Chicago.—The clothing industry in Chicago, although less extensive than that in New York, has a peculiar interest from the standpoint of immigration, on account of the more even balance between the nationalities there employed. Whereas in New York the Jews largely predominate, yet in Chicago they number only about 25 per cent of the trade. The following is believed to have been the distribution of the nationalities in 1886:

TABLE 8.—*Distribution of clothing workers by nationality, Chicago, 1886.*

	Per cent.
Swedes	30
Bohemians	30
Jews	25
Germans	10
Others	5
Total	100

Prior to 1870 the trade was mainly custom work, the tailors being German and Irish. The Germans took up the ready-made work in their homes prior to 1880. It was in 1880 to 1884 that the Bohemians, Jews, and Scandinavians took up the manufacture of ready-made garments, and from that time is dated the expansion of that trade. The Poles did not enter the trade until 1889, but have already increased to probably 15 per cent of the total number, and have driven Bohemians and Jews out of the ready-made branches. These displaced nationalities have created places for themselves by developing the "special order" trade (see page 331), or by opening small custom shops. Following is the probable distribution of nationalities in Chicago at present:

TABLE 9.—*Distribution of clothing workers by nationality, Chicago, 1900.*

	Per cent.
Swedes	25
Bohemians	25
Jews	25
Germans	5
Poles	15
Others	5
Total	100

The Jew occupies a unique position in the clothing trade. His physical strength does not fit him for manual labor. His instincts lead him to speculation and trade. His individualism unsuited him for the life of a wage-earner, and especially for the discipline of a labor organization. For these reasons, when the Jew first lands in this country he enters such light occupations as sewing, cigar making, shoemaking, etc. Only about 11 per cent of the Jewish immigrants were tailors in Europe. The reason why so many of them take up that occupation in America is because the work is light. They begin as helpers and advance to full-fledged mechanics. After they have worked for some time and have learned the trade they open contractors' shops for themselves. They can begin with a capital of \$50. From that they go into the wholesale manufacture of clothing. A similar development occurs in the cigar manufacture. Jews do not enter largely those industries where machinery plays an important part, but if they do enter they strive to set up as small manufacturers or contractors. Probably the only place in the United States where shoes are made outside factories by the old sweating system is among Jewish contractors in New York.

Jewish women are employed to a much less extent than the women of other nationalities, and their children are kept in school until 15 or 16 years of age. It is quite unusual for Jewish tailors to teach their children their own trade. The young generation seek other callings.

The Italian tailor in his own country receives only about one-half the wages received by the Russian, Polish, Hungarian, and Roumanian Jews in their own countries, and about one-quarter of the wages paid for similar grades of work in Western Europe. Consequently, in the United States, with his standard of living, he can successfully compete with the newly arrived Russian Jew and 4 to 1 against the newly arrived German or Englishman. The Russian Jew who is not a tailor, but learned his work in this country and works in the shop as operator or presser, is usually from the stock of small business men in the old country, who have a fairly good standard of living, and is regarded among the clothing workers as of the better class. He will insist on better living and higher wages for his particular kind of work than the tailor. This accounts for a curious paradox in the task system in New York, where the operator, who usually comes from the commercial

classes in Russia, will command \$3 instead of \$2.66, which is paid to the skilled tailor for the basting. This also holds true in other branches, such as cloak making and pants and vest making, the operator usually gets more money than the tailor, due to the fact that this line of employment has been taken up by a class of people who did not work in the clothing trade in the old country and whose standard of living was not as low as that of the tailor.

But when we come to the Italian we find that he will work at operating, or pressing, or any branch of the trade which he learns in this country, at exceedingly low wages. He has usually been a farmer or farm hand, and the standard of living of the Italian farmer is even below that of the tailor. While as yet the Italians have not come into the trade in very large numbers, since they have sought mainly the common outdoor employments, yet those who have taken up this branch of work usually accept much less wages than skilled tailors. Considering the large immigration of Italians it seems that the future clothing workers in this country are not likely to be the Jews, but the Italians.

One point at which the Italians have an advantage is the employment of their wives and sisters. The Italian and his wife will come to the shop together. If he is a pants operator she is usually his helper, or if he is a cloakmaker she is his hand-sewer and finisher, and so both labor together to cover the expenses of the family. In the case of the Jews, the Jewish woman after she is married will not go to work in the shop. There are numbers of cases where the Italian and his wife together work for the same price which the Jew receives for his labor alone, and in this way the Italian is able to crowd the Jew out of the trade.

The Italian, like the Jew, has a very elastic character. He can easily change habits and modes of work and adapt himself to different conditions: he is energetic and thrifty and will work hard, with little regard to the number of hours. It is quite usual for an Italian cloakmaker, like the Jew, after he has worked 10 hours in the shop with his wife to take a bundle of work home at night. But, unlike the Jew, he not only does the work at home himself but he is assisted by the women in his family, and often leaves a part of the work for them to do during the day.

If the Italian and the Pole are compared, it will be found that it is the Polish women who enter the sewing trade, whereas the former Polish farmer clings to common work requiring hard labor. The Italian is able, on account of his national characteristics, artistic ability, etc., to control such work as the manufacture of clothing, silk weaving, hat making, and other trades where taste and a fine sense of touch are essential for a successful performance of the work. The Polish farmer can successfully compete in factory work, where hard, automatic labor is necessary; but the Italian dislikes mechanical work and is better adapted to diversified pursuits where manipulation is required.

The mode of production among the Germans and Bohemians is about the same; the women and girls operators, edge basters, and finishers, with men as first basters and trimmers. The Bohemians employ their children in the shops probably more than the Germans. The Bohemians are a fairly well educated people, and have a number of unions among their working population. When the price for labor is reduced they usually start a movement in resistance.

The Poles work in the same way as Germans and Bohemians. Owing to the opposition of their priests they have never made any attempt to join a labor organization. During the strike in Chicago in 1896 it was the Polish shops that continued at work and defeated the strike. The Poles are a submissive people while working, and it is in their shops that the hardest driving is done. They have greater endurance and will work for a lower rate of wages than any other nationality. The contractors are mainly Jews. Their children begin to work early. In a shop of sixteen persons there will usually be four to six children under 16 years of age.

Notwithstanding the competing power of Polish women they can probably be out-classed by Italian women. While a great many Polish women have entered the trade they have not yet developed great speed nor been able to work in factories producing the best grades of work, while Italian women are almost perfect imitators. The Italian woman can develop speed and can work with skill. Like the Poles, they also are obedient to orders.

The best people in the clothing trade in Chicago are the Scandinavians, including Swedes, Norwegians, and Danes. They are engaged in the manufacture of pants and vests, under contractors of their own nationality. They do not work more than 10 hours a day as a rule, usually in large shops with steam power. They uphold the price for their labor more than the Bohemians or Poles, and have developed the best labor organizations in the trade. Their standard of living is high, and many of them are fairly well educated. The Swedes do not put their children to work, but send them to school.

The women of the above-mentioned nationalities—Germans, Bohemians, Poles, and Swedes—are principally employed in the shops. In many cases they work even after

marriage. The mother or grandmother stays at home keeping house and taking care of the children while the younger women of the family are in the shop. There are about 5 women to 1 man in the Swedish shops on pants and vests, and about 2 women to 1 man in the Polish and Bohemian coat shops. In the Jewish shops there are about equal numbers of men and women, although the women are mainly of other nationalities.

The standard of living of all nationalities has been gradually raised after their immigration to this country. Probably the Jewish immigrant changes his standard of living soonest. When the Jew wants to make more money he will leave his former occupation as operator or baster, etc., and will become a contractor or store-keeper. So that, instead of trying to raise the standard of living in the trade, he will try to leave the trade and throw his lot in with people whose standard of living is somewhat higher. In this way his commercial instinct militates continually against making active efforts to better the condition of his trade.

The Poles and Italians adhere to a lower standard of living for a longer time. During the last few years immigration from those countries has been continuous, yet there is not much evidence of a material rise in the standard of living among the clothing workers. While it may be that the clothing workers are earning more money, and are living under somewhat better conditions than they did in the old country, yet here in this country their lot in life has not improved. The low standard of living on the part of those immigrants who are continuously coming into the trade is always a successful check on the efforts that the people may make to better their condition. So they have no choice except either to stay in the trade and submit to the conditions of the newly arrived immigrant or to leave the trade and go into some business. The Jews have been successful in doing the latter. As regards the condition of the clothing workers, it is about the same as it would be if all these Poles, Jews, and Italians had begun to engage in the trade yesterday. Those who have had a better standard of living, such as the Germans and Irish, have been crowded out of the trade and have been replaced by the Italians, Jews, and Poles.

IV. LABOR ORGANIZATIONS IN THE CLOTHING TRADE.

1. Generally.—The movement of wages in the clothing trade is directly affected by the fate of labor organizations. With the continual influx of immigrants unaccustomed to unionism, with the employment of women and children, and with the prevalence of home work, the problem of organization is indeed serious. In New York, for the past 20 years, the Jews have controlled the trade, so that it has not been conflicts of nationalities within the union that have occasioned difficulty. The problem has been the nature of the Jew himself. The Jew's conception of a labor organization is that of a tradesman rather than that of a workman. In the clothing manufacture, whenever any real abuse arises among the Jewish workmen, they all come together and form a giant union and at once engage in a strike. They bring in 95 per cent of the trade. They are energetic and determined. They demand the entire and complete elimination of the abuse. The demand is almost always unanimous, and is made with enthusiasm and bitterness. They stay out a long time, even under the greatest of suffering. During a strike large numbers of them are to be found with almost nothing to live upon and their families suffering, still insisting, on the streets and in their halls, that their great cause must be won.

But when once the strike is settled, either in favor of or against the cause, they are contented, and that usually ends the union, since they do not see any practical use for a union when there is no cause to fight for. Consequently the membership of a Jewish union is wholly uncertain. The secretary's books will show 60,000 members in one month and not 5,000 within 3 months later. If perchance a local branch has a steady thousand members from year to year, and if they are indeed paying members, it is likely that they are not the same members as in the year before. A German union, on the contrary, will have the same members year after year, well or ill, with little change. The Jew joins the union when it offers a bargain and drops it when he gets, or fails to get, the bargain.

The Jew is also exceedingly abstract and metaphysical, and greatly interested in general principles. His union is always, therefore, except in time of a strike, a forum for the discussion of socialism and the philosophy of the labor movement. The Socialist element acquires control when the workmen stay away from the union, and they urge an organization devoted mainly to education on the principles of the solidarity of all labor, without much attention to trade differences. The Jewish labor press, pamphlets, and speakers, nearly all recruited from the Socialists, have continually engaged in these discussions, neglecting the formation and strengthening of their unions.

These statements are substantiated again and again in the history of the trade in New York. It is a saying on the East Side that there is always a strike going on

somewhere. Following is a brief survey of the more important events of the past 25 years:

2. **Coat makers.**—The first union of tailors employed in the ready-made clothing trade in New York was organized in 1877. At that time the home shop was the prevailing mode of production. The union was a sort of educational society with the purpose of educating its members to establish separate shops. It existed only a few months, because no practical work could be done. In 1879-80 a union was organized, led a strike, lost, and went to pieces. In 1882 there was a strike against the increased number of coats to the task. At that time the contractors first organized against their people. The strike was lost and the union broken up. Two years later, in 1884, the tailors organized again under the leadership of the Knights of Labor, and the contractors also organized. At this time the number of coats to be made in the task had been increased. The contractors refused to employ union men. The fight was on the right to organize in both cases. The strike lasted several weeks and resulted in a complete victory for the men. A large number of contractors even paid a fine of \$25 to \$50 for having done violence to the interest and spirit of the tailors and gone into an association of their own.

About a year later the contractors again organized and locked out the men. After 4 weeks a compromise was made and the number of coats in a task was somewhat reduced, but the union was not recognized and neither body gained a complete victory. Later, in 1885, another strike occurred against nonunion buttonhole workers. During the years when the tailors were under the leadership of the Knights of Labor there was dissatisfaction with the methods of settling disputes. They claimed that the executive board of the Knights, composed of bricklayers, teamsters, and other trades, had no knowledge of tailoring, and in 1886-87 the union went out of existence. In 1888 an independent union was organized, called the Tailors' Progressive Union. This union was governed entirely by the tailors, and did not belong to any national or superior body.

In 1891-1894 there was a vigorous agitation among the tailors against the task system. The number of coats per task was being increased continually. Competition was very severe. In 1894 a strike was instituted and won. Contractors were forced to file a pledge with the union that they would employ their people by the week with no reference to the number of coats they made per day, and also that they would not compel them to work longer than 10 hours a day. A certain scale of wages was insisted on, namely, \$16 per week for the operator, \$14 for the baster.

During the season of 1895 the contractors came together, formed an association, and locked their men out. The men held out for a long time, but were finally defeated, and the task system was again introduced, with longer hours of labor and lower wages.

In 1897 the union was again reorganized, but it has not up to the present time been strong enough to effectively control the trade.

3. **Pantsmakers.**—Among the pantsmakers the union has had more effect than among the coatmakers. They, too, have had the same history of organizing, striking, leaving the organization, and again reorganizing, time after time during the past 15 years. During the last 3 or 4 years they have interested themselves mainly toward securing a regular number of hours for their members. While they do not control all of the trade, they do control a large number of shops and have made a very hard fight against long hours in the contractor's shop. Out of the 3,000 pantsmakers in New York and Brooklyn about 1,100 are organized, controlling most of the large shops. Unlike the coat trade, within the past 12 years there has been almost no change in the price paid for the best operator. He now gets 9 to 12 cents for operating an ordinary pair of pants, just as he did 10 or 12 years ago.
